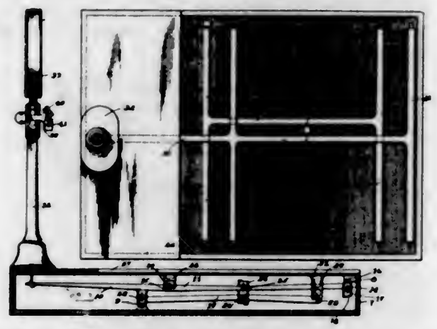
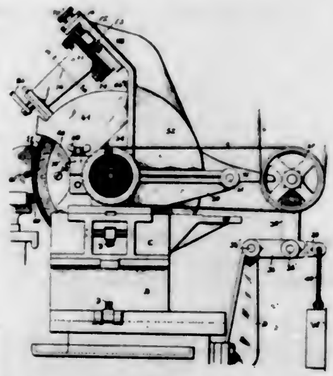
6. In a system of control, the combination with a plurality of dynamo-electric machines, of a movable device having an actuating coil and main and auxiliary contact members for effecting a transitional operation of said machines, and an electrically-controlled switch adapted to be opened by said device during such operation, one of said auxiliary contact members being connected in circuit to energize said coil for the initial portion of the travel of said device, and said switch having an interlock connected to permit the energization of said coil and the completion of said travel after the switch has opened.



1,504,554. CHARGE-FORMING DEVICE. CARL HALLAUER, Brawley, Calif. Filed July 23, 1923. Serial No. 653,229. 9 Claims. (Cl. 123—25.)

1. In a charge forming device, an intake manifold, a valve formed with a chamber having an outlet adapted on operation of the valve to effect variable communication with the intake manifold, said valve adapted to receive warm air, a mixture of cold air and water, a mixture of hot air and fuel from separate inlets leading to the valve chamber, said inlets and outlets being adapted on operation of said valve to effect variations in the proportions of the warm air, cold air and water mixture, and hot air and fuel mixture received by said chamber.

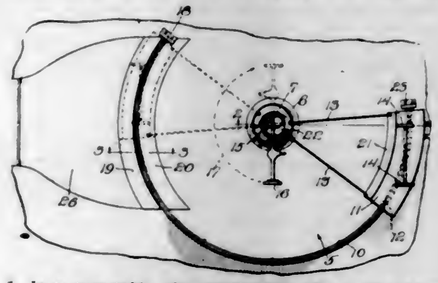


1,504,555. WEIGHING SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Original application filed July 25, 1914. Serial No. 853,061. Divided and this application filed Apr. 26, 1920. Serial No. 376,724. 12 Claims. (Cl. 265—62.)

1. In a weighing scale, in combination, a pair of platform levers each comprising a longitudinally-extending member, a transverse member at one end of the longitudinally-extending member, fulcrum pivots on said transverse member, arms extending laterally from said

longitudinally-extending member, load pivots on said arms, and means connecting said levers between said transverse members and said arms.

1,504,556. GRINDING MACHINE. HARRY E. HARRIS, Bridgeport, Conn. Filed Apr. 22, 1920. Serial No. 375,659. 2 Claims. (Cl. 262—11.)



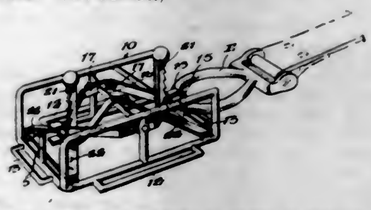
1. In a grinding machine, a grinding wheel, a support adjacent thereto, a slide carried by said support and adjustable thereon toward and from the cutting portion of said wheel, a pair of posts pivoted at one end to said slide, and angularly adjustable thereon, slideways at the opposite ends of said posts, a truing tool slidably mounted in each of said slideways, said tools being movable in non-intersecting paths and independent manually actuated means for moving said tools in said slideways across the cutting portion of said wheel.

1,504,557. GASEOUS FUEL. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 5, 1920. Serial No. 349,588. 1 Claim. (Cl. 48—199.)

A gas for the purpose specified comprising a mixture of hydrogen with from fifteen to fifty per cent by volume of coal gas of substantially the following composition:

	Parts.
C_6H_6	.5
C_nH_{2n}	4.3
CO	8.0
H_2	47.0
CH_4	36.0
O_2	.4
N_2	2.2

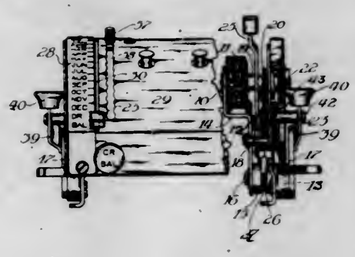
1,504,558. TURNTABLE AND THE LIKE. JOHN B. HAWLEY Jr., Colorado Springs, Colo. Filed Feb. 12, 1923. Serial No. 618,447. 5 Claims. (Cl. 104—44.)



1. In a turn-table, the combination of a central wheel support pivoted for rotation about a central axis, a circular trackway extending around said wheel support as an axis, a platform journaled upon said track, a radial connection from the central wheel support to the platform, an end stop at each end of said track, a spring for operating on the wheel support to turn the same and restore the platform to its initial position against one of said stops, a suitable approach adjacent to the other stop, and a floor between the central wheel support and the track, whereby when the front wheels of a vehicle are carried by the platform one of the rear wheels may be carried by the wheel support and the other rear wheel may travel on the floor, substantially as described.

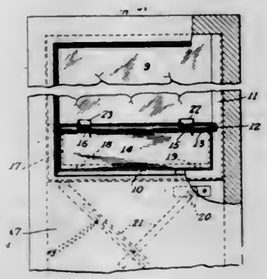
1,504,559. FULCRUM SUPPORT. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 5, 1920. Serial No. 371,277. 8 Claims. (Cl. 265—49.)

1. In a device of the class described, in combination, a bracket, a knife edge pivot secured to said bracket, a link depending from said pivot, and a shelf lever, said shelf lever having its fulcrum supported by said link.



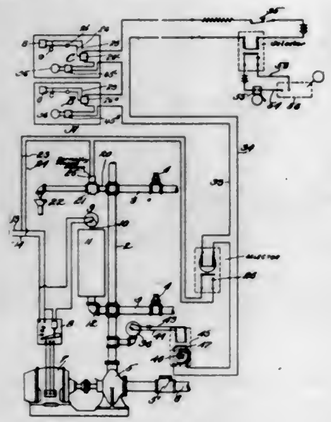
1,504,560. TRACE CARRIER. FRED C. KRAUSE, Mansfield, S. Dak. Filed Dec. 12, 1923. Serial No. 680,203. 1 Claim. (Cl. 54—56.)

A trace carrier comprising a frame, a pair of posts mounted on the frame and providing keepers, a shaft mounted on the frame, a pair of rockable yokes mounted



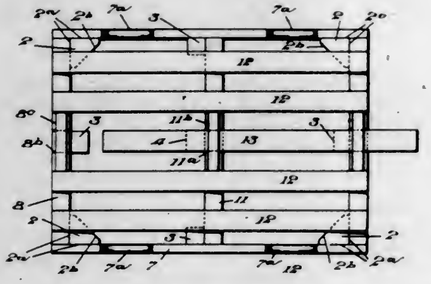
on the shaft, U-shaped holders mounted on the yokes and cooperable with the posts, a pair of latch levers pivotally mounted on the frame and cooperable with the holders, each latch lever having a plurality of teeth cooperable with its holder and having a knob whereby it may be released, and a single spring bent around the shaft and engageable with the latch levers for urging them into cooperation with their holders.

1,504,561. WORD-PRINTING DEVICE. HARRY LANDSIEDEL, Cincinnati, Ohio, assignor to Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 21, 1922. Serial No. 589,587. 8 Claims. (Cl. 101—94.)



1. In a printing mechanism of the class described, the combination of a type carrier provided with type, means for setting the type carrier to the selected position, means for advancing the type carrier to the printing line, interlocking devices for preventing operation of the setting-up mechanism during the printing movements of the type carrer, a stationary index plate provided with inscriptions corresponding to movements of the setting-up mechanism, and an adjustable stop in close relation to the index plate and to the manually controlled portion of the setting-up mechanism to facilitate stopping the latter in convenient relation to a selected inscription on the index plate, substantially as described.

1,504,562. AUTOMOBILE DOOR. MORRIS LEFF, New York, N. Y. Filed Feb. 10, 1923. Serial No. 618,252. 1 Claim. (Cl. 296—44.)

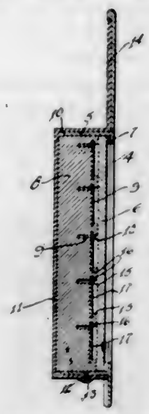


A window for vehicle doors comprising a frame arranged in said door, a glass in said frame and of less than the total length of said frame, a pivot pin supported in said frame and extending the full length of one edge of said glass, a shutter hingedly supported upon said pivot pin, said shutter comprising a frame having a glass therein, means for retaining said shutter closed, said means comprising coiled springs arranged upon said pivot pin and clips engaged upon the free edge of the first said glass, for receiving one end of said springs.

1,504,563. SUPERVISORY DEVICE FOR AUTOMATIC SPRINKLER SYSTEMS AND THE LIKE. ALBERT J. LOEPSINGER, Edgewood, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Nov. 29, 1918. Serial No. 264,560. 12 Claims. (Cl. 177—382.)

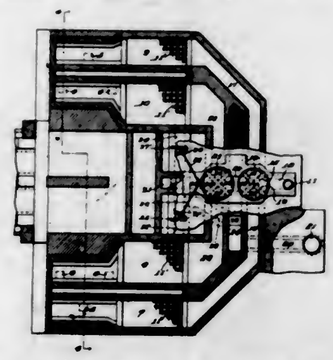
1. A water system having a supply pump adapted to increase the service pressure in the system; means controlled by the pressure in the system for automatically starting and stopping the pump; means for giving a signal at a distant station on a predetermined decrease of pressure, and for giving another signal at the said station on a predetermined increase of pressure, a normally-closed valve controlling the escape of water from the system, and means controllable at said station, for opening and closing said valve at will.

1,504,564. WOODEN RECEPTACLE. LLOYD HAWLEY MCKEE, Fort Worth, Tex. Filed Jan. 15, 1921. Serial No. 437,456. 1 Claim. (Cl. 217—36.)



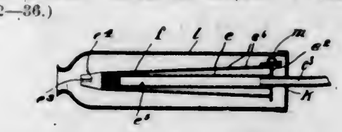
In a wooden receptacle, the combination of a bottom member; a plurality of posts attached to said bottom member; end, side and top slats attached to said posts, the outermost top slat on each side being spaced from the topmost side slat, and said topmost side slat being provided with reduced portions at points on its upper and lower edges to provide hand grips.

1,504,565. GRAVE MARKER. JOHN MALCOLM MCNEILL, St. Joseph, Mo. Filed Oct. 1, 1923. Serial No. 665,923. 2 Claims. (Cl. 40—124.5.)



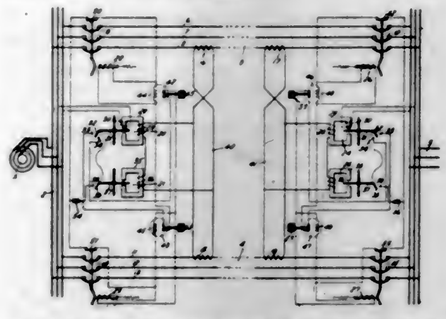
1. A grave marker of the character described comprising a rigid plate adapted for engagement with the earth adjacent the grave, said plate having an opening there-

through, a transparent window disposed in said opening, a block disposed at the rear of said window, means



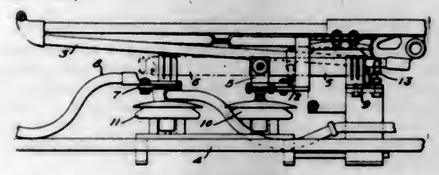
associated with said block for displaying legends relating to the deceased through said window, and a waterproof covering for the block.

1,504,566. FURNACE. NORMAN E. MACCALLUM, Phoenixville, Pa. Filed July 1, 1921. Serial No. 481,752. 4 Claims. (Cl. 263—15.)



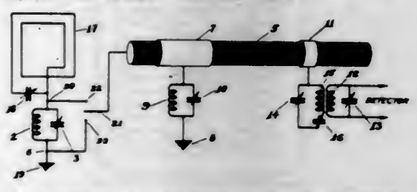
1. In a steel furnace of the reversible open hearth type, and provided with a hearth, regenerator chambers, reversing valves and a stack, the combination therewith of an auxiliary passage from the regenerator chambers to the stack and a valve or damper operated by said reversing valves for controlling the flow of outflowing gases through said auxiliary passage.

1,504,567. WAVING OF HAIR. WILLIAM MACDONALD and HUGH MACDONALD, Inverness, Scotland. Filed Oct. 5, 1923. Serial No. 666,800. 7 Claims. (Cl. 132—36.)



3. Improvements relating to the waving of hair including a hair waving appliance composed of an inner tubular member to which steam is supplied, an outer tubular member on which the hair is wound, the two tubular members being adapted to be rotated relatively to one another and means for locking such in the required position.

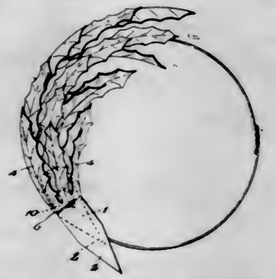
1,504,568. ELECTRICAL PROTECTIVE DEVICE. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1917. Serial No. 206,918. 12 Claims. (Cl. 175—294.)



6. In a system of distribution, the combination with parallel-connected feeder conductors, interrupters for the respective ends of the conductors and automatic means for tripping the interrupters of a conductor when a fault occurs therein, of interlocking means between the interrupters at the corresponding ends of the conductors for rendering inoperative the automatic means associated with the interrupters of one conductor until sufficient time has lapsed to permit all the interrupters of a faulty conductor to be tripped, comprising a switch and an operating coil therefor associated with each tripping means and simultaneously energized therewith to open the switch, said switch being in the circuit of the other tripping means.

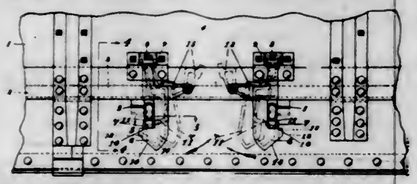
1,504,569. TROLLEY. PAUL L. MARDIS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,389. 5 Claims. (Cl. 191—65.)

1. In combination, a pantograph frame adapted, when in advanced position, to conduct current from a line conductor to a second conductor, a switch member for connecting the frame to the second conductor and a bar on said frame, said switch being adapted to retain said bar and frame in retracted position.



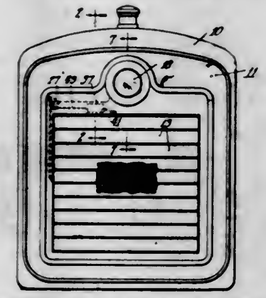
1,504,570. ELECTRICAL SIGNALING. JOSEPH O. MAUBORGNE, Chicago, Ill., and LOUIS COHEN, Washington, D. C. Filed July 26, 1922. Serial No. 577,664. 11 Claims. (Cl. 250—20.)

1. In a system for the reception of radio signals, the combination of an antenna, a loop circuit and ground constituting an antenna circuit, a wave coil connected to the junction point of the antenna and loop circuit,



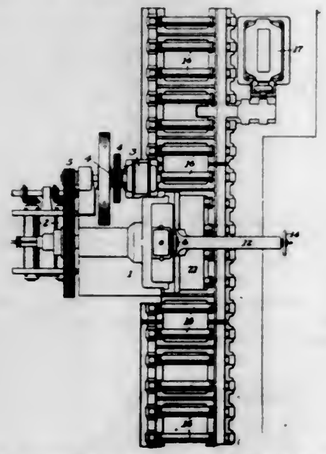
part of said wave coil being enclosed in a metal tube, said metal tube being grounded through an independent loop circuit, said wave coil being also electrically connected to a detector through an oscillating circuit.

1,504,571. WREATH. BURNS HENRY MARSHALL, Detroit, Mich. Filed Dec. 21, 1923. Serial No. 682,030. 7 Claims. (Cl. 41—12.)



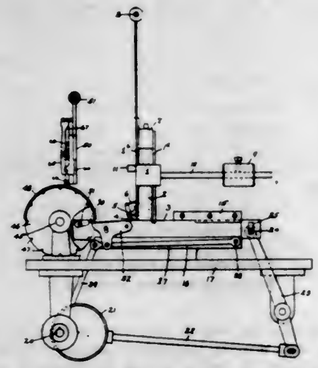
1. A wreath comprising a plurality of alternating foliage sections made of a flexible material and spacers, and means holding said foliage sections and spacers in ring formation.

1,504,572. DOOR-SUPPORTING MECHANISM. FRANK E. MILLER, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 17, 1923. Serial No. 632,632. 14 Claims. (Cl. 105—308.)



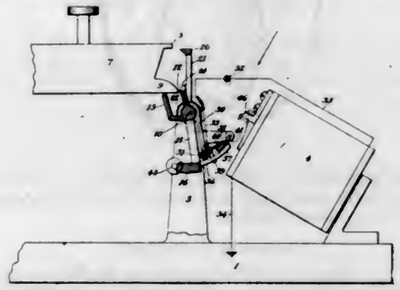
1. In a dump car, a discharge door, a member pivotally mounted on said car for supporting said door in closed position, a member movably mounted on the first mentioned member for supporting said door in partly closed position, and means whereby both of said members are simultaneously movable out of their door supporting positions.

1,504,573. SHUTTER-OPERATING APPARATUS. JOHN H. MILLER, Oak Park Ill., assignor to Pines Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 5, 1922. Serial No. 558,842. 10 Claims. (Cl. 123—174.)



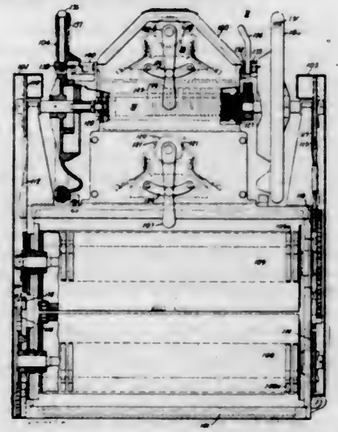
3. In combination with an adjustable closure adapted to regulate the flow of air through an engine radiator, a thermostat connected with said closure and adapted automatically to position said closure to correspond with the cooling requirements of the engine when the latter is running, of means adapted when operative to close said closure in opposition to the action of said thermostat, and devices operable by the suction of the engine adapted to render the means last aforesaid inoperative when the engine is running.

1,504,574. SHEAR AND PILER. RICHARD W. MOSES, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 28, 1922. Serial No. 571,492. 15 Claims. (Cl. 164—49.)



2. The combination with a shear having a supporting housing, upper and lower shear blades, and means for relatively actuating said blades, said housing having the portion thereof which is below the horizontal plane in which the cutting edge of the lower blade lies positioned substantially wholly at one side of the vertical plane in which said cutting edge lies, of a piler, and means for removably supporting said piler adjacent said lower blade, substantially as described.

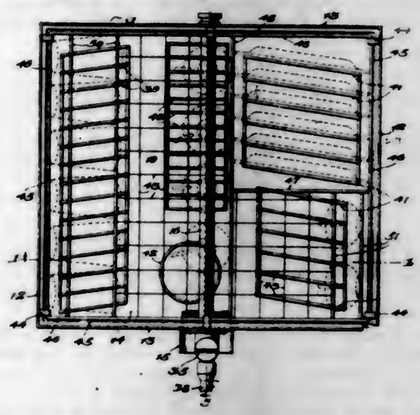
1,504,575. MANUFACTURE OF BRUSHES. LAURITS HENRIK NIELSEN, Kolding, Denmark, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,406. 9 Claims. (Cl. 300—7.)



2. In mechanism of the character described, the combination of a reciprocable device adapted to segregate a bunch or bundle of brush material from a body thereof, of a magazine for such material, said magazine supported in a vertical plane over said device so as to be yieldingly movable in the direction of movement of said device in segregating a bunch of bristles, and means normally positioning said magazine in such vertical position.

1,504,576. TYPEWRITER. EDWIN POPE, Quebec, Quebec, Canada. Filed Dec. 14, 1922. Serial No. 606,778. 14 Claims. (Cl. 197—13.)

1. The combination, in a typewriter, with means for producing a controlling magnetic field, of key bars each provided with a fixed engaging element, an armature element provided with fixed means initially engageable directly by each key bar and movable thereby to bring the armature into the magnetic field, and also provided with fixed means for directly engaging the fixed engaging element of each key bar and completing the stroke movement of each key bar through the influence of the magnetic field in the armature.



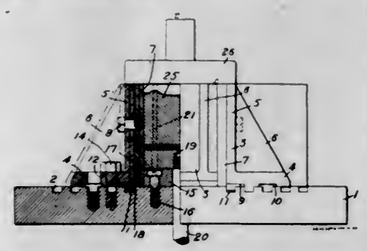
1,504,577. SUBMARINE MOTOR-CONTROL SYSTEM AND APPARATUS. LYNN G. RILEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 23, 1920. Serial No. 426,076. 92 Claims. (Cl. 172—179.)

1. In a control system, the combination with a plurality of electric motors severally having armatures and shunt field windings of single means for effecting motor acceleration by successive armature-circuit and field-circuit manipulation, and means selectively coacting with said single means for effecting either series or parallel relation of said motors during the period of said armature-circuit manipulation.

20. A controller comprising a speed-control handle, a series-parallel drum, and means for permitting the operation of said handle only when said drum occupies its "series" or its "parallel" position and for permitting the operation of said drum only when said handle occupies an inoperative position or an operative position corresponding to said "series" position.

1,504,578. DISHWASHING APPARATUS. HARRY ROSENBAUM, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,418. 17 Claims. (Cl. 141—9.)

11. A dish washer comprising, in combination, a dish receptacle, and an elongated tubular spray device provided with a plurality of series of jets along its length and mounted within said receptacle to rotate upon an axis slightly inclined with respect to the central longitudinal axis of said device, a substantial proportion of said jets being arranged to discharge tangentially with respect to the axis of revolution and thereby to act as reaction jets to rotate said tubular spray device.



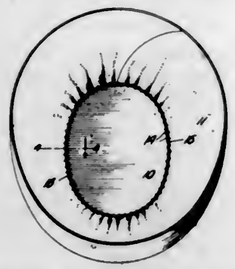
1,504,579. APPARATUS FOR DESTROYING INSECTS. CHARLIE A. ROUNSAVILLE, Scottsboro, Ala. Filed Apr. 27, 1923. Serial No. 635,162. 1 Claim. (Cl. 43—113.)

An apparatus for destroying insects comprising a standard, a fuel reservoir mounted on the standard, a jacket having its upper and lower ends open throughout their entire area, a burner disposed in the upper portion of the jacket and in communication with the fuel reser-

voir, means for securing the end of the burner to the standard and to the jacket, a fuel pan extending diametrically across the jacket below the burner, means for securing one end of the fuel pan to the jack, and means for securing the opposite end of the fuel pan to the standard and to the jacket.

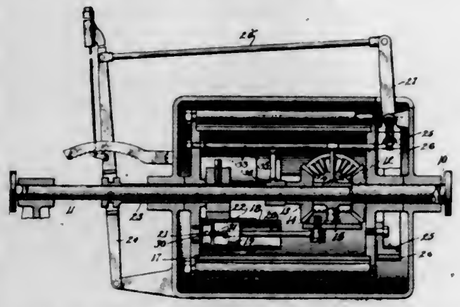
1,504,580. MOLD FOR SWITCH PANELS. BERTRAND P. ROWE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1919. Serial No. 311,037. 3 Claims. (Cl. 18—5.)

3. A mold for switch panels comprising a table, a plurality of wall members, means for securing the wall members in adjusted position to provide with the table a molding chamber, a base plate adapted to seat in the lower end of the molding chamber and having flange and channel engagement with the walls, press blocks insertible in the molding chamber, the press blocks being formed with a plurality of alined openings, and a plurality of core elements carried by the base plate and adapted to extend through the openings in the press blocks.



1,504,581. AUTOMOBILE BUMPER. HENRY SCHMIDT, Philadelphia, Pa., assignor to Geo. A. Weidman Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1923. Serial No. 681,113. 7 Claims. (Cl. 293—55.)

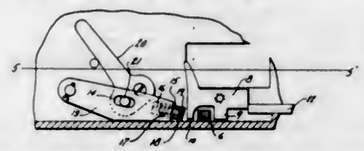
1. A pneumatic bumper for automobiles comprising a resilient tubular member, a relatively rigid external bar sector shaped in cross section extending lengthwise with respect to said tubular member, means for securing said tubular member to said external bar, an internal resilient air tight tube, means for inflating said internal tube, and a cap member of rigid material mounted on each end of the structure and each provided with a shoulder portion overlapping the external bar and extending toward the center of the structure, said cap members being secured to the external bar and forming closures at the ends of the resilient tubular member first mentioned for the purpose of confining the internal resilient tube therein.



1,504,582. LINING FOR HATS. FRANK SOLOMON, New York, N. Y. Filed Sept. 19, 1922. Serial No. 589,071. 3 Claims. (Cl. 2—190.)

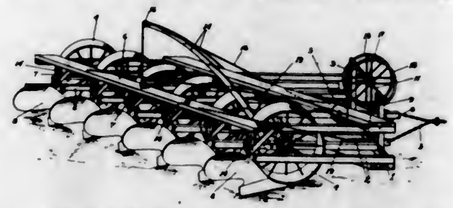
3. A hat lining comprising a crown piece and an apron or skirt portion secured by sewing to a laterally extending edge portion of the crown piece, said edge portion and the adjacent edge portion of the apron or skirt being concealed back of the lining, and said crown piece having along and against the face of its peripheral portion a line of soft body material and a line of stitches crossing said body material and binding the same against said crown piece, said stitches being separated from one another to

expose said material, and said stitches and body material being closely adjacent to said apron or skirt portion and being independent thereof.



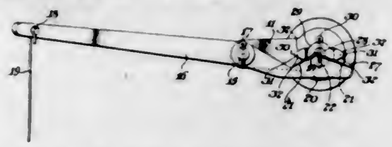
1,504,583. HYDRAULIC TRANSMISSION AND CLUTCH MECHANISM. OSCAR J. STREETER and NOBLE M. STREETER, Stockton, Calif. Filed Nov. 15, 1921. Serial No. 515,275. 1 Claim. (Cl. 74—34.)

In a transmission mechanism, a drive shaft, a driven shaft, differential gear mechanism connecting said shafts together, a revoluble casing journaled at one end on the driven shaft and at the other end on the drive shaft, said casing surrounding the differential mechanism and forming an inclosure for uncompressible fluid, a cylinder fixed in the casing parallel to said drive shaft, a piston within the cylinder and operatively connected to a compensating gear of said differential mechanism, said cylinder being provided with ports to permit fluid to be pumped therethrough, a sleeve valve slidable on said cylinder to control said ports, whereby the resistance to the movement of fluid through said cylinder may be varied in a manner to affect said compensating gear and bring about a change in the movement of the driven shaft with relation to the drive shaft, a brake drum fixed on the casing, a brake band associated therewith to affect the operation of the casing, an actuating sleeve on the drive shaft slidable through the journal of the casing and operatively connected to the sleeve valve, a controlling lever operatively connected to said sleeve and said brake band for simultaneously actuating said valve and said brake.



1,504,584. AUTOMATIC GUN. CARL G. SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed July 16, 1918. Serial No. 245,152. Renewed Nov. 21, 1921. Serial No. 516,902. 24 Claims. (Cl. 89—33.)

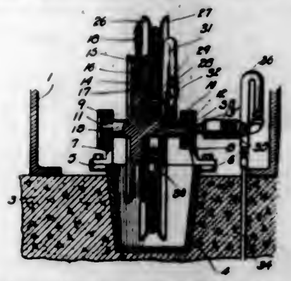
21. In an automatic gun, a feed mechanism normally capable of operation in one direction only and means including a rod extending through the rear end of the gun, whereby said feeding mechanism may be operated in the opposite direction, step by step.



22. In an automatic gun, a feed mechanism, means to operate said feed mechanism in one direction and means independent of said feed mechanism operating means to allow only a step by step rearward movement of the feed mechanism.

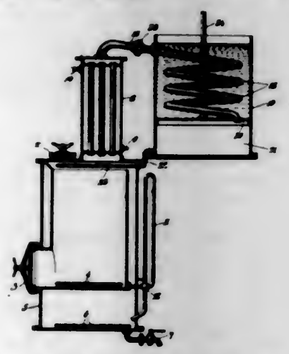
1,504,585. PLOW FOR DEEP AND SOFT-LAND PLOWING. LEE S. THOMAS, Stockton, Calif. Filed Oct. 29, 1921. Serial No. 511,472. 4 Claims. (Cl. 97—93.)

1. A gang plow comprising a wheel supported frame, an auxiliary frame superimposed thereon, adjustable means between the auxiliary and main frames at the rear end thereof for supporting and holding the auxiliary frame at varied heights relative to the main frame, plowing devices projecting downwardly from and fixed to the rear end of the auxiliary frame, and means for independently adjusting the height of the forward end of the auxiliary frame relative to the main frame.



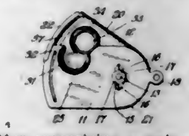
1,504,586. VALVE-ACTUATING MECHANISM. EDWIN S. THOMPSON, Lansdowne, Pa. Filed Dec. 1, 1922. Serial No. 604,146. 12 Claims. (Cl. 4—69.)

1. In a valve actuating mechanism, the combination of a valve actuating lever fulcrumed between its two ends, and a manually operated completely rotatable member acting directly thereon, said lever and member having coacting convex marginal formations.



1,504,587. STORING DEVICE. LOUIS E. TRACHSEL, St. Joseph, Mo., assignor to The King Manufacturing Company, St. Joseph, Mo., a Corporation of Missouri. Filed May 1, 1922. Serial No. 557,792. 2 Claims. (Cl. 299—78.)

1. In combination a housing, a rotatable shaft having a ported chamber, means for supplying fluid to said chamber, a flexible hose having connection with said chamber, a hose drum in fixed relation to and rotatable with said shaft and having a deep groove of a width substantially equal to the diameter of the hose and in which the hose is wound in single, superimposed convolutions, a second drum also fixed on the shaft and having a deep groove, a pulley rotatable in the housing, a flexible, looped connection having one end fixed to the housing and the other end fixed in the groove of the second drum, a pulley suspended in the loop of said connection, and a weight suspended from said pulley, the width of the flexible connection being substantially equal to that of the drum to

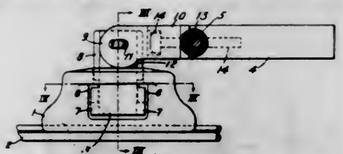


which it is connected, the connection and hose being wound reversely on their drums in single coils of proportionately increasing and decreasing diameters respectively for the purpose set forth.

1,504,588. PROCESS OF EXTRACTING OILS, FATS, ETC. BURNELL R. TUNISON, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 12, 1920. Serial No. 373,309. 14 Claims. (Cl. 87—6.)

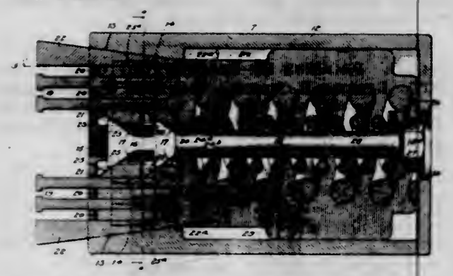
1. In a process of extracting oily material from associated material, the step which consists in treating the mass with a solvent that is composed of a constant boiling mixture of ethyl acetate, alcohol, and water.

1,504,589. CIGAR CUTTER. WILLIAM G. WAGNER and HENRY COHEN, New York, N. Y. Filed Nov. 8, 1923. Serial No. 673,400. 7 Claims. (Cl. 131—38.)



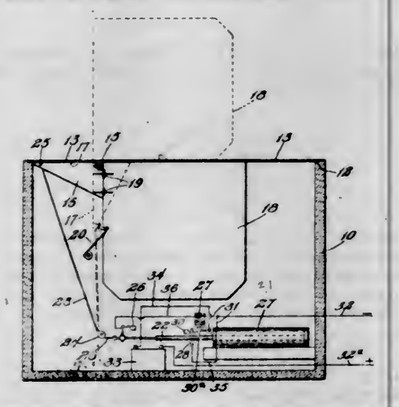
1. A cigar cutter comprising a pair of relatively movable pivotally connected side members one of said side members being provided with a keeper and a cutting element disposed intermediate said side members, one end of said cutting element being held in position by said keeper.

1,504,590. FEED-WIRE CONNECTER. NILS J. A. WAHLBERG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 2, 1919. Serial No. 294,306. 9 Claims. (Cl. 191—12.)



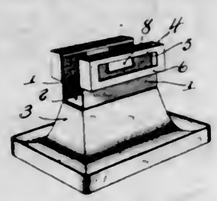
1. In a clamp, the combination with a pair of complementary jaw members having substantially flat inclined

surfaces and a clamping block having similarly inclined surfaces which engage said jaw members, of means com-



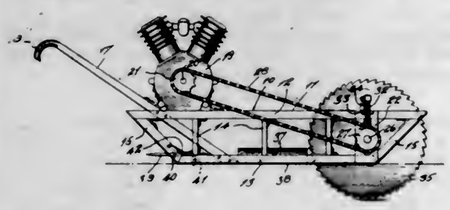
prising a pivoted handle member for adjusting the inclined surfaces of said block against the corresponding inclined surfaces of said jaw members.

1,504,591. DRAFT RIGGING. IRA ORVILLE WRIGHT, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1919. Serial No. 276,287. 2 Claims. (Cl. 213—30.)



1. In a draft rigging, the combination with a friction casing provided with oppositely inclined inner faces, of a plurality of wedging friction members engaging said inner faces of the casing and adapted to be moved longitudinally of the said casing, and means within the said casing for forcing said members into engagement therewith, said means including a wedging member and a plurality of longitudinally movable friction members, said wedging member being actuated by a movement of said wedging friction members and being movable in a direction opposite to the movement of the said member.

1,504,592. CROSSING SIGNAL. JOHN ENOCH YOUNGQUIST, Sterling, Colo. Filed Mar. 29, 1924. Serial No. 702,854. 6 Claims. (Cl. 246—128.)

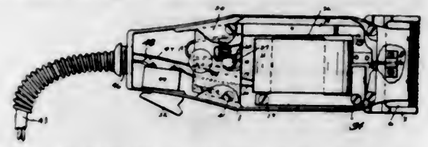


1. In a signal of the type described, a casing adapted to be buried in the highway and having a cover forming a portion of the highway, the cover having a slot, a semaphore arranged within the casing, a pivotal mounting for the semaphore for shifting the same in its own plane to project through the slot in the casing and appear above the right of way, means for shifting the semaphore about the pivot thereof and a connection between the semaphore and the mounting thereof permitting movement of the semaphore from a position vertical to the right of way to a position parallel with the right of way when impinged in a direction longitudinal to the right of way.

1,504,593. MATCH HOLDER. ADAM ZISKA, Jr., Milwaukee, Wis. Filed Feb. 16, 1923. Serial No. 619,593. 3 Claims. (Cl. 206—20.)

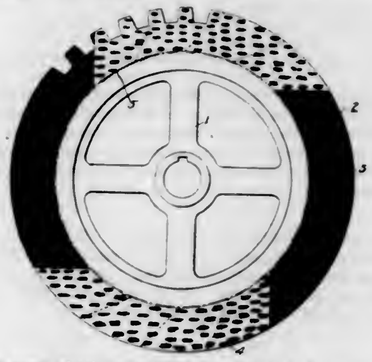
1. A holder for papers of matches comprising a back plate, a frame extending therefrom and adapted to surround a portion of a paper of matches, and a resiliently urged pawl supported from said back plate and adapted to engage said paper of matches and prevent the withdrawal thereof in an upward direction, said frame having an open bottom portion whereby said paper of matches may be downwardly ejected.

1,504,594. ICE HARVESTER. THOMAS K. AGAR, Sheffield, Mass. Filed Aug. 31, 1921. Serial No. 497,228. 1 Claim. (Cl. 262—20.)



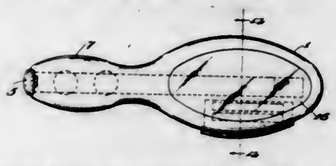
An ice harvester comprising a pair of spaced-apart beams, runners on the supporting edge of said beams, propelling and guiding handles secured to the beams and runners, a motor mounted between said beams at the rear thereof, a guide plate mounted vertically on each beam at the forward end, vertical guide slots in said plates, ears integral with said plates above the guide slots, pillow blocks slidably mounted in said guide slots, said pillow blocks having grooves at their upper ends, inwardly projecting tongues above said grooves, adjusting screws mounted in said ears, the lower ends of said screws registering in the grooves of said pillow blocks, pivoted handles at the upper ends of said screws adapted to rotate said screws, a shaft journalled in said pillow blocks, a saw fixed on said shaft, means for driving said shaft from said motor, and a spring actuated pivoted tracking finger aligned with said saw and at the rear of the harvester.

1,504,595. ELECTRICALLY-OPERATED HAIR CLIPPER. MATTHEW ANDIS, Racine, Wis. Filed July 5, 1923. Serial No. 649,594. 22 Claims. (Cl. 30—1.)



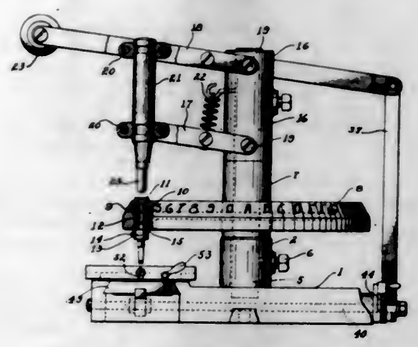
3. In a hair clipper, the combination with a support, of a stationary blade, a movable blade adapted to slide freely in any direction upon one surface of the stationary blade, an actuator having one end loosely interlocked with the central portion of the movable blade and its other end connected with the support, means for swing-

ing the actuator upon its supporting connection to impart a vibratory movement of the blade, resilient means for communicating said vibratory movement from the actu-



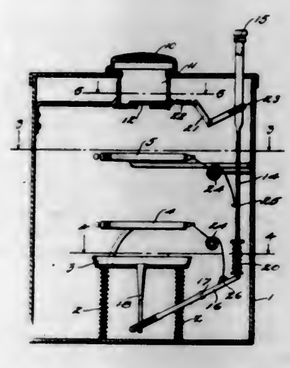
ator to the blade, and means connected with the support for adjustably pressing said actuator in the direction of the movable blade to regulate its pressure upon the stationary blade.

1,504,596. GEAR WHEEL. ARTHUR J. BASTIAN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,591. 4 Claims. (Cl. 154—2.)



3. A gear wheel comprising a working body portion of superimposed layers of sheet material associated with a phenolic condensation product, the several layers comprising a plurality of assembled segments, certain of the segments being of duck and certain of them of cork, the segments being so arranged that each cork segment is entirely surrounded by duck segments.

1,504,597. COMBINATION TOILET SET. LOUIS M. BAYRON, New York, N. Y. Filed Apr. 17, 1923. Serial No. 632,712. 2 Claims. (Cl. 132—87.)

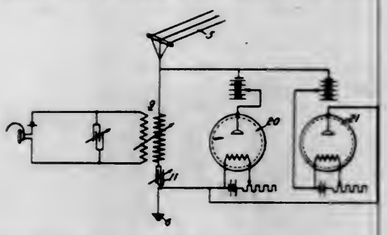


1. A toilet set of the character described, comprising, a body having a rectangular recess forming longitudinally through the center thereof and a somewhat shorter recess formed on the side thereof, the front extremity of the body being shaped to form a brush and the rear extremity being shaped to form a handle, a mirror secured on the upper side of the brush retaining portion, a hinged cover adapted to close the side recess, an arcuate cover hinged to the extremity of the handle portion and adapted to cover the longitudinal recess in the body, a pair of swinging covers secured to the lower portion of the handle and adapted to cover circular recesses formed therein, a plurality of clips to engage the covers and prevent opening thereof, and bristles formed in the lower portion of the body.

1,504,598. MARKING MACHINE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed June 3, 1921. Serial No. 474,821. 7 Claims. (Cl. 197—6.7.)

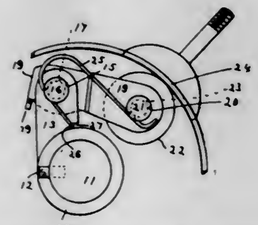
1. In a device of the class described, in combination, a frame, a marking punch carrier movably supported by said frame, an automatic hammer supported by said frame, and means for selectively bringing said marking punches into operative relation with said automatic hammer.

1,504,599. AUTOMATIC MATCH AND TOOTHPICK BOX. JOHN A. P. BLACKWOOD, New York, N. Y. Filed Sept. 15, 1923. Serial No. 662,953. 4 Claims. (Cl. 206—21.)



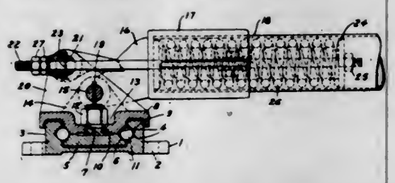
1. A device of the character described comprising a cabinet, a tray arranged within the cabinet to receive a bundle of matches or toothpicks, spring bands adapted to surround the bundle of matches or toothpicks, a plunger element having one end normally located in an opening at the bottom of the said tray beneath the said bundle, and manually operated means to exert an upward thrust on the said plunger.

1,504,600. MEANS FOR PROTECTING WIRELESS OUTFITS FROM STATIC DISTURBANCES. QUINCY A. BRACKETT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,493. 1 Claim. (Cl. 250—20.)



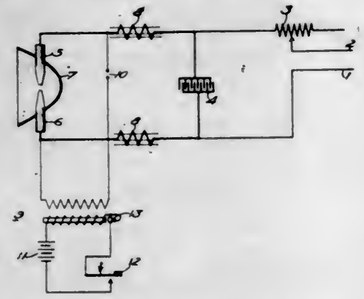
In a receiving device, an aerial including a pair of adjustable reactors of opposite character, whereby said aerial may be tuned, a receiving circuit coupled to one of said reactors and including a signal-receiving device,

and a shunt around said two reactors, said shunt including two rectifying devices connected in parallel to one another and in opposite directions in the shunt, each



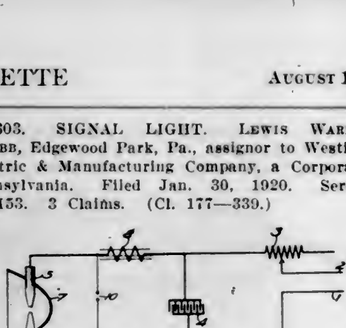
of said device being provided with two means for adjustment, one controlling the normal potential across the device and the other controlling the critical voltage of the device.

1,504,601. MOUNTING FOR COMMUTATOR ROLLERS. EDWARD J. BROSNAN, Canajoharie, N. Y. Filed Mar. 28, 1922. Serial No. 547,404. 5 Claims. (Cl. 200—26.)



2. A commutator roller mounting consisting of a hub adapted to be secured upon the cam shaft, an ear rigidly projecting therefrom, an arm pivotaly mounted upon the outer end of said ear and having its outer end forked to receive therebetwen the roller, a roller shaft mounted in the forked end of said arm with its ends projecting beyond said arm and there provided with grooves and a U-shaped bent spring having its inner end engaging the hub or the ears near the hub and having its outer ends fitting into the grooves in the projecting ends of said shaft and tensioned to press the roller outwardly, the outer ends of said spring forming the means of detachably holding said shaft from longitudinal displacement but allowing rotation thereof.

1,504,602. TROLLEY BASE. LELAND F. BURNHAM, Wilkinsburg, Pa., assignor to R. D. Nuttall Company, a Corporation of Pennsylvania. Filed Jan. 20, 1923. Serial No. 613,799. 9 Claims. (Cl. 191—68.)

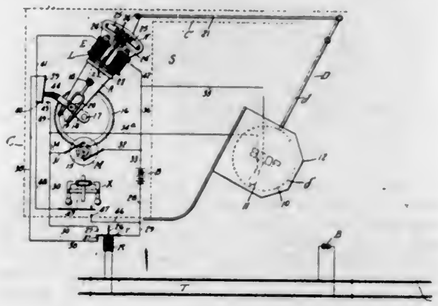


4. A trolley base comprising a support, a groove therein constituting an outer ball-race, an inner ball-race consisting of upper and lower co-operating members secured together, the upper member having an opening therein, the lower member being provided with a projection passing through said opening for holding said members together, balls in said races, and means for securing a trolley pole to one of said members.

1,504,603. SIGNAL LIGHT. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1920. Serial No. 355,153. 3 Claims. (Cl. 177—339.)

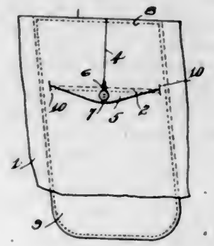
1. In a signal light, the combination with two spaced electrodes, a source of direct-current electrical energy connected thereto, and a condenser connected to said source of energy and to said electrodes, of electric means connected to said electrodes for breaking down the resistance of said spaced electrodes and thereby causing said condenser to discharge across said electrodes, the resistance of the circuit containing the electrodes and the source of current being sufficient to prevent the flow of current therethrough after the condenser has become discharged.

1,504,604. SYSTEM OF CONTROL. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,055. 20 Claims. (Cl. 250—17.)



1. In a wireless transmission system, a plurality of radiating antennæ and means whereby said antennæ may be included in an absorbing circuit.

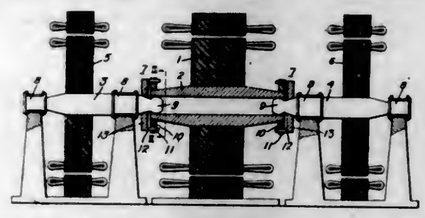
1,504,605. GAME APPARATUS. WILLIAM H. CLAUSEN, Melrose, Mass. Filed Jan. 31, 1922. Serial No. 532,097. 3 Claims. (Cl. 46—61.)



3. A game apparatus comprising a board provided with holes scattered throughout the surface or field thereof and properly spaced apart, a plurality of posts fitted to be removably held in said holes and adapted to serve as goals or wickets, and two distinguishable sets of men also fitted to be removably held in said holes so that they may be placed to occupy any desired positions on the field of said board.

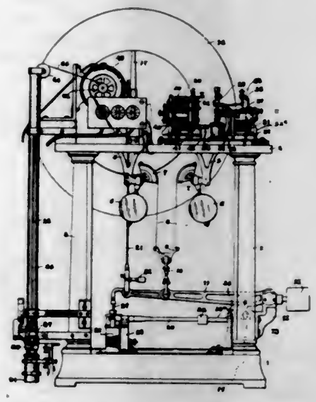
1,504,606. GRADE-CROSSING SIGNAL. JOHN P. COLEMAN and PER UTNE, Edgewood Borough, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1917. Serial No. 153,601. 31 Claims. (Cl. 177—339.)

4. A crossing signal comprising a pendulum semaphore, a motor for causing oscillation of the semaphore, a speed-responsive device operated by the motor, a contact controlled by said device and closed only when the motor is running, and means governed by said contact for connecting the semaphore with the motor only when the contact is closed.



1,504,607. GARMENT POCKET. SOLOMON CORNBLUM, Rochester, N. Y., assignor of one-half to William N. Goldwater, Rochester, N. Y. Filed Sept. 2, 1919. Serial No. 321,070. 3 Claims. (Cl. 2—247.)

1. A garment having a pocket opening and an elongated single-chambered pocket comprising a front and a rear wall secured together along their peripheral edges, the pocket opening extending transversely of the vertical axis of the pocket, the upper edge of the pocket being secured to the garment above and in spaced relation to the pocket opening, the front wall having an opening between the upper and the lower edges thereof, the edges of said opening being secured to the garment on opposite sides of the pocket opening, and the rear wall of the pocket being secured to the garment at opposite ends of the pocket opening.

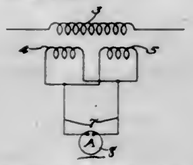


1,504,608. BEARING. STUART H. COWIN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,448. 7 Claims. (Cl. 64—89.)

1. In combination with two abutting, approximately alined shafts, an energy-translating machine mounted upon each of said shafts, a universal joint capable of supporting the weight of one of said shafts joining the

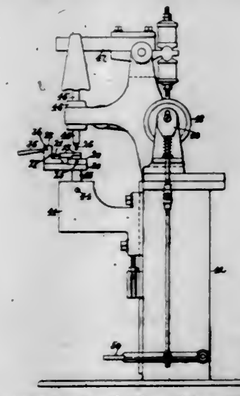
abutting ends, and a supporting bearing on only one side of said joint for providing the sole shaft supporting means at the abutting ends of both machines.

1,504,609. WEIGHING SCALE. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,687. 5 Claims. (Cl. 177—351.)



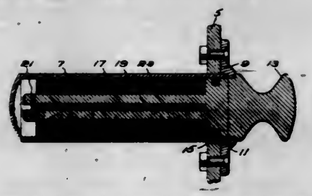
5. In a device of the class described, weighing mechanism, a shaft connected to said weighing mechanism to be rotated thereby, a motor, means controlled by movement of said weighing mechanism for operating said motor, a commutator geared to said motor, an indicator, connections between said commutator and said indicator for moving said indicator proportionally to the movement of said commutator, means for stopping said motor after movement proportional to the movement of said shaft, and means for de-activating the connections between said commutator and said indicator upon the stopping of said motor.

1,504,610. BINDER BOARD. FRANK E. CROMPTON, Brooklyn, N. Y., assignor to Signature Company, New York, N. Y., a Corporation of New York. Filed June 1, 1923. Serial No. 642,781. 22 Claims. (Cl. 129—35.)



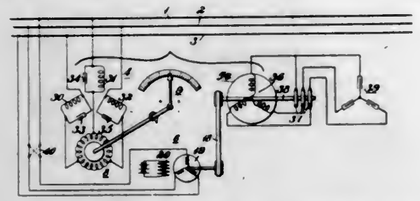
1. In a binder board, means for operating a binder to receive documents and for holding said documents in a predetermined arrangement, and document registering means into engagement with which the side edges of said documents are moved as they are placed within the binder.

1,504,611. CURRENT TRANSFORMER. LEO DOLEMAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,271. 15 Claims. (Cl. 175—358.)



1. The combination of a plurality of core members, a primary coil and a plurality of secondary coils associated therewith, and electrical means for causing the impedances of the secondary circuits to differ from each other.

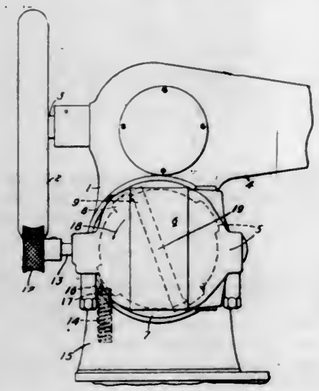
1,504,612. PEENING APPARATUS. EDWARD B. FRASER, Arlington, Mass. Filed July 24, 1922. Serial No. 577,051. 5 Claims. (Cl. 78—70.)



1. In an apparatus of the character described, in combination an anvil having a member for entering one end of an opening in the article to be peened and provided with a curved exterior surface which cooperates with the sharp edge of one end of said opening, a hammer pivoted at one end and having its free end cooperating with said anvil and provided with a member for entering the other end of said opening and having a curved exterior surface which cooperates with the sharp edge of the second mentioned end of said opening, and means for moving the free end of said hammer toward said anvil to cause the sharp edges of the opening to be rounded and smoothed.

1,504,613. AUTOMOBILE ATTACHMENT FOR HOLDING CERTIFICATES OR THE LIKE. ARTHUR T. FERGUSON, Salem, Mass. Filed Feb. 9, 1924. Serial No. 691,693. 6 Claims. (Cl. 40—19.)

5. A storage member for a strip of paper or other flexible material comprising an open ended tube, a closure plug having an outer grasping member and a core of lessen diameter than the tube, and a resilient fastening to hold the plug in position.



1,504,614. ELECTRIC MEASURING INSTRUMENT. CHARLES LEG. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,756. 12 Claims. (Cl. 172—245.)

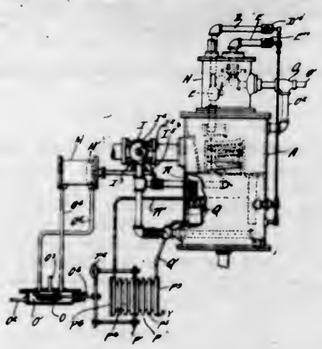
1. In an electrical system, the combination with a supply circuit, of a measuring system comprising a dynamo-electric machine having a stator winding energized in accordance with an electrical quantity of the supply circuit and having a rotor winding, means for driving said rotor winding at synchronous speed with respect to said supply circuit and an induction machine connected to said stator winding.

12. In an electrical system, the combination with a supply circuit, of a measuring system comprising a dynamo-electric machine having its polyphase stator windings energized from said supply circuit and having a rotor winding, a second dynamo-electric machine having its polyphase stator windings energized from said supply circuit in a reverse sense from those of the first-named machine, said second machine having a rotor winding operable with the first-named rotor winding, a plurality of induction machines connected to the respective sets of stator windings, a plurality of indicating means respectively connected to said induction machines to cause the respective indicating means to indicate the positive and the negative-phase-sequence components of the supply current.

1,504,615. MOUNTING FOR SEWING-MACHINE MOTORS. GEORGE H. GAUCHELON, Swissvale, and NIELS HANSEN, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,702. 21 Claims. (Cl. 74—26.)

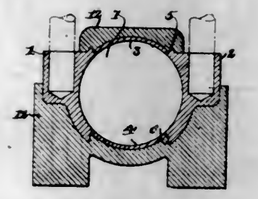
1. A machine comprising a head, a drive shaft having a hand wheel, an electric motor provided with a drive pinion and detachably mounted on said head and a resilient means serving to rotatively bias said motor around an axis perpendicular to said head and said drive pinion and passing substantially through the center of gravity of the motor to hold said pinion in driving engagement with said hand wheel.

1,504,616. METHOD OF CUTTING BEVELED LUMBER. DAVID B. GARY, Everett, Wash., assignor of one-half to Harry L. Gary, Everett, Wash. Filed Sept. 7, 1923. Serial No. 661,422. 3 Claims. (Cl. 144—309.)



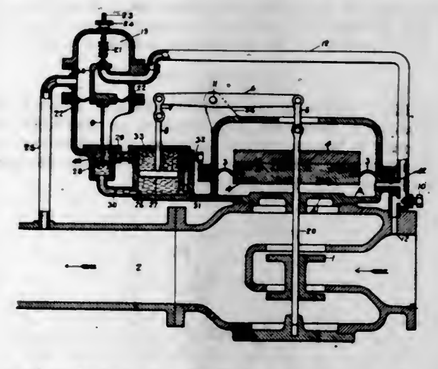
1. The method of cutting beveled lumber which consists in first cutting the log into triangular segments, cutting these segments into cants by cuts extending at right angles to the radius of the log which bisects such cut, then cutting the cants into vertical grain beveled lumber, alternating the position of the thick and thin edges of the lumber as required to use up the entire cant without waste.

1,504,617. PRESSED-METAL SPIDER HAVING CROSSED ARMS. HARVEY D. GEYER, Dayton, Ohio, assignor, by mesne assignments, to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,054. 12 Claims. (Cl. 74—33.)



1. A wheel spider including a hub portion, a plurality of pairs of metal arms lapped over each other at the hub, and a metal plate for clamping the arms to the hub portion, said plate having projections integral therewith which are bent around part of the hub.

1,504,618. APPARATUS FOR WATER DEAERATION. GEORGE H. GIBSON, Montclair, N. J., assignor to H. S. B. W. Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1921, Serial No. 523,546. Renewed Jan. 9, 1924. 5 Claims. (Cl. 183—25.)

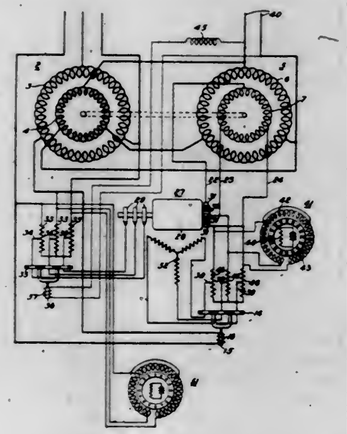


1. Apparatus for deaerating water comprising in combination a closed chamber provided with water and air outlets, means for supplying water to be deaerated to said chamber as required to maintain the latter partially filled with water, and means for supplying steam to said chamber comprising a steam inlet opening to the chamber below the water level therein, a steam inlet opening to the chamber above the water level therein and a distributing valve adjustable to throttle the supply of steam to either inlet while permitting steam to pass freely to the other inlet.

1,504,619. PROCESS OF MAKING MAGNETO-GENERATORS. PHILIP J. GILINSON, Lowell, Mass., assignor to Heinze Electric Company, Lowell, Mass., a Corporation of Maine. Filed Jan. 13, 1922. Serial No. 529,048. 14 Claims. (Cl. 29—155.5.)

1. That process of making electric generators which comprises forming a pair of integrally united pole pieces, simultaneously machining the pole faces of said pole pieces, and separating such pole pieces during the machining thereof.

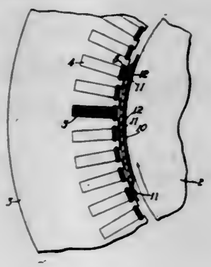
1,504,620. METHOD AND APPARATUS TO STABILIZE REGULATORS. PAUL ECKERT GOOD, Riverton, N. J. Filed Oct. 11, 1923. Serial No. 668,025. 4 Claims. (Cl. 50—11.)



1. The method of stabilizing a regulator having a regulating element and a power element which consists in connecting each element to a liquid containing dash pot and interconnecting said dash pots so as to transmit the pressure differences generated in the liquid from one dash pot to the other.

1,504,621. ELECTRICAL SYSTEM OF DISTRIBUTION. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1919. Serial No. 286,434. 14 Claims. (Cl. 172—281.)

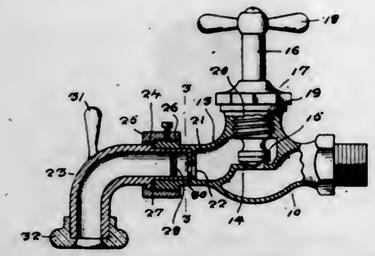
1. In an electrical system, the combination with a main generating machine, of an auxiliary dynamo-electric machine having a field winding, means for varying the energization of said field winding in accordance with the load conditions of said main machine, and means associated with said auxiliary dynamo-electric machine to deliver a current to the main generator to effect a change in the frequency thereof.



8. In an electrical system, a main induction motor, a main polyphase induction generator, the secondary

winding of the motor being connected to the generating winding of the generator, a single-phase consumption system derived from between the two machines, and an eradicating machine for preventing the flow of undesirable currents from the generating machine to the motor.

12. An induction generator having an armature winding and a polyphase field winding, a source of polyphase energy connected to said field winding, and means operative upon the occurrence of an abnormal power-demand on said generator for varying the frequency of said source in such manner as to reduce the armature frequency.

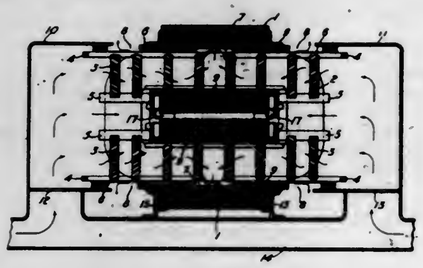


1,504,622. SYSTEM OF VENTILATION. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,560. 8 Claims. (Cl. 171—252.)

4. A dynamo-electric machine comprising rotor and stator members separated by an air gap, and a skewed barrier disposed in said air gap.

1,504,623. FAUCET. LOUIS J. HULLA, Onaway, Mich., assignor of one-half to Henry Lipshield, Onaway, Mich. Filed May 5, 1923. Serial No. 637,000. 1 Claim. (Cl. 299—10.)

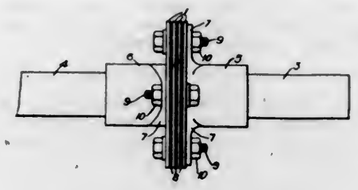
1. In a faucet having a straight outlet conduit, a curved nose piece rotatably mounted upon the outlet conduit and disposable either in an upwardly or a downwardly extending position, a partition in the outlet conduit formed with a hole eccentrically thereof, a wall at the inlet end of the nose piece formed with an eccentric hole registering with said first named hole entirely when the nose piece is in downwardly extending position, the



hole in the wall registering only slightly with the first-named hole when the nose piece is in upwardly extending position.

1,504,624. PURIFYING GAS. JOSEF JANNEK, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Aug. 19, 1921. Serial No. 493,749. 3 Claims. (Cl. 183—118.)

1. The process of removing carbon oxysulfid from gases which consists in treating a gas which has been purified from hydrogen sulfid, with an active charcoal having an alkaline condition.

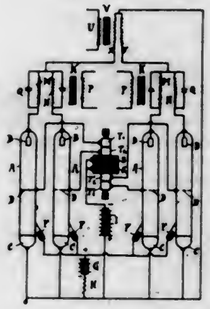


1,504,625. TRANSFORMER. CARL G. JONES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,641. 7 Claims. (Cl. 175—361.)

1. In a transformer, a core member, coils inductively related thereto, means for directing a cooling medium over the faces of the coils from each end thereof, said means being so arranged that the cooling medium is supplied first to the hottest portion of said core and across the faces of said coils, and then to the less heated portions of the core, and means for alternately deflecting the flow of said cooling medium over the faces of said coils in different directions.

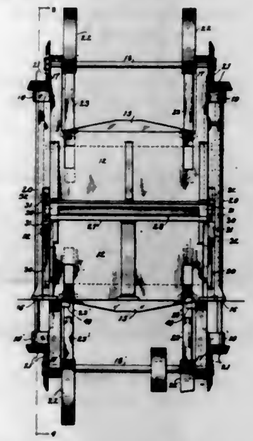
1,504,626. FLEXIBLE COUPLING. J STANLEY KINNEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 22, 1918. Serial No. 245,989. 7 Claims. (Cl. 64—96.)

1. In a flexible coupling, the combination with shaft sections carrying laterally extending ears at their adjacent ends, of flexible members secured to the ears of each shaft, with the ears of one shaft disposed inter-



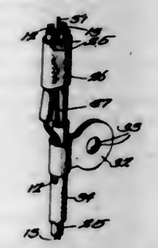
mediate those of the other, the flexible members comprising fibrous sheet material impregnated with a hardened phenolic condensation product.

1,504,627. PROCESS OF TREATING NATIVE ARSENATE ORES. JAMES GRAHAM LAMB, Denver, Colo., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1921. Serial No. 441,682. 6 Claims. (Cl. 23—3.)



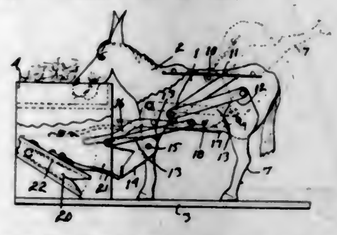
1. In a process of making water soluble arsenates, treating native, raw, pentavalent arsenic bearing ores in a finely divided condition with a caustic alkali in the form of approximately a 50 per cent solution and effecting a reaction between said alkali and the arsenic compounds of said ore.

1,504,628. ELECTRIC VALVE. CHARLES LÉONARD ARMAND MAURICE LEBLANC, Paris, France, assignor to Société Anonyme pour l'Exploitation des Procédés Maurice Leblanc-Vickers, Paris, France. Filed Dec. 16, 1920. Serial No. 431,221. 9 Claims. (Cl. 172—281.)



1. A frequency changing device comprising a pair of partial vacuum tubes each containing an anode, a grid, a cathode and a fluid, whereby the current shall be transmitted by the ions, an auxiliary anode for maintaining the cathode constantly in an incandescent state, means for intermittently imparting to the said grid a constant negative potential, a transformer having a single secondary winding and a pair of equal and oppositely wound primary windings having a common terminal forming one connection with a periodic source of current, said cathodes being connected together and to the other side of said source, the other terminals of said primary windings being respectively connected to said anodes.

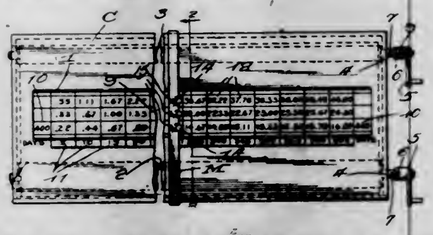
1,504,629. EXPANDED-METAL MACHINE. GEORGE W. LENTZ, Canton, Ohio. Filed Oct. 6, 1923. Serial No. 666,942. 16 Claims. (Cl. 164—6.5.)



1. The method of expanding metal sheets which consists in slitting and simultaneously expanding entire rows of strands and bonds to form diamond mesh successively from one side edge of the sheet toward the other side edge thereof while the unexpanded portion of the sheet remains in situ.

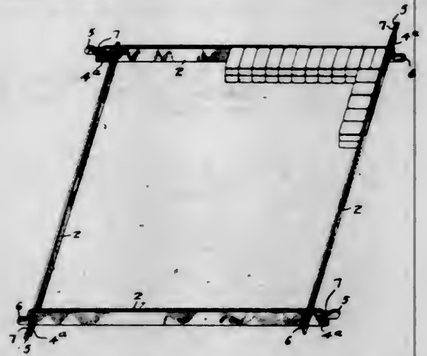
1,504,630. WIRE CABLE. CHARLES L. LILLEBERG, Chicago, Ill. Filed Nov. 22, 1922. Serial No. 602,667. 4 Claims. (Cl. 173—264.)

1. The combination with two conductors, one extending longitudinally of and beyond the other and which latter is bare where it terminates; of a circuit connecting clip surrounding and gripping both conductors at the bare end of the latter.



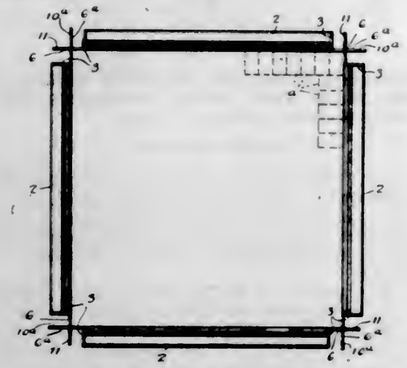
1,504,631. MECHANICAL TOY. PAUL LIPMAN, San Francisco, Calif. Filed Dec. 12, 1923. Serial No. 680,109. 1 Claim. (Cl. 46—40.)

In a mechanical toy, the combination with a base of a figure mounted thereon having a movable section, a spring to hold said section normally in one position, a catch to hold said movable section in another position,



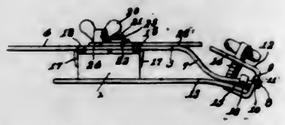
a bellows, means connected with the movable section of the figure to collapse the bellows, a catch to hold the movable section in a position different from the normal position, and means whereby the bellows will be slightly expanded to release the movable section of the figure a short time after it has been set.

1,504,632. COMPUTING DEVICE. ALBERTO LORATO, Antonito, Colo. Filed Aug. 15, 1923. Serial No. 657,630. 1 Claim. (Cl. 235—86.)



An interest computing device, comprising a shiftable web, a series of valuations disposed along a side marginal portion of the web, a window disposed transversely across the web through which a portion of the web is adapted to be exposed, stationary time indications disposed transversely of the web and arranged adjacent a margin of the window, columns of interest computations disposed lengthwise of the web, each of said columns being aligned with a time indication, said columns of interest computations being divided into a plurality of series, the computations of each series being disposed longitudinally of the web, the window being of a length substantially equal to the width of the web and of a length substantially equal to the space occupied by a series of computations in a column, the computations of each series indicating the amount of interest at different rates for the adjacent valuation for the period of time denoted by the time indication associated with such series, means for shifting the web, an index member disposed over the window and having movement in a direction transversely of the web, the portion of the member disposed over the window being provided with fingers of a number equal to the number of computations in each series of interest computations in a column, said fingers being provided with interest indications, said indications being of different rates.

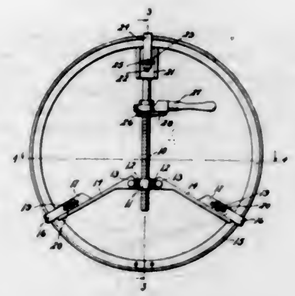
1,504,633. DEVICE FOR SUPPORTING WALLS OF A TILE GAME. LUCY W. LUCE, Brooklyn, N. Y. Filed May 1, 1923. Serial No. 635,955. 2 Claims. (Cl. 46—55.)



1. A device for use in building the walls of a tile game of the kind described, comprising four duplicate bars of proper length, each of said bars having near its opposite ends slots extending inward from opposite edges, and finger grips projecting from the ends, whereby a rectangular frame is formed when the slotted portions are fitted together, and after the walls have been built therein the frame may be conveniently disassembled and the parts laid before the respective players without disturbing the walls or obstructing subsequent play with the tile pieces, substantially as described.

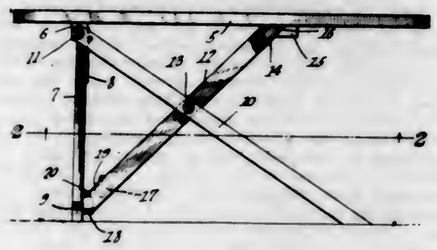
1,504,634. DEVICE FOR SUPPORTING WALLS OF A TILE GAME. LUCY W. LUCE, Brooklyn, N. Y. Filed May 15, 1923. Serial No. 639,063. 6 Claims. (Cl. 46—55.)

1. An apparatus for use in a tile game, comprising a set of members consisting of racks adapted to receive the "hands" of tiles of the respective players, with projecting interlocking terminals on the racks to form an enclosure of definite proportions, the racks and terminals being constructed to form continuous surfaces against which to build the sides of a wall of tiles.



1,504,635. SHINGLING GAUGE. SANFORD MCCAUSLAND, Quincy, Mass. Filed May 23, 1923. Serial No. 640,919. 7 Claims. (Cl. 33—188.)

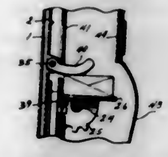
1. A shingle gauge comprising a body bar with a longitudinally slotted straight portion and graduated scales at opposite sides of the slot, a deflected rear portion, an enlarged head connected with and spaced from the rear end of the latter portion, a U-shaped member mounted to rock between the rear end of the body bar and said enlarged head, a screw bearing in the upper arm of the U-shaped member and adapted to engage the body bar, and means on the straight portion of the body bar for securing the bar in position.



1,504,636. RIM TOOL. SANFORD MCCAUSLAND, Quincy, Mass. Filed Dec. 15, 1923. Serial No. 680,972. 1 Claim. (Cl. 157—1.)

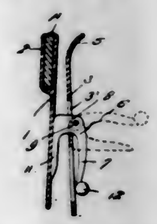
A rim tool comprising a screw, a collar threaded thereon and adapted to move longitudinally thereof when the screw is rotated, arms pivoted on the collar and adapted to be arranged in divergent relation for use, a clamp carried by each arm and arranged to engage said rim at a point adjacent the meeting ends thereof, a clamping device supported by one end of the screw and swivelly connected therewith, said device including a hollow member having divergent sides, said sides having aligned slots, clamping elements reposing on said sides, a bolt connecting the clamping elements and passed

through said slots, and means including a handle for rotating said screw in either direction for the purpose specified.



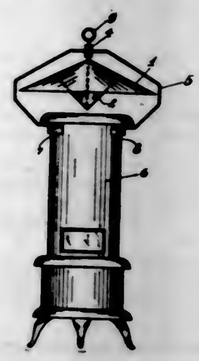
1,504,637. IRONING TABLE. JOHN H. MCVEY, Wessington Springs, S. Dak. Filed Dec. 15, 1923. Serial No. 680,944. 1 Claim. (Cl. 68—10.)

An ironing table including a board, a pair of leg members hingedly connected to the board, a foot piece for connecting the lower ends of the leg members, a bar secured to the foot piece, leg members pivotally connected to the first mentioned leg members, bracing bars having pivotal connection with the second mentioned leg members, means for securing the upper ends of the bracing bars to the board, the lower ends of said bracing bars adapted to engage the ends of the bar secured to the foot piece to restrict lateral movement thereof, and means for securing the bracing bars to the bar secured to the foot piece.



1,504,638. LOCK FOR VENDING MACHINES AND GLASS RETAINERS FOR SLIDE COVERS. JAMES H. MANN, Jr., Pine Bluff, Ark., assignor, by mesne assignments, to Empire Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed July 11, 1921. Serial No. 483,850. 2 Claims. (Cl. 211—8.)

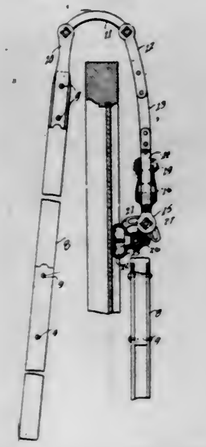
1. In a vending machine, a casing having a magazine for articles to be delivered, an article delivering tray pivotally mounted below the lower end of the magazine and supporting the articles therein, an actuator operatively connected to the tray to tilt the same and thereby cause the successive discharge of the articles to be vended, a pawl normally held in an operative position by the articles supported upon the tray, said pawl being operatively pivoted on the casing and being adapted to be supported in a vertical position by the articles in the magazine and rest upon the last article on the tray when all but said last article has been discharged and when said article is discharged swinging downward into



operative position, the tray having a portion thereof adapted to be engaged by the pawl to lock the tray in a tilted position when the last article has been discharged therefrom.

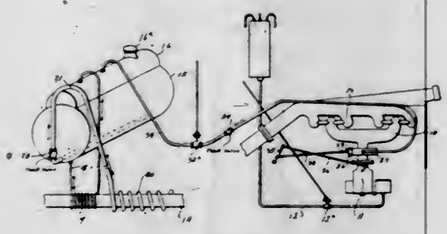
1,504,639. KEY-RING HOLDER. ARTHUR E. MILLER, Montpelier, Vt. Filed Mar. 26, 1924. Serial No. 702,040. 3 Claims. (Cl. 24—3.)

1. A key ring holder comprising a strip of metal having its upper end provided with attaching means for supporting the same on the belt of a person, the lower portion of said strip being bent back upon itself to provide a key ring receiving and supporting loop, means on said bent back portion for retaining the key ring disposed in the looped portion against accidental displacement therefrom, said means comprising a substantially inverted U-shaped member pivotally supported on said bent back portion and extending through a slot provided therein, one of the arms of the inverted U-shaped member being in engagement with the intermediate portion of said strip, the other arm extending beyond the outer face of said bent back portion and providing a means for actuating the same.



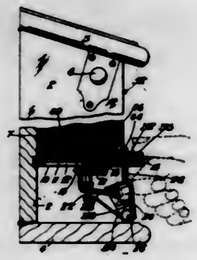
1,504,640. HEAT DEFLECTOR. JAMES R. MONROW, Oakland, Calif. Filed June 25, 1923. Serial No. 647,531. 3 Claims. (Cl. 126—96.)

1. A deflector comprising a hood, means for mounting said hood above the stove adjustable means connecting said hood to said first-mentioned means and a conical



baffle plate having its apex pointing in the opposite direction from the apex of the hood, said baffle plate being attached to said hood.

1,504,641. WINDOW-CLEANING DEVICE. KICHIMATSU MUKAI, San Francisco, Calif. Filed Aug. 18, 1922. Serial No. 582,779. 1 Claim. (Cl. 15—220.)



A window cleaning device comprising a sectional handle, yoke arms connected to said handle and disposed in a plane substantially in parallelism to the plane of the handle, a slotted member pivoted to the yoke arms and terminating at one end in central bored fingers, a sponge-holding element carried by the opposite end of said member, a horizontal rod positioned in the fingers of said member and adapted to move freely therein, a pair of clamping jaws secured to said rod, tension means for returning the jaws to their normally closed position, a slotted finger carried by one of said jaws and adapted to travel through the slot of said member, said jaws being adapted to retain therein a piece of fabric or the like, for the purpose specified.

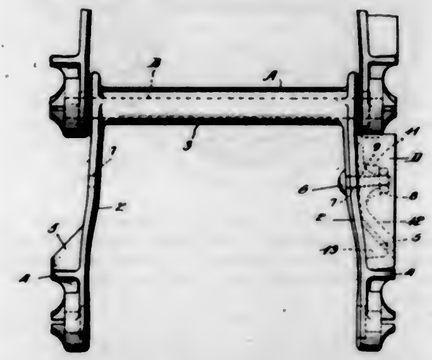
1,504,642. FUEL-SUPPLY MEANS FOR INTERNAL-COMBUSTION ENGINES. JULIUS MARION NELSON, Tulsa, Okla. Filed Jan. 7, 1922. Serial No. 527,704. 2 Claims. (Cl. 123—127.)

1. The method of fueling internal combustion engines consisting in employing the usual carbureter and intake manifold and in addition employing means for forming a highly charged fuel gas, starting the engine employing the charge formed by the carbureter, cutting off the supply of fuel to the carbureter, admitting the fuel gas directly to the manifold and controlling the supply of air for admixture with said fuel gas by the throttle valve of the carbureter.

1,504,643. VENDING OF RAILWAY AND LIKE TICKETS. LUDWIG NUDL, Whittlesea, Victoria, Australia, assignor to The Nudl Safety Cabinet Ticket Tube Company Proprietary Limited, Melbourne, Victoria, Australia, a Company of Victoria. Filed July 10, 1922. Serial No. 573,852. 5 Claims. (Cl. 211—8.)

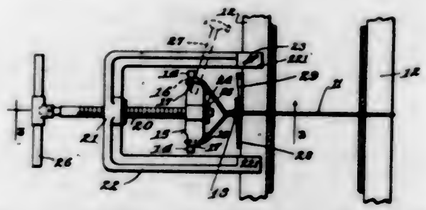
5. In a ticket delivery apparatus, the combination of a receptacle provided with a compartment to contain a stack of tickets; an ejector for the tickets; a front plate attached to the lower portion of the receptacle and provided with a delivery aperture for the tickets and with a second aperture directly below the first one; a member normally projecting outward through the second aperture but adapted to be pushed inward therethrough by pressure exerted against it by the forefinger of one hand of the operator to effect the outward movement of the ejector; and a forwardly-extending guard disposed above the ticket aperture and overhanging the projecting portion of the operating member, said guard having its forward end cut away to expose the projecting end of the ticket acted on by the ejector, whereby said projecting ticket end may be grasped between the thumb and forefinger of the same hand and removed.

1,504,644. AX. JAMES E. RAYBURN, Waynesboro, Tenn., assignor of one-half to Claude L. Boyd, Waynesboro, Tenn. Filed Oct. 14, 1922. Serial No. 594,539. 2 Claims. (Cl. 145—2.)



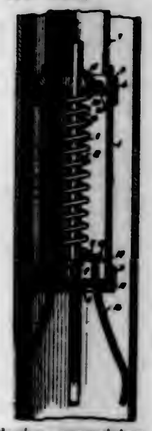
1. A tool of the character described comprising a head, a broad blade on the head, one side of said broad blade having a chip ridge formed thereon extending longitudinally of its medial portion from a point in proximity to said head to a point in proximity to the cutting edge of the blade whereupon it is formed with divergent branches extending to points adjacent the opposite extremities of the cutting edge of said blade.

1,504,645. METHOD FOR MANUFACTURING FORMS OF CEMENT. JOHN A. RICE, Berkeley, Calif. Filed May 1, 1923. Serial No. 636,031. 8 Claims. (Cl. 25—155.)



1. The method of making cement forms which consists in filling a mold with soft cement prepared to yield to cutting action when hardened, in allowing the cement to partly set and in then slicing the same.

1,504,646. CONVEYER CHAIN. GUSTAV R. RODDY, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 19, 1923. Serial No. 613,720. 4 Claims. (Cl. 198—171.)

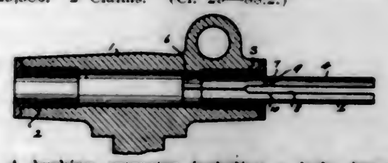


1. The combination with a drag conveyer chain, of a separable wearing block adapted to be applied to a link of the chain, of harder material than that of which the chain links are formed, and means for detachably securing the block to a link.

1,504,647. APPARATUS FOR TIGHTENING FORM WIRES. ZALOS W. SCOTT, Santa Barbara, Calif. Filed May 16, 1923. Serial No. 639,316. 4 Claims. (Cl. 140—119.)

1. An apparatus of the character described, comprising a frame to engage a form member, a screw threaded through the frame and provided with an unthreaded shank, and a head rotatably mounted on the shank and constructed for securing a form wire thereto.

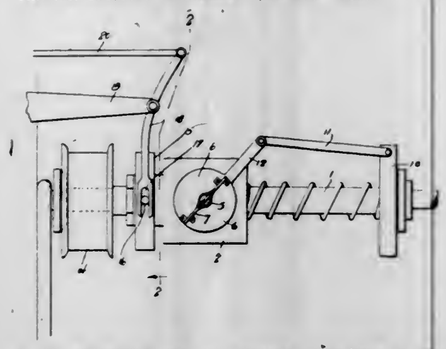
1,504,648. GRIPPING DEVICE. CHARLES P. SKINNER, Bicknell, Calif., assignor of one-third to Henry Schwab and one-third to J. A. Dunn, both of Bicknell, Calif. Filed Oct. 19, 1922. Serial No. 595,630. 3 Claims. (Cl. 294—100.)



1. A gripping device comprising a plurality of co-operating jaws movable to occupy gripping or non-gripping position, means for yieldably urging the jaws to non-gripping position, and means operating automatically to lock the jaws in gripping position when moved to such position.

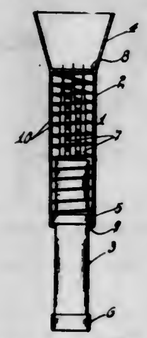
1,504,649. EMERGENCY RIM. DANIEL ARTHUR SMITH, Jr., Wilmington, Del. Filed Oct. 31, 1923. Serial No. 671,998. 5 Claims. (Cl. 301—39.)

3. An emergency rim comprising a member adapted to be disposed over and about a deflated tire, inwardly extending spokes carried by said rim, lugs at the inner ends of said spokes adapted for disposition between the spokes of the wheel and means for holding the attachment against lateral displacement with respect to the wheel, said means comprising clamping members each formed as a shank journally mounted and provided at one end with a handle and at its other end with a laterally extended lug having a wedge face, said shanks being disposed transversely with respect to the wheel.



1,504,650. BUSHING EXTRACTOR. FRED H. SMITH, Houston, Tex. Filed Apr. 3, 1923. Serial No. 629,586. 2 Claims. (Cl. 29—88.2.)

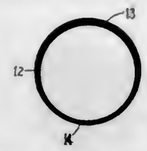
1. A bushing extractor including a body formed of two sections, an enlarged head at one end of said body forming an annular shoulder, a deep slot at the other



end of said body, said sections being formed with flat faces, at the enlarged end which fit together when the extractor is in use.

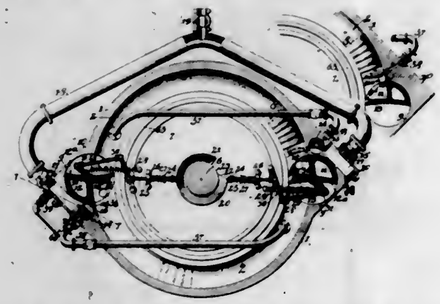
1,504,651. COOLING FAN FOR MOTORS. HAROLD M. STUELAND, Clarkfield, Minn. Filed Aug. 10, 1921. Serial No. 491,118. 3 Claims. (Cl. 170—163.)

1. An adjustable fan for motors comprising a rotating shaft, a block secured stationary to one end of said shaft, a fan hub slidably mounted on the shaft, a coil spring urging said fan hub from said block, a plurality of studs fastened into the said hub, fan blades mounted on said studs, movable plates between the fan hub and fan blades, means for securing the blades to the plates, arms connecting the said plates to said block, and means for sliding said fan hub upon the revolving shaft to change the angle of said blades.



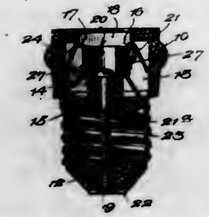
1,504,652. CIGAR CUTTER. RICHARD W. SWEET, Oakland, Calif. Filed Sept. 11, 1922. Serial No. 587,360. 2 Claims. (Cl. 131—20.)

1. A cigar perforator comprising a barrel, a mouth formed on said barrel, a plunger within said barrel, a plurality of prongs secured to said plunger, a collar formed on said plunger near the upper end thereof, a second collar at the lower end of said plunger, a stop shoulder at the bottom of said barrel for engaging said collars, a shoulder at the base of said mouth, and a spring positioned between the first mentioned collar and said latter shoulder.



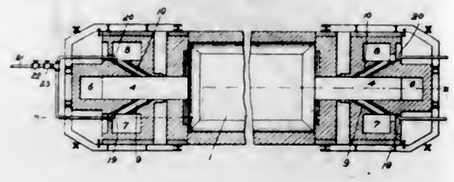
1,504,653. METHOD OF MAKING ANNULAR TUBES. EDWARD C. TAYLOR, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1920. Serial No. 424,416. 3 Claims. (Cl. 154—14.)

1. The method of making annular tubes comprising forming a straight tube having the wall thickness on one side sufficiently greater than the wall thickness directly opposite to produce a tube of substantially even wall thickness when inflated into annular form, joining the ends of the tube to form an annulus with the thicker



part of the tube wall forming the outside of the annulus, expanding the annular tube so formed into an annular mold, and vulcanizing the tube.

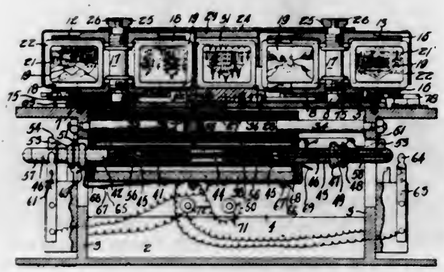
1,504,654. ROTARY ENGINE. HENRY OTIE TAYLOR and LOUIS CARL BROWN, Wewoka, Okla. Filed Apr. 27, 1918. Serial No. 231,166. 5 Claims. (Cl. 121—78.)



1. A rotary engine comprising a casing having a live steam chamber and an exhaust steam chamber, rotors in the chambers having pistons in disalinement, a steam valve controlling the passage of steam to the live steam chamber, a steam chest communicating therewith, a steam pipe connected to the steam chest, a main steam valve in said pipe, a pipe connection between the steam chest and the exhaust steam chamber, an auxiliary steam valve in said pipe connection, and connecting means between said auxiliary valve and main steam valve for initially opening the auxiliary valve upon opening the main steam valve to conduct live steam from the steam chest to the exhaust steam chamber and insure the starting of the engine should the piston in the live steam chamber stop across the steam valve, said auxiliary valve being closed upon further opening of the main steam valve.

1,504,655. ATTACHMENT PLUG. DON N. THOMPSON, Syracuse, N. Y. Filed Aug. 25, 1919. Serial No. 319,645. 6 Claims. (Cl. 173—343.)

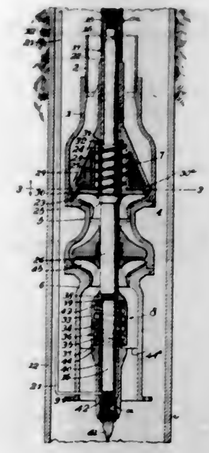
3. A separable attachment plug comprising in combination a substantially cylindrical insulation body having an elongated rectangular guide opening in the top thereof and a pair of contact recesses open at the bottom, separated by a partition and having lateral and partial longitudinal communication with said guide opening, an insulation button, a threaded contact shell fitting between and abutting at the ends against the insulation body and the button, a central contact member a single member holding all of said parts together and a pair of spring contacts in said recesses engaging said partition along the upper end thereof and having curved ends adapted to normally close the openings between said contact recesses and said guide opening for the purpose set forth.



1,504,656. STRUCTURE AND METHOD OF OPERATION OF HEATING FURNACES. WILLIBALD TRINKS, Pittsburgh, Pa. Filed July 17, 1923. Serial No. 652,061. 7 Claims. (Cl. 263—15.)

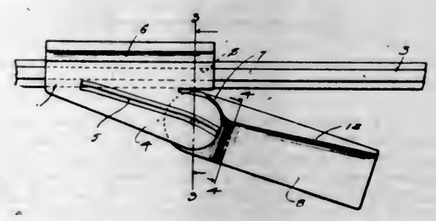
2. In the operation of a furnace using preheated air for combustion the method herein described of impelling the flow of air to the furnace chamber which consists in projecting into the line of flow a jet of gas at a velocity exceeding that of sound.

3. In a heating-furnace structure the combination with a furnace chamber of an air passageway leading thereto, means for projecting into said air passageway a flow-inducting jet of gas at a velocity exceeding that of sound, and means for admitting fuel to the induced stream, substantially as described.



1,504,657. SLIDE-MOVING APPARATUS. GEORGE L. TRUEBLOOD, Berkeley, Calif. Filed Feb. 8, 1919. Serial No. 275,829. 28 Claims. (Cl. 88—27.)

1. The combination with a movable magazine adapted to contain magnetizable objects, of a pole-piece movable toward and away from said magazine to remove the objects therefrom and means cooperating with the pole piece for moving the magazine.

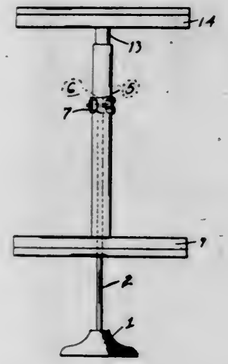


1,504,658. TURBINE PUMP. JOSEPH AMES ULMER, Porterville, Calif. Filed Dec. 29, 1922. Serial No. 609,687. 12 Claims. (Cl. 103—102.)

1. In mechanism of the character disclosed, a pump bowl including an axial sleeve, a bushing fitted in the sleeve, a revoluble shaft having bearing in the bushing but falling short of the lower end of the sleeve to define an oil chamber which has communication with the bearing surfaces, a hood carried by the shaft extending over the sleeve in spaced relationship thereto to define an annular chamber, and a spiral vane carried by said hood operating in said chamber to expel water tending to enter from said bowl and thereby creating a vacuum at

the other end of the hood to draw oil from said oil chamber over said bearing surfaces contrary to the action of gravity.

1,504,659. CAR REPLACER. JOHN A. VEAZEY, Youngstown, Ohio. Filed Dec. 4, 1923. Serial No. 678,466. 3 Claims. (Cl. 104—271.)

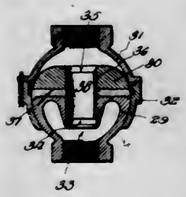


3. A car replacer comprising a frog having a rail receiving channel in its underside and a flange receiving groove in its top side adjacent an edge thereof and having a laterally disposed extension tapering throughout its length and provided upon its top side with a replacing rib of approximately inverted V-form, the rear portion of said lateral extension being separated from the frog and having a pivot stud depending therefrom, a hollow replacing wing underlapping the rear portion of the lateral extension of the frog and receiving the pivot stud and provided along its top side adjacent its inner edge with a rib having a tapering extension at its forward end to enter the space formed between the frog and the rear portion of the tapering lateral extension thereof, and a latch member within the forward portion of the wing adapted to engage the said pivot stud and retain the wing in place.

1,504,660. DISPLAY STAND. ROBERT WEIR, San Francisco, Calif. Filed Oct. 2, 1923. Serial No. 666,094. 4 Claims. (Cl. 40—146.)

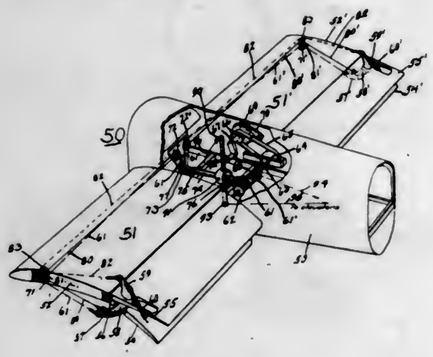
1. A display stand, comprising a base, a standard carried thereby having an eye at its upper end, a pair of clamps, a bolt passing through said clamps and through

the eye of said standard, a tubular member passing through said clamps, and means at the top and bottom of said tubular member to secure a card in position, the



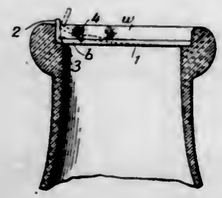
bolt enabling said clamps to be loosened to raise or lower the display and permitting the display to be tilted at will.

1,504,661. FURNACE DOOR. FERD ELIEL WERTHEIM, Chicago, and ASHUR URL WETHERBEE, Evanston, Ill., assignors to William A. Gilchrist, New York, N. Y. Filed Dec. 21, 1922. Serial No. 608,332. 9 Claims. (Cl. 110—173.)



9. In a furnace, the combination of a door loosely hinged on the frame, a lever pivoted on the frame adjacent to the hinge and having a short arm for engagement with the door, a head pivoted on the frame opposite to the hinge, to swing in front of the door, and a screw in the head for engagement with the door.

1,504,662. FLEXIBLE PIPE JOINT. WALTER C. WHITE, Pittsburgh, Pa., assignor to International Couplers Co., a Corporation of California. Filed July 31, 1919. Serial No. 314,506. 1 Claim. (Cl. 285—95.)

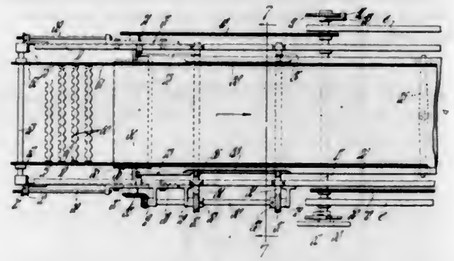


In a flexible pipe joint, a swelling packing unit having a rigid core defining an opening through the packing and limiting the swelling of the packing in a direction tending to close said opening.

1,504,663. AIRPLANE. ORVILLE WRIGHT and JAMES M. H. JACOBS, Dayton, Ohio, assignors to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed May 31, 1921. Serial No. 474,046. 16 Claims. (Cl. 244—29.)

1. In an aerofoil, means for changing either the camber of its upper surface or the camber of its lower surface independently of one another.

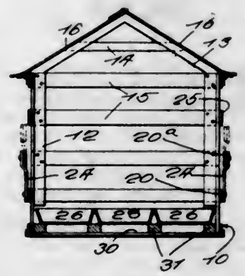
1,504,664. BOTTLE STOPPER. ADOLPH Y. S. ALBUM, Maywood, Ill. Filed Sept. 11, 1922. Serial No. 587,490. 6 Claims. (Cl. 215—100.)



1. The combination of a bottle cap having a pull-tab secured thereto, said cap being weakened on a line extending in approximately a transverse direction relative to the pull-tab, said tab being weakened transversely at a point spaced from the periphery of the cap said line of weakening being adjacent the point of connection between the pull-tab and the body of the cap and permitting flexure of the cap without hinging.

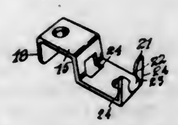
1,504,665. [WITHDRAWN.]

1,504,666. FEEDING MECHANISM FOR CONFECTIONERY MACHINES. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1921. Serial No. 510,325. 13 Claims. (Cl. 107—28.)



1. Feeding mechanism for confectionery machines, comprising, supporting means for the articles to be fed, and a series of feed bars movable in spaced parallel relation over said supporting means and adapted to propel the articles thereon, each of said bars having means provided along its leading edge for centering and propelling articles and means provided along its trailing edge for guiding the leading ends of articles centered and propelled by the preceding bar.

9. In a combination with a depositing machine, having a transverse row of nozzles through which measured quantities of confection may be deposited upon articles



positioned therebelow, a feed belt, a series of notched feed bars movable with and above the feed belt for carrying the articles to said nozzles, and means for tapping the edge of said feed belt.

1,504,667. CHICKEN FEEDER. OVERTON M. BENNETT, Lenoxville, Pa. Filed Sept. 15, 1923. Serial No. 662,882. 2 Claims. (Cl. 119—61.)

1. A poultry feeding device comprising a base having a rim and adapted to contain food and water pans, posts extending upward from the corners of the base, slats or strips disposed above the rim of the base and carried by and vertically adjustable upon said posts, slats or strips disposed above the first named strips and supported thereon in a position outward of the plane of the outer face thereof, and slats or strips disposed in spaced relation to each other and carried above the first named strips and in secured positions upon said posts and extending outwardly of the last named strips and the roof.

1,504,668. SHUTTLE FOR BOBBINS. JOHN B. BENTLEY, Jamestown, N. Y. Refiled for abandoned application Serial No. 532,948, filed Jan. 31, 1922. This application filed Mar. 24, 1923. Serial No. 627,498. 4 Claims. (Cl. 139—209.)

1. In a shuttle a holding clip having an inverted U shaped outer end and upturned inner end in which inner end is formed an open ended inwardly enlarging slot, in combination with a resilient split spindle adapted to spring into holding engagement in said open ended slot, and a hooked end portion on said spindle engaging the U shaped end of said clip and thereby securing said spindle in positino.

1,504,669. TITANIUM COMPOUND. JOSEPH BLUMENFELD, London, England. Filed Apr. 28, 1924. Serial No. 709,671. 3 Claims. (Cl. 23—13.)

1. In the process of producing titanium oxide from material containing titanium, the steps of mixing the said material with sulphuric acid, heating the mixture initially to a temperature of at least 130° C. and gradually increasing the temperature to a maximum of 220° C., treating the resulting material with water in such proportions as to produce a solution containing about 15 to 25% of TiO_2, and subjecting that solution to hydrolysis while avoiding the presence of any substantial amount of ferric iron therein.

1,504,670. TITANIUM COMPOUND. JOSEPH BLUMENFELD, London, England. Filed Apr. 28, 1924. Serial No. 709,672. 4 Claims. (Cl. 23—13.)

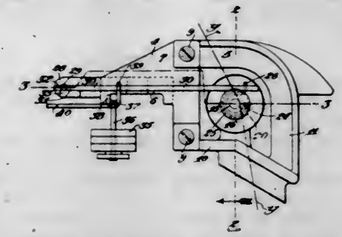
1. In the process of producing crystalline titanyl sulphate from material containing titanium, the steps of mixing the said material with sulphuric acid, heating the mixture initially to a temperature of at least 130° C. and gradually increasing the temperature to a maximum of 220° C.

1,504,671. TITANIUM COMPOUND. JOSEPH BLUMENFELD, London, England. Filed July 17, 1923. Serial No. 652,188. 6 Claims. (Cl. 23—13.)

1. A process of producing titanium oxide from titaniferous mineral consisting in decomposing the mineral with not substantially more than 1 to 2 parts of sulphuric acid of about 80% strength, and treating the resulting mass with not substantially over 3 parts of water, while maintaining the mass at an approximately constant temperature near to the boiling point of the liquid until the titanium oxide is precipitated, while any iron compound in the solution is maintained in the ferrous state, and separating the oxide from the mother liquor and residue, substantially as described.

1,504,672. PREPARATION OF TITANIUM HYDROXIDE. JOSEPH BLUMENFELD, London, England. Filed Feb. 4, 1924. Serial No. 690,658. 5 Claims. (Cl. 23—13.)

1. The preparation of titanium oxide or hydroxide by hydrolytic precipitation which comprises diffusing titanium from one solution into another under the action of differential concentration and temperature, and allowing the diffusion action to continue for several minutes before mixing the solutions.



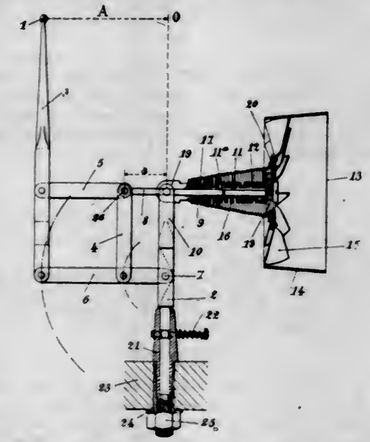
1,504,673. TITANIUM PIGMENT. JOSEPH BLUMENFELD, London, England. Filed July 17, 1923. Serial No. 652,189. 7 Claims. (Cl. 23—13.)

1. The production of colloidal titanium compounds, in any desired degree of dispersion by the peptization of precipitated titanic acid obtained by hydrolysis, substantially as described.

1,504,674. TENSION DEVICE. CARL A. BRINK, Cranston, R. I., assignor, by mesne assignments, to The New England Trust Company, a Corporation of Massachusetts, trustee. Filed Dec. 19, 1921. Serial No. 523,553. 16 Claims. (Cl. 242—150.)

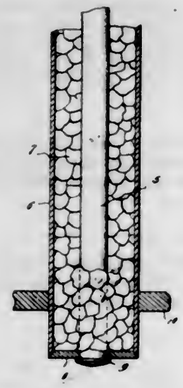
1. In a tension-device, the combination with means adapted to bear upon a running yarn or filament to apply tension thereto, of means to control the action of the

tension-means comprising a movable member, means to apply pressure to the movable member and an element



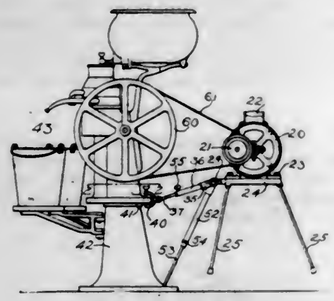
having a beveled face against which the movable member acts to exert a constant wedging thrust against the tension-means.

1,504,675. TOBACCO USER'S APPLIANCE. WILLIAM C. BRUZGA, Norwood, Mass. Filed Feb. 25, 1921. Serial No. 447,722. 1 Claim. (Cl. 131—51.)



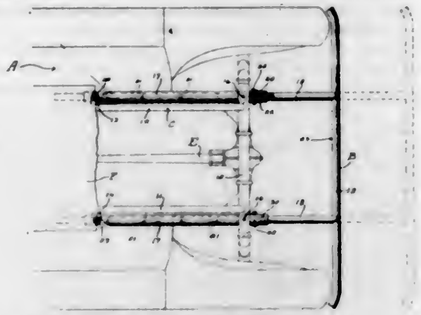
As a new article of manufacture, a cigar and cigarette holder comprising a bit portion having a longitudinally extending bore therethrough, a metallic cigar and cigarette receiving nipple fitted in the forward portion of the bore, a combustion chamber section arranged to be detachably associated with the bit section including a hollow metallic body having one end thereof closed and the other end opened, the sections being constructed to simulate the appearance of an ordinary cigar, the combustion chamber having a plurality of air inlet openings formed therein, and an annular outstruck guard flange formed on the nipple and arranged to engage the forward face of the bit portion to prevent the burning of the same by cigars and cigarettes fitted in said bit portion.

1,504,676. AUTOMATIC FIRING GEAR FOR AIRPLANES AND AIRSHIPS. PIERRE ROGER LOUIS AUGUSTE CARMIER, Paris, France. Filed May 31, 1922. Serial No. 564,998. 1 Claim. (Cl. 33—47.)



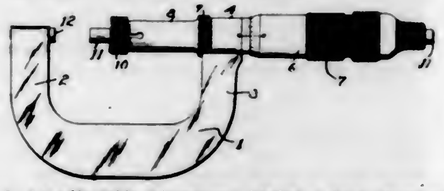
In firing gear for aerial machines the combination with the sighting gear thereof, of apparatus for automatically correcting the firing and consisting in a socket connected with the sighting gear, a swivelling post carried by the socket, a parallel linkage articulated to said post, a staff projecting from the parallel linkage, a ball forming the tip of the staff and the extremity of a virtual vector whose other extremity is in the axial line of said swivelling post, a stem articulated to the parallel linkage, and a spring-controlled air-turbine mounted on said stem in movable relation thereto.

1,504,677. METAL BAR. CHARLES R. CARTER, St. Louis, Mo. Filed May 9, 1923. Serial No. 637,921. 1 Claim. (Cl. 189—9.)



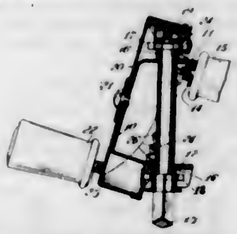
A bar structure adapted to be used as a barrier across a wall opening comprising an exterior cylinder of metal and closed at its ends, a rod traversing the length of the cylinder and disposed centrally therein and having its ends secured in the end walls of the cylinder, the exterior surface of the rod being spaced from the interior surface of the cylinder, said rod being of metal, and a filling of gravel interposed in the space between the rod and the inner surface of the cylinder, and completely filling said space.

1,504,678. DOMESTIC APPLIANCE. ERNEST DICKEY and RALPH L. LEE, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 3, 1922. Serial No. 592,140. 10 Claims. (Cl. 64—52.)



1. In a portable power device, the combination with a motor having a driving pulley for belted connection with the pulley of a work machine; of strut and bracing members connected with the motor, said strut and bracing members engaging the frame of the work machine, said members and said frame constituting a rigid support adapted to support the motor.

1,504,679. EXTENSIBLE BUMPER FOR VEHICLES. JAMES JOSEPH DIETZ, South Jacksonville, Fla. Filed Apr. 7, 1924. Serial No. 704,863. 5 Claims. (Cl. 293—55.)



1. In combination with the frame of a vehicle, a bumper comprising tubular supporting members attached to said frame, a bumper portion having supporting arms slidable in said supporting members, and fastening elements extending through each companion supporting member and arm for retaining the bumper portion in any desired adjusted position with respect to the vehicle frame and supporting members.

1,504,680. ADJUSTABLE MICROMETER. JOSEPH FERNANDEZ, Oakland, Calif. Filed Aug. 29, 1921. Serial No. 496,237. 3 Claims. (Cl. 33—165.)

1. An adjustable micrometer, having a fixed abutment and a slidable measuring stem, a tubular extension bearing supported on a tubular head and adapted to support said stem when it is in an extended position and contacting with the stem for a considerable distance to form a bearing for said stem, and a micrometer for reading the measurements.

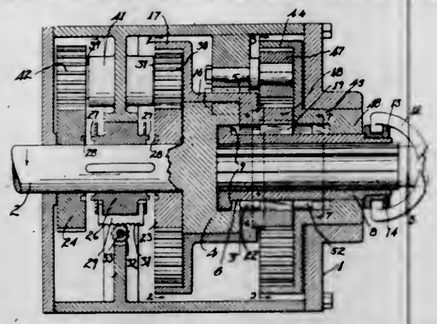
1,504,681. DRIVING MECHANISM. GEORGE J. FITZPATRICK, Chicago, Ill. Filed May 29, 1922. Serial No. 564,370. 6 Claims. (Cl. 74—7.)

1. Driving mechanism of the character described, comprising a holding frame provided with sloping sides, a shaft rotatably mounted in said frame and disposed therethrough in a diagonal manner relative to the sloping sides of the frame, a bridge member rotatably secured to one sloping side of said frame and extending to the upper end of the shaft, an internally toothed gear secured to said bridge member in an inclining diagonal manner relative to the longitudinal axis of the shaft and adjacent to opposite sides thereof, means whereby rotative movement of the gear will be transmitted to said shaft, and a handle secured to said bridge member whereby the latter and said gear may be rotated.

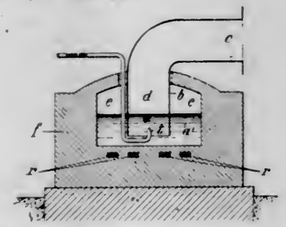
1,504,682. LAMP. JOSEPH FRALING, Bemidji, Minn. Filed Feb. 12, 1924. Serial No. 692,318. 2 Claims. (Cl. 240—10.)

1. A lamp comprising a housing the front face of which has angular recesses in the periphery thereof, a closely fitted front face on the housing formed of a material permitting the passage of light rays, a lamp within the housing, an extension cord leading to the lamp and constituting a support for the housing, means for connecting said cord to the upper portion of the housing, and a group of radiating tongues within each angular recess of the housing.

1,504,683. GAUGE. RUDOLPH V. FUSCO, Brooklyn, N. Y. Filed Apr. 25, 1921. Serial No. 464,199. 2 Claims. (Cl. 33—178.)



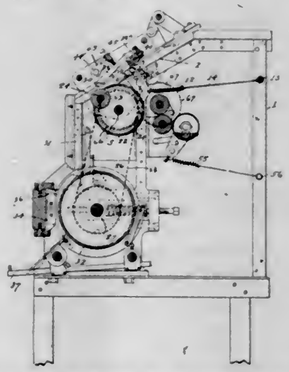
1. A device of the class specified, comprising in combination a gauge member having diverging faces, a tubular portion extending laterally therefrom in a line coincident with the vertex of the diverging faces and arranged with graduations, a plunger slidably mounted in said tubular portion normally yieldingly maintained in position with a portion of the plunger projecting between the gauge faces to a predetermined extent, a pointer carried by the plunger to co-operate with the graduations, a scribing tool, and a carrier therefor mounted on the tubular portion to have adjustment longitudinally thereon and adapted to be secured in variable predetermined positions in relation to a second set of graduations on said tubular portion for the purpose specified.



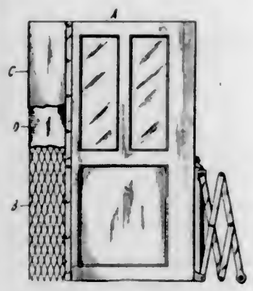
1,504,684. TRANSMISSION. JOSEPH C. GALLAGHER, Reno, Nev., assignor of one-eighth to Frank Knowles, Reno, Nev., one-eighth to Patrick Salmon, San Francisco, Calif., and one-eighth to R. E. Vice, Virginia City, Nev. Filed July 21, 1923. Serial No. 652,982. 9 Claims. (Cl. 74—59.)

1. In a change speed transmission, a drive shaft, a driven shaft alined therewith, a sleeve slidable on the driven shaft having means thereon for directly engaging the drive shaft, a member surrounding both the drive shaft and the sleeve, two gear wheels rotatable on the

drive shaft in spaced relation, an element slidable between the gear wheels adapted to be engaged with either of them for rotating the same, means for transmitting motion to the said member from the gear wheels in opposite directions and means for transmitting motion from the said member to the sleeve when the latter is slid backwardly.

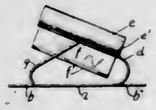


1,504,685. PROCESS FOR MANUFACTURING OXIDE OF WHITE ANTIMONY. ANTONIN GERMOT, Asnieres, France. Filed Sept. 11, 1922. Serial No. 587,451. 1 Claim. (Cl. 134—58.)



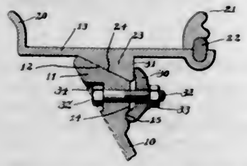
A process for making pure Sb_2O_3 suitable for the manufacture of paints and free from higher oxides, comprising blowing an oxygen containing gas into a bath of molten antimony which is held in a closed chamber, and collecting the thus formed clouds of oxide of antimony in receiving chambers.

1,504,686. INKING MACHINE. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Company, Chicago, Ill., a Corporation of West Virginia. Filed Nov. 7, 1919. Serial No. 336,378. 6 Claims. (Cl. 101—363.)



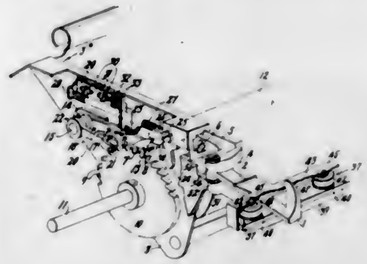
1. In an inking machine, the combination with a cylindrical rotatable ink reservoir having small perforations in the periphery thereof, of means for forcing the ink to the outside surface of the ink reservoir, distributing means frictionally contacting the ink reservoir, a feed roll with an inking roll rotatably mounted thereon, said inking roll adapted to procure ink from the distributing means and printing means positioned relative to the travel of said inking roll whereby the ink is transferred from the distributing means to the printing means.

1,504,687. CAR DOOR. PERCY M. GRIFFIN, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Apr. 9, 1924. Serial No. 705,257. 1 Claim. (Cl. 20—19.)



A sliding door having its front edge provided with a spring mesh formed of resilient metal bands disposed in planes transverse to the plane of the door.

1,504,688. CUTTING DEVICE. WILLIAM HAAS, Arlington, N. J. Filed Oct. 20, 1923. Serial No. 669,661. 1 Claim. (Cl. 30—14.)



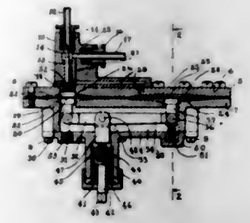
As an article of manufacture, a cutting device comprising the combination with a safety razor blade having a single cutting edge of a pressed sheet metal frame formed with a base portion having struck out therefrom apertured ears for securing said device to a surface, a portion bent upwardly at an angle with said base and formed with a slot for the passage of the blade substantially downwardly therethrough and disposed as a support therefor, a tubular member secured to the upper side of the blade support to retain the blade in cutting position, and a portion of said frame formed with a slot for the passage of the blade and bent upwardly towards said first mentioned portion to form an angle with the cutting edge of the blade to guide the article to be cut in contact therewith.

1,504,689. VEHICLE WHEEL. JAMES E. HALE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 19, 1921. Serial No. 501,662. 3 Claims. (Cl. 301—19.)

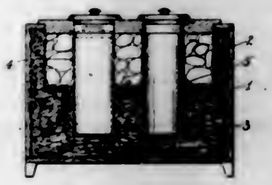
1. A vehicle wheel comprising a demountable tire rim having a centrally located frusto-conical supporting surface, a wheel embodying a disk portion with a substantially thickened peripheral portion, said peripheral portion having a frusto-conical surface adapted to cooperate with the corresponding surface of the tire rim, and clamping means associated with the wheel portion embodying a plurality of clamping members each of which is adapted to seat below the thickened portion of the wheel and to engage a lateral surface of the tire rim, and a bolt disposed intermediate the seating surfaces of the clamp for operating each of the clamps.

1,504,690. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 7, 1921. Serial No. 499,015. 17 Claims. (Cl. 197—114.)

1. In a typewriting machine, in combination, a platen, a ratchet-wheel connected to said platen, an actuating pawl for said ratchet-wheel, means for driving said pawl a given distance, means for adjusting the position of said pawl, and means for bodily adjusting said driving means to correspond to the adjustment of said pawl.



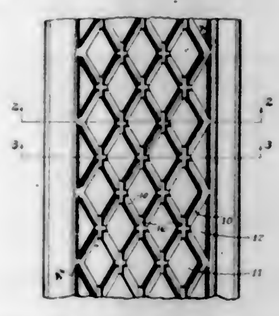
1,504,691. SAFETY SYSTEM FOR ELECTRIC NETWORKS. MARTIN HÖCHSTÄDTER, The Hague, Netherlands, assignor to N. V. Lijn-Protectie, The Hague, Holland. Filed Sept. 7, 1921. Serial No. 499,054. 2 Claims. (Cl. 175—294.)



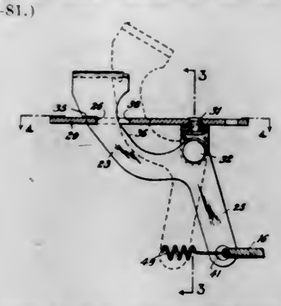
2. A safety system for automatically cutting out faulty sections of electric networks, having a sub-divided conductor in each section, a magnetically saturated transformer at each end of a section, having its primary winding connected to one branch and its secondary winding in the other branch of the section, so as to effect the magnetization of the transformer in opposite direction, the ratio of transformation of one transformer of a section being smaller and that of the other transformer being greater than the ratio of impedance of the sub-divided conductors.

1,504,692. EXPANSION VALVE FOR REFRIGERATING SYSTEMS. GEORGE F. KNOX, Milwaukee, Wis. Filed Mar. 16, 1922. Serial No. 544,260. 6 Claims. (Cl. 50—10.)

1. A device of the class described comprising a casing having an inlet and an outlet fluid passage, a pair of pressure chambers, and by-passes connecting said outlet passage with said chambers; a diaphragm in each of said chambers; a valve carried by one of said diaphragms, for controlling said fluid passages; a spring associated with said diaphragm within said casing, normally tending to open said valve; connections between said diaphragms whereby pressure upon the second diaphragm will act in opposition to the pressure on the first diaphragm and to the force of said spring; and means for varying the force exerted by said spring.

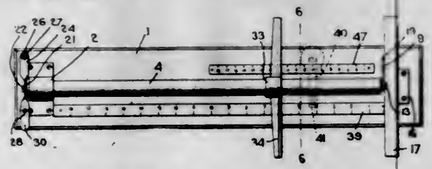


1,504,693. REFRIGERATOR. HARVEY R. LINDSAY, Oakland, Calif. Filed Apr. 24, 1923. Serial No. 634,273. 6 Claims. (Cl. 62—87.)



4. A refrigerator comprising a housing, a tank in the upper portion thereof, adapted to contain a cooling mixture, a water-tight receptacle within said tank and protruding through the bottom thereof and hermetically sealed where it passes through said bottom, and insulating material in the space between said housing and said tank and around the protruding portion of said receptacle.

1,504,694. VEHICLE TIRE. PAUL W. LITCHFIELD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 27, 1921. Serial No. 495,866. 16 Claims. (Cl. 152—1.)

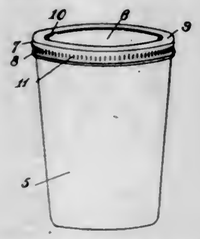


5. A resilient tire having relatively narrow tread indentures of varying depths, the depths of said indentures varying directly in accordance with their distance from the side of the tire and the distance between adjacent indentures being greater than the width of the indenture.

1,504,695. PEDAL. GEORGE F. LONG, New York, N. Y. Filed Aug. 14, 1922. Serial No. 581,705. 9 Claims. (Cl. 74—81.)

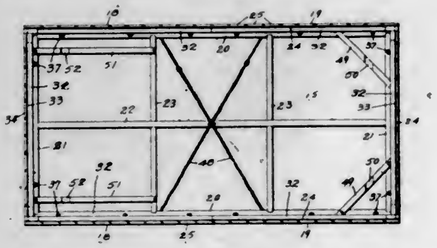
1. In a pedal actuated control mechanism for a cut-out, the combination with a pedal arm, of a base plate having a slot through which a portion of the pedal arm oscillates, said slot having a lateral notch for engaging the pedal arm in one of its positions, and means pivotally secured to said plate for supporting the arm.

1,504,696. CUTTING DEVICE FOR GLASS AND OTHER ARTICLES. CLIFTON R. MACLEAN, Stoughton, Mass. Filed Feb. 20, 1922. Serial No. 537,711. 17 Claims. (Cl. 33—26.)



4. A glass cutting device comprising a pair of rock shafts having arms provided with cutting instrumentalities positioned to engage opposite faces of the article to be cut and a single resilient pressure-applying means acting upon both of said rock shafts to force the cutting instrumentalities against the opposite faces of the article with equal pressure.

1,504,697. ABRASIVE COMPOUND. JOSEPH A. MENARD, Seattle, Wash. Filed June 30, 1919. Serial No. 307,590. Renewed May 12, 1921. Serial No. 469,032. 3 Claims. (Cl. 51—280.)



1. An abrasive compound for grinding in bearings and finishing bearing surfaces containing lead, silica and sodium in substantially the proportions stated.

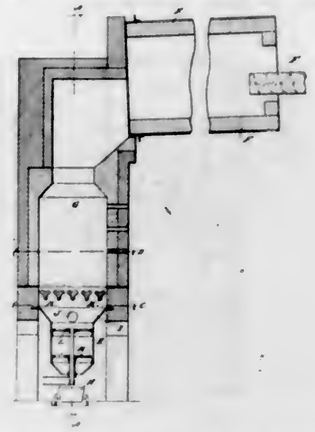
1,504,698. CLOSURE FOR RECEPTACLES. AUGUSTUS L. MEROLLE, Brooklyn, N. Y., assignor to Empire Metal Cap Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 21, 1920. Serial No. 418,561. 2 Claims. (Cl. 215—38.)

1. A sheet metal receptacle closure comprising a cover portion and a continuous integral annular flange portion, the cover portion being adapted to rest flat upon the upper annular edge surface of a receptacle and the flange portion being adapted to telescope over the adjacent substantially straight outer surface of the receptacle, the flange portion being resilient and being of a size relative to that of the receptacle requiring it to be expended by forced movement downwardly over the receptacle whereby it will exert throughout its circumference a crushing strain against the receptacle and thereby frictionally retain the closure against displacement, and the cover portion having a downwardly projecting annular shoulder therein arranged to project into the receptacle in engagement with the inner surface of the receptacle to thereby reinforce the receptacle in withstanding the continued pressure of the flange.

1,504,699. KNOCKDOWN EXPORT PACKING BOX. ADOLPH MILLER, Kirkwood, Mo. Filed May 17, 1923. Serial No. 639,506. 6 Claims. (Cl. 217—12.)

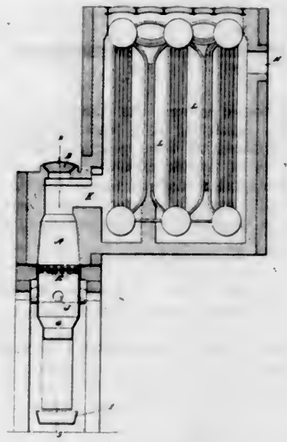
1. A knock-down export packing box comprising a top, a bottom, end and side members, headed means carried by the side and end members and adapted to have the heads thereof engage with the edges of the top and bottom for holding the box in assembled position, and means for tightening said headed means when in engagement with the top and bottom.

1,504,700. ELECTROPLATING APPARATUS. JOSÉ LUIS MUJICA, Brooklyn, N. Y., assignor to U. S. Galvanizing & Plating Equipment Corporation, a Corporation of West Virginia. Filed Aug. 17, 1922. Serial No. 582,337. 17 Claims. (Cl. 204—5.)



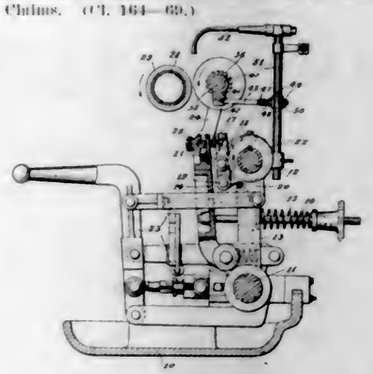
1. In apparatus for liquid treatment of articles, the combination with a tank, of endless means for supporting and moving the articles around the tank, and means for supporting said conveying means from the tank comprising a series of cross members and an adjustable connection permitting the length of said article supporting and conveying means to be varied.

1,504,701. PROCESS AND APPARATUS FOR MAKING CEMENT. SPENCER B. NEWBERRY, Cleveland, Ohio; Andrew W. Newberry, executor of said Spencer B. Newberry, deceased, assignor of one-half to Andrew W. Newberry and one-half to Arthur C. Newberry. Filed Jan. 24, 1921. Serial No. 439,486. 16 Claims. (Cl. 222—3.)



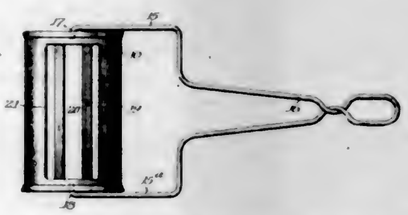
13. In a device of the class described the combination of a vertical kiln having an outlet at the top of a movable grate at the bottom to support the mass in the kiln and regulate and control the discharge of clinker through it, a pipe for supplying air under pressure to

the space below the grate, a substantially air tight closure below said grate of funnel shape with a central discharge



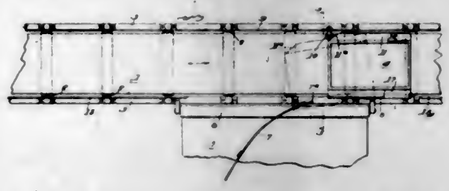
extension, a pair of spaced valves in said extension and means for feeding material containing carbonaceous combustible matter to said kiln at the top.

1,504,702. PROCESS FOR BURNING CEMENT CLINKERS. SPENCER B. NEWBERRY, Cleveland, Ohio; Andrew W. Newberry, executor of said Spencer B. Newberry, deceased, assignor of one-half to Andrew W. Newberry and one-half to Arthur C. Newberry. Filed July 7, 1921. Serial No. 483,084. 11 Claims. (Cl. 222—4.)



10. The process of producing cement clinker comprising forming small coherent masses of cement raw materials and carbonaceous fuel, the constituents of which are so proportioned that the argillaceous matter will be less than that required by an amount which will be replaced by the ash produced when the combustible constituents are burned, supplying said masses to the upper surface of a laterally enclosed and heat insulated body of predetermined height composed of similar masses, forcing a strong blast of air upwardly through said body to support and cause the combustion of the combustible constituents and discharging the cement clinker thereby produced at the bottom agitating the body of material during the passage of air for combustion and disintegrating coherent masses of clinker as they are discharged.

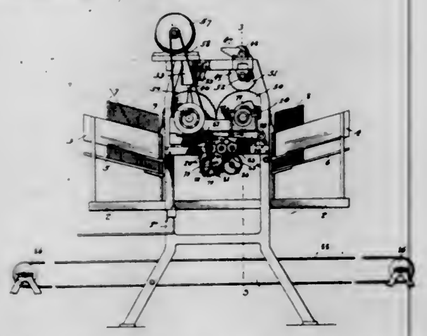
1,504,703. KNIFE-FEEDING MECHANISM FOR RUBBER AND FABRIC CUTTING MACHINES. WILLIAM NICHOLAS, Bridgeport, Conn., assignor to The Black Rock Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 20, 1923. Serial No. 626,305. 5 Claims. (Cl. 164—69.)



1. In a machine of the character described, a rotatable tube supporting mandrel, a circular cutting knife, means adapted to impart inward and outward movement to the knife to engage and disengage it with the tube, and means adapted to intermittently rotate said knife during its inward movement through a partial revolution independently of the rotation of the tube.

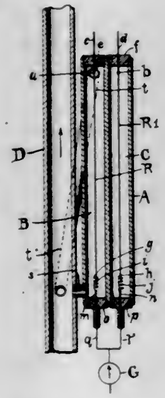
1,504,704. MIXING DEVICE. MATILDA J. NORDSTRAND, Chicago, Ill. Filed May 17, 1923. Serial No. 639,503. 8 Claims. (Cl. 259—2.)

1. A dough mixer comprising in combination, a cylindrical member having a mixing opening in its side wall, a discharge opening oppositely disposed with relation to said mixing opening, and a handle on which said cylindrical member is mounted.



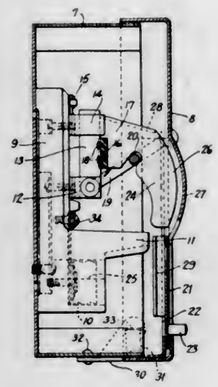
1,504,705. AUTOMATIC SELECTIVE CONVEYER SWITCH DEVICE. SAMUEL OLSON, Chicago, Ill., assignor to Samuel Olson & Company, Chicago, Ill., a Corporation of Illinois. Filed May 27, 1922. Serial No. 564,016. 12 Claims. (Cl. 186—1.)

1. In a conveyer a load carrier to travel thereon, a fixed switch member positioned out of the normal path of the load carrier, means on the carrier adapted for



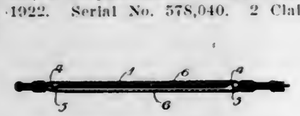
engagement with the switch member and fixed means adjacent the normal path of the load carrier adapted to divert the carrier from said normal path for engagement and control of the switch member.

1,504,706. WRAPPING MACHINE. PETER PACHTER, Chicago, Ill. Original application filed Jan. 6, 1919, Serial No. 269,832. Now Patent No. 1,453,636. Divided and this application filed June 25, 1920. Serial No. 391,715. 5 Claims. (Cl. 270—27.)



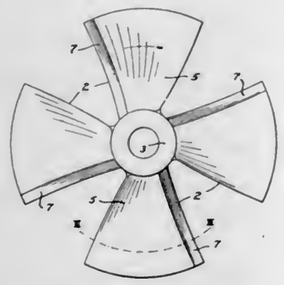
1. A wrapping machine of the class described, comprising correlated cylinders arranged to rotate toward each other, gripping means on said cylinder whereby paper stock is held on the cylinders for a predetermined period, means timed with the cylinders whereby adhesive substance will be applied to a predetermined point to the stock held on one cylinder, means for actuating the gripping means when the cylinders reach a predetermined point in their rotation to release the paper stock from the cylinders, a sectional cylinder arranged in the path of the released stock, means cooperating with said sectional cylinder adapted to roll the sheets upon themselves into tubular form.

1,504,707. GAS ANALYSIS. JACOB C. PETERS, Jr., State College, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1924. Serial No. 684,133. 21 Claims. (Cl. 23—3.)



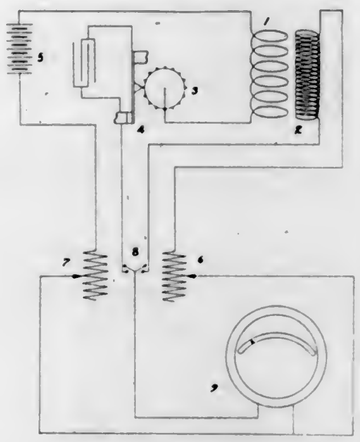
1. In the art of gas analysis, the method of procuring a sample from an enclosed current of the gas to be analyzed, which comprises effecting passage of the gas substantially solely by convection from and back to points in said current between which the pressure difference is substantially nil.

1,504,708. SAFETY SWITCH. CLARENCE D. PLATT, Bridgeport, Conn. Filed Dec. 18, 1922. Serial No. 607,524. 10 Claims. (Cl. 200—50.)



1. In a safety switch, a casing, a cover having a panel slidable to open or close an aperture therein, a fixed contact, a movable contact, an operating bar, and a member to interconnect the movable contact and bar and to prevent opening of the panel when the contacts are closed.

1,504,709. INDEXING SYSTEM. FRANK D. POWELL, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of South Dakota. Filed July 28, 1922. Serial No. 578,040. 2 Claims. (Cl. 40—63.)

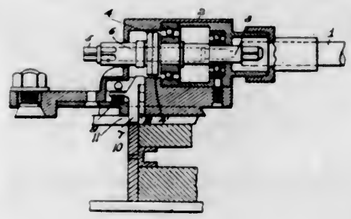


2. In an indexing system, the combination with a reversible frame, consisting of a web having a plurality of flanges positioned to form columns and adapted to engage the ends of flexible members, a plurality of longitudinally extending staggered raised portions adjacent and substantially parallel to the flanges, and functioning to assist in holding the strips and facilitating their removal.

1,504,710. ROTOR. JAMES F. ROBERTS, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 1, 1922. Serial No. 548,603. 16 Claims. (Cl. 253—153.)

1. A motor rotor vane the trailing edge of the working face of which is abruptly chamfered.

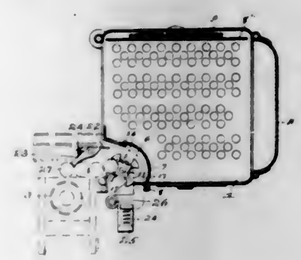
1,504,711. ELECTRICAL TACHOMETER. HERBERT O. RUSSELL, Detroit, Mich., and EDWARD A. SIPP, Dayton, Ohio. Filed Mar. 2, 1922. Serial No. 540,575. 1 Claim. (Cl. 175—368.)



In an electrical tachometer, a primary electric circuit, a constant voltage source of electrical energy in said circuit, circuit make and break means in said circuit, an electrically controlled meter in said circuit graduated in R. P. M., a rheostat also in said circuit, a secondary circuit including said meter and a second rheostat, and a double-throw switch controlling said circuits.

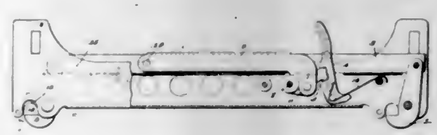
1,504,712. CONTROL FOR SYNCHRONIZED GUNS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,430. 3 Claims. (Cl. 89—27.)

3. A control for synchronized guns embodying a tubular casing, an impulse cable therein, and means for varying the effective length of said casing, and means for adjusting the primary effective length of the casing relative to said impulse cable.



1,504,713. FLEXIBLE-SHAFT SYNCHRONIZING GEAR. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,399. 10 Claims. (Cl. 89—27.)

1. In a synchronizing gear for machine guns, an engine driven shaft terminating at one end in a serrated disc, a cam shaft terminating at one end in a serrated disc adapted to mesh with said first named disc to effect the adjustment of said cam shaft in relation to said first named shaft about their longitudinal axes, a sear slide operating plunger adapted to be actuated by the cams on said cam shaft.

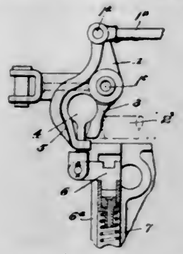


8. In synchronizing gear for machine guns, a trigger motor embodying a housing, a driving shaft, a cam on said shaft, and a sear-operating slide adapted to be moved out of operative position when struck by the sear slide of the gun.

1,504,714. MACHINE GUN AND HOPPER FEED BOX THEREFOR. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,401. 6 Claims. (Cl. 89—33.)

6. In combination with a machine gun, a mounting bracket detachably secured thereto, a hopper fed box detachably held on said bracket and having a cartridge outlet opposite the feed way of the gun, a rotatable cartridge feeding wheel carried by said bracket and positioned between said outlet and feed way, and means controlled by the cartridge feeding means of the gun for rotating said wheel to transfer the cartridges from the feed box to the gun feed way, the wheel rotating means embodying rack and pinion mechanism and a rack return spring.

1,504,715. BOMB-RELEASING SHACKLE. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,404. 3 Claims. (Cl. 244—1.)

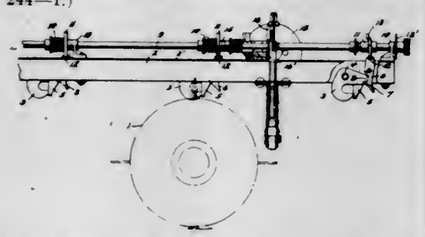


1. In a bomb-releasing shackle, a supporting bar, bomb-holding hooks pivotally mounted on said bar, a tie rod connecting said hooks to cause simultaneous operation thereof, a link pivoted at one end to said tie rod, a second link pivoted to said support and connected by a pivot to the first named link, and a trigger for holding and releasing said second link, all of the pivots of the links being in a straight line with each other when the shackle is set.

1,504,716. IMPULSE GENERATOR. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,408. 3 Claims. (Cl. 89—27.)

1. In an impulse generator, an impulse lever, a cam-actuated pin for operating said lever, an idler arranged

in the path of said pin between said pin and impulse lever, and a shiftable expanding member movable be-

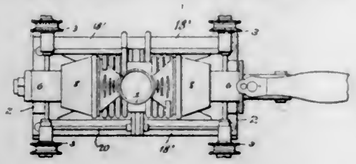


tween said idler and lever to render said lever operative or inoperative and means for shifting such expander member.

1,504,717. AUTOMATIC COCKING ATTACHMENT FOR MACHINE GUNS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,411. 3 Claims. (Cl. 89—2.)

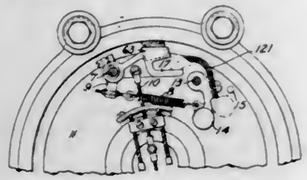
1. The combination with the bolt of a machine gun, of automatic cocking means embodying a normally free cocking rod connected to and operating in unison with the bolt, a spring plunger for thrusting said rod rearwardly upon failure of the gun to fire, and a catch for normally holding said spring in check but adapted to automatically release the plunger in case of non-fire.

1,504,718. SELECTIVE ELECTRIC CONTROL FOR BOMB-RACKS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,420. 11 Claims. (Cl. 244—1.)



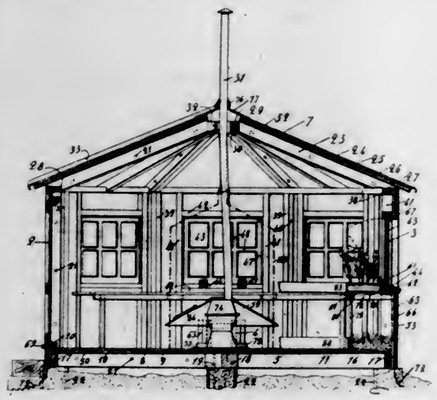
1. In combination with a bomb-supporting frame member, a bomb-supporting hook, a trigger for locking said hook, and a rotary cam shaft having a cam to operate said trigger to release the hook, said cam being movable longitudinally of said shaft.

1,504,719. FLEXIBLE GUN MOUNT. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,421. 8 Claims. (Cl. 89—40.)



1. In a flexible gun mount for aircraft, a curved track, a wheeled carriage movable along said track, a gun supporting member mounted on said carriage, and means for raising said carriage off of its wheels so that the weight of the carriage is taken by flat track engaging members.

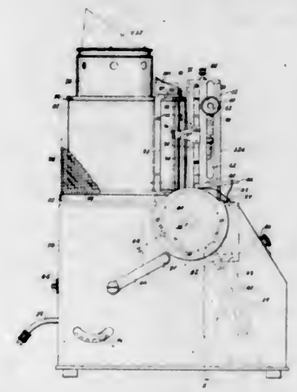
8. In a gun mount for aircraft, a gun support, means for moving said support about a horizontal axis, means



for moving said gun support about a second axis, and a single means operable selectively to prevent rotation of said gun support about either of said axes.

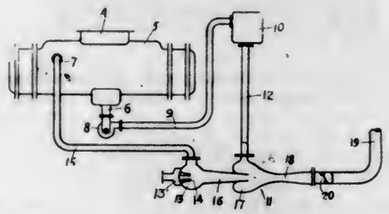
1,504,720. CENTRIFUGAL SHORT-CIRCUITING AND BRUSH LIFTING DEVICE. FRED V. SAMS, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1919. Serial No. 320,288. 6 Claims. (Cl. 172—120.)

1. In combination, a relatively stationary conducting ring, rotatable means, a brush movably mounted on said rotatable means coactable with said ring, means for biasing said brush into engagement with said ring, a contact movably mounted on said rotatable means, a weight adapted to be moved by centrifugal force rigidly associated with said contact, means for restraining said weight, and a conducting projection associated with said brush extending into the path of movement of said contact means whereby said contact will first engage said projection and then move said brush out of engagement with said ring.



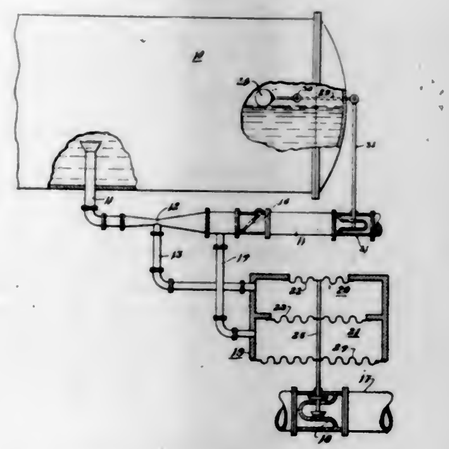
1,504,721. COMBINED BROODER AND GREENHOUSE. LÉON SAUVÉ, Ridgefield, Conn., and LUCIEN ARDIN, New York, N. Y. Filed Jan. 26, 1922. Serial No. 531,932. 16 Claims. (Cl. 119—32.)

1. A combined brooder and greenhouse comprising a house for raising chicks, the house being of polygonal shape, and having its sides and roof formed of separable



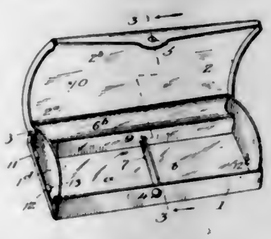
sections, one of the sides having a door to permit the entrance of the attendant a central heater within the house for heating it, a plurality of boxes arranged around the inside of the house and adjacent to the sides, for receiving soil for growing plants, means for supporting said boxes out of reach of the chicks, and radial division panels extending from said boxes to said central heater each of said panels rising above said floor the tops of the panels being below said boxes and the height of the panels permitting the attendant to step over them.

1,504,722. MOVING-PICTURE PROJECTOR. HERMAN C. SCHLICKER, Milwaukee, Wis., assignor of one-half to John R. Freuler, Milwaukee, Wis. Filed Oct. 17, 1919. Serial No. 331,499. 58 Claims. (Cl. 88—16.)



1. A moving picture projector, comprising means for intermittently moving a transparent film having a spiral line of pictures thereon, a projecting lens adjacent the film and continuously movable approximately at right angles to the film movement and at a speed corresponding to the speed of travel of the line of pictures longitudinally of the axis of movement of said pictures, and means for directing a ray of light through the film and the lens.

1,504,723. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919, Serial No. 296,671. Renewed May 11, 1922. Serial No. 560,263. 10 Claims. (Cl. 103—6.)

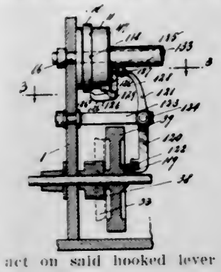


1. In combination in a condenser installation, an air ejector means, condensate ejector means into which the air ejector means discharges, an elevated receiver for delivering condensate withdrawn from the condenser to the condensate ejector means, and means for elevating condensate from the condenser to said receiver.

1,504,724. FUEL CONTROL. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 3, 1921. Serial No. 434,637. 9 Claims. (Cl. 122—449.)

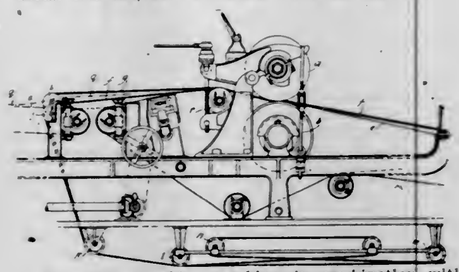
1. The method herein described of controlling combustion in furnaces which consists in regulating the supply of fuel in accordance with the boiler pressure and further varying the feed of said fuel in accordance with variations in the rate of feed water supply.

1,504,725. CONTAINER. CONRAD SCHUMACHER, Lynbrook, N. Y., assignor to Auto Strop Co., New York, N. Y., a Corporation of New York. Filed Dec. 13, 1921. Serial No. 521,984. 3 Claims. (Cl. 206—16.)



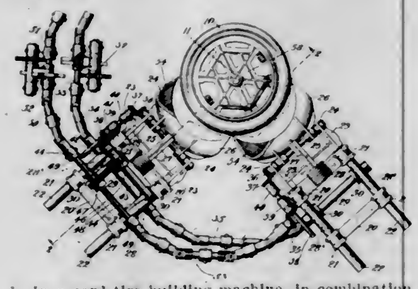
1. A container comprising a hollow body, a member extending lengthwise within the body, and a strip extending across the body between one of its walls and said member, said wall having an outwardly extending recess receiving an end of said strip to retain them from displacement, and a cover hinged to the container and having a flange provided with a recess to receive the first named recess to retain the cover closed.

1,504,726. FILM-FEEDING MECHANISM FOR CINEMATOGRAPHS. HERMAN N. SEFFERT, Brooklyn, N. Y. Filed Nov. 13, 1922. Serial No. 600,575. 1 Claim. (Cl. 74—14.)



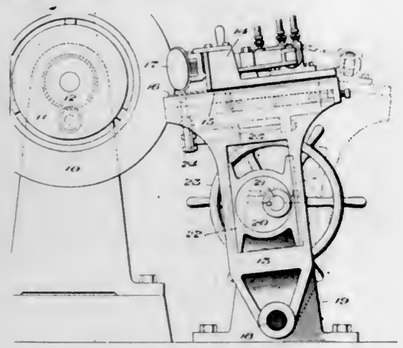
In a film feeding mechanism for cinematographs or the like, the combination with the driving shaft and the film feeding drum shaft, of a continuously freely revolving body on said second shaft, a notched disk loose on the latter, a hooked spring actuated lever carried by said revolving body and engaging a notch in said disk

to couple it to said body, a cam on said driving shaft and a lever operated from said cam and adapted to



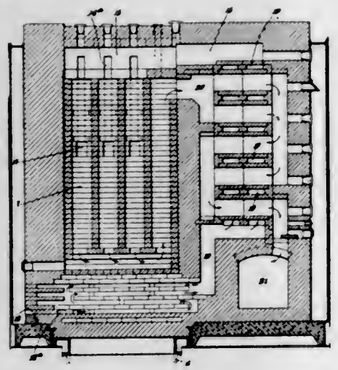
intermittently act on said hooked lever to uncouple it from said disk.

1,504,727. PAPER-MAKING MACHINE. WILLIAM SHEAHAN, Ocean Falls, British Columbia, Canada; LAMAR TOOZE, administrator of said William Sheahan, deceased, assignor to Joseph W. Sheahan, Los Angeles, Calif., and MARIE B. TOOZE, Eugene, Oreg., and EDWARD K. SHEAHAN, Los Angeles, Calif., and LOUISE M. SHEAHAN, Eugene, Oreg., jointly. Filed Aug. 29, 1921. Serial No. 496,794. 5 Claims. (Cl. 92—49.)



1. In a paper making machine, in combination with the press-rolls of means for conducting the web of paper thereto, such means comprising a sheave element mounted on the periphery of one end of the upper press-roll, a pair of endless travelling carriers bearing in said sheave element, side by side, the carrying surface of said sheaving element being below the web carrying surface of said press-roll by the thickness of said carriers, so that the web-carrying surfaces of the latter will travel approximately at the same speed as said drier-rolls, sheaves arranged for conducting said carriers to and from said press-rolls, the sheaves in front of the latter being adapted to separate said carriers at the web receiving end so as to permit the lead-end of the web to be placed between them.

1,504,728. CORD-TIRE-BUILDING MACHINE. KNUT O. B. TEXTORIUS, New York, N. Y., assignor to Tex Engineering Corporation, New York, N. Y. Filed May 27, 1921. Serial No. 473,087. 28 Claims. (Cl. 154—11.)

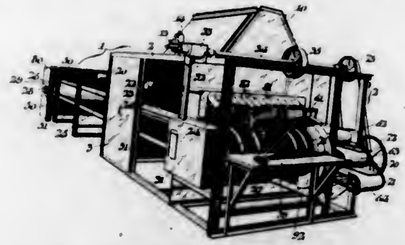


1. In a cord tire building machine, in combination with a tire forming core, a cord holder mounted for bodily swinging movement, and means for swinging said holder from a cord receiving position in angular relation to the core to a position in radial alignment therewith.

1,504,729. TIRE-BUILDING MACHINE. ROLAND S. TROGNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 23, 1919. Serial No. 332,667. 13 Claims. (Cl. 154—10.)

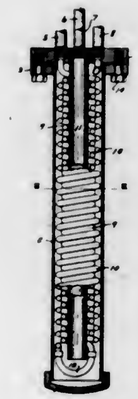
12. A tire-building machine including a tire-forming core, a stitcher-supporting instrumentality associated with the core, and a stitcher device on the instrumentality and movable toward the core and maintained in relation thereto by the force of gravity.

1,504,730. PROCESS OF CARBONIZATION. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 11, 1919. Serial No. 310,131. 5 Claims. (Cl. 252—3.)



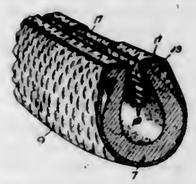
1. The process of producing porous decolorizing carbon having highly active surfaces, comprising feeding distillery waste into a highly heated zone to drive off the water, and then feeding it into a zone of a lesser temperature to complete the carbonization.

1,504,731. DRYING MACHINE. HARRY H. WIGGLESWORTH and HAROLD O. KAUFMANN, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1922. Serial No. 550,956. 21 Claims. (Cl. 34—12.)



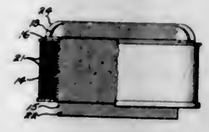
19. A drying machine, comprising a conveyor, a drying chamber through which the conveyor passes, means to support hosiery forms on the conveyor so that when the latter is filled with hosiery forms of maximum length

the entire operating surface of the conveyor will be covered thereby, means to direct a current of air through



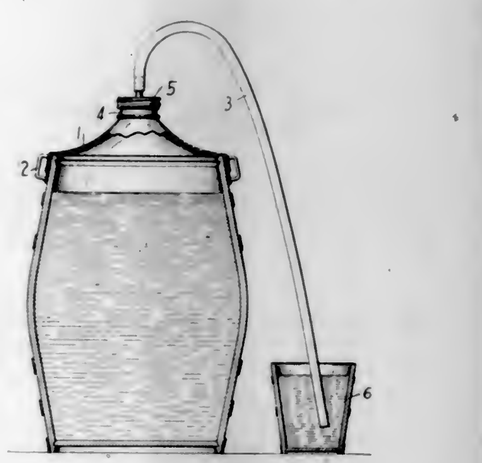
the conveyor and between the forms, and means to cover a portion of the conveyor when shorter forms are used so as to direct the air current between said short forms.

1,504,732. LIQUID COOLER. JAMES WILSON, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 2, 1920. Serial No. 414,245. 5 Claims. (Cl. 257—229.)



2. In a cooler, a pair of helical tubular coils screwed one within the other and having their lower ends connected to form a single conduit beginning at the upper end of one of said coils and terminating at the upper end of the other coil, a vertical cylindrical member located within and in close proximity to the innermost portion of said coils, and a vertical tubular casing surrounding and located in close proximity to the outermost portion of said coils.

1,504,733. PACKAGE. EDWARD H. ANGIER and WILLIAM M. WHEILDON, Framingham, Mass.; said Wheildon assignor to said Angier. Filed Mar. 14, 1922. Serial No. 543,689. 16 Claims. (Cl. 206—46.)

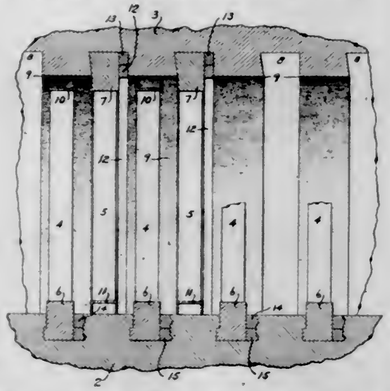


5. A package comprising a toric article and a wrapping applied circumferentially along one of the circumferences thereof and overlying the sides of the tire, said wrapping comprising throughout its area differentially expanded gatherings and thereby conforming to the enclosed article, the edges of the wrapping being tucked into the interior of the article.

1,504,734. FIELD-POLE CONSTRUCTION. ROBERT W. BORCHARD, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 6, 1921. Serial No. 475,516. 10 Claims. (Cl. 171—252.)

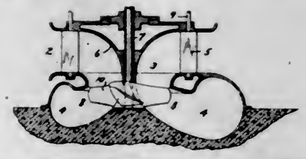
7. A pole end-plate built up out of sheet stock, comprising a member bent out of its general plane at one end to form a shelf, a second member having a portion thereof bent out of its general plane and forming a brace for said shelf.

1,504,735. BARREL CLOSURE. ANNA BRECHAK, Dayton, Ohio. Filed Nov. 6, 1922. Serial No. 599,279. 6 Claims. (Cl. 217—105.)



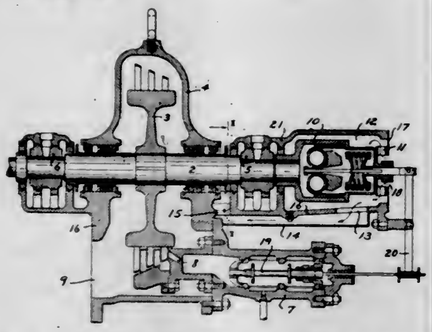
1. A closure for barrels and the like comprising a hood of flexible material having an elastic circumferential edge portion adapted to be stretched about the open end of a barrel, and handles applied to said edge portion of said hood to facilitate the application of said hood to a barrel.

1,504,736. MEANS FOR PROTECTING TURBINE SURFACES. EDWIN H. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 6, 1920. Serial No. 380,011. 2 Claims. (Cl. 253—39.)



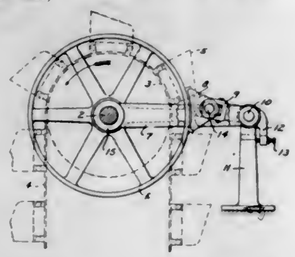
1. In a fluid actuated turbine, a plurality of stationary blades, a non-corrodible foundation strip rigidly attached to corresponding ends of said blades, a corrodible casing

within which said foundation strip is rigidly secured, and a non-corrodible coating of erosion resisting metal in the form of a film deposited as minute particles permanently



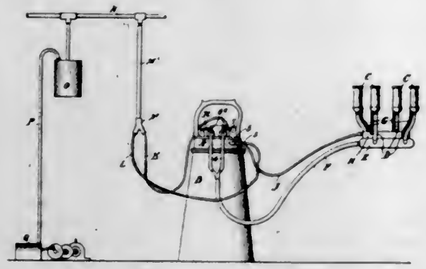
attached and closely adhering to said casing and covering a portion thereof otherwise exposed to fluid passing said blading.

1,504,737. HYDRAULIC TURBINE. EDWIN H. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 1, 1921. Serial No. 481,745. 20 Claims. (Cl. 253—148.)



17. In combination, a turbine impeller having non-overlapping vanes, conduit means formed to positively produce a whirling stream of liquid and to deliver said stream axially toward said impeller, and means for effecting free discharge of whirling liquid from said impeller in both axial and radial directions.

1,504,738. BEARING. EDWIN H. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 4, 1922. Serial No. 592,207. 4 Claims. (Cl. 253—39.)

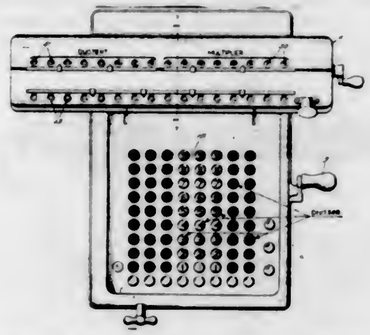


1. In combination with a steam turbine having a stationery lower casing, a bearing secured to an end of said casing, and removable caps coacting with said casing and bearing, of a steam supply conduit located beneath said bearing and communicating with said casing, means forming a confined cooling duct extending horizontally between said bearing and said conduit, and a fan operable by said turbine to produce a flow of air through said duct.

1,504,739. ELEVATOR BRAKE. JOHN W. BROWN, West Allis, and ALEXANDER J. NICHT, Jr., Milwaukee, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 24, 1920. Serial No. 354,207. 3 Claims. (Cl. 188—81.)

1. In combination, a horizontally disposed rotary shaft, a horizontally disposed pivot spaced horizontally from said shaft, and a single toggle connecting said pivot and said shaft, one element of said toggle comprising a link and the other element comprising a brake wheel secured to said shaft and a shoe having surface coaction with said wheel, rotation of said shaft in one direction tending to flex said toggle while maintaining said surface coaction and reverse rotation of said shaft tending to straighten said toggle and stop said shaft.

1,504,740. MILKING-MACHINE PULSATOR. EDWIN DE HAVEN CALDWELL, Fredonia, N. Y., assignor, by mesne assignments, to Empire Milking Machine Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Aug. 19, 1920. Serial No. 404,630. 10 Claims. (Cl. 31—101.)



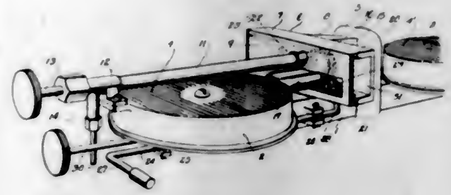
1. In a milking machine, a source of suction, a suction line and a suitable milking device for attachment to a cow, an intermediate mechanism to control the pulsating of the milking device, means related to said mechanism for interrupting the suction in the line to the milking device and means for operating the same by the variations in air pressure in the line, said means being connected in such a manner that the action of the regulator will vary fractionally with the variation of the suction on the line, and a quick-throw device actuating the pulsator mechanism.

1,504,741. COUNTING-WHEEL CARRY MECHANISM. GEORGE C. CHASE, South Orange, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1923. Serial No. 662,090. 64 Claims. (Cl. 235—137.)

1. In a calculating machine, reversible numeral wheels, and carry mechanism therefor including actuating means

having a universal element, members carried and reciprocated thereby, and members carried by the numeral wheels

and individually engaged by the actuator members, said means adapted to rotate said numeral wheels selectively in either direction.

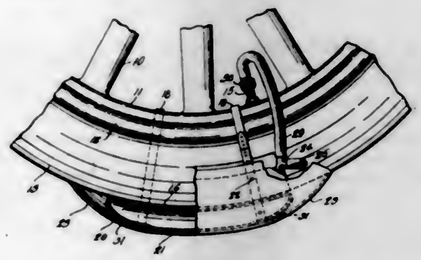


1,504,742. PENCIL. HAZELLE R. CHRISTIANSEN, Rockford, Ill. Filed Aug. 14, 1922. Serial No. 581,570. 5 Claims. (Cl. 120—18.)

5. A pencil comprising a hollow barrel having one end formed into a lead channel opening through the corresponding end thereof, the opposite end of said barrel being notched; a rotatable lead container in said body said lead container being provided in its periphery with a plurality of lead pockets open at both ends; a flange on said lead container provided with lugs adapted to fit the notches in said barrel; a sealing plate in said barrel at the inner end of said container, there being a notch in said sealing plate adapted to register with the respective pockets in said lead container upon rotation thereof; lugs on the sealing plate, there being notches in the inner walls of the barrel to receive said lugs and prevent turning of said sealing plate; a rotatable stem in said lead container, said stem being provided with an oblong bore; and a second stem operating in said oblong bore and having an oblong head at its outer end preventing rotation in said bore, the inner end of said inner stem being threaded in the inner end of said lead container, substantially as described.

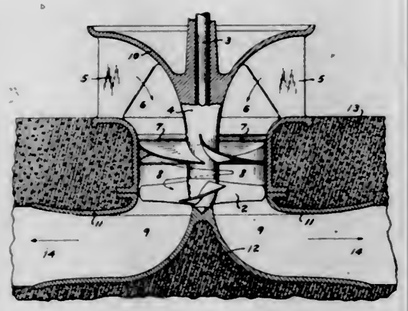
1,504,743. PREHEATER FOR GASOLINE STOVES. WILLIAM C. COLEMAN, Wichita, Kans. Filed Nov. 9, 1923. Serial No. 673,797. 6 Claims. (Cl. 158—83.)

6. An oil burner comprising a burner member adapted to burn vaporized liquid fuel, a vaporizer above the member, the length of the vaporizer being greater than the diameter of the member, the vaporizer having a discharge end, a mixing chamber into which the vaporizer discharges, means for communicating the mixing chamber with the member, a preheater cup having an upwardly



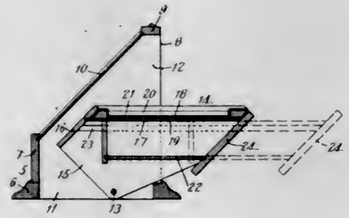
extending end adapted to align with the discharge end of the vaporizer when the preheater cup is beneath the vaporizer and a transversely movable slide supporting the preheater cup.

1,504,744. HINGE. RAY B. COX, Berkeley, Calif. Filed July 13, 1922. Serial No. 574,686. 7 Claims. (Cl. 16—165.)



1. A hinge having a pair of straps provided with corresponding right angular abutments and a plurality of spaced openings, a plurality of links hingedly connecting said straps together on opposite sides of said abutments, and a plurality of supporting members intermediate said links, hinge pins connecting said links and said supporting members, said supporting members having right angularly formed faces for engagement with said straps and said abutments.

1,504,745. TIRE PATCH AND PUMP. JOSEPH DE FABIO and ROBERT M. BANKS, Bridgeport, Conn. Filed Dec. 13, 1923. Serial No. 680,476. 5 Claims. (Cl. 152—24.)



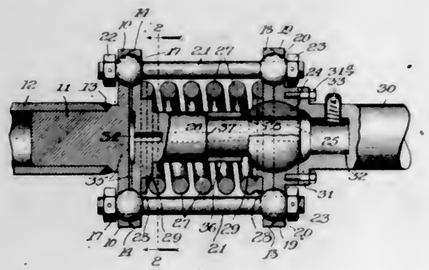
2. A combination patch and inflating device for pneumatic tires comprising spaced shoes of flexible material, a flexible rubber bag between said shoes the walls of which tend to separate, a non-return valve connected with said bag and the atmosphere, a tube leading from the bag adapted for connection to the filling nipple of a tire, and means for clamping the device on the tire with the inner shoe covering a break in the tire.

1,504,746. HYDRAULIC MACHINE. GEORGE F. DE WEIN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 27, 1922. Serial No. 547,142. 9 Claims. (Cl. 253—153.)

3. In combination, means for directing a flow of liquid in radial planes only with respect to an axis, means for causing the liquid to flow along said axis, means for positively causing the axially advancing liquid to whirl, means forming a vane free space for receiving the whirling liquid and for conducting said liquid along said axis, and a rotor located in the path of the freely whirling axially advancing liquid.

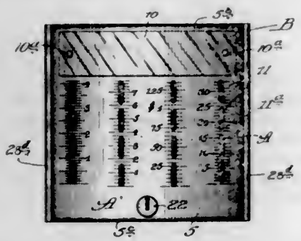
1,504,747. DISPLAY CABINET FOR PENS AND PENCILS. WILLIAM P. DE WITT, Somerville, Mass., assignor to De Witt-La France Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 20, 1921. Serial No. 493,790. 2 Claims. (Cl. 211—25.)

1. A display cabinet having, in combination, a casing embodying therein an inclined glass panel, a tray mounted within said casing and provided with a plurality of parallel grooves formed therein, a stationary pivot for said tray, said pivot being located beneath said tray and at a substantial distance from the front thereof, said tray being normally disposed adjacent to the rear of said panel and parallel thereto and a drawer slidably mounted upon said tray, the bottom of said tray constituting a cover for said drawer, said tray and drawer being adapted to be tipped in unison within said casing to a horizontal position.



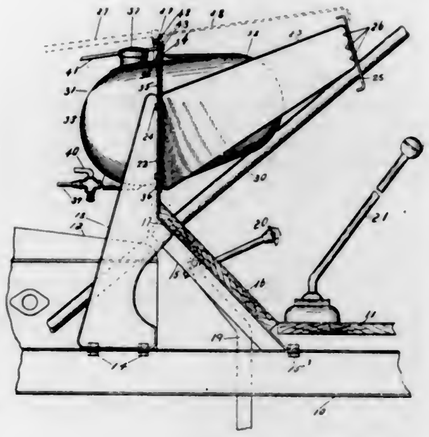
1,504,748. DOORSTOP AND DOOR CLOSER. WALTER P. DORL, Detroit, Mich., assignor to Door Control Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1921. Serial No. 439,186. 4 Claims. (Cl. 292—262.)

1. In a vehicle body, in combination, the body wall, a door pivoted thereto, a flexible check band one end of which is secured to the door the other end of which is secured to the body wall, resilient fastening means securing at least one end of said band to the member to which it is fastened in such a manner that as the door is opened the band is drawn outwardly against the tension of said resilient fastening means, means for limiting the outward travel of such band in the opening of the door, a catch member so positioned that the band will travel



thereby as the door is opened, a stop carried by said band adapted to engage said catch member at a determined open position of the door to prevent the tension on the band from retracting the same, and means adapted to releasably hold said catch in engagement with the stop to prevent retraction of the band by the tension of said resilient fastening thereon.

1,504,749. FLEXIBLE COUPLING. GEORGE F. ECKART, Cincinnati, Ohio. Filed June 18, 1923. Serial No. 645,994. 7 Claims. (Cl. 64—96.)



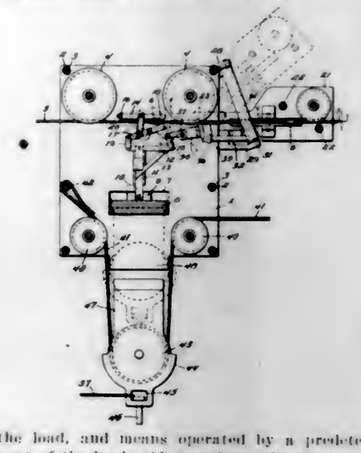
1. In a flexible coupling, a pair of opposing flanges, a series of members flexibly connecting said flanges, a compression spring holding said flanges outwardly against said members, a shaft extending between the flanges for holding them in alinement, and means on said shaft for limiting the movement of said flanges.

1,504,750. SAVINGS BANK. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,972. 32 Claims. (Cl. 232—4.)

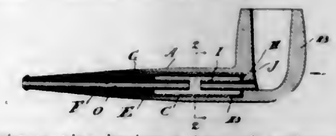
1. A savings-bank comprising a pair of substantially flat-sided complemental open-sided casing-sections having complemental partial coin chambers and forming when together a substantially flat body, coin-admission means for said coin chambers, and means for locking the sections together.

1,504,751. FUEL-TANK SUPPORT. CHARLES F. GREEN, Defiance, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 14, 1918, Serial No. 262,535. Renew 1 Jan. 8, 1924. 23 Claims. (Cl. 180—54.)

1. In a device of the class described, in combination: a vehicle frame; a dash carried by said frame, a fuel tank formed of mating sections secured to opposite sides of the dash and connected thereto by common fastening means.



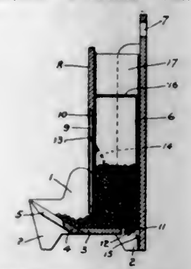
1,504,752. GOLF-PRACTICE DEVICE. MARTIN GREEN, London, England. Filed Mar. 7, 1923. Serial No. 623,380. 2 Claims. (Cl. 46—4.)



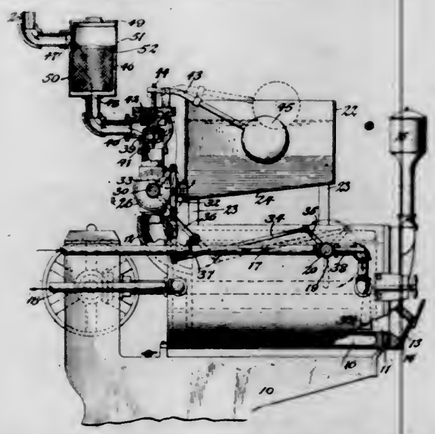
2. A golf practice device, comprising a flyer of sheet material of such character as to be capable of withstanding the blow of a golf club without material deformation, said flyer being provided with means for temporarily supporting it vertically in position to receive the blow of any ordinary golf club, whereby said flyer will be projected away from the club when struck, but will have its flight limited by its form and light weight, and a flight retarding device consisting of a flexible pendant attached to said flyer at one end and having its other end entirely free, to further limit the extent of its flight.

1,504,753. LOG CARRIER. JOSEPH A. GUEMIN, Seattle, Wash. Filed May 2, 1923. Serial No. 636,254. 16 Claims. (Cl. 212—76.)

1. A conveyor, including a supporting cable having a plurality of stops means to engage said stops to prevent movement of the carrier in one direction on the cable, said respective means operating at right angles to each other, a load cable cooperating with the carrier to support the load, and means operated by a predetermined movement of the load cable to release the carrier relative to the stops.

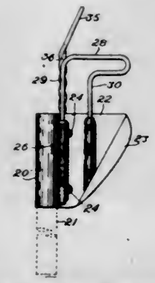


1,504,754. TOBACCO PIPE. ALFRED HACKETT, Toronto, Ontario, Canada. Filed Mar. 3, 1923. Serial No. 622,583. 1 Claim. (Cl. 131—12.)



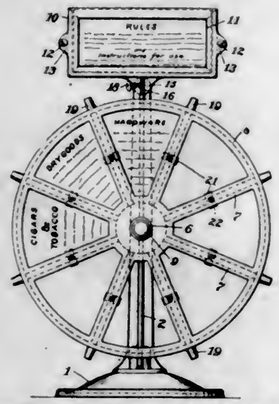
A tobacco pipe having a bore of uniform diameter longitudinally formed in the straight stem thereof for the major portion of its length, the inner end of said bore terminating short of the cavity in the bowl; a metal lining of uniform diameter having a circular inturned flange at its inner end permanently mounted in said bore, and having its flanged inner end fit against the inner end of said bore; a metal conduit having its inner end mounted in that portion of the bowl of the pipe separating the inner end of said bore from said cavity, and extending through the inner end of said lining; a mouth piece having a neck adapted to fit within the outer end of said metal lining, and a metal conduit mounted within said mouth piece for the length thereof and extending beyond said neck into said metal lining, the inner ends of said conduits being spaced apart.

1,504,755. MATCH SAFE. CARL HAMMERSEN, Vancouver, British Columbia, Canada. Filed June 25, 1923. Serial No. 647,770. 6 Claims. (Cl. 206—31.)



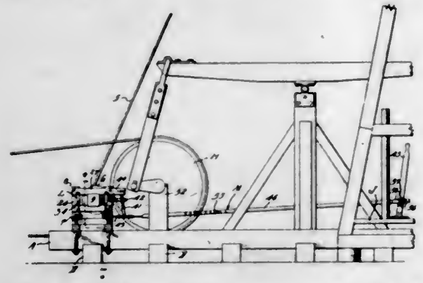
1. A match safe comprising a rear wall and a front panel adapted to hold a match box therebetween, a match receiving tray, and means for adjusting the front panel to suit varying sizes of match boxes.

1,504,756. ICE-CREAM FREEZER. HARRY B. HAM MILL, Buffalo, N. Y. Filed Aug. 19, 1921. Serial No. 493,593. 1 Claim. (Cl. 62—114.)



An ice cream freezer comprising a freezing chamber, a refrigerating jacket surrounding the freezing chamber, a measuring tank for measuring the liquid to be frozen and having a communicating passage, an ice cream mixture supply pipe, an ice cream mixture controlling valve having its casing connected with said supply pipe, said measuring tank and said freezing chamber and having a movable plug which in one position connects said measuring tank with said supply pipe and in another position connects said measuring tank with said freezing chamber, a refrigerant controlling valve having a casing connecting with a refrigerant supply and with said jacket and having a movable plug adapted to open and close the passage through said refrigerant valve casing, and means operatively connecting the plug of said ice cream mixture controlling valve and the plug of said refrigerant controlling valve and operating in one position to close the refrigerant controlling valve and shift the mixture controlling valve so that it disconnects the freezing chamber from the measuring chamber and in another position to open said refrigerant valve and shift said mixture controlling valve so that it connects the mixture tank with the freezing chamber.

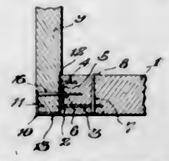
1,504,757. BRIDGE-WARNING DETACHER AND REPLACER. BENJAMIN J. HASTINGS, Taunton, Mass., assignor to Hastings Signal & Equipment Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1923. Serial No. 630,491. 13 Claims. (Cl. 294—24.)



1. In a device of the character described, two cooperating clamping members mounted on a holder, said clamping members being adapted to yieldingly hold a drop wire, and a guide member extending above said clamping members to guide the positioning of the drop wire with relation to a hanger with which it is to be connected.

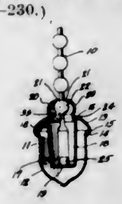
1,504,758. ADVERTISING DEVICE. CLAUDE H. HAYS, Union, Miss. Filed Oct. 22, 1923. Serial No. 670,159. 2 Claims. (Cl. 46—56.)

1. An advertising device, including a base, a standard thereon, an axle carried by said standard, and a rotatable wheel on the axle, pins projecting outwardly from the periphery of the wheel, and a flexible stop carried by the standard projecting between the pins to retard rotary movement of the wheel, said wheel having spokes with openings between the same, and cards located between the spokes.



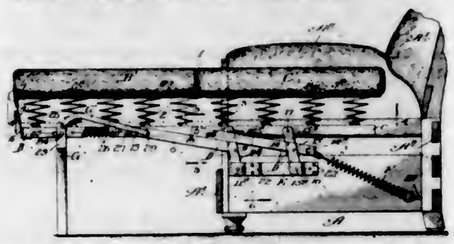
1,504,759. WELL-DRILLING RIG. THOMAS WESLEY HOLLEY, Ranger, Tex. Original application filed Feb. 10, 1921, Serial No. 444,030. Divided and this application filed May 18, 1922. Serial No. 561,927. 3 Claims. (Cl. 74—26.)

1. In a well drilling rig, the combination of a main sill and a tail sill, a sand reel including a shaft and pulley, and a band wheel for engagement with said pulley, of a tail pedestal for one end of said shaft carried by the tail sill, a head pedestal mounted upon the main sill for longitudinal movement, a bearing for the other end of the sand reel shaft associated with the pedestal for movement longitudinally and laterally of the main sill, a manually operated means for adjusting the bearing block longitudinally of the main sill, and means for permitting adjustment of the operating mechanism relative to the adjustment of the head pedestal and of the bearing block laterally of the main sill.



1,504,760. THEFTPROOF BOX. JOHN LAWRENCE HOOD, Pawtucket, R. I. Filed Sept. 28, 1923. Serial No. 665,392. 6 Claims. (Cl. 212—69.)

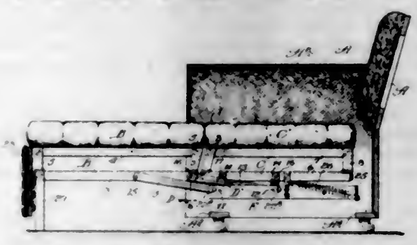
1. In a theft proof box, sides, ends and bottoms each composed of a plurality of pieces of material, substantially L-shaped channel bars embedded in the end edges of the end pieces and having their connecting sides formed with nail-receiving depressions, nails driven through the end pieces and through the long sides of the channel bars and clinched to the inner faces of the end pieces, similar channel bars connected to the end edges of the sides, top and bottom, the long sides of the channel bars of the sides being engaged with the connecting sides of the channel bars of the ends, and the adjacent sides of the



channel bars of the top and bottom being engaged with the top and bottom edges of the ends of the box, and nails driven through the box sides and through the long sides of the channel bars of the sides, and through the nail-receiving depressions of the connecting sides of the channel bars of the ends and into the latter.

1,504,761. CLASP. HARVEY HUBBELL, Bridgeport, Conn. Filed May 31, 1923. Serial No. 642,502. 9 Claims. (Cl. 24—230.)

1. In combination, a body member provided with an opening therein, and a spring clip extending through said opening provided with spaced side members connected together at their inner ends only, said side members being curved over toward each other at their outer ends to provide flanges having opposed recesses forming an opening for insertion and removal of an enlargement on a separate element, the sides of the opening in the body member being adapted to engage the side members of the clip intermediate its ends to retain the enlargement therein.



1,504,762. SOFA BED. CHARLES HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Oct. 21, 1921. Serial No. 509,374. 5 Claims. (Cl. 5—22.)

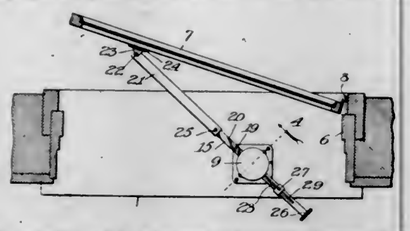
1. In a structure of the character set forth, the combination of a main frame equipped with end-standards, a pair of levers of general T form having their head portions pivotally connected at one end with said end-standards, a rear bed-section having its end portions pivotally connected with the other ends of the heads of said levers, and a front bed-section having the rear and intermediate portions of its end members pivotally mounted on the long arms of said levers, said levers being proportioned and arranged so that the long arms of the rear pair of levers will rest upon the long arms of the front pair of levers when the structure is in bed-form.

5. In a structure of the character set forth, the combination of a main frame, pairs of front and rear levers pivotally mounted thereon, a rear bed-section having pivotal connections with the short arms of said levers, a front bed-section having pivotal connections with the free ends of the long arms of the levers, legs equipped with pivots which are movable in slots with which the front bed-section is provided, springs tending to hold said pivots at the rear ends of said slots, said legs being provided with extensions above said pivots, and links connecting said extensions with the long arms of the front pair of levers.

1,504,763. SOFA BED. CHARLES HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Apr. 4, 1921. Serial No. 458,189. 4 Claims. (Cl. 5—22.)

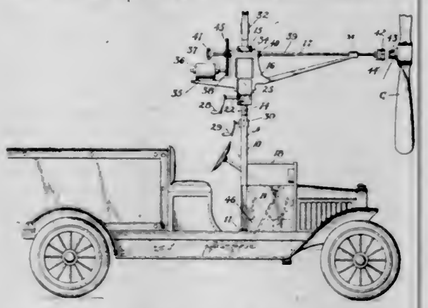
1. In a structure of the character set forth the combination of a main frame having end standards provided at their inner surfaces near their lower edges with rigidly secured supporting plates, a pair of plates demountably carried by said supporting plates and equipped with rearward extensions, a pair of levers permanently pivoted to each demountable plate, each of said levers having a long arm and a short arm, a front bed-section mounted on the long arms of said levers, and a rear bed-section mounted on the short arms of said levers, the short arms of said levers serving to carry the rear bed-section rearwardly a substantial distance and then forwardly substantially the same distance in the operation of folding the structure, said rear bed-section being adapted to occupy a position above the plane of said extensions when the bed is open and a position below the plane of said extensions when the bed is closed, and springs connecting the rear ends of said extensions with the rear bed-section.

1,504,764. PROCESS OF DIE FORGING. EDWARD E. JOHNSON, St. Paul, Minn. Original application filed Feb. 13, 1920, Serial No. 358,449. Divided and this application filed Feb. 27, 1922. Serial No. 539,433. 3 Claims. (Cl. 29—156.)



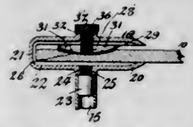
1. The process of die-forging which consists in heating cylindrical tubular blanks and subjecting the end portions of said blanks to radially-directed inward pressure applied at regular intervals around the blank to contract said end portions and give a polygonal exterior shape thereto.

1,504,765. CONTROLLING MECHANISM FOR WINDOWS AND OTHER MOVABLE MEMBERS. ERIC J. JOHNSON, Chicago, Ill. Filed Sept. 21, 1922. Serial No. 589,597. 3 Claims. (Cl. 268—14.)



1. In a device of the class described, in combination, a frame having a stop member, a closure pivotally mounted on said frame and impinging against said stop mem-

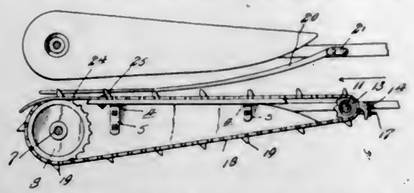
ber, a rod having a spiral groove of varying pitch, a sleeve, one of said last named elements pivotally mounted on said frame and the second thereof pivotally connected to said closure, a stud rigidly carried by said sleeve and engaging said groove, the portion of the groove of least



pitch coacting with said stud when the closure engages said stop member whereby to cause firm engagement thereof, means to cause relative rotation between said rod and sleeve, and releasable locking means to prevent reverse rotation of said rod.

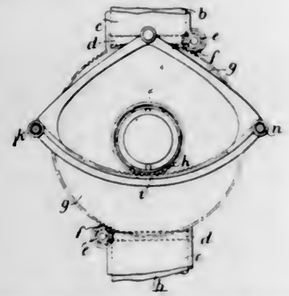
1,504,766. STARTING DEVICE FOR AEROPLANES. HARRY KNIFFER, New Auburn, Wis. Filed Mar. 22, 1920. Serial No. 367,910. 12 Claims. (Cl. 244—31.)

1. A starting device for the engines of aeroplanes comprising a wheeled body, a frame carried by the wheeled body, a block slidably and rotatably carried by the frame, means for adjusting the elevation of the block, a starting shaft rotatably carried by the block, an electric motor carried by the block, and means for operatively connecting the motor and the starting shaft.



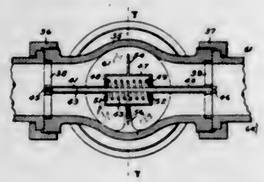
1,504,767. MOUNTING FOR WINDSHIELD WINGS, ETC. WILLIAM LA HODNY, Buffalo, N. Y. Filed Aug. 9, 1922. Serial No. 580,637. 4 Claims. (Cl. 296—84.)

1. A wing provided on its front side with a recess, a U shaped supporting head having a rear jaw engaging the rear side of said wing and a front jaw arranged opposite the recess on the front side of the wing, a U-shaped clip embracing said front jaw, and having a flexible part opposite said recess; and a clamping screw working in said front jaw and adapted to shift the flexible part of said clip into engagement with said recess.



1,504,768. BINDER ATTACHMENT. WILLIAM E. LAMINACK, Blake, Okla. Filed Mar. 22, 1923. Serial No. 626,728. 1 Claim. (Cl. 56—119.)

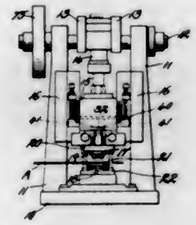
In a binder attachment, the combination with the upper and lower conveyors, of an auxiliary conveyor interposed between the upper and lower conveyors and arranged centrally of the space between the upper and lower conveyors, whereby the short stalks may be taken care of and choking of the machine eliminated, said conveyor comprising sprockets spaced apart in line with each other, an endless chain travelling over said sprockets, a tine parallel with said chain and cooperating therewith to direct the short stalks into the binding



mechanism, a board lying adjacent to the path of movement of the inner run of said chain and cooperating with said chain and tine to assist in the travel of the short stalks, and a guide fastened to said board and surrounding the sprocket wheel at the delivery end of said auxiliary conveyor and comprising a single length of wire bent upon itself between its ends to provide parallel arms.

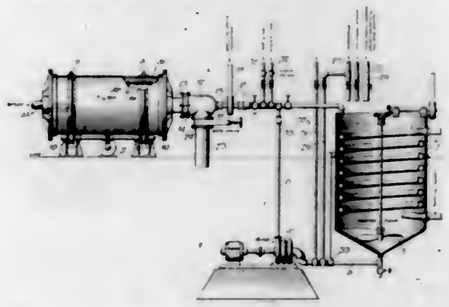
1,504,769. MECHANISM FOR VARYING THE PITCH OF SCREW PROPELLERS. HENRY LEITNER, London, England. Filed Apr. 21, 1924. Serial No. 708,095. 3 Claims. (Cl. 170—163.)

1. Mechanism for varying the pitch of screw propellers including a propeller hub, a master wheel, a spur-wheel connected to said master wheel, a toothed member in gear with said spur-wheel and pivoted to said propeller hub, and means interposed in the path of said toothed member as it is rotated by the propeller hub to cause said toothed member to rock on its pivot in either direction whereby the propeller blades are rotated around their axes.



1,504,770. FLOW INDICATOR. WILLIAM H. LIEBER, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1919. Serial No. 348,503. 14 Claims. (Cl. 116—117.)

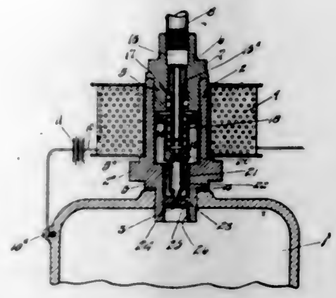
13. In liquid flow indicating mechanism, the combination with a tube having a transparent portion, of a movable indicating vane within said tube and visible through said transparent portion, and means for movably



mounting said vane whereby it occupies an operative position intermediate the ends of the tube, said mounting means comprising spaced apart spiders, a rod connecting said spiders, and means supported by said rod for spacing said vane intermediate said spiders, said vane being movable relative to said rod.

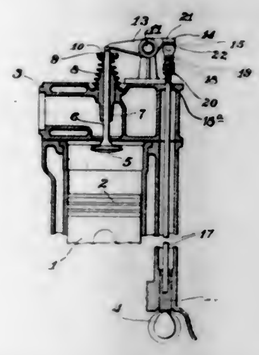
1,504,771. FORK DIES. GEORGE P. MALLORY, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed Apr. 11, 1922. Serial No. 551,505. 8 Claims. (Cl. 113—49.)

1. In a machine for forming articles from sheet material, a pair of relatively movable dies having cooperating shaping portions, the shaping portion of one of said dies including a part which is movable with respect to the remainder of said shaping portion, means tending normally to hold said movable part in a retracted or operative position with respect to the other parts of the shaping portion of said die, and means for projecting said part out of operative position, when said dies are separated, to eject said articles.



1,504,772. PROCESS OF DECOLORIZING OIL. FRED W. MANNING, Chicago, Ill., assignor to Manning Refining Equipment Corporation, a Corporation of Delaware. Filed Mar. 13, 1920. Serial No. 365,537. 5 Claims. (Cl. 196—147.)

4. The process of purifying hydrocarbon oils which consists of quickly mixing powdered fuller's earth with the oil, then quickly filtering out the earth at high pressure, and then subjecting the earth to successive washes of naphtha, the liquid resulting from a second washing in a prior operation being used as a first washing agent.

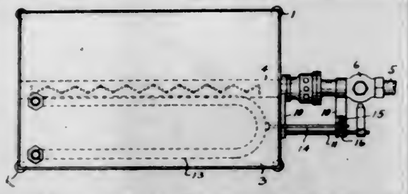


1,504,773. ELECTROMAGNETIC VALVE. SHELDON MARSTON, Bay City, Mich. Filed Mar. 31, 1922. Serial No. 548,556. 7 Claims. (Cl. 137—139.)

1. An electromagnetic valve comprising a core having a chamber formed therein, a plug having threaded engagement with the chamber, a magnet coil surrounding said core, an armature, and a valve stem formed integral therewith, a socket in said armature, an adjustable plug threaded into said first mentioned plug member and ex-

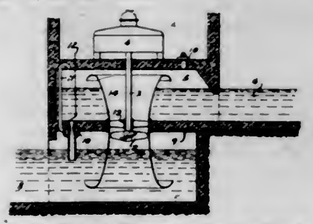
tending into the said socket, a fuel passage through the adjustable plug, a disk removably secured in the core and a fuel discharge opening in the disk.

1,504,774. VALVE OPERATING MECHANISM. CLYDE H. MARTIN, Pittsburgh, Pa., assignor to Durant Motors Incorporated, a Corporation of Delaware. Filed July 17, 1923. Serial No. 652,016. 4 Claims. (Cl. 123—90.)



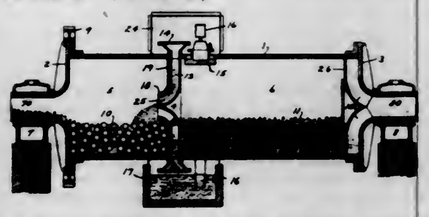
1. In combination in an engine structure provided with an operating cam and a valve, having a stem, normally held closed by means of a spring, of operating means for the stem comprising a lever fulcrumed intermediate its ends and engaging the stem at one end and having at its other end a substantially flat surface, a push rod operated from the cam at one end, means for guiding said push rod in sliding movement parallel to the axis of the engine cylinder, an adjusting member screw threaded on the other end of the push rod and provided with a ball socket, a ball in said socket, free to rotate, but held against lateral movement by the walls of the socket and engaging said flat surface on said lever, and a nut lock for said adjusting member, also threaded on said push rod.

1,504,775. STERILIZER. WALTER G. MILLER, Galveston, Tex. Filed Mar. 31, 1923. Serial No. 629,095. 6 Claims. (Cl. 126—351.)



1. A sterilizer including a container, a gas burner associated therewith, a shut off valve controlling the supply of gas to the burner, a mechanism disposed to hold said valve open to admit gas to said burner, and a

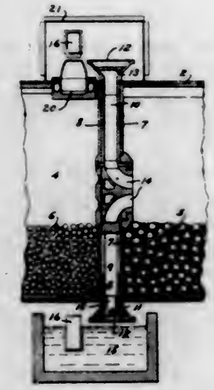
looped fluid conduit connected at both ends into said container and having its arms located at unequal distances from the burner, and having a free portion which



is caused to move by the unequal expansion of said arms to release said mechanism and thereby permit the closing of the valve.

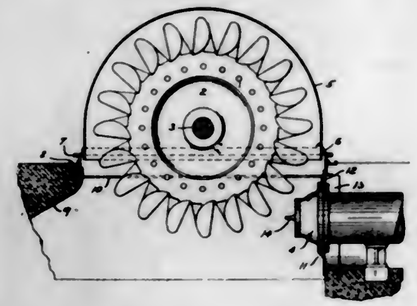
1,504,776. HYDRAULIC MACHINE. FORREST NAGLER, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 8, 1922. Serial No. 550,312. 25 Claims. (Cl. 253—148.)

25. In a hydraulic machine, a rotor having a vertical axis of rotation, means forming a vertical flow decelerating conduit within which said rotor is located, a liquid basin communicating laterally with the lower extremity of said conduit, a liquid basin extending laterally toward the upper extremity of said conduit, and a liquid sealed chamber above the upper of said basins and communicating openly with the upper extremity of said conduit.



1,504,777. COMMINUTING MILL. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,332. 24 Claims. (Cl. 83—9.)

1. In a comminuting mill, a rotary drum, means for introducing material into an end of said drum, and an external scoop movable with said drum to introduce material from an outside source directly into said drum remote from said end, a portion of said scoop extending transversely of the drum axis and substantially parallel to the drum periphery.



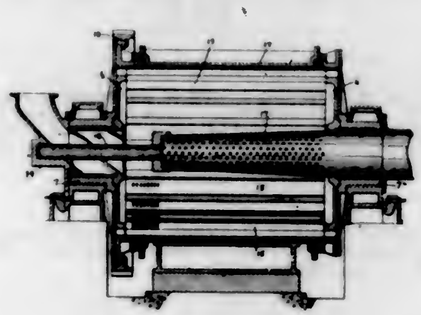
12. In combination, a rotary drum having uniform diameter throughout its length, a partition dividing said drum into a plurality of chambers, comminuting means in each of said chambers, means connected with said partition for delivering reduced material from one of said chambers, a stationary receptacle adapted to receive said reduced material, and means connected with said drum for feeding material from said receptacle into another of said chambers.

1,504,778. COMMINUTING MILL. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,222. 6 Claims. (Cl. 83—9.)

1. In combination, a rotary drum, an annular screen rotatable with said drum and having side walls, and a spreader located within said screen and between said walls, said spreader being formed to direct material delivered from said drum over all portions of said screen.

1,504,779. HYDRAULIC MACHINE. FRED C. PAATSCH, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 17, 1922. Serial No. 601,456. 11 Claims. (Cl. 253—22.)

1. In combination, a rotor, a cover for said rotor, a structural steel bar of standard cross-section forming a support for said cover, said cover being removable from said support, and a drip catch coacting with an upper portion of said bar.

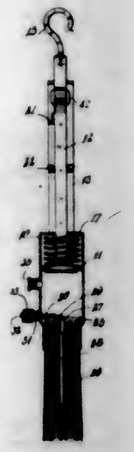


1,504,780. CHECK OR THE LIKE. WILLIAM TALBOT PAYTON, Westmount, Quebec, Canada. Filed Apr. 12, 1923. Serial No. 631,600. 1 Claim. (Cl. 283—12.)

A check or the like comprising a blank ruled crosswise and lengthwise at one end to form a plurality of spaces, a plurality of these spaces bearing a numeral, the remaining spaces bearing the denominations disclosed in said plurality of spaces, the lengthwise lines adjacent the upper edge extending longitudinally and parallelly across said blank, said longitudinal and parallel lines adjacent the upper edge of said blank being divided by a plurality of oblique lines adapted to form a plurality of rhomboid shaped spaces extending through a portion of said lengthwise lines and each of said rhomboid spaces bearing a numeral; and a plurality of longitudinal spaces provided intermediate of said lengthwise lines and bounded at

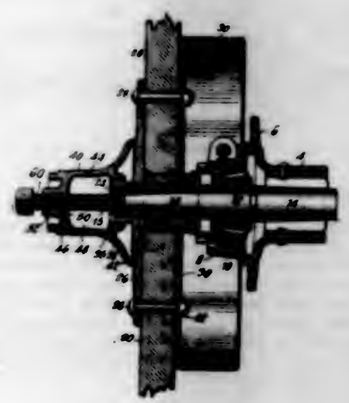
one end by said rhomboid shaped spaces and at their other end by said crosswise lines, said longitudinal spaces bearing different denominations, substantially as described.

1,504,781. MACHINE FOR PULVERIZING MATERIAL. RALPH E. H. POMEROY, Canton, Ohio. Filed Feb. 27, 1922. Serial No. 539,417. 4 Claims. (Cl. 83—9.)



1. An apparatus for pulverizing frangible material having in combination a rotatable shell having perforations in its periphery, a perforated outlet pipe arranged within the shell and having its outlet end outside of the shell, and means for causing currents of air to enter through the peripheral openings in the shell, and to flow out through the perforated pipe.

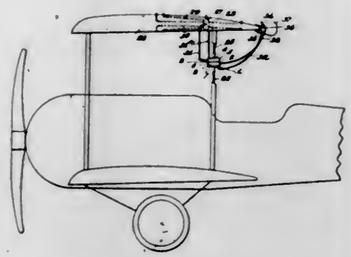
1,504,782. ART OF PHOTOLITHOGRAPHY. JOHN H. POWRIE, New York, N. Y. Filed Feb. 9, 1921. Serial No. 443,632. 6 Claims. (Cl. 95—5.1.)



1. The method of correcting the error in the tone scale of a photographically prepared printing element which is introduced by the use of the half tone screen, which consists in preparing separate printing elements each element being made with such a complementary tone error as will offset or neutralize the error of the other in superposed printings so as to produce a final impression having a substantially correct tone scale.

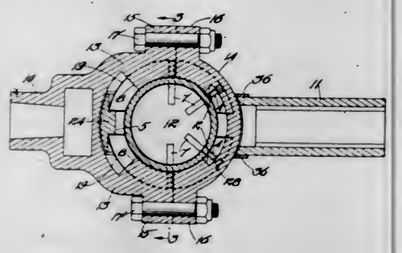
1,504,783. MAGAZINE BRUSH. STEVEN RADIMAK, New York, N. Y., assignor of one-half to David Schiffer, New York, N. Y. Filed Nov. 4, 1922. Serial No. 599,113. 2 Claims. (Cl. 15—137.)

1. A brush comprising a casing, bristles projecting therefrom, a follower in said casing, and a spring urging said follower forward, and a spring pressed braking device for retarding the forward movement of said follower.



1,504,784. COMBINED WHEEL PULLER AND HUB CAP. JOHN B. RAVIOLO, New York, N. Y., assignor to Durant Motors Incorporated, a Corporation of Delaware. Filed Feb. 2, 1922. Serial No. 533,537. 2 Claims. (Cl. 301—108.)

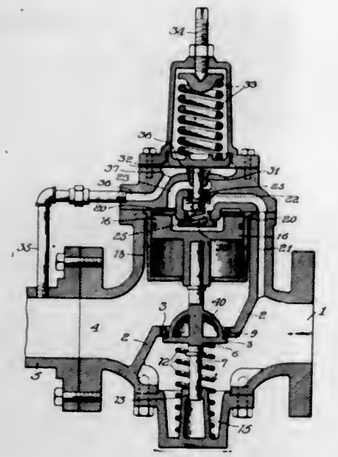
2. A wheel hub extension element normally mounted upon and carried by the wheel, the said element being provided at one end with means for removably securing the same to the wheel and also with a flange surrounding the said securing means, the edge of the flange being adapted to contact with the side of the wheel when in place to simulate an extended hub, said extension ele-



ment also having a bridge portion, said bridge portion being provided with a centrally disposed screwthreaded perforation in line with the wheel axle when the said extension element is in place on the wheel.

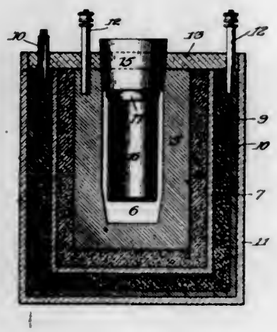
1,504,785. METHOD OF AND APPARATUS FOR INDICATING THE ATTITUDE OF AIRCRAFT. JOHN NEWBERRY REYNOLDS, Greenwich, Conn. Filed Dec. 30, 1918, Serial No. 268,871. Renewed Jan. 21, 1924. 41 Claims. (Cl. 244—31.)

1. An indicator for flying machines, comprising an aerofoil, means responsive to air reactions due to that relative movement of the air and aerofoil which produces the necessary lifting forces, there being a conduit communicating with the responsive means and the air, said conduit having an opening in proximity to and facing the top surface of the aerofoil.



1,504,786. UNIVERSAL JOINT. CARROLL H. RICHARDS, Newton, Mass. Filed June 24, 1920. Serial No. 391,500. 11 Claims. (Cl. 64—102.)

1. A universal joint comprising two coupling members and an intermediate hollow lubricant holder having a curved periphery, each coupling member having sliding engagement with the periphery of said lubricant holder, means by which lubricant is fed from the interior of said holder to the surfaces of the engaging portions of the said coupling members, and covers closely fitting over the joints between the said coupling members and said lubricant holder to prevent escape of lubricant and entrance of dust.

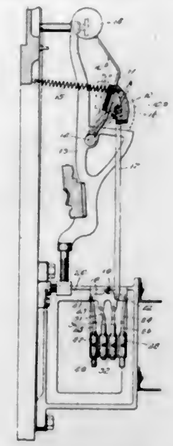


1,504,787. REGULATING VALVE. HARRY J. RICHTER, Wilmette, Ill. Filed Sept. 1, 1920. Serial No. 407,359. 4 Claims. (Cl. 50—11.)

1. A regulating valve comprising, in combination, a valve casing having inlet and outlet chambers and an opening connecting said chambers, a valve seat about said opening, a valve disk coacting with said seat, a projection carried by said disk extending into said opening and substantially filling the same when the valve is closed, said disk so shaped as to require a substantial movement of the valve to allow small quantities of fluid to pass and to increase the effective opening by a rapidly increasing ratio as the valve is opened further, a valve

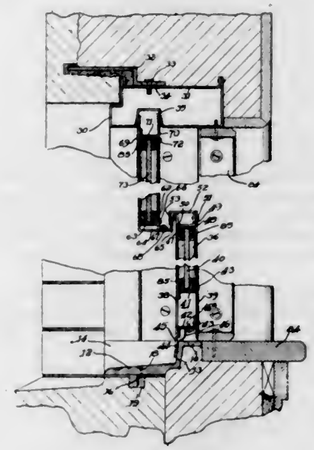
stem on the valve disk, a piston on the valve stem adapted to operate in a cylinder, a passage leading from the inlet chamber to one end of said cylinder, and a valve in said passage controlled by pressure on the service side of the regulating valve.

1,504,788. PRIMARY BATTERY. HENRY K. SANDELL, Chicago, Ill. Filed Feb. 15, 1923. Serial No. 619,143. 4 Claims. (Cl. 204—41.)



1. In a primary battery, a porous anode body, a cathode surrounding said anode body, a separator between the cathode and anode body, means for supplying an electrolyte between the separator and the cathode and means for supplying an electrolyte within the anode body.

1,504,789. HAMMER-RAIL CONTROL. HENRY K. SANDELL, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1923. Serial No. 641,098. 5 Claims. (Cl. 84—23.)



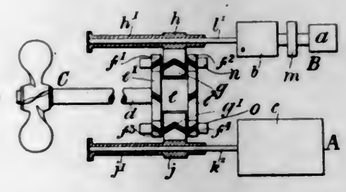
2. In a means for raising and lowering the hammer rail of a player piano, a lever pivotally mounted near its

center, a connection between said lever and hammer rail, and a plurality of solenoids having cores operably con-

nected to said lever for moving said lever to a plurality of positions.

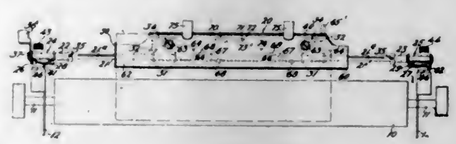
1,504,790. METALLIC WINDOW CONSTRUCTION. THOMAS P. SHEAN, Chicago, Ill., assignor to Shean Steel Window Co., Chicago, Ill. Filed Sept. 24, 1919. Serial No. 325,938. 2 Claims. (Cl. 189—66.)

1. In a window construction, the combination of a jamb member affording a guide channel having a side wall for cooperation with the sash, a rigid guide member adjustably mounted on the jamb member for cooperation with said wall, a movable sash, and a flexible member on said sash arranged for engagement between said wall and adjustable guide member.



1,504,791. HAIR WAVER. HENRY M. SIEGEL, Malden, Mass. Filed Mar. 18, 1924. Serial No. 699,981. 1 Claim. (Cl. 132—39.)

The improved hair-waving device comprising a pair of opposite arms upon which a lock of hair may be wound in figure 8 fashion, a pair of horns projecting transversely with relation to the direction of extent of the said arms and separated from each other by a deep cleft,

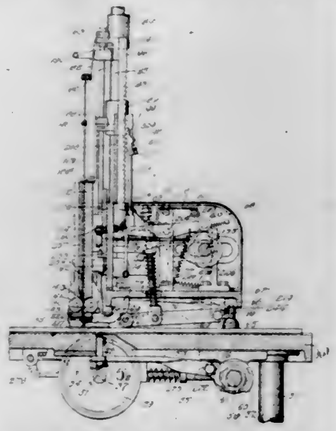


and a stem with retaining hook for securing the end of said lock at the opposite side of the device from the said horns.

1,504,792. TOOTHED TRANSMISSION GEARING. JAMES HENRY SMITH, Belfast, Ireland, assignor to himself, Workman, Clark & Company Limited, and James Wilkie, all of Belfast, Ireland. Filed Apr. 4, 1921. Serial No. 458,495. 11 Claims. (Cl. 74—7.)

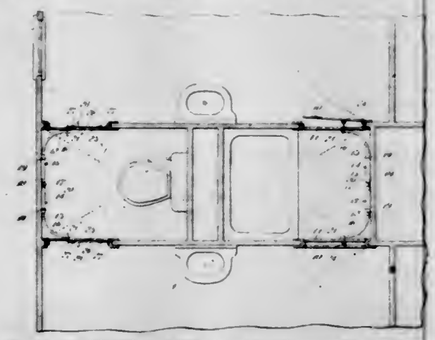
1. The method of eliminating vibration of the gear wheels in a power drive embodying reduction gear, which consists in equalizing the periodicities of the free torsional oscillations of all the rotating masses about the reduction gear.

1,504,793. TYPEWRITING MACHINE. JESSIE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 5, 1921. Serial No. 449,754. 12 Claims. (Cl. 197—140.)



1. In a front-strike typewriting machine, a platen, and means settable for rapidly locating on the platen in succession a plurality of work-sheets having the same depth of heading, comprising a collating table at the delivery side of the platen, a leading-edge gage, and a support for said table shiftable forwardly and rearwardly to vary the distance between the leading-edge gage and the writing line in accordance with the depth of heading on the set of work-sheets to be inserted.

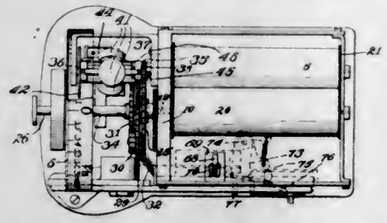
1,504,794. BOARD-FILLING MACHINE. WILLIAM P. STRICKLAND, Chicago, Ill. Filed Oct. 8, 1923. Serial No. 667,348. 37 Claims. (Cl. 226—2.)



1. In a machine of the character set forth, the combination of a magazine for the strips in folded condition, severing means for cutting the strips into short lengths, means for supporting a board the holes in which are to be charged with the strip sections, a member for receiving portions of the strips, means for advancing the

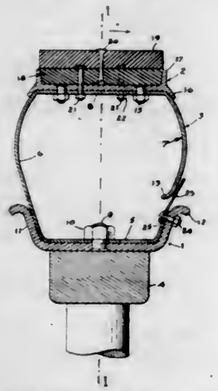
strips in said magazine and into said member, said member being movable into a position in which the strip sections therein extend substantially at a right angle to

said board and in line with holes therein to be filled, means for actuating said member, and means for discharging the strip sections from said member into the holes aligning therewith.



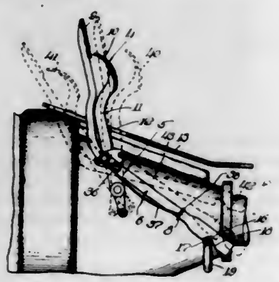
1,504,795. LOCKING MEANS FOR DOORS. HENRY C. TROST, El Paso, Tex. Filed Nov. 25, 1921. Serial No. 517,436. 10 Claims. (Cl. 20—16.)

9. In combination with a pair of oppositely disposed doors leading from opposite rooms into an intermediate compartment, means oscillatably mounted on the adjacent or connecting wall of said compartment intermediate of said doors, said means being adapted to extend transversely of the doors when in locking position and parallel with said adjacent or connecting wall when in unlocking position, and means whereby said first means may be operated and held in door locking position.



1,504,796. CLOTH-MEASURING AND COST-COMPUTING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 26, 1920, Serial No. 354,043. Renewed Mar. 29, 1922. Serial No. 547,908. 14 Claims. (Cl. 33—12.9.)

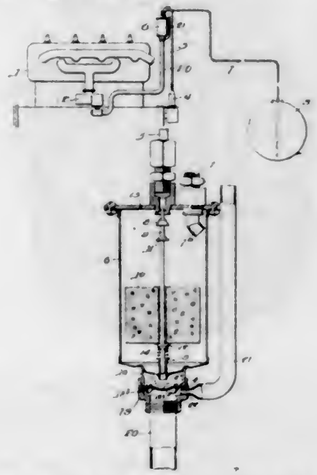
1. In a cloth measuring and computing machine having a measuring roller, the combination of a price-scale, a chart co-operating with said scale to indicate the total cost of quantities of the measured material, said chart also carrying yard-indicating numbers to indicate the number of full yards measured, a pinion actuated by the measuring roller, a clutch shaft, a gear wheel carried thereby and meshing with the pinion, a second pinion, on the clutch shaft and associated with the gear wheel, a clutch for connecting the gear wheel to the last named pinion for driving the same, a horizontal shaft, a bracket plate supporting the outer end of the shaft, a gear wheel carried thereby and meshing with the last named pinion,



and a number wheel carried by the said shaft adjacent to the bracket plate, and having divisions indicating inches and fractions of a yard.

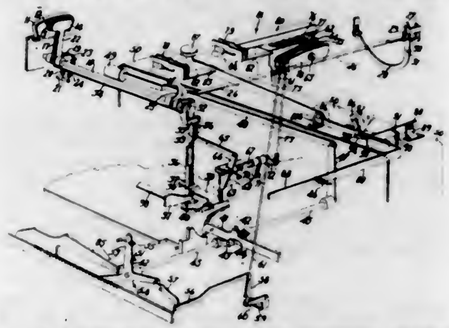
1,504,797. SPRING TIRE. JOSEPH VAN MOHR, San Francisco, Calif. Filed May 26, 1923. Serial No. 641,626. 5 Claims. (Cl. 152—37.)

1. A vehicle tire comprising an inner rim, an outer rim, a plurality of spring metal sections secured to and interposed between the rims, each of said sections being in substantially circular form and of one piece of material, with the free ends thereof spaced from one another, said sections being arranged with the spaced ends alternating on opposite sides of the rim.



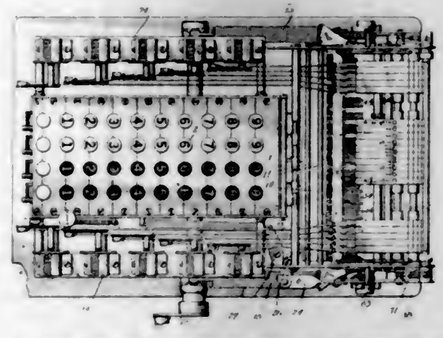
1,504,798. NEUTRAL SAFETY PEDAL ATTACHMENT. CHARLES S. WESTFALL and FRANK S. TABER, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 442,931. 10 Claims. (Cl. 74—81.)

1. In a device of the character described, the combination with a clutch pedal, of a unitary attachment secured to said clutch pedal at a point underneath the floor-board of the motor vehicle, the said attachment having an operating portion extending upwardly behind said clutch pedal and through the standard clutch pedal slot



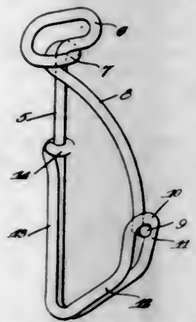
of the floor board, and having means below the floor board to automatically restrain the pedal in neutral position whenever it moves through said position.

1,504,799. VACUUM FEED DEVICE. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 24, 1922. Serial No. 583,952. 1 Claim. (Cl. 103—236.)



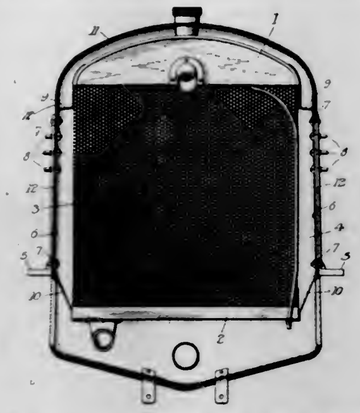
In a vacuum fuel feeding device comprising a vacuum chamber adapted to deliver fuel by gravity through a discharge orifice in the bottom of the chamber, a fitting secured to the bottom of the chamber encompassing said orifice and having a discharge opening substantially larger than said orifice, a pipe reducer fitting screwed onto the first fitting forming a valve chamber below said larger discharge opening, a check valve in said chamber seating upwardly against the first mentioned fitting and a stand pipe connected laterally into said pipe reducing fitting opening into the valve chamber below the valve and extending up alongside the vacuum chamber to a point above the high liquid level thereof, said stand pipe being opened to atmospheric pressure at the top and being of relatively large cross-section to serve as a fuel reserve chamber for discharge by gravity during the suction intervals of operation of the vacuum chamber.

1,504,800. COMBINED TYPEWRITING AND COMPUTING MACHINE. JOHN A. WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1922. Serial No. 573,317. 17 Claims. (Cl. 235—60.)



1. In a combined typewriting and computing machine normally set for addition, in combination, a carriage whereby computing zones may be determined, bichrome mechanism normally set for typing in one color, means for setting the machine for subtraction, a train of mechanism actuable by the subtraction-setting means for shifting said bichrome mechanism for printing in a second color, a special key adjacent the keyboard, and special-key-actuated means for disabling said train to free the bichrome mechanism from control by the subtraction-setting means.

1,504,801. PAY-ROLL-COMPUTING MACHINE. SAMUEL B. WHITE, Barrington, R. I. Filed July 29, 1920. Serial No. 399,718. 8 Claims. (Cl. 235—60.)

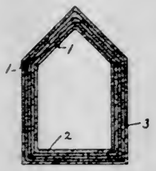


1. In a pay roll computing machine, in combination a bank of keys, a series of registering members corresponding to bills and coins of different value, means for moving the same, intermediate selective devices comprising interengaging banks of plates, the plates of one bank being locked by means under the control of the keys, the plates of the other banks being locked by engagement with the plates of the first bank, means for releasing the plates of said second banks dependent upon the lateral adjustment of the plates of the first named bank, and projections on the plates of the second bank of varying length which afford stops for the registering members when the latter are moved.

1,504,802. SNAP. CLYDE MARION WOLF, Aberdeen, Saskatchewan, Canada. Filed Apr. 12, 1924. Serial No. 706,148. 1 Claim. (Cl. 24—230.5.)

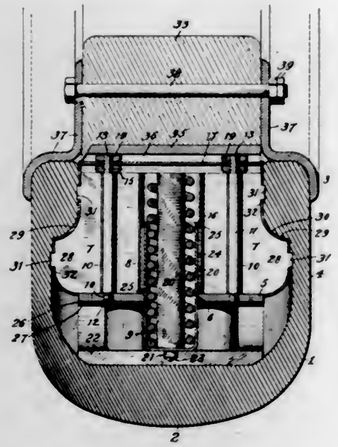
A snap hook including a length of wire material bent intermediate its ends to provide a body portion and a locking arm, a loop portion formed at one end of the body portion, the portion of the length of wire between the free end of the locking arm and loop portion being bent around the body portion adjacent to one end thereof, one end of the body portion being bent at an oblique angle and bent rearwardly, a portion thereof overlying the body portion the free end of the body portion being looped around the body portion at a point intermediate its ends, and said arm having a right angled end portion adapted to cooperate with the portion of the body extending at an oblique angle to secure the locking arm.

1,504,803. RADIATOR SUSPENSION STRUCTURE. FRED M. YOUNG, Racine, Wis. Filed Apr. 16, 1923. Serial No. 632,372. 2 Claims. (Cl. 180—68.)



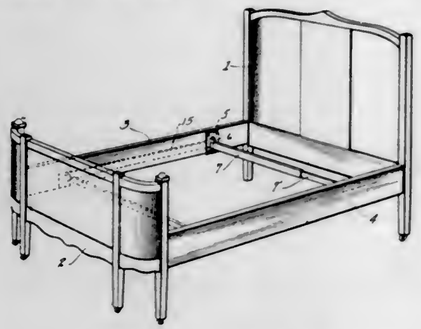
1. The combination of a radiator, a pair of suspension brackets extending vertically at opposite sides of the radiator core and spaced therefrom, the upper and lower ends of said suspension brackets being bowed toward the radiator and attached respectively to the upper and lower tanks of the radiator, and brackets for supporting the radiator on the vehicle frame, said supporting brackets having vertical arms extending along and secured to said suspension brackets intermediate the bowed ends thereof.

1,504,804. TAG. THOMAS ALLATT, Westfield, N. J., assignor, by mesne assignments, to Millie Patent Holding Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 29, 1923. Serial No. 615,663. 1 Claim. (Cl. 40—25.)



A device of the character described, comprising a tag, a string placed against one of the faces thereof, and a staple driven from the opposite face of the tag through the latter, said staple including two prongs bent against the tag in overlapping positions and clamping said string against said tag, at least one of said prongs passing through said string.

1,504,805. COMPOSITE STRUCTURE. MORRIS BORSODI, New York, N. Y. Filed Dec. 27, 1921. Serial No. 525,137. 2 Claims. (Cl. 154—46.)



1. In an article of the class described, sheet material of a contour resulting from having been wound on a form and comprising a laminated structure, each two adjacent layers of the sheet material having interposed between them adhesive matter and granular substance and superposed adhesive matter, the latter lying between the granular substance and each layer of sheet material, whereby, when dry, a continuous laminated product of the required thickness and design is formed of great strength and rigidity.

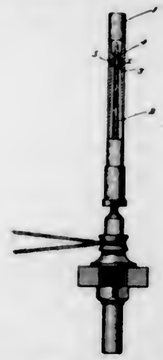
1,504,806. RESILIENT WHEEL. EDWARD J. BRANDT, Watertown, Wis. Filed Mar. 26, 1921. Serial No. 455,710. 37 Claims. (Cl. 152—8.)

1. A tire of the character described comprising a shoe, a multitude of transversely disposed combined pockets and bracing members extending around the shoe therewithin and contacting at their ends with the inner side walls of the shoe, and yieldable plungers in the pockets of said members adapted to bear against the inner face of the tread portion of the shoe, the transverse members being formed and arranged to provide space for the movement of the plungers intermediate of the inner edges of the shoe and said tread portion.

1,504,807. BEDSTEAD CONSTRUCTION. HERBERT BROTHERTON, Jr., and HIRAM S. NETTLETON, Tacoma, Wash. Filed Feb. 26, 1923. Serial No. 621,268. 2 Claims. (Cl. 5—236.)

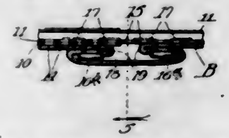
1. In a bedstead, the combination with the opposite side rails of the bed of plates secured to the inner faces of the rails at opposite sides of the bed having loops pressed therefrom in vertically spaced relation, cross bars extended transversely between the rails, having looped ends disposed between the loops of said plates, and keys extended through said loops to pivotally and detachably secure the ends of the cross bars.

1,504,808. MINER'S TOOL. WILLIAM N. BROWN, Tilden, Ill. Filed Jan. 11, 1923. Serial No. 612,120. 2 Claims. (Cl. 86—21.)



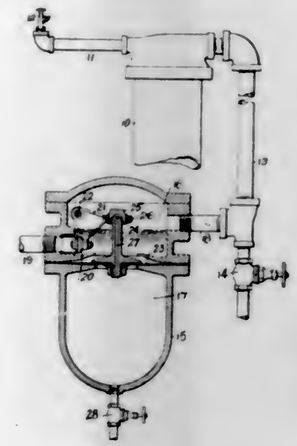
2. A device of the class described comprising a tubular socket; a tamping head mounted in one end of the socket;

tools adapted for interchangeable mounting in the other end of the socket, and means for holding the tools in



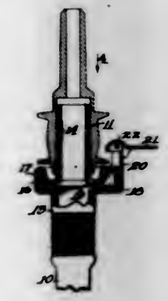
adjusted positions, one at a time, in the socket, one of said tools being movable into and out of engagement with the tamping head to drive the head out of the socket.

1,504,809. BOBBIN. ROBERT BURGESS, Newton Center, Mass., assignor of one-half to Joseph H. Jones, Winthrop, Mass. Filed Mar. 11, 1922. Serial No. 542,834. 8 Claims. (Cl. 242—122.)



1. A bobbin comprising a body of plastic material, a cylindrical container-shell embedded in said body, and a spindle-blade-engaging cork annulus contained within said container-shell.

1,504,810. CURTAIN ROD. THOMAS F. BYRON, Chicago, Ill. Filed Mar. 19, 1923. Serial No. 626,167. 4 Claims. (Cl. 156—19.)

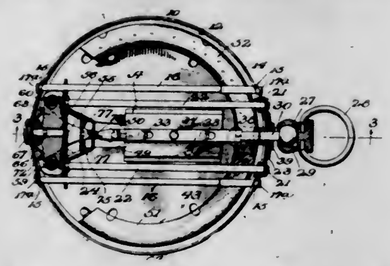


1. A curtain rod consisting of a plurality of rod sections adapted for use in various relatively adjusted positions, each section having a row of holes extending lengthwise thereof, holes of one section being registrable with holes of an adjacent section in each of the said positions, in combination with curtain-piercing pins separable from each section and applicable to selected registering holes of the sections in the said positions to secure the sections together and to support the curtain.

1,504,811. AIR EXHAUSTER FOR DRY-PIPE SYSTEMS. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1920, Serial No. 402,579. Renewed June 30, 1924. 9 Claims. (Cl. 169—17.)

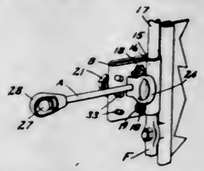
1. An air exhauster for dry pipe systems comprising an air exhaust chamber, an inlet connection to said chamber from said pipe system, said chamber having also an exhaust opening, a valve for closing said exhaust opening, an air storage chamber, and means to open and close said valve, said valve being opened by excess air pressure in said storage chamber and being closed upon the occurrence of excess air pressure in said exhaust chamber.

1,504,812. BOLSTER CASING. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 9, 1923. Serial No. 618,147. 5 Claims. (Cl. 118—65.)



1. As an article of manufacture, a spinning spindle bolster casing comprising a hollow body formed of sheet metal closed at the bottom and open at the top having a cylindrical portion at each extreme end, and a larger intermediate portion between them formed from the sheet metal and having an integral sheet metal oil receiving and conducting enlargement around the casing at the junction of the intermediate portion and the open end portion provided with a radial projection having a passage therein for conducting oil.

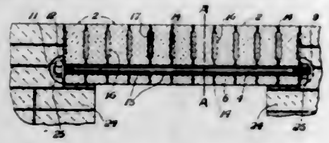
1,504,813. PROCESS FOR PRODUCING SULPHURIC ANHYDRIDE AND SULPHURIC ACID. MELVILLE F. COOLBAUGH and JOHN BURNS READ, Golden, Colo., assignors to The Complex Ores Recoveries Company, Denver, Colo., a Corporation of Colorado. Filed May 29, 1922. Serial No. 564,514. 6 Claims. (Cl. 23—1.)



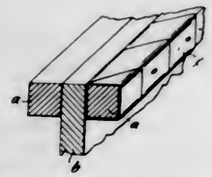
1. A process for sulphuric acid production comprising roasting an iron-sulfur mineral at a temperature below the sintering point of the sulphur mineral to produce the maximum amount of ferric oxide and to liberate sulfur dioxide, advancing the roasted materials and liberated gases concurrently with air in contact with one another to form sulfur trioxide, and producing contact of the sulfur trioxide with water vapor under conditions to form sulphuric acid.

1,504,814. HONING AND STROPPING DEVICE. ERNESTO L. CRESPO, Guatemala City, Guatemala. Filed Apr. 30, 1923. Serial No. 635,704. 7 Claims. (Cl. 51—58.)

7. A razor sharpening device including a pair of spaced apart oscillatable sharpening members, and a blade holder reciprocal between said members having connections therewith for oscillating the members during reciprocation of the blade holder and also having means to tilt a blade held thereby against the said sharpening members.



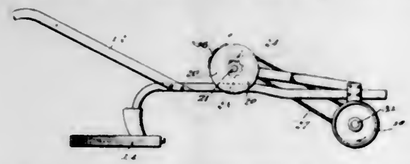
1,504,815. TRAFFIC SIGNAL FOR MOTOR VEHICLES. SHERMAN F. CROY, Long Beach, Calif. Filed Dec. 14, 1921. Serial No. 522,382. 2 Claims. (Cl. 177—329.)



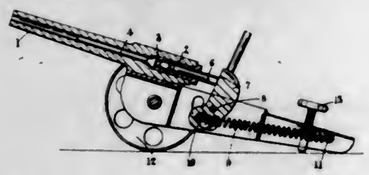
1. A traffic signal for motor vehicles comprising a bracket, an indicating arm rotatably sustained on the bracket, stops for sustaining the arm in any of several indicating positions, means for urging the arm to such a position that when moved it will engage said stops, a handle by means of which said arm can be manually positioned against the action of said urging means so that when moved it will engage said stops, a lamp carried by the arm, a contact on the arm, and a circuit including a source of current and conductors, one of which latter is connected to said lamp and to said contact and the other of which is connected to said source of current, the stops being adapted to be engaged by said contact to effect illumination of said lamp in any of its several indicating positions.

1,504,816. LINTEL AND OTHER STRUCTURE OF REENFORCED BRICKWORK. CLIFFORD L. CUMMINGS, St. Kilda, Melbourne, Victoria, Australia. Filed Oct. 11, 1922. Serial No. 593,848. 9 Claims. (Cl. 72—55.)

1. Improvements relating to lintels and other structures of reenforced brickwork, consisting in a brick having a transverse hole extending therethrough and opening on opposite sides thereof to accommodate a reinforcing rod, said hole having its center located at a point equidistant from the other two side faces and one end of the brick for the purpose specified.

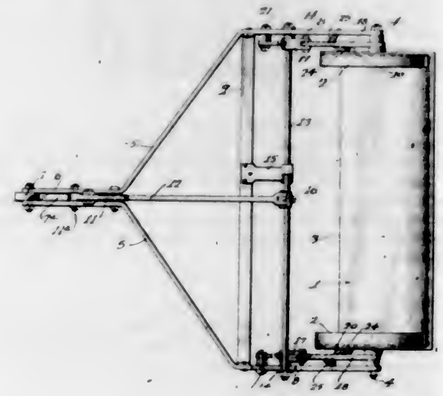


1,504,817. FASTENING THE COVERING OF PLANES OF FLYING MACHINES TO RIBS OR SUCH LIKE. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Dec. 9, 1920. Serial No. 429,557. 4 Claims. (Cl. 244—31.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an arrangement of the character described, the combination of longitudinally divided frame members, of fabric insertions between the parts of said members, a covering, and means for securing the covering to the insertion.

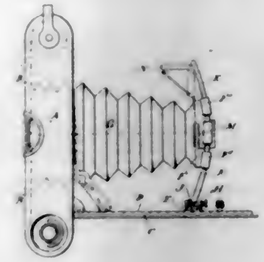
1,504,818. POISON DISTRIBUTOR. JACK POPE FULLOVE, Shreveport, La. Filed Aug. 13, 1923. Serial No. 657,037. 4 Claims. (Cl. 299—38.)



1. A poison distributor comprising a beam, a shaft extending transversely thereof and having its ends provided with drums adapted for containing and applying poison liquid, and means whereby to rotate the drum in the direction opposite the direction of travel of the machine.

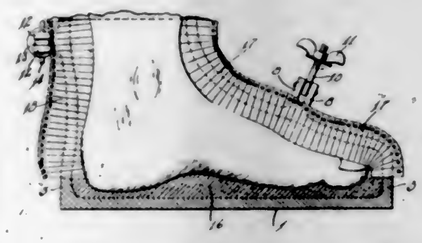
1,504,819. TOY CANNON, PISTOL, GUN, AND THE LIKE. CEDRIC HAROLD HANWELL, Northampton, England. Filed Jan. 29, 1923. Serial No. 615,728. 9 Claims. (Cl. 124—12.)

1. In a toy cannon, the combination of a carriage, a barrel mounted on the carriage and having the breech portion of larger bore than the front portion thereof, a removable firing chamber in said breech portion, said firing chamber having a restricted opening at its forward end with ducts intercepting said restricted opening and communicating with said front portion, a pin in the firing chamber, and striking means engaging the pin for igniting a propellant in said firing chamber.



1,504,820. AUTOMATIC ROTARY SCRAPER. ROE C. HAWKINS, Long Beach, Calif. Filed June 7, 1923. Serial No. 643,925. 9 Claims. (Cl. 37—140.)

1. In a rotary scraper, a bowl having one flat side with a cutting edge at the front of the flat side and having solid ends, arcuate shoes connected to the solid ends and forming substantially a circle except at the flat side of the bowl, pivots extending outwardly from the solid ends at the center of the circle of the shoes, a main frame having parallel rear ends attached to said pivots and having converging intermediate portions connected together and having parallel ends extending from the connected portions and attached to a hitch plate, a rock shaft mounted in the rear, parallel portions in front of the rotating scraper, a crank arm fixed upon the center of the rock shaft and extending upwardly, a link connected to the upper end of the crank arm and extending forwardly, a hand lever connected to the forward ends of the frame and to the link so that by operating the hand lever the rock shaft is rotated back and forth, lever arms fixed upon the ends of the rock shaft and extending substantially horizontally and backwardly and having lower cam faces, locking arms pivotally connected to the frame in front of the rock shaft and extending downwardly and backwardly and having notches in their upper faces and at their rear ends, plus fixed in the ends of the rotary scraper and adapted to engage in the notches of the locking arms, springs connecting the locking arms to the frame, and cam faces upon the locking arms to be engaged by the cam faces upon the lever arms carried by the rock shaft so that when the hand lever is pushed backwardly the cams of the lever arms will push the locking arms against the tension of the springs to release the pins from the notches in the locking arms.

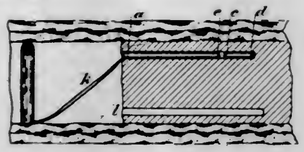


1,504,821. PHOTOGRAPHIC CAMERA. ALBERT HAYWARD, Auckland, New Zealand. Filed Nov. 2, 1921. Serial No. 512,350. 1 Claim. (Cl. 95—51.)

In cameras of the class herein referred to, the combination with a base plate for the lens carrying frame, and with such lens carrying frame, of a block attached to the bottom of the said frame, and a slide extending transversely across the base in which such block is mounted to move to and fro, such slide being curved in an arc extending forwardly and formed on a radius

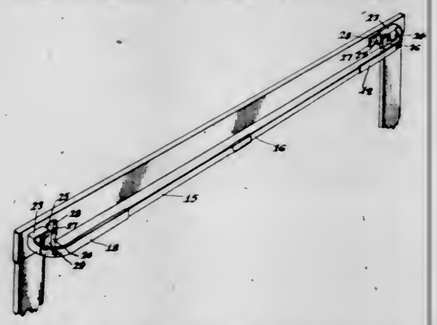
having as its centre the vertical central line of the camera's exposure opening, substantially, as and for the purposes specified.

1,504,822. MEANS FOR MAKING CASTS. EZRA HESS, Warsaw, Ind. Filed Jan. 18, 1923. Serial No. 613,480. 3 Claims. (Cl. 18—42.)



1. A mold making receptacle comprising a dish-shaped bottom portion, a pair of side portions hinged to said bottom portion, a flexible parting strip adapted to enter between the edges of said side portions, and means for clamping the side portions and to conform to the contour of an object in said receptacle together to hold said parting strip in position.

1,504,823. PLUG CONNECTION. ARTHUR H. KLINE, Chicago, Ill. Filed Sept. 24, 1920. Serial No. 412,503. Renewed June 14, 1924. 1 Claim. (Cl. 173—360.)

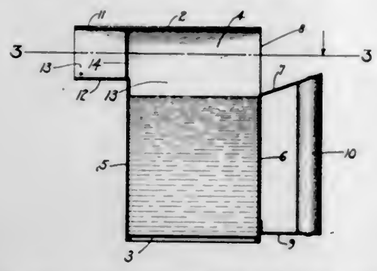


In an electrical connection, a body portion having a pair of lugs adjacent the outer end thereof, a V-shaped terminal plate disposed between said lugs, a movable contact pin provided with a shoulder slidably disposed in alined openings of the side arms of said V-shaped terminal, and a spring disposed between said shoulder and the inner side arm of said V-shaped terminal, whereby the shoulder of said pin normally abuts against the outer side arm of said V-shaped member.

1,504,824. METHOD OF AND MEANS FOR EXTINGUISHING OR SMOTHERING EXPLOSIONS IN MINES. HERMANN KRUSKOPF, Dortmund, Germany. Filed Apr. 30, 1921. Serial No. 465,765. 5 Claims. (Cl. 102—5.)

5. The herein described method of tamping explosive-charge holes, consisting in inserting in such hole following the application of the charge, an independent spacing member adapted to have one end engage the charge, and a self-contained charge of tamping material having a normal diameter less than that of the hole inserted to engage the other end of the member, the member spacing the charge and tamping in a predetermined relation and said material being released under the force of the explosion to eventually completely close the tamped end of the hole.

1,504,825. CURTAIN BRACKET. MADS M. LARSEN, Colton, Calif., assignor of forty-nine per cent to Irwin M. Knopsnyder, Colton, Calif. Filed Aug. 24, 1923. Serial No. 659,140. 5 Claims. (Cl. 156—22.)



2. A curtain hanger, comprising curved arms extensibly associated with each other, brackets having portions arranged at an angle with respect to each other, and members carried by the arms and arranged at an angle with respect to each other to engage the portions of the brackets for sustaining the arms upon the brackets.

1,504,826. INSERT-CARD FRAME. MADS M. LARSEN, Colton, Calif. Filed Oct. 8, 1923. Serial No. 667,259. 14 Claims. (Cl. 40—148.)

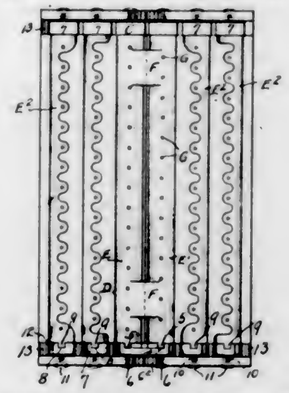
1. In an insert card device, an open front box-like main frame, a back having a light opening, and resilient means for supporting a card near the front thereof while permitting light thereto from the rear.

1,504,827. DISH RINSER. THURSTON MCGILL, Lafayette, Ind. Filed Oct. 7, 1922. Serial No. 593,072. 5 Claims. (Cl. 299—102.)

1. A dish rinser comprising a receptacle having a closed top and bottom, a rear wall and handle thereon, said wall above said handle having a filling opening, and a spout in the front wall of said receptacle opposite said filling opening and extending the full width of the rinser, through which opening the water in said receptacle is delivered straight down upon the articles to be rinsed.

1,504,828. PNEUMATIC BUMPER. WALTER G. MOORE and JOSEPH E. WOOD, Chicago, Ill. Filed July 30, 1923. Serial No. 654,726. 4 Claims. (Cl. 243—55.)

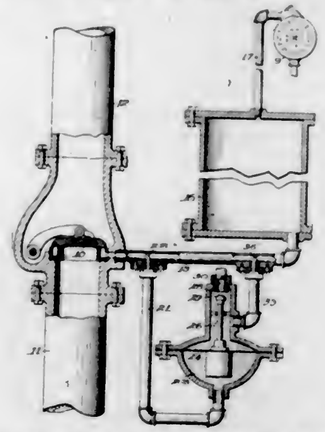
4. A bumper of the type described comprising a pair of bumper bar supporting members substantially loop-shaped in contour adapted to be pivotally mounted at one end upon the spring bolts of a motor vehicle, hingedly mounted plates attached to the opposite end of said loop-shaped members, whereby said plates may be secured by any ordinary securing means to the frame of said vehicle, and parallel bumper bars disposed transversely thereacross.



1,504,829. PLASTER. FRANCIS MULLIGAN, Belfast, Ireland. Filed Feb. 6, 1924. Serial No. 691,032. 3 Claims. (Cl. 106—34.)

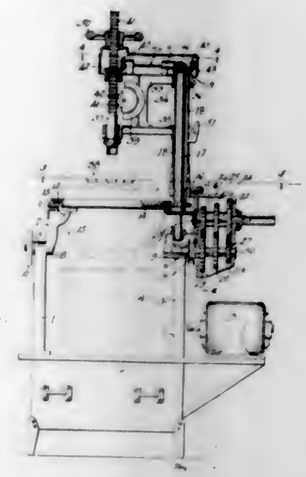
2. A process of manufacturing cement of the kind described, consisting in first burning raw gypsum in the presence of fuel to a point of clinkering or fusing and maintaining it at this point for a period of 15 hours, after calcination separating the gypsum from the fuel, sprinkling the calcined gypsum with water, and then grinding it into a fine powder and finally adding not more than one per cent of a solid hardening agent to the powder.

1,504,830. COLLAPSIBLE HAIRBRUSH. ALFRED CLAYTON MYERS, Altoona, Pa. Filed Mar. 8, 1922. Serial No. 542,074. 2 Claims. (Cl. 15—203.)



1. A folding brush construction including a pair of box-like casing sections, hinge members for connecting the adjacent sides of said sections, said hinge members each including a pivot axis about which the sections rotate, a duplex brush-carrying bar detachably fitted to said hinge members, gear teeth formed on said hinge members, a plurality of rotatable brush bar carrying

members journaled in the side wall of the casing and each being provided with gear teeth, rack bars slidably guided in each section and meshing with the gear teeth



of said hinge members whereby relative movement of the sections on the hinge member will cause the rotation of said journal members, and brush carrying bars carried by said journal members.

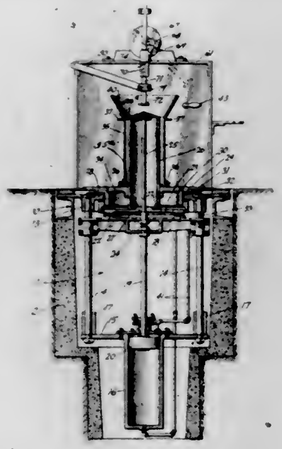
1,504,831. AUTOMATIC DEVICE FOR DRAINING VARIABLE-PRESSURE ALARM SYSTEMS. HALFORD W. PARK, Scarsdale, N. Y., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1921. Serial No. 526,428. 8 Claims. (Cl. 169—23.)

1. In an automatic alarm valve system, the combination with a main alarm valve, a water motor alarm, and a conduit controlled by the alarm valve for conducting water from the riser to the motor when the alarm valve opens, of an upwardly opening port for discharging the water from the system, a valve below it adapted to close the port from below and adapted to open the port by force of gravity, a diaphragm having a chamber behind it, means for conducting water to increase the pressure in said chamber when the water flows to the water motor, whereby said valve is held up in opposition to its weight against the valve seat to close it by the force of the water flowing through the system from the riser to the water motor and whereby when it becomes seated the hydrostatic head of water above it will assist in holding it to its seat, said valve having sufficient weight to cause it to fall away from the seat whenever held only by the hydrostatic head in the system behind said diaphragm.

1,504,832. CULINARY APPARATUS. MARCELLIN PORGET, Detroit, Mich. Filed Nov. 22, 1919. Serial No. 339,783. 4 Claims. (Cl. 259—85.)

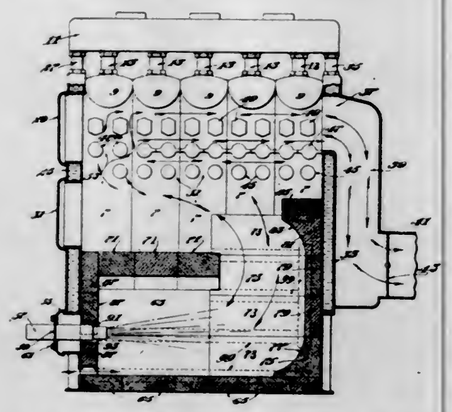
1. In apparatus of the character described, a framework comprising a base part and upper part pivoted to swing thereon on a horizontal axis, a rotatable element on the said upper part including a receptacle, rotatable apparatus adapted to be positioned within or withdrawn from the said rotatable element, and means for rotating the said element and apparatus including a driving shaft, the longitudinal axis of which is in alignment with the turning axis of the upper frame.

1,504,833. TIP FOR BILLIARD CUES. THOMAS H. PROSSER, Tatura, Victoria, Australia. Filed Sept. 12, 1922. Serial No. 587,751. 9 Claims. (Cl. 46—9.)



1. An improved tip for billiard cues comprising in combination an inner disc having a central elongated opening therein, an intermediate disc secured to the outer face of said inner disc and having two spaced elongated openings or incisions, a fastening tongue projecting from said inner disc and having its root portion passing through said openings of the inner and intermediate discs and extending sidewardly between the two latter discs and an outer disc secured to the outer face of said intermediate disc substantially as described.

1,504,834. CONCRETE-PIPE MACHINE. EMSLEY ROBBINS, Upland, Calif. Filed Nov. 9, 1921. Serial No. 513,919. 9 Claims. (Cl. 25—37.)



1. In a concrete pipe forming machine, a rotatively mounted support, a cylinder removably positioned upon said support, a support arranged for movements beneath the first mentioned support, a core removably positioned on the lower support and extending upwardly

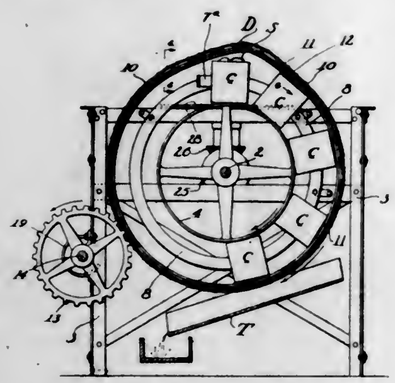
through the upper support and through the cylinder positioned thereon, a lip rigidly mounted at the upper end of the cylinder and extending downwardly against the

outer end of the core to form an outside rabbet, and a ring fitting inside of the lower end of the cylinder to form an inside rabbet.

1,504,835. FURNACE. JOHN T. MCTARNAHAN, Boston, Mass., assignor to Ralph H. Cahouet, trustee in bankruptcy of McTarnahan Fuel Oil Burning Corporation, bankrupt, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1921. Serial No. 523,857. 2 Claims. (Cl. 158—1.)

2. In a furnace, a combustion chamber of substantial length comprising side walls, a crown and end walls, one of the end walls being spaced a substantial distance from one end of the crown to leave an outlet, said side walls and crown being formed of solid, thick blocks of ceramic material specially formed to determine the shape and size of the combustion chamber, certain of said side wall blocks being formed to provide abutments for supporting the crown blocks, the side wall and crown blocks having opposed horizontal grooves therein, metallic uniting elements in said grooves, said elements and grooves being formed for interlocking engagement, thereby to secure the blocks in assembled relation; and a fuel oil burner entered through one of the end walls for projecting its flame through the combustion chamber toward the opposite end wall, that the gases of combustion may be deflected by the latter up through the outlet; the side walls and crown of the combustion chamber being closely related in respect to the burner so as to be highly heated by the flame and store up heat to be radiated back into the combustion chamber and promote combustion of the fuel oil.

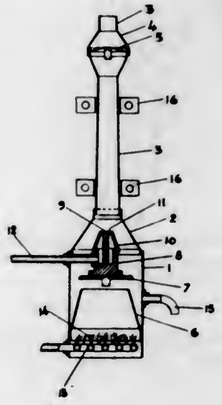
1,504,836. GLOVE. BELDEN REHN, Miles City, Mont. Filed Nov. 6, 1923. Serial No. 673,100. 3 Claims. (Cl. 2—160.)



1. In combination, a glove, a strap connected at one end of said glove, a key connected to the free end of the strap, and means on the glove for holding the key in an out-of-the-way position when not in use.

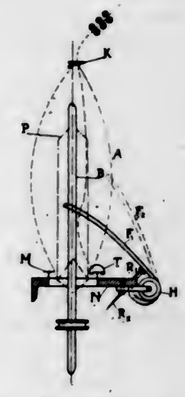
1,504,837. FUEL FOR USE IN INTERNAL-COMBUSTION ENGINES. HARRY RALPH RICARDO, London, England. Filed Mar. 24, 1922. Serial No. 546,445. 4 Claims. (Cl. 44— 9.)

1. A composition constituting a liquid fuel for use in an internal combustion engine comprising benzol, acetone in amount not less than that of the benzol, and water the total proportion of water being not less than 8% by weight of the composition.



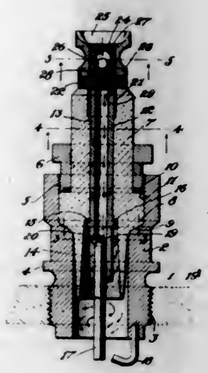
1,504,838. CAN-DRAINING MACHINE. ERNEST W. RICKARD, Hemet, Calif. Filed June 21, 1923. Serial No. 646,831. 9 Claims. (Cl. 226—22.)

1. In a machine for draining containers, a central, rotatable wheel onto the periphery of which the containers are adapted to be positioned, means for guiding the containers to and from the face of the wheel, and a rotary, substantially circular device concentrically spaced about the face of said wheel and adapted to engage the outer ends of the containers positioned on the wheel and carry the same around on and with the wheel, said device being without direct connection with the wheel.



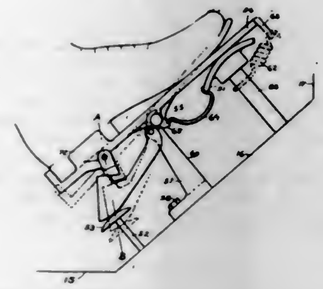
2. A machine for draining containers by moving the containers through an orbit, said machine comprising means for moving the containers through a substantially circular orbit in which the containers are inverted, and means for feeding the containers to and leading the containers from the inverting means, said container-moving means including concentrically spaced rotary devices.

1,504,839. APPARATUS FOR HEATING OF WATER. OSSIAN ALBERT RINGNOM, Helsinki, Finland. Filed June 25, 1923. Serial No. 647,712. 1 Claim. (Cl. 126—359.)



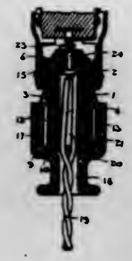
In a water heater, a comparatively wide lower vertical casing, a comparatively narrow upper casing, a conical portion connecting said parts, a burner in the lower portion of the lower casing, a water supply in the upper portion of said lower casing, an outlet for said water supply arranged within the lower casing and adapted to deliver the water into the upper casing to create a forced draft, a baffle located within the upper casing remote from the lower casing to deflect the water while permitting the passage of the products of combustion.

1,504,840. ANTIBALLOON DEVICE. JOSEPH AUGUSTE ROUGE, St. Etienne-les-Remiremont, France. Filed Oct. 6, 1922. Serial No. 592,864. 5 Claims. (Cl. 118—11.)



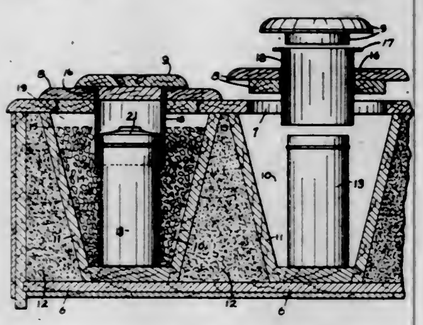
1. The combination with a ring spinning or twisting device, of an anti-bulging element mounted for swinging movement under the action of the ballooning thread, and normally held by gravity in position to prevent thread bulging during operation of the device.

1,504,841. SPARK PLUG. LAMBERT SCHMIDT, Brooklyn, N. Y. Filed Sept. 14, 1921. Serial No. 500,604. 2 Claims. (Cl. 123—169.)



1. A spark plug comprising a casing, an insulating core secured in said casing provided with an internal shoulder, an electrode mounted in the core and having a flange to engage upon said shoulder, said electrode including a tubular portion having an externally threaded end projecting beyond the core, retaining means threaded thereon, the other end of the core being provided with a petticoat having its inner surface spaced from the electrode, the wall of said tubular portion of the electrode having a series of tangentially disposed ports therein, means within the tubular electrode adjacent to said ports to direct air outwardly and downwardly therethrough against the wall of said petticoat in a series of spiralling streams and an air controlling valve mounted in the upper end of said electrode.

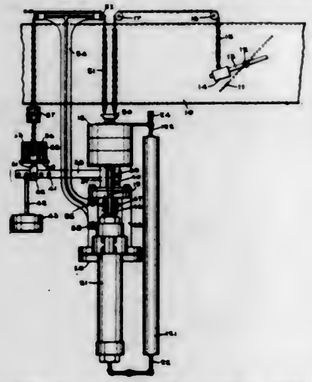
1,504,842. CONTROLLING-PEDAL MECHANISM. WILLARD T. SEARS, Montclair, N. J.; Mabel Helena Sears executrix of said Willard T. Sears, deceased. Filed Feb. 2, 1921. Serial No. 441,796. 10 Claims. (Cl. 74—81.)



1. In apparatus of the class described, the combination of a pedal and a fixed support for said pedal, said pedal having a pivotal motion about one part of said support and a bodily sliding motion along said support; a controlling device operated by the pivotal motion of said pedal, and another controlling device operated by the sliding motion of said pedal.

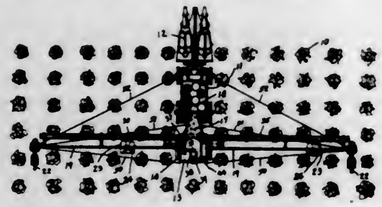
1,504,843. ELECTRICAL PLUG CONNECTER. WILLIAM E. SHORE, New York, N. Y. Filed Apr. 4, 1921. Serial No. 458,387. 4 Claims. (Cl. 173—360.)

1. In an electric plug connector, comprising a central insulating member having longitudinal grooves in the periphery, a plurality of spring fingers normally resting in said grooves and having thread corrugations, and means external to the central insulating member slidable longitudinally in said grooves adapted to engage in sliding contact with said spring fingers to lock said fingers in engagement with the threaded socket.



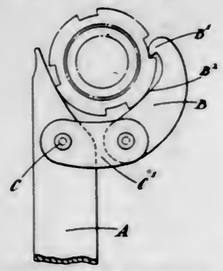
1,504,844. ICE-CREAM CABINET. RICHIE H. STERNE, Seattle, Wash., assignor to Patton Wooden Ware Co. Inc., Seattle, Wash., a Corporation of Washington. Filed July 5, 1923. Serial No. 649,735. 2 Claims. (Cl. 217—7.)

1. An ice cream cabinet embodying an ice cream container; a heat insulated refrigerating compartment relatively larger than said ice cream container; an annular cover rim; a cover to fit said rim; and a sleeve suspended from said cover rim and enclosing and extending below the upper portion of said ice cream container and level of the salted ice, whereby upon removal of said cover only that portion of the refrigerating compartment disposed immediately above the ice cream container is exposed to the temperature of the atmosphere of the surrounding room, whereby salted ice may be packed about said ice cream container.



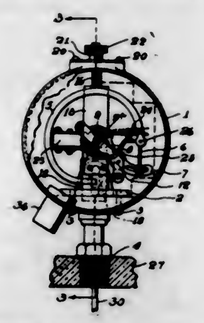
1,504,845. AUXILIARY FLUID-PRESSURE CONTROL. COLE STICKLE, Indianapolis, Ind. Filed July 29, 1922. Serial No. 578,359. 3 Claims. (Cl. 236—85.)

1. Auxiliary fluid pressure mechanism, for steam boilers; including a weight, a cylinder, a piston and piston rod therein for elevating the waight, a replacement tank for supplying fluid under pressure to said cylinder and having a slight leak, a pipe for supplying fluid under pressure to said replacement tank, a valve for controlling fluid under pressure to said pipe, means actuated by the steam from the boiler for opening said valve, yielding means for closing said valve, and weighted means flexibly connected with said weight and tending to elevate the



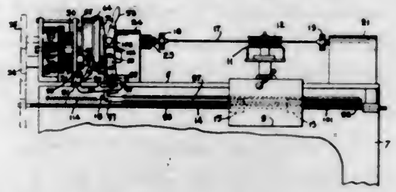
same and in position to engage said yielding means when said weight is near its upward limit of movement to aid in closing said valve.

1,504,846. TOMATO HARVESTER. ELVAN Y. TARKINGTON, Indianapolis, Ind. Filed Dec. 30, 1922. Serial No. 609,920. 5 Claims. (Cl. 214—83.)



1. A harvester attachment of the class described, comprising a vehicle, a laterally extending supporting beam supported at one end upon said vehicle, means for supporting the opposite end of said beam independently of said vehicle, and a movable seat suspended from said beam in position to be moved back and forth from one end to the other whereby said seat may cover an appreciable extent of ground while said vehicle remains stationary.

1,504,847. C SPANNER OR WRENCH FOR SLOTTED NUTS OR PARTS. NICHOLAS SPENCER TARR, Cheltenham, England. Filed Oct. 31, 1922. Serial No. 598,179. 2 Claims. (Cl. 81—90.)

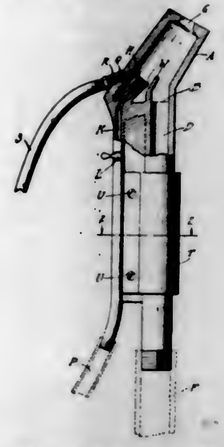


1. A C-spanner or wrench for slotted nuts or parts, comprising a handle, a stationary jaw formed in one piece with the said handle and having a concaved inner face, and a movable jaw, a link connecting said movable jaw to said handle, said movable jaw extending in an opposite direction to the stationary jaw and having a concaved inner face and a terminal hook or claw, whereby the wrench is caused to bear on at least three parts of a nut during operation.

1,504,848. THERMOSTATIC CONTROL MEANS. ERNEST TROVA, St. Louis, Mo. Filed July 17, 1922. Serial No. 575,454. 2 Claims. (Cl. 236—94.)

1. A heat regulating device comprising in combination with the heating element of the heating chamber, a removable cover plate for the heating chamber supporting the heating element from the inner side thereof, a casing supported by and above the outer side of the cover plate, a heat responsive element in said casing extending through the cover plate and downwardly at a distance from one side of and laterally below the heating element, a switch for the electric heating circuit in said casing, and a connection in said casing for actuating said switch operated by said heat responsive element.

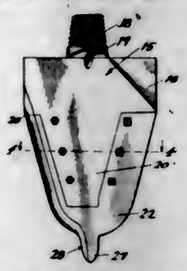
1,504,849. COIL-WINDING MACHINE. JAMES BRYANT WHITMORE and JOHN EBLING FERGUSON, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 22, 1921. Serial No. 524,061. 39 Claims. (Cl. 153—67.)



1. A machine for producing incandescent electric lamp filament, which comprises means for winding a filament wire in a given direction to produce a coil and means for automatically adjusting said machine to wind said wire in a reverse direction to produce a reversely wound coil.

1,504,850. METHOD OF TREATING GALAX LEAVES. TRUMON N. WOODRUFF, Lowgap, N. C. Filed May 14, 1923. Serial No. 639,021. 12 Claims. (Cl. 99—8.)

8. The method of preserving galax leaves consisting of soaking the leaves for approximately seven days in a solution containing calcium chloride, slaked lime and glycerine having a specific gravity of substantially 95°.

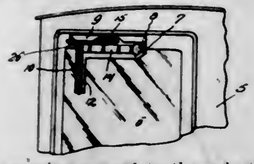


12. A preservative compound for foliage used for decorative purposes comprising water six hundred gallons, calcium chloride one thousand eight hundred and seventy-five pounds, slaked lime ten pounds, and glycerine one half pound.

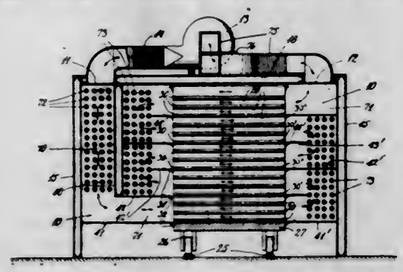
1,504,851. DEVICE FOR WASHING VEHICLES. JOHN J. WREN, Chicago, Ill. Filed May 24, 1923. Serial No. 641,267. 1 Claim. (Cl. 299—140.)

A device for washing cars, comprising a casting having a mixing chamber with an outlet nozzle, said casting having a water inlet and an air inlet to said chamber, the end of the air inlet comprising a pipe that is disposed within said chamber and bent so as to direct the stream of air toward the water that is being conveyed into the chamber from the water inlet, the inner end of the water inlet comprising a partition separating the rear portion of the mixing chamber from the water inlet and disposed adjacent to the air pipe, a fluid inlet disposed adjacent to said pipe, and in converging relation thereto whereby the air flowing from said pipe will entrain the fluid from said fluid inlet, and a valve for controlling the flow of air through said air inlet.

1,504,852. ROTARY DRILL BIT. WILSON W. WRIGHT, Downey, Calif. Filed Aug. 19, 1922. Serial No. 582,877. 10 Claims. (Cl. 255—61.)



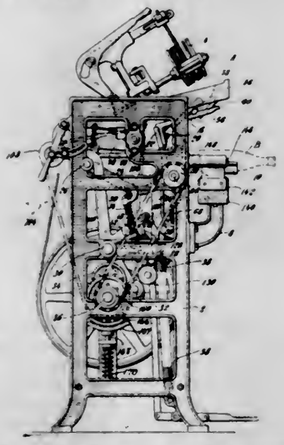
1. A drill bit comprising a V-shaped body, a blade including divergent arms having cutting edges, said body being received between said arms, and means extending through the arms and body for securing the blade to the body.



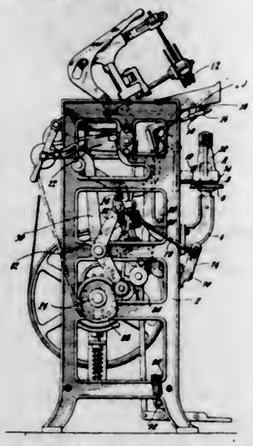
1,504,853. DIRECTION SIGNAL. MAX ZIEHLKE and ANTHONY J. LEUWER, Linton, N. Dak. Filed Feb. 25, 1924. Serial No. 695,072. 2 Claims. (Cl. 116—52.)

1. A direction signal comprising a member adapted for attachment to the upper end and outer side of a closed car door, a pendant extension formed upon the forward end of said member, and being formed with a lateral lug at its lower end, a rod journalled between said lug and said first mentioned member, an indicating pointer carried by said rod, means for maintaining said pointer

normally beside said member, means upon the inner side of said car door whereby said member may be forced outwardly to an indicating position, said means comprising a flexible member secured to the rod at one end and extending through an opening in said car door, and a handle pivoted to the inner side of said door to which the opposite end of said table is attached.

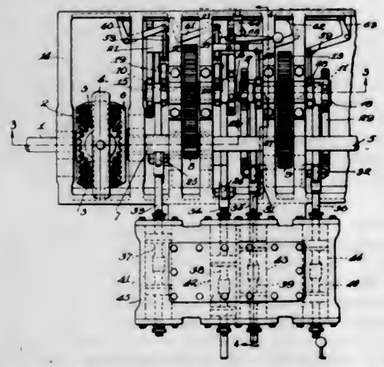


1,504,854. DRIER. DAVID S. BAKER, Greenwich, Conn., assignor to National Evaporator Corporation, Providence, R. I., a Corporation of Nevada. Filed Mar. 1, 1922. Serial No. 540,196. 19 Claims. (Cl. 34—39.)



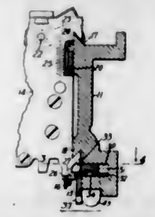
2. In a drier, the combination of means providing a continuous flow circuit comprising a straight descending portion, a tortuous ascending portion located at the side of said descending portion and a portion connecting the upper ends of said straight and tortuous portions; a blower in said connecting portion adapted to cause a circulation of drying medium through the flow circuit, a preheater in said straight portion, and re-heaters and material supports arranged alternately in said tortuous portion.

1,504,855. LABELING MACHINE. FRITZ BECKER, Long Island City, N. Y., assignor to National Labeling Machine Company. Filed May 17, 1922. Serial No. 561,588. 4 Claims. (Cl. 216—54.)



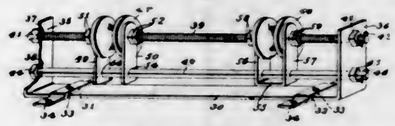
1. In a labeling machine, pivotally mounted carrier arms to position a label upon the article to be labeled, a presser foot pivotally supported for movement in a plane parallel with the label carrying arms about an axis disposed in parallel relation to the axis of said label carrying arms, said presser foot adapted to engage the intermediate portion of the label and hold the same upon the article during a reverse movement of said arms to disengage the same from the label, a power shaft, spaced cams fixed on said shaft, operating means for the label carrying arms actuated by one of said cams, and operating means for the presser foot actuated by the other of said cams, said latter means including a resiliently yieldable connection permitting of the engagement of the presser foot with articles of different sizes.

1,504,856. LABELING MACHINE. FRITZ BECKER, Long Island City, N. Y., assignor to National Labeling Machine Company. Filed May 17, 1922. Serial No. 561,589. 5 Claims. (Cl. 216—14.)



1. In a labeling machine, an article support, rock shafts arranged at each side of said support, an angular arm fixed to each of the rock shafts, a locally yieldable label clamping member secured to one end of each of said arms, and cam actuated mechanism operatively connected to the rock shafts and including an adjustable connection for regulating the extent of rocking movement of said shafts.

1,504,857. VARIABLE-SPEED TRANSMISSION. LUCIAN H. BEEBE, New London, Conn. Filed Nov. 23, 1921. Serial No. 517,202. 12 Claims. (Cl. 74—34.)



1. Apparatus of the character described, comprising a member adapted to be rotated at approximately constant speed, a plurality of elements in axial alinement with the member and adapted to be rotated thereby, a shaft, connections between the shaft and one of the elements whereby said shaft may be rotated by the element, a second shaft, connections between said second shaft and another of the elements whereby said second shaft may be rotated by said other element, and means for varying the speed of rotation of the shafts whereby relative rotation of the elements may be established.

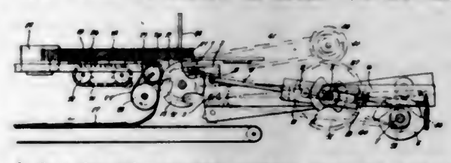
1,504,858. CALCULATING MACHINE. ROBERT G. C. BOA, New York, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 22, 1921. Serial No. 479,580. 14 Claims. (Cl. 235—59.)

1. In a calculating machine, the combination of a supporting bar, a totalizer mounted on and adjustable along said bar, a locking bar extending lengthwise of said supporting bar and having a series of notches for locking said totalizer in its several adjustments, and means for moving said locking bar transvesrely into and out of engagement with said totalizer.

1,504,859. ADJUSTABLE SECONDARY RACK. WILLIAM P. BRADY, New Britain, Conn. Filed Sept. 22, 1923. Serial No. 664,219. 1 Claim. (Cl. 173—321.)

In a secondary rack, a U-shaped supporting member having a base and a pair of upstanding arms, a pair of cross rods mounted in said arms, a plurality of insulators mounted on one of said rods, and means rigidly connecting said rods at a point between said arms for reinforcing the rod carrying said insulators, and means for locking said insulators in any desired position.

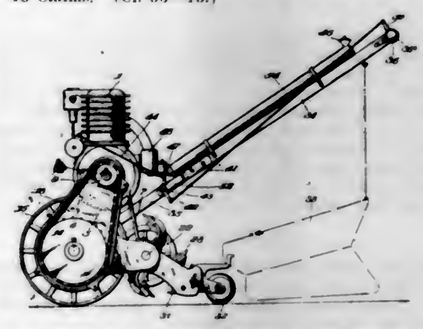
1,504,860. PRODUCTION OF BRIQUETTES. WALTER BROADBRIDGE, EDWIN EDSER, and WILLIAM WARWICK STENNING, London, England, assignors to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Aug. 17, 1920. Serial No. 404,106. 61 Claims. (Cl. 44—19.)



1. A process of making briquettes which consists in suspending suitably divided solids in water so as to form a freely flowing pulp and subjecting the pulp to agitation with a binding medium having an affinity for solid particles so as to coat them with binding medium and agglomerate them, and separatig the resulting agglomerates from pulp liquid and forming the same into briquettes.

61. A process of making briquettes of purified material from impure material which consists in subjecting the impure material in suitably divided condition to concentration by froth flotation, whereby selected particles are separated from impurities, agitating the selected particles in a freely flowing pulp with a binding medium having an affinity for the selected particles in amount sufficient to cause the particles to agglomerate but insufficient to flow on the surface of the particles after coating the same, so as to coat such particles with a binding medium and agglomerate them, and separating the resulting agglomerates from pulp liquid and forming the same into briquettes.

1,504,861. PRODUCTION OF BRIQUETTES. WALTER BROADBRIDGE, EDWIN EDSER, and WILLIAM WARWICK STENNING, London, England, assignors to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Original application filed Aug. 17, 1920, Serial No. 404,106. Divided and this application filed May 17, 1923. Serial No. 639,695. 12 Claims. (Cl. 44—10.)



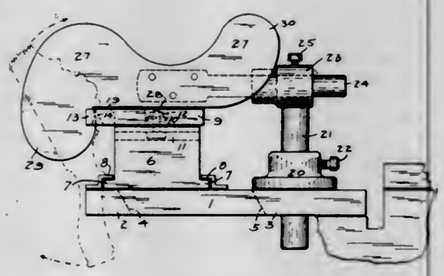
1. A process of making briquettes of purified material from impure material which consists in subjecting the impure material in a suitably divided condition to flotation separation, with the addition of material acting as frothing agent and binding medium and with a flocculating agent whereby selected particles become coated, flocculated and floated in the form of agglomerates supported by bubbles, while impurities are not so floated, collecting and draining the float, and forming briquettes from the coated particles.

1,504,862. FOUNTAIN GUMMING MACHINE. HERBERT CHARLES BROOKS, London, England. Filed Feb. 21, 1923. Serial No. 620,449. 18 Claims. (Cl. 271—29.)

1. In a fountain gumming machine, means for separating the bottom blank from a pile of blanks supported on the machine, comprising a sucker and actuating means causing the sucker to move upwardly to engage the leading edge of a bottom blank of a pile of blanks, then forwardly to separate the blank and immediately expose the next bottom blank, and then downwardly so as to pull down the blank and then rearwardly to move clear of the said leading edge of the separate blank, thereon immediately returning to engage the succeeding bottom blank, so that a plurality of blanks may be moving simultaneously from under the pile of blanks.

1,504,863. LAWN MOWER. ALLEN W. BROWN, St. Louis, Mo., assignor of one-half to Frank E. McMillin, Chevy Chase, Md. Filed Oct. 21, 1919. Serial No. 332,216. 15 Claims. (Cl. 56—16.)

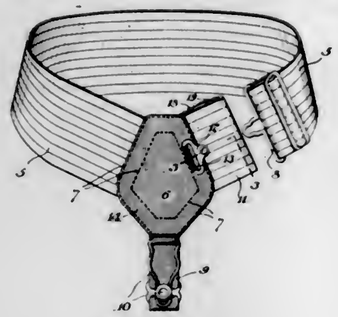
1. A motor lawn mower, including a lawn mower having supporting wheels and provided with cutting mechanism, an internal combustion engine carried by the lawn mower, driving gearing connecting the internal combustion engine with the cutting mechanism for actuat-



ing the latter, starting mechanism comprising engine cranking gearing connecting the internal combustion engine with one of the supporting wheels, and an automatic clutch device in the latter gearing having means arranged to transmit motion from the supporting wheel of the lawn mower to the engine and to automatically unclutch the said wheel from the engine when the speed of the latter exceeds the speed of the supporting wheel, whereby the engine may be started by pushing the lawn mower and when started will automatically operate only the cutting mechanism without manual operation of the clutch.

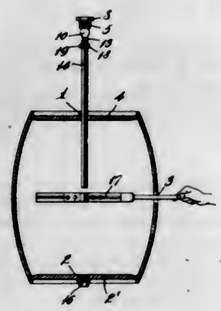
1,504,864. NOZZLE. GUADALUPE BUELNA and HENRI EUGENE JEREMIE VACHER, Santa Barbara, Calif. Filed Oct. 29, 1923. Serial No. 671,338. 3 Claims. (Cl. 299—115.)

1. A spray nozzle for water sprinklers comprising a body threaded for attachment to a source of water supply, and having a tapering bore and a contiguous cylindrical bore, said cylindrical bore having a plurality of equally spaced substantially spiral grooves extending inwardly from the end of said nozzle and terminating in the upper part of said tapering bore.



1,504,865. SCROLL-SANDING MACHINE. EMIL F. BUTTS, Tacoma, Wash., assignor of one-half to Edwin Gregory, Tacoma, Wash. Filed Jan. 25, 1923. Serial No. 614,888. 6 Claims. (Cl. 51—141.)

1. In a scroll sanding machine, the combination of a traveling sand belt, having its abrasive surface upward; a work table whereon said belt travels, said table being notched in its front and rear edges to permit the portions of the scroll piece not being sanded to swing beyond the plane of the sand belt and thus permit the portion being sanded to be rolled on the said sand belt; and a work brace board supported over the traveling sand belt and adapted to brace and to guide the scroll piece held thereagainst and pressed on the sand belt.



1,504,866. GARTER. TILLMAN CAHN, Elkins Park, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed Nov. 3, 1922. Serial No. 598,722. 1 Claim. (Cl. 241—6.)

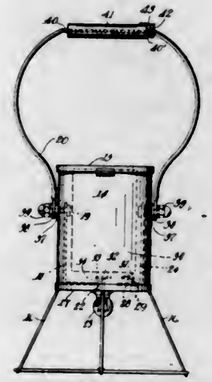
In a wide web garter, the combination of a leg band, a connecting pad having its vertical extension greater than its horizontal extension and formed of a plurality of pairs of layers of fabric, each pair of layers folded together at their margins, the leg band secured to one side margin of the pad, and having at its free end a cast-off element, a tab formed of folded webbing having its two ends inserted between the said pairs of folded layers at the other side margin of the pad, with lines

of stitching securing said webbing ends and said layers together, and a cast-off element secured to the pad near its last mentioned side margin by stitching passing through said pairs of layers and their folded-in portions and said webbing ends.

1,504,867. PAINT MIXER. EDSEN L. CANNON, Cleveland Heights, Ohio, assignor to The Erie Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 6, 1921. Serial No. 435,423. 7 Claims. (Cl. 254—134.)

1. An agitator comprising a plug adapted to be secured in the wall of a container, a socket member carried upon the inner end of said plug, a shaft having a ball on one end thereof for rotatable engagement in said socket member and adapted to be inserted through the same opening as the plug, agitating means adapted to be secured upon said shaft, and means for rotating said shaft.

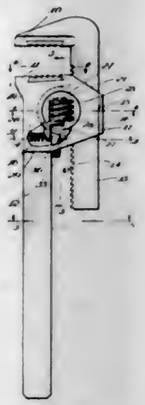
1,504,868. CLEANING DEVICE FOR AUTOMOBILES. JOHN W. CARRINGTON, Cincinnati, Ohio. Filed Oct. 10, 1921. Serial No. 506,724. 4 Claims. (Cl. 299—67.)



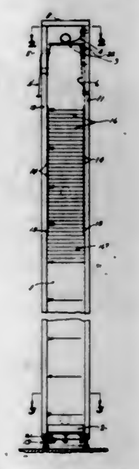
1. A cleaning device including a hollow cylinder having closed ends and provided at one end with means for controlling the admission of fluid to the cylinder and at its opposite end with means for controlling the emission of fluid from the cylinder, a pipe rotatably mounted in said cylinder and provided with propeller blades to permit fluid passing through the cylinder to rotate said pipe, one end of said pipe being open and arranged within the cylinder to permit fluid from the cylinder to pass

into the pipe, a hollow rotatable head mounted at the outer end of said cylinder, arranged exteriorly of the

cylinder and provided with apertures to permit fluid to be discharged from said head, and means for controlling the emission of fluid from said pipe.



1,504,869. ELECTRIC LAMP. GUY W. COMER, Chicago, Ill. Filed Apr. 11, 1922. Serial No. 551,443. 7 Claims. (Cl. 240—8.5.)

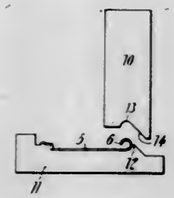


2. A lantern comprising a supporting handle having metallic side members and an insulating stem for supporting and electrically separating said metallic side members, a pair of metallic bars electrically connected with said side members, a light electrically connected with one of said bars, a battery connected with said light and the other bar, and finger engaging means movable bodily on said stem for electrically connecting said metallic side members to establish a circuit through the above said elements.

1,504,870. WRENCH. JOHN P. COUGHLIN, Chicago, Ill. Filed June 27, 1923. Serial No. 648,011. 7 Claims. (Cl. 81—105.)

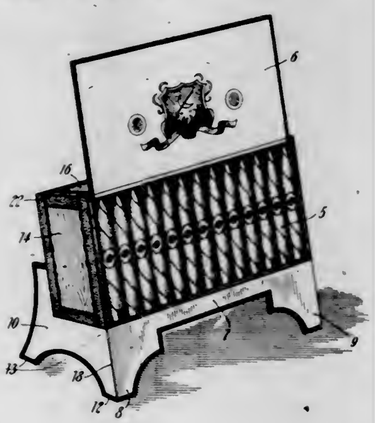
1. A wrench comprising a stationary jaw having a shank forming the wrench handle, a movable jaw having a toothed shank and being pivoted on said stationary shank, a rotary worm for engaging said toothed shank, a case for said worm rotatable with said movable jaw, and a crank journaled in said stationary jaw and rotating with said case, and carrying at its offset portion said worm, whereby said worm swings about said journal as an axis to engage and disengage said teeth.

1,504,871. GRAVITY BALL-TESTING APPARATUS. CLARENCE LESLIE COVINGTON, Brookline, Mass. Filed Mar. 30, 1922. Serial No. 547,958. 3 Claims. (Cl. 265—13.)



1. In a gravity ball-testing apparatus, a vertical, graduated standard; an anvil having a horizontal face, at the lower end of the standard; a supporting leaf at the upper end of the standard above the anvil to sustain the object; a spring to actuate the leaf downward; means to sustain the leaf in horizontal position against the urge of the spring.

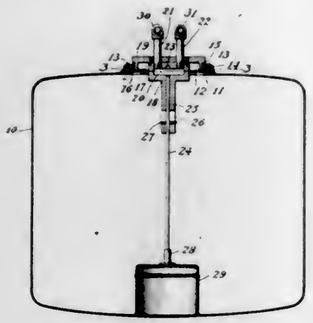
1,504,872. MEANS FOR MAKING PRINTING PLATES. FRANK DE MINICO, New York, N. Y., assignor to Pollard-Alling Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1922. Serial No. 600,065. 1 Claim. (Cl. 153—3.)



Means for producing a printing plate having an approximately cylindrical tubular rib on one edge thereof, comprising a series of three pairs of coacting punches and dies respectively, said punches being operated in

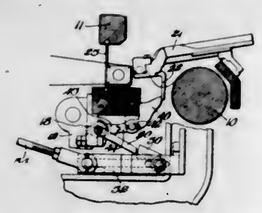
parallelism toward their respective dies, said first punch and die being adapted for punching out the plate blank from sheet material, the punch whereof is beveled on one edge whereby an upturned flange is formed on an edge of the blank simultaneously with said punching out

of the blank, said second punch and die being adapted for forming a bend parallel with and adjacent said upturned flange, and said third punch and die being adapted for rolling over said doubly bent edge toward the body of the plate.



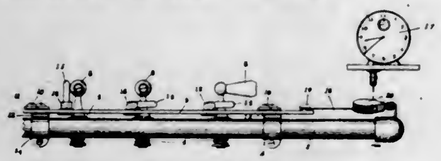
1,504,873. DISPLAY DEVICE. ADOLPH DIETSCHER, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1922. Serial No. 534,851. 2 Claims. (Cl. 40—126.)

1. In a display device the combination of a front wall, opposite end walls articulated thereto, and a flap articulated to the upper edge of each end wall, said flaps having means for mutually interlocking and said end walls terminating downwardly in feet adapted for supporting the display, the front and end walls being held in angular relation and the device in display position by the interlocking of said flaps.



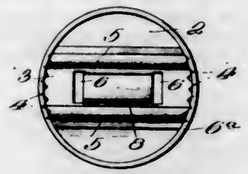
1,504,874. SIGNAL FOR GASOLINE TANKS. CIRILLO DI PIETRO and DANIEL M. COLUCCI, Waterbury, Conn. Filed May 2, 1923. Serial No. 636,136. 2 Claims. (Cl. 116—109.)

2. In an alarm device for warning the driver of a motor vehicle when the fuel in the supply tank has become nearly exhausted, the casing having a flange for attachment to the edge of an opening in the top of the tank, said casing having an interior horizontal passageway communicating at one end with a source of vacuum and at the other end with an air-operated signal, a plunger extending into said casing in right angles to said passageway and extending therethrough, said passageway having a socket in its upper surface adapted to form a seat for the upper end of said plunger, a float directly connected to the lower end of said plunger,



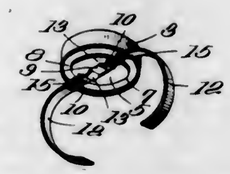
the top of said plunger being adapted to normally close said passageway and being adapted to fall and open communication between the ends thereof when the level of liquid in said tank has dropped to a predetermined point.

1,504,875. LOOM. CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Jan. 26, 1923. Serial No. 615,010. 3 Claims. (Cl. 139—292.)



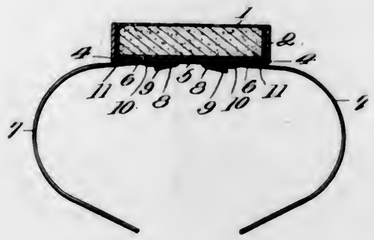
2. A high speed loom having, in combination, a lay, protector mechanism, temples provided with heels for engagement with the lay to push the temples forward upon each forward beat of the lay, bunters mounted on the lay, connections between the bunters and the protector mechanism operating on actuation of the protector mechanism to swing the bunters into position to engage the heels of the temples and thereby push them forward out of range of possible blow by the shuttle on the lay.

1,504,876. VALVE-OPERATING DEVICE. JOSEPH F. DUNN, New York, N. Y. Filed Apr. 7, 1922. Serial No. 550,319. 19 Claims. (Cl. 161—9.)



1. A device for operating a plurality of valve handles, comprising controlling means, movable members carried thereby, and supporting and guiding connections for the controlling means, each movable member being adapted to be set in the path of travel of its respective valve handle, whereby the set members will act to operate their respective valves when the controlling means is actuated.

1,504,877. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, McKeesport, Pa. Filed Apr. 14, 1924. Serial No. 706,358. 15 Claims. (Cl. 246—487.)

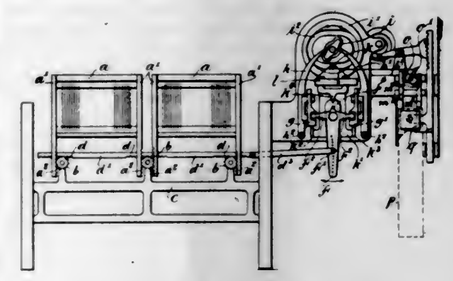


1. A railway signal torpedo comprising a case, a surrounding strengthening ring deeper than the said case and projecting beyond its bottom, and a clip having its ends extended and projecting and biting into the inner side of the said ring, for the purpose described.

1,504,878. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, McKeesport, Pa. Filed Apr. 14, 1924. Serial No. 706,359. 7 Claims. (Cl. 246—487.)

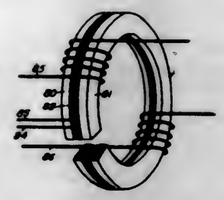
1. An improved railway signal torpedo, comprising a case having a flange extending from one side thereof, a clip held by the extended flange, said clip having therein strap openings, and a two-part strap passing through the said openings, the clip and strap being bent for causing the strap to be held in position on the clip.

1,504,879. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, McKeesport, Pa. Filed Apr. 14, 1924. Serial No. 706,360. 7 Claims. (Cl. 246—487.)



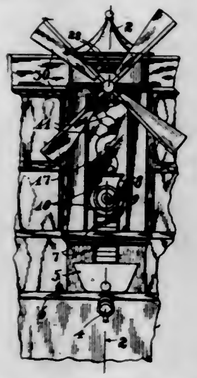
1. A railway signal torpedo, comprising a case, a clip applied thereto and having a strap opening, and a two-part strap applied through the said opening, one of the members having spring interlocking parts for holding the said straps in position on the clip.

1,504,880. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, McKeesport, Pa. Filed Apr. 14, 1924. Serial No. 706,361. 8 Claims. (Cl. 246—487.)



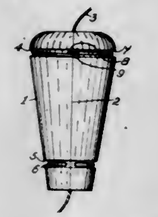
1. A railway signal torpedo comprising a case having a depending peripheral flange, and a disk-shaped clip having a periphery within and forceably engaging the inner side of the flange, the clip held to the torpedo by the said flange.

1,504,881. SHEDDING MECHANISM FOR LOOMS. CARL EGGART, Arbon, Switzerland, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Oct. 7, 1922. Serial No. 592,948. 5 Claims. (Cl. 139—57.)



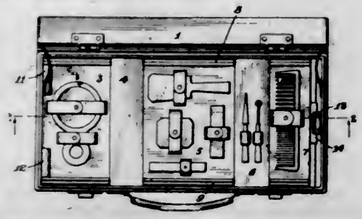
1. In a loom, the combination of two heddle frames in endwise relation, each frame having two vertical rack bars, the rack bars of one frame facing to one side and the rack bars of the other frame facing to the other side, a gear engaging both of the adjacent rack bars of the two frames, other gears engaging respectively the other rack bars of the two frames, a common rack bar engaging all of the gears, and means to reciprocate said common rack bar.

1,504,882. METHOD AND APPARATUS FOR TRANSMITTING SIGNALS. GUSTAF W. ELMEN, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1920. Serial No. 351,898. 7 Claims. (Cl. 178—45.)



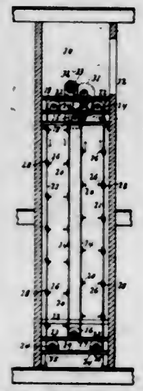
5. The method which comprises supplying the magnetic losses in the core of a loading coil designed to reduce attenuation from a source of current other than the signaling current.

1,504,883. DISPENSING DISPLAY. JAMES FAZIO, Venice, Calif. Filed Feb. 28, 1922. Serial No. 539,959. 9 Claims. (Cl. 40—126.)



1. In a dispensing-display, a cabinet having transparent portions and having a dispensing faucet at a point below the transparent portions, fruit guiding means within the cabinet visible behind the transparent portions, and other guiding means for fluids in apparent connection between the fruit guiding means and the faucet.

1,504,884. FISHING FLOAT. DUDLEY GARST, Waterloo, Iowa. Filed May 27, 1922. Serial No. 564,173. 3 Claims. (Cl. 43—49.)



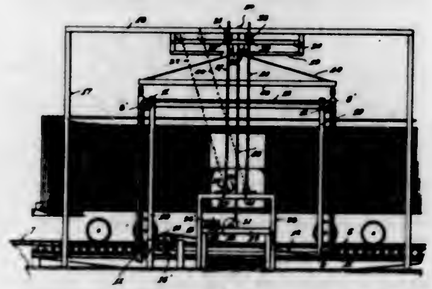
2. A fishing float, comprising an elongated elastic semi-split body whose split extends longitudinally to the axis of the body, a fishing-line traversing said split along its inner limit and held by elastic reaction of the walls of the split, said body consisting of water warpable material and having annular grooves around its opposite ends, and split-rings constructed of resilient material seated around said body compressingly in said annular grooves, and one of them being uncircular and having terminal integral interlocking parts.

1,504,885. LUGGAGE WITH FOLDING TRAY. GEORGE A. GERMANN, Floral Park, N. Y., assignor to Mark Cross Company, New York, N. Y., a Corporation of New York. Filed Apr. 16, 1923. Serial No. 632,389. 1 Claim. (Cl. 190—51.)

Luggage comprising a body and a cover hinged thereto, strips inside of opposite sides of said body adapted to support a tray, a tray on said strips comprising a plurality of sections hinged together, the central section being larger than the others and provided with upstanding ends rising to approximately the top edge of the body when the tray is resting on the strips, the sections next the central section having no upstanding ends whereby the tray may be partially folded and slit in the strips to permit access to the lower portion of the body and still permit access to the contents of the tray, said tray being also adapted to be removed from the body and carried as a separate piece of luggage.

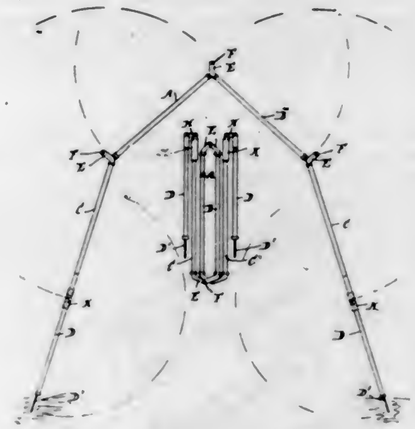
1,504,886. CONVEYING MACHINE. WILLIAM J. GIBBS, Brooklyn, N. Y. Filed Dec. 11, 1922. Serial No. 606,047. 12 Claims. (Cl. 198—163.)

1. In a conveying machine the combination with an endless carrier, of an endless carrier surrounding the same, means on both carriers for supporting an object, and means for driving the carriers at the same speed.



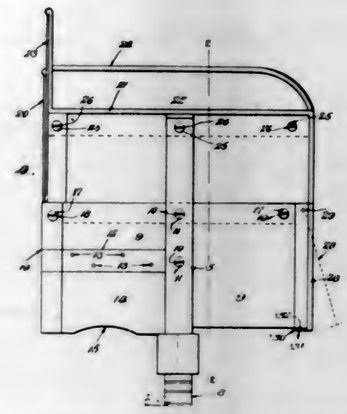
9. In a conveying machine the combination with a vertical endless chain carrier, of an endless chain carrier surrounding the same, shelves disposed at the inner and outer portion of the respective carriers one being in a line with the other for supporting a tray when ascending or descending, means for driving both carriers, and means controlled by the tray for automatically stopping the driving means.

1,504,887. BRUSH. WALTER GRUMBACHER, New York, N. Y. Filed Aug. 17, 1923. Serial No. 657,916. 5 Claims. (Cl. 15—191.)



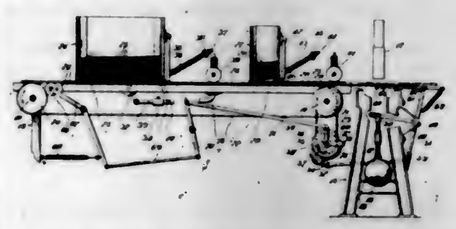
1. In a device of the character described, a compressible tubular handle member, bristles positioned therein and a bendable member wound tightly about said tubular member to compress it so as to produce an interengagement between the handle member and the bristles, the free ends of the bendable member being interengaged and twisted and then bent longitudinally of the handle member and in the direction of the bristles.

1,504,888. RAILWAY-CAR-DUMPING APPARATUS. MICHAEL J. HADDIGAN, Peoria, Ill. Filed July 13, 1922. Serial No. 574,771. 12 Claims. Cl. 214—47.)



1. A railway-car dumping-apparatus including in its construction a platform to carry the car to be dumped, a frame carried by the platform at each side of the car, a gearing for clamping the frames upon the car to secure the later with respect to the said platform, and power means with which the gearing is adapted to engage and disengage in the tilting of the car.

1,504,889. TENT. HANS PETER HANSEN, Gisborne, New Zealand. Filed July 11, 1922. Serial No. 574,180. 1 Claim. (Cl. 135—4.)

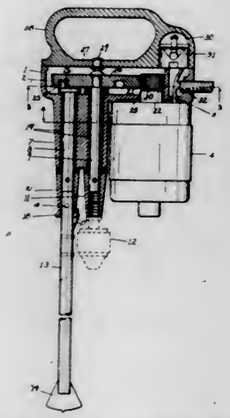


Collapsible frame for tents, comprising a plurality of separate members, each composed of a plurality of hinge-jointed sectional lengths adapted to form respectively the peak roof portion and the side-wall portion, hinge plates each adapted to project beyond each end to be joined together and bent sideways at an angle to the plane of the section's length and overlapping with the hinge plate on the other length, a pivot pin passing through the outer ends of the overlapping hinge-plates, the said hinge plates coinciding with each other in the assembled position of the said frame members, and a ring adapted to be slipped over the said hinge plates to hold them in locked position.

1,504,890. HOD. PETER H. HARTMAN, East Orange, N. J. Filed Oct. 5, 1920. Serial No. 414,881. 4 Claims. (Cl. 72—134.)

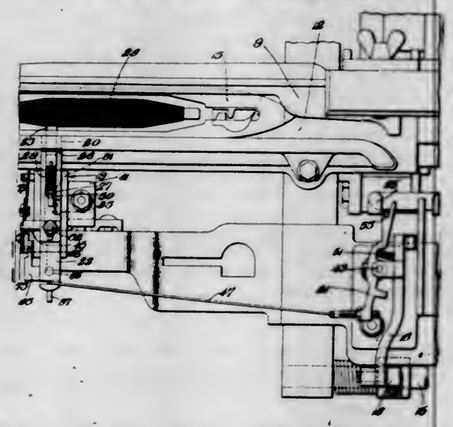
1. A hod comprising a plurality of converging superimposed sections detachably fitted together, the lower edge portion of an upper section projecting inside of the upper edge portion of the next adjacent lower section in the direction of convergence to form the body of the hod and a post connected with said body.

1,504,891. APPARATUS FOR MAKING BOX BLANKS. BERT EUGENE HILL, Natchez, Miss., assignor to National Box Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1920. Serial No. 411,010. 37 Claims. (Cl. 1—8.1.)



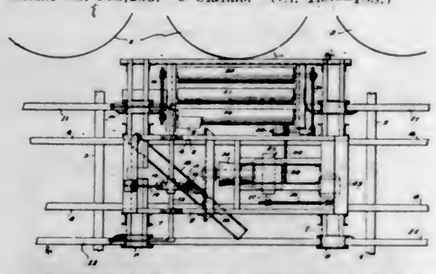
1. In a machine for making box blanks, the combination of stapling mechanism, conveying mechanism for conducting frames containing blank parts assembled in position for stapling to said stapling mechanism, and mechanism for advancing said frames past said stapling mechanism, the latter mechanism being adjustable independently of the said conveying mechanism to vary the position or number of the staples.

1,504,892. COMBINED DRILLING AND GRINDING MACHINE. CORWILL JACKSON, Kalamazoo, Mich. Filed Apr. 18, 1923. Serial No. 633,033. 7 Claims. (Cl. 29—26.)



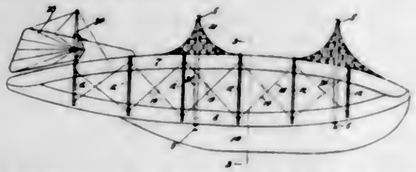
1. The combination of a frame comprising a body member provided with a gear box and having a motor housing seat on its underside and a spindle bearing extension disposed at the side of said seat, a top member constituting a cover for said gear box and provided with a hand piece, a motor provided with a housing mounted on said seat, said motor being provided with a shaft projecting into said gear box and having a pinion thereon, spindles mounted in parallel relation on said spindle bearing extension to project into said gear box, one of

said spindles being provided with a crank, and a gear mounted on the other of said spindles and meshing with said pinion on said motor shaft, said gear being operatively connected to said spindle crank.



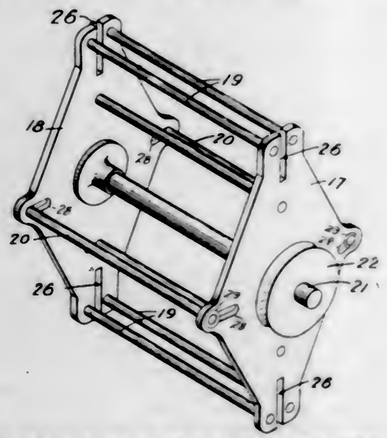
7. The combination of a frame comprising a body member provided with a gear box, a motor mounted on said body member and provided with a shaft projecting into said gear box and having a pinion thereon, spindles disposed on said frame to project into said gear box, one of said spindles being provided with a crank, and a gear mounted on the other of said spindles and meshing with said pinion on said motor shaft, said gear being operatively connected to said spindle crank whereby an oscillating movement is imparted to one spindle and a rotary motion to the other.

1,504,893. FILLING-FEELER MECHANISM FOR LOOMS. CORNELIUS J. KELLY, Taunton, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed July 19, 1922. Serial No. 575,980. 7 Claims. (Cl. 139—270.)



1. A loom having, in combination, a lay, a shuttle, a filling carrier, and filling feeler mechanism comprising a controller mounted to move toward and from the lay, a feeler pivotally mounted on the controller, the controller having its rear end adapted to be engaged by the shuttle, and the feeler being mounted above the controller so that the feeler engages the yarn at a point on the bobbin immediately in the rear of the point where the controller engages the shuttle.

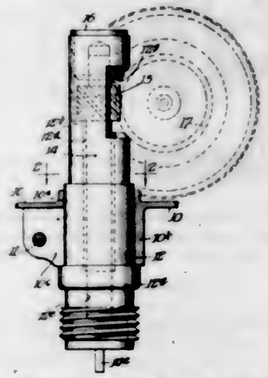
1,504,894. MOLD LOADER. JESSE E. MCBRIDE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 7, 1921. Serial No. 513,265. 9 Claims. (Cl. 198—188.)



1. The combination with a conveyor and a parallel series of stations, of a loader above said conveyor and movable along the same for transferring work carried by the conveyor to said stations, and means upon said loader for moving work from said stations to said conveyor.

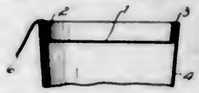
1,504,895. AIRCRAFT. ARCHIBALD LEE MCKELVEY, St. Louis, Mo. Filed Apr. 2, 1923. Serial No. 629,435. 11 Claims. (Cl. 244—30.)

1. In an aircraft, a fuselage comprising as a unitary structure a plurality of longitudinals arranged to form the skeleton work of the frame, vertical frames arranged at spaced intervals adapted to tie the longitudinals together in a rigid structure, tensioning guy wires arranged between each pair of vertical frames and disposed in crossed relationship, and a hull section suspended from the frame.



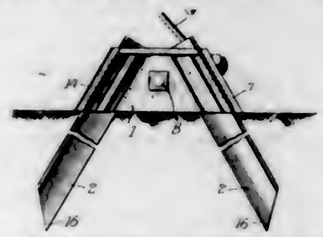
1,504,896. DUPLICATING MACHINE. MICHAEL P. MURPHY, New York, N. Y. Filed Aug. 21, 1920. Serial No. 405,098. 2 Claims. (Cl. 242—77.)

2. A reel for a web of material having end heads provided with outwardly opened slots, web supporting rods connected with said end heads, certain of said rods being disposed at opposite sides of the slot to support lay-



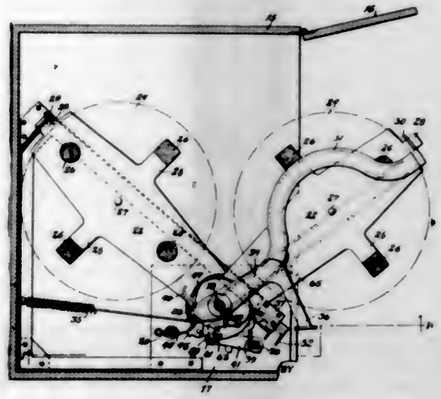
ers of the material in position to be severed by a cutting implement inserted within the slot and beneath the material, and other of said supporting rods being radially adjustable on the heads to vary the sheet length of the material on the reel.

1,504,897. DRIVING MECHANISM FOR SPEED INDICATORS. ALBERT M. OSLOCK, Elgin, Ill., assignor to N. W. Church, Los Angeles, Calif. Filed Nov. 23, 1922. Serial No. 602,734. 2 Claims. (Cl. 74—7.)



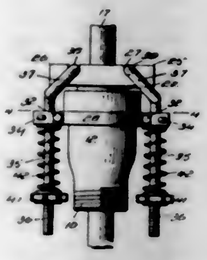
1. In a mechanism of the class described, a clamping collar, a bearing sleeve rotatably mounted therein and having an eccentric bore, a driving shaft journaled at one end in said bore, means mounted in the sleeve in which the opposite end of the shaft is journaled, said sleeve having a lateral opening, a gear, and a pinion secured to the shaft and exposed through said opening and in mesh with said gear.

1,504,898. COVER FOR DRINKING VESSELS. HOWARD C. POMEROY, St. Louis, Mo. Filed Oct. 8, 1921. Serial No. 506,454. 4 Claims. (Cl. 229—3.7.)



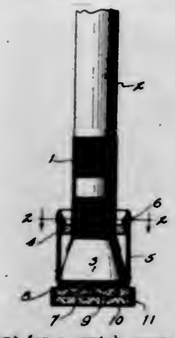
2. A removable cover for drinking vessels and the like comprising rings, one of slightly less diameter than the other, and a disk having its peripheral portion held between said rings, said cover being placed in the top of said vessel.

1,504,899. GROUND-ANCHOR MEANS. DAVID H. QUINN, Boston, Mass., and WILLIAM E. SWIFT, Lake Forest, Ill. Filed July 3, 1922. Serial No. 572,426. 7 Claims. (Cl. 189—90.)



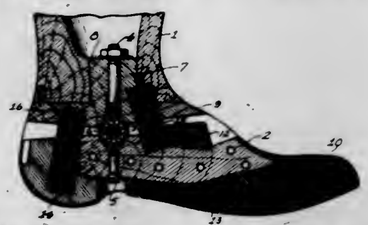
1. Ground anchor means comprising a guide having guideways formed thereon, in combination with posts adapted to be driven into the ground and guided by said ways, said guide including separable sections removable from said posts after the same have been driven.

1,504,900. CABINET. FRANK N. ROEHRICH, Jersey City, N. J. Filed Aug. 8, 1923. Serial No. 656,384. 11 Claims. (Cl. 211—16.)



1. In a cabinet, a series of article carriers mounted for independent movement into and from the interior of the cabinet, a common operating element for the carriers, means for locking the said element within the cabinet, means for independently locking the respective carriers within the cabinet, and means operable to release the said element and any predetermined carrier and to couple the said carrier to the element, whereby the said element and its associated carrier can be projected from the cabinet and can thereafter be moved into the cabinet and locked therein.

1,504,901. STUFFING BOX. ROY W. ROGERS, Midian, Kans. Filed Mar. 6, 1923. Serial No. 623,246. 1 Claim. (Cl. 286—39.)



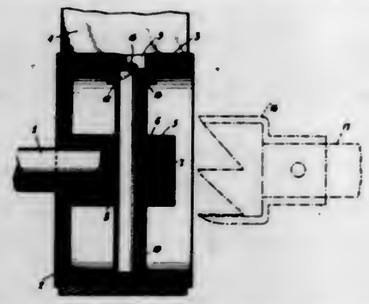
A stuffing box comprising a hollow body member, a packing means arranged therein and supported thereby, a gland extending into said member and having its upper end formed with oppositely disposed laterally extending transversely grooved flanges, a pair of vertically extending spring controlled pressure applying elements each formed at its upper end with an inwardly extending skeleton head seated in a groove of and further opposing the sides of a flange, and a clamping element carried by said body in proximity to its upper end and provided with laterally disposed end portions providing means for detachably connecting said pressure applying elements with said body and further constituting abutments for the springs of said pressure applying elements, and said end portions including transversely extending removable means to permit of the swinging outwardly of the pressure applying elements on said flanges to release the gland to relieve compression on the packing means.

1,504,902. ATTACHMENT FOR CRUTCHES. SAMUEL J. ROSENHEIN, Jr., Charleston, Miss. Filed Dec. 7, 1923. Serial No. 679,249. 2 Claims. (Cl. 135—53.)

2. An attachment for a crutch comprising a cap, spring latch members carried thereby and adapted to engage a projection on the lower end of the crutch and a disc of frictional material connected with the lower end of the cap.

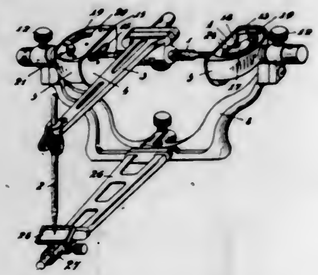
1,504,903. ARTIFICIAL FOOT. JAMES F. ROWLEY, Chicago, Ill. Filed May 5, 1924. Serial No. 711,170. 4 Claims. (Cl. 3—7.)

1. An artificial foot comprising a leg member, a foot core hingedly mounted below said leg member, opposed spring rubber cushions comprising a heel cushion and a toe cushion, said heel cushion extending into a recess in said leg member and extending through said foot core, said toe cushion extending into recesses bearing directly between said leg member, and said foot core and a buffer cushion secured to said foot core.



1,504,904. ANCHOR FOR LOWER DENTURES. THEODORE ROXBURY, Brooklyn, N. Y. Filed Aug. 4, 1923. Serial No. 655,597. 4 Claims. (Cl. 32—4.)

1. A denture provided with a bar member projecting rearwardly from one side portion thereof, said member having a recessed member secured thereto remote from the denture adapted to cling by suction to a side wall of the mouth.

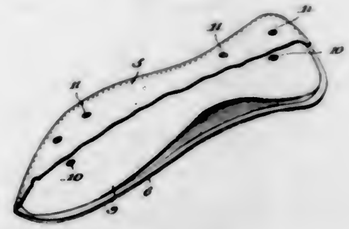


1,504,905. PULLEY PIN. CLARENCE L. RUFFCORN, Omaha, Nebr., assignor of one-half to Tony Costanzo, Omaha, Nebr. Filed Aug. 30, 1921. Serial No. 496,855. 7 Claims. (Cl. 287—53.)

7. A pin for radial insertion into and withdrawal through an opening in the flange of a fan pulley, comprising an unthreaded member of uniform diameter having a cotter key-way in one end comprising a bore having the form of an inverted Y, the single leg of which is substantially axial of the member, a cotter key insertible in the single leg of said bore and spread by passage

through said divergent legs, the spread extremities of said cotter key being adapted to limit the radial movement of said pin when in position within the flange of the pulley.

1,504,906. ARTICULATOR. CARL RUMPEL, Berlin, and HERMANN SCHRÖDER, Berlin-Westend, Germany, assignors to the Firm of Sommer & Runge, Berlin-Friedenau, Germany. Filed May 14, 1923. Serial No. 638,868. 5 Claims. (Cl. 32—1.)



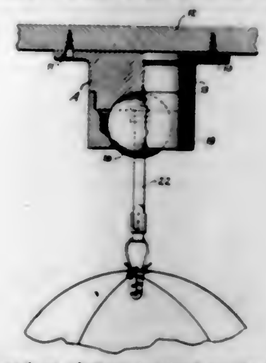
1. In an articulator the combination of the articulator-axis with the bearing or guide-cases for the ends of the articulator-axis, turnably positioned pivots fastened to the bearing-cases, and squeezing-screws for the fixation of the pivots.

1,504,907. ADVERTISING DEVICE. EARL SANDUSKY, Los Angeles, Calif., assignor to The Bailey Fitwell Company, Inc., Los Angeles, Calif., a Corporation of California. Filed June 26, 1923. Serial No. 647,856. 1 Claim. (Cl. 40—129.)

A device of the character described comprising a substantially U-shaped body member provided with a pocket at each end thereof, and a U-shaped resilient member mounted in each of said pockets and serving as means for securing the device in display position.

1,504,908. INSOLE FOR SHOES. RYUJI SATO, New York, N. Y. Filed Jan. 3, 1923. Serial No. 610,482. 2 Claims. (Cl. 36—28.)

1. An insole including an enclosure structure having a perforated wall, and a hollow elastic body contained in the enclosure and provided with openings co-acting with the openings of the enclosures to induce a circulation of air around the foot respectively on inflation and deflation of said body.



1,504,909. WRENCH. LEW SATTER, Wiley, Wash. Filed Dec. 14, 1922. Serial No. 606,958. 1 Claim. (Cl. 81—103.)

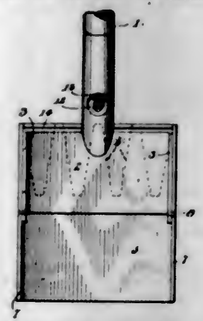
A wrench comprising a pair of substantially parallel bars adapted to move longitudinally with respect to one another, a handle on one of said bars, heads on both bars having mutual gripping teeth to receive a pipe, one of said bars having a series of notches on its inner side, a casing enveloping both bars and pivoted to one of the bars, a pivoted pawl carried by said casing between the bars and adapted to cooperate with the notches on said bar whereby to hold the jaws in substantially fixed position, said casing having a slot, a pin connected to the pawl and slidable through said slot, said casing having a closed wall against which the outer face of the notched bar slides and abuts, said casing also having a second wall opposite the first mentioned wall against which the outer face of the companion bar is adapted to engage, said walls adapted to prevent undue separation of the bars, such as would cause the jaws to swing together and crush the pipe held therebetween, said notched bar having a limited lateral movement in and relative to the casing toward the companion bar, said pivoted pawl having a plurality of teeth adapted to simultaneously engage the notches in the bar over a relatively wide area, a flat spring on such companion bar for urging the toothed portion of the pivoted pawl toward the notched bar and for yieldingly holding the notched bar against the first named closed wall of the casing, said toothed portion of the pawl being at an intermediate portion of said casing and its first named closed wall, the pivot point of the pawl being inwardly of the pivot point of the casing toward said notched bar.

1,504,910. BAG SWIVEL. MYRON R. SCHALL, Monte Vista, Colo. Filed Dec. 2, 1922. Serial No. 604,539. 2 Claims. (Cl. 46—69.)

1. In a device of the character described, an attaching plate, a socket member supported by said plate, a ball swivelled in said socket member and having a bore opening at both ends, a looped strap projecting from one end

of the bore, and an element received by the loop formed by said strap and positioned in the bore of said ball for holding the parts associated.

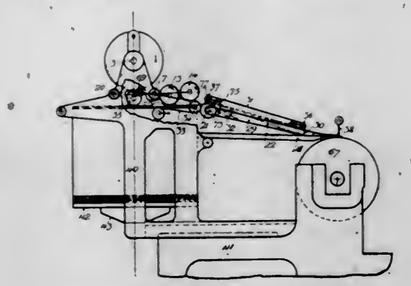
1,504,911. BOLUS GAUZE. ALFRED SCHINDLER-JENNY, Leuggelbach, Glarus, Switzerland, assignor to the Firm Gallatin & Cie., Leuggelbach, Glarus, Switzerland. Filed Apr. 24, 1922. Serial No. 556,537. 2 Claims. (Cl. 128—156.)



1. A bolus gauze comprising bolus alba rendered adherent to gauze by aluminum acetate resulting from the reaction of about equal weights of acetate of lead and alum in about four parts by weight of water.

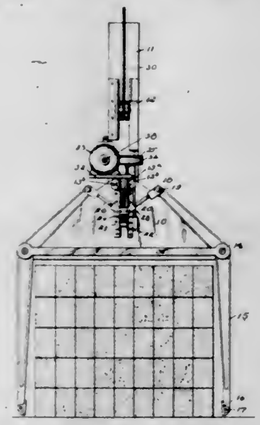
1,504,912. RING TRAVELER. MICHAEL J. SHEEHAN, New Bedford, Mass. Filed Aug. 16, 1923. Serial No. 657,815. 7 Claims. (Cl. 118—61.)

1. A traveler for spinning and twisting machines, comprising a body portion adapted to engage a ring, an arm extending upwardly from said body, said arm having a thread guide on its end, and a tension spring connected to said arm and body.



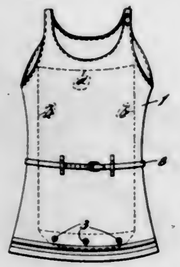
1,504,913. COMBINED HOE, RAKE, AND SHOVEL. ANSELMO SIMONCELLI, Silverbow, Mont., assignor of one-half to Domenica Girardi, Butte, Mont. Filed Apr. 18, 1923. Serial No. 632,945. 6 Claims. (Cl. 294—52.)

1. In a device of the class described, a handle, a head having upstanding side flanges carried by said handle, a blade having upstanding side flanges, means for pivotally



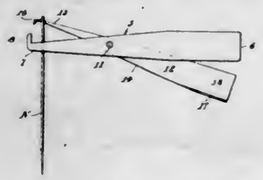
connecting the side flanges of said head and blade, a link pivotally connected to said blade, and means carried by said handle adapted to engage said link for retaining the blade in different angular positions in respect to the axis of said handle.

1,504,914. AUTOMATIC SHEET-FEEDING DEVICE. JOHN H. STONEMETZ, New London, Conn., assignor to The Babcock Printing Press Manufacturing Company, New London, Conn., a Corporation of Connecticut. Filed Nov. 18, 1919. Serial No. 338,835. 7 Claims. (Cl. 271—21.)



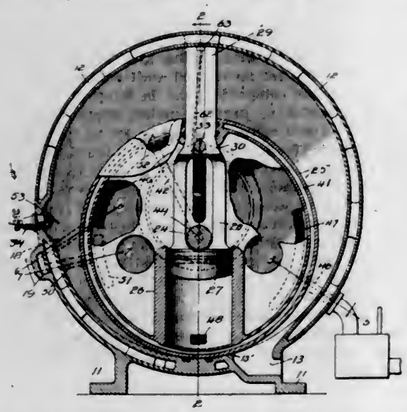
1. A device for feeding sheets singly from a pile, comprising means for holding a pile of sheets, means for separating sheets singly from said pile and for feeding them direct, and means for separating sheets singly from the same pile and for reversing or turning said sheets and for feeding them.

1,504,915. DEVICE FOR HANDLING HOLLOW BUILDING BLOCKS. HALVER R. STRAIGHT, Adel, Iowa. Filed June 9, 1920. Serial No. 387,767. 8 Claims. (Cl. 294—63.)



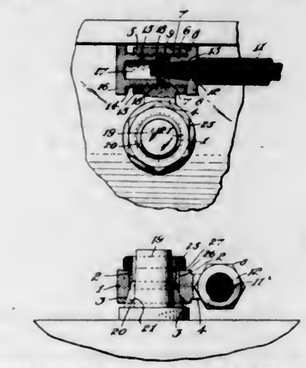
1. In a device of the class described, a grab member provided with a series of grippers adapted to move from an open to a closed position, an electric circuit including a double pole switch, a motor and a pole changer, the pole changer being adapted to reverse the movement of the motor, means actuated by said motor for opening and closing said grippers, and means actuated by the last said means for actuating said pole changer when the grippers have been moved to either a closed or open position, said switch and said pole changer being so arranged that the motor will be automatically thrown out of operation and the pole changer moved from one position to the other of its movement.

1,504,916. BATHING SUIT. EDWARD A. TEIBER, St. Louis, Mo. Filed Jan. 8, 1923. Serial No. 611,427. 4 Claims. (Cl. 9—20.)



1. A bathing garment having a pocket, and a wafer shaped buoyant pad formed of cellular or sponge rubber and having an outer impervious covering formed integral with said cellular portion, said pad being removably secured in position in said pocket, the tapered edges of said pad being relatively stiff.

1,504,917. NEEDLE-THREADING DEVICE. HERMAN TRZECIAK, Wakpala, S. Dak. Filed Nov. 28, 1923. Serial No. 677,418. 2 Claims. (Cl. 223—36.)



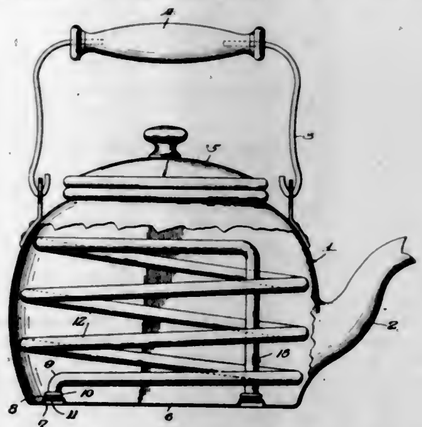
1. In a needle threading device, a series of arms pivotally connected together intermediate their ends, two of said arms having upstanding lugs carried by their adjacent ends and the third arm having a downwardly directed curved end adapted to be moved into transverse alinement with the said upstanding lugs.

1,504,918. ROTARY ENGINE. FREDERICK TUCKER, Santa Barbara, Calif. Filed Mar. 31, 1921. Serial No. 457,164. 7 Claims. (Cl. 123—16.)

1. A rotary engine comprising a stationary casing forming a combined explosion and rotor chamber, a shaft disposed eccentrically of said casing, a rotor concentrically mounted on said shaft and having a part thereof in continuous contact with the wall of said chamber, said rotor having at one side thereof a cylinder formed with a combined inlet and discharge port and a combined fuel suction, compressing and expelling piston operating in the cylinder diametrically of the rotor and provided with a pressure operated element shiftable through the opposite side of the rotor and riding permanently against the wall of said chamber to provide an explosion space therein, said casing having a transverse duct and a fuel conducting channel dealing from each end of said duct, one of said channels terminating in an entrance port registering with the port of said cylinder for receiving fuel therefrom during the operation of the rotor, the other of said channels terminating in a discharge port and receiving fuel from said duct, said chamber further provided with a fuel supply channel having a delivery port registering with the port of the cylinder in advance of the registration of said entrance port during the operation of the rotor, said rotor provided with a clearance for opening said discharge port to said chamber subsequent to the registration of said entrance port, an igniting element extending into said chamber and said casing provided with an exhaust for said chamber, the ports of said channels controlled by said rotor.

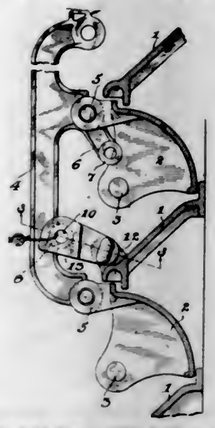
1,504,919. ELECTRICAL CONNECTER AND TERMINAL. JAMES R. VAN AUKEN, Newark, N. J. Filed Dec. 19, 1922. Serial No. 607,805. 12 Claims. (Cl. 173—259.)

1. A connecter and terminal for storage batteries, comprising a pair of sleeve-members, one of said members being provided with a hole having a cylindrical portion and a cone-shaped portion, a binding sleeve in said hole, said sleeve being longitudinally slitted and having a cylindrical portion and a cone-shaped portion adapted to be fitted upon the cylindrical and cone-shaped portions of the said sleeve-member, said binding sleeve being adapted to be fitted upon a batery-post, means connected with said binding sleeve for locking said sleeve-member and said binding sleeve against displacement upon the battery-post, a tubular stud in one end of the other sleeve-member, said tubular stud being adapted to receive the metallic conductor-end of a cable, a binding stud in the other end of said second-mentioned sleeve-member, and means connected with said binding stud adapted to be brought in engagement with said first-mentioned tubular stud for securing the metallic conductor-end of the cable against displacement from within said tubular stud.



1,504,920. COLLAPSIBLE CONTAINER. ROBERT VIEGELMANN, New York, N. Y. Filed June 22, 1923. Serial No. 647,014. 2 Claims. (Cl. 221—60.)

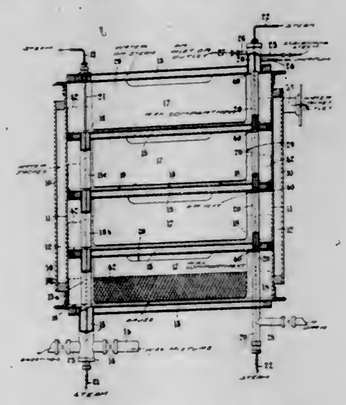
1. A collapsible container having an outlet portion with opposed walls of pliable material between which the contents of the container are adapted to be forced when emptying the container, said pliable walls of the outlet portion being releasably interlocked with each other for closing and sealing the container to preserve the contents from contact with the air and with exterior objects, said pliable interlocked wall being adapted



to be separated by pressure of the contents in the outlet portion when the container is collapsed for automatically opening the container under predetermined pressure for removal of the contents by continued pressure.

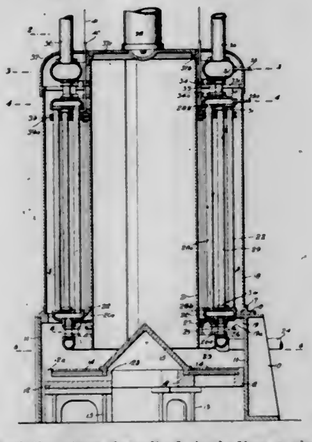
1,504,921. COOKING UTENSIL. HENRY WIEDERHOLD, New York, N. Y. Filed Aug. 10, 1923. Serial No. 656,725. 5 Claims. (Cl. 53—9.)

1. A cooking utensil comprising a chamber for the material to be heated and a substantially helical heating tube therewithin having both of its ends opening through the base of the utensil at points near the periphery thereof.



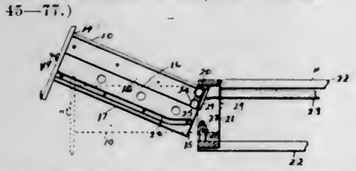
1,504,922. FREIGHT-CAR VENTILATOR. WILLIAM E. WINE, Toledo, Ohio. Filed Aug. 6, 1923. Serial No. 656,094. 5 Claims. (Cl. 292—345.)

1. A shutter bar having portions throughout its length for pivotal engagement with revolvable shutters, a short arm formed at one of said pivotal portions and a pro-



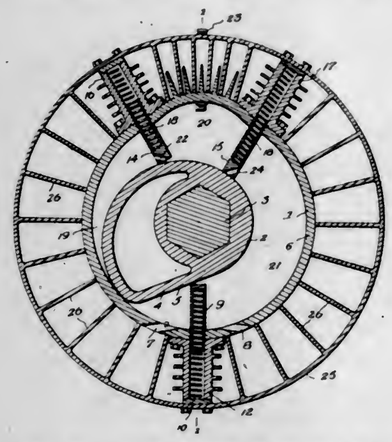
jection formed on said shutter bar between a pivotal portion and said short arm, a latch member separate from said bar and adapted to engage the arm when the bar is in one position to thereby lock the same against movement and to engage the projection when the bar is in its opposite position.

1,504,923. APPARATUS FOR SWEATING OR CRYSTALLIZING PARAFFIN OR OTHER WAX. HUGH L. ALLAN and JAMES MOORE, Burmah, British India, assignors to The Burmah Oil Company Limited, Glasgow, Scotland, a British Corporation. Filed Oct. 6, 1923. Serial No. 666,996. 10 Claims. (Cl. 196—20.)



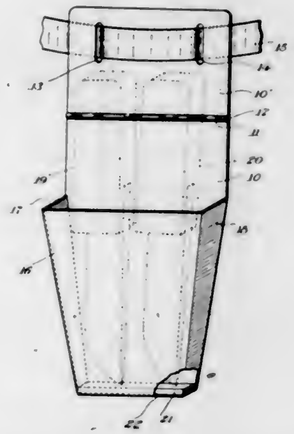
1. Apparatus for crystallizing and dry-sweating wax comprising a closed wax-containing chamber, substantially horizontal hollow heating and cooling cells above and below said chamber, a filling pipe entering said chamber from below and an air-vent at the top of said chamber for the escape of displaced air, whereby said chamber may be completely filled with wax mixture to the exclusion of air.

1,504,924. BOILER. ROBERT ANDERSON, Brooks, Alberta, Canada, assignor of one-half to Peter MacGregor, Detroit, Mich. Filed Apr. 29, 1921. Serial No. 463,381. 1 Claim. (Cl. 122—339.)



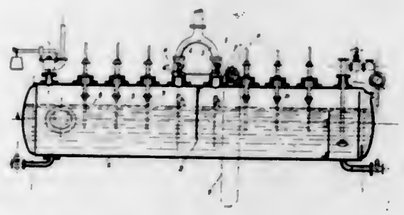
A boiler of the class described, including a ring, means supporting said ring, series of doors on said supporting means and enclosing the fire chamber and ash pit of the boiler, an outer shell supported on said ring, an annular lower header supported on said supporting means, and having a water inlet, an annular mud drum suspended by stay pipes from said header and communicating therewith, an inner shell supported on said header, vertical tubes rising from said header between the shells, separate chambers with which separate groups of said vertical tubes communicate at their upper ends, certain of the tubes being threaded into the lower header and into said chambers, others of each group being held clamped between the chambers and lower header through the medium of the threaded tubes, and an annular chamber above and in communication with said separate chambers.

1,504,925. DRAWER. PAUL ANTONIO, New York, N. Y. Filed Jan. 23, 1923. Serial No. 614,432. 1 Claim. (Cl. 45—77.)



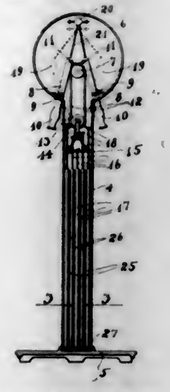
A drawer, a support for the drawer, a rail on each side of the drawer, rollers carried by said support near the front thereof and into contact with which said rails are in the movement of said drawer, a pair of rollers on each side of the drawer near the rear end thereof, tracks carried by said support into contact with which respectively said pairs of rollers are in the movement of said drawer, stops carried by the drawer at the rear end thereof which project above the top edge of the drawer and which move against a cross bar of said support to prevent the complete withdrawal of the drawer from the support, the rails on said drawer being curved at the rear ends thereof to allow the front end of the drawer to be tilted upwardly so that the stops clear the cross bar so that the drawer may be completely withdrawn from its support, and the front end of the tracks being curved downwardly for receiving the rollers on the drawer when the drawer is in tilted position.

1,504,926. ROTARY INTERNAL-COMBUSTION ENGINE. CARROLL BAISCH, Lincoln, Nebr. Filed Mar. 11, 1922. Serial No. 543,067. 4 Claims. (Cl. 123—14.)



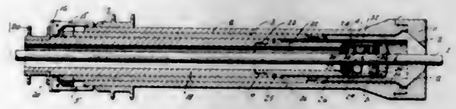
1. In a rotary internal combustion engine, a stationary cylinder, a piston rotatable therein, a plurality of sliding abutments extending into the cylinder and dividing into inlet compression and exhaust compartments, said piston having an irregular perimeter, means urging said abutments in engagement with the perimeter of the piston to permit operation of the abutments by rotation of the piston to control the passage of gases into and from said compartments, certain of said valves provided with diagonal openings adapted to be normally closed by the perimeter of said piston, and at predetermined times free from engagement with the perimeter of the piston to permit the passage of gases therethrough.

1,504,927. SANITARY KIT FOR BUTCHERS' KNIVES. GEORGE HENRY BAUST, Omaha, Nebr. Filed Oct. 2, 1922. Serial No. 591,976. 2 Claims. (Cl. 224—5.)



1. A device of the class described, comprising upper and lower sections, a hinge for connecting said sections along a transverse line, the upper section being provided with slots, a belt passing through the slots, an open-top receptacle carried by the lower section, and a strip of flexible material on the upper side of the bottom of the receptacle.

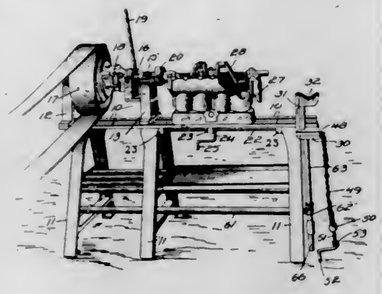
1,504,928. ELECTRICALLY-HEATED BOILER. PAUL BERGEON, Grenoble, France. Filed Apr. 4, 1921. Serial No. 458,465. 3 Claims. (Cl. 219—40.)



1. A steam boiler having compartments arranged for water communication between them, electrodes for partial immersion in the water in the compartments, means to establish steam connection between the steam spaces of the compartments, and means to regulate the escape of steam from each compartment and thereby cause an increase of steam pressure in either of the compartments and hence effect a corresponding lowering of the water level therein and a corresponding reduction of the extent of the immersion of the electrodes of said compartment.

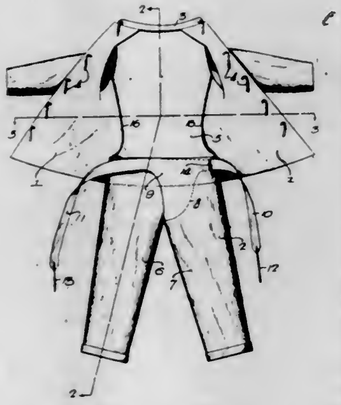
1,504,929. VIGORMETER. ALPHONSE BISCHOFF, Los Angeles, Calif. Filed June 8, 1922. Serial No. 566,800. 5 Claims. (Cl. 265—22.)

1. In a device of the class described, handles, weights having engaging means at different points in relation to the several weights, means for consecutively engaging the handles with the weight engaging means of the weights, a housing inclosing the weights and engaging means, and indicating means on the outside of the housing having connection with the inside operating means for indicating the movements of the handles and weights.



1,504,930. AUTOMATIC SCREW MACHINE. CLAUDE G. BLANCHARD, Erie, Pa. Filed Jan. 18, 1922. Serial No. 530,165. 17 Claims. (Cl. 29—61.)

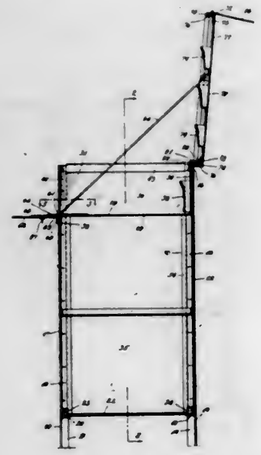
1. A stock gripping feed chuck for forming machines comprising a hollow body, a gripping member having a central aperture adapted to embrace the work and tiltably mounted upon the body, and means permitting the member to move to a position at right angles to the axis of the body upon a movement of the body in one direction and permitting a movement into angular relation to the axis of the body upon a movement of the body in the other direction, said gripping member being longitudinally movable with the body.



10. A stock gripping feed chuck for forming machines comprising a hollow body through which the stock is adapted to pass, a retainer ring detachably mounted at the mouth of the hollow body and extending centrally inward, a pressure ring disposed within the hollow body inward of the retainer and detachably engaged with the body, the pressure ring having its face confronting the retainer ring disposed in a plane diagonal to the axis of the body, a gripping ring disposed between the pressure ring and the retaining ring and tiltable in said space from a position at right angles to the axis of the body and against the inner face of the retaining ring to a position at less than a right angle and against the inclined face of the pressure ring, and screws holding the pressure ring and retainer ring in place, said screws having shanks of smaller diameters than the screws, the screw openings in the pressure ring and retaining ring being sufficiently deep to permit the screws to be turned down entirely within said rings when the rings are inserted into the body, the shoulders formed at the base of said shanks preventing the outward movement of the screws beyond a predetermined point, said shanks having a length equal to the thickness of the wall of the body.

1,504,931. ENGINE REPAIR STAND. VICTOR BLASZYK, New Rome, Wis. Filed Dec. 18, 1922. Serial No. 607,593. 4 Claims. (Cl. 29—89.5.)

1. In an apparatus of the class described a support, rail members in spaced parallel relation carried by said support, guide rods in parallel relation to the rail members, a bar slidable on the rods, a stop element swingingly coupled to said bar at one end, means for limiting the movement of said stop element in one direction, and clamping means operating through said bar and adapted to engage the body to be operated on to hold it in position on the rails.



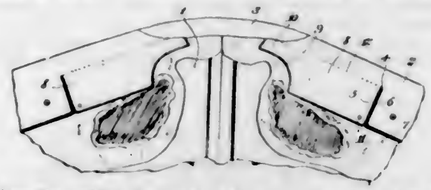
1,504,932. OPERATING GOWN. MATTHEW H. BOEHMER, Philadelphia, Pa. Filed Feb. 15, 1922. Serial No. 536,740. 2 Claims. (Cl. 2—79.)

1. A one-piece garment comprising coat and trousers portions, the trousers being permanently attached to the coat only by a strip of material extending from the back of the trousers to the collar of the coat intermediate the arm openings, said strip being adapted, while constituting an inner back for the coat, to lie entirely behind and be hid by the body of one wearing the garment.

1,504,933. DISPLAY CABINET. ACHILLE BRAUNSTEIN, New York, N. Y., assignor to Anchor Corrugating Construction Co., New York, N. Y., a Corporation of New York. Filed Oct. 1, 1923. Serial No. 665,768. 12 Claims. (Cl. 211—14.)

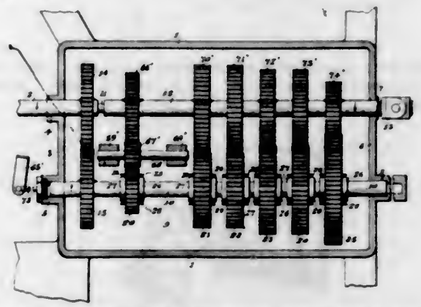
1. A display cabinet having an open side, a removable side wall adapted to close said side of the cabinet, cooperating engaging means on the side wall and the cabinet arranged to prevent outward movement of the side wall when the wall is in position to close said opening and to permit outward movement of the side wall when it is raised a short distance from said position, a cover for the top of the cabinet adapted, when closed, to

engage the upper end of the side wall, and means for securing the cover in closed position and thereby preventing removal of the side wall.



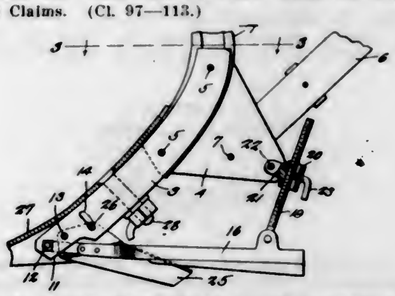
1,504,934. SUPPORT FOR GOLF-COURSE MARKERS. THOMAS J. W. BROWN, Washington, D. C. Filed May 22, 1922. Serial No. 562,887. 4 Claims. (Cl. 46—4.)

1. A support for golf course markers comprising in combination a split sleeve, means for binding the sections of said sleeve upon the lower end of a marker standard, a depending pin, and a lug upon said pin arranged and adapted to maintain said support at proper elevation.



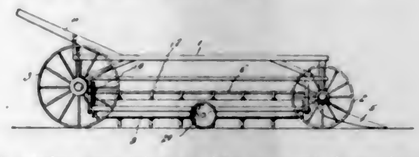
1,504,935. COMBINED COAT AND MUFFLER. LOUIS BUCHALTER, New York, N. Y. Filed Mar. 28, 1924. Serial No. 702,675. 1 Claim. (Cl. 2—85.)

A coat having both of its inner front facings provided at their edges remote from the edges of the coat with integral extensions at the upper ends of the facings, said extensions being identical in form and size and laterally of a length less than the width of the lapel opening in the coat when closed whereby both said facing extensions at the upper ends of the facings may be combined to form a muffler to close the lapel opening of the coat



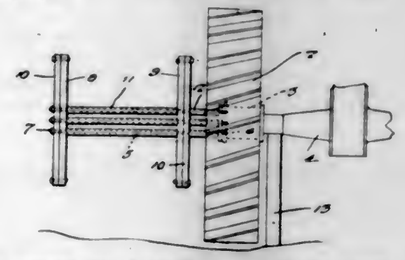
when the coat is buttoned and such extensions are adjusted for use as muffler sections as and for the purposes set forth.

1,504,936. TRANSMISSION-GEAR MECHANISM. THEOPHILUS T. BURCHELL, Manchester, Ky. Filed Apr. 29, 1924. Serial No. 709,808. 6 Claims. (Cl. 74—59.)



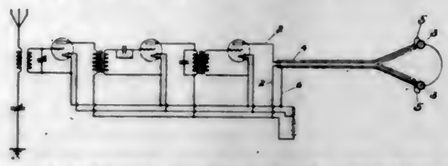
1. A transmission gear mechanism comprising a driven shaft, means operated from the motor of the vehicle for continuously operating said shaft during the operation of the motor, a driving shaft, a plurality of pairs of speed change gears mounted on said driving shaft, the gears of each pair being of the same diameter and one fixed to and the other clutching with said driving shaft, the gears of one pair being of a different diameter with respect to the gears of the other pair, a plurality of pairs of speed change driving elements mounted in inactive position on said driven shaft, said elements permanently meshing with said gears, the elements of each pair being of the same diameter and of a different diameter with respect to the elements of the other pair, each of said elements including means for clutching it in an active position on the driven shaft, and a cam element mounted in the driven shaft for selectively coupling synchronously a plurality of said elements to said driven shaft.

1,504,937. PLOW. WILLIAM JACKSON BURNETT, Thomasville, Ga. Filed May 24, 1922. Serial No. 563,325. 2 Claims. (Cl. 97—113.)



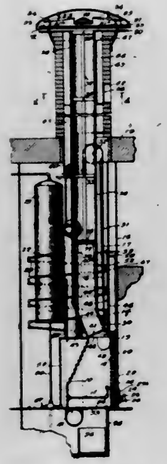
1. In a plow the combination with a standard and parallel extension strips secured thereto, of a runner pivotally connected to said strips, wings or scrapers pivotally connected to the strips, and clamping means for holding said wings or scrapers against angular adjustment, there being arcuate slots for the reception of the clamping means concentric with the point of connection between the wings and the strips.

1,504,938. ONION WEEDER. AARON J. BURNHEIMER, Kimmell, Ind. Filed May 31, 1923. Serial No. 642,456. 1 Claim. (Cl. 97—38.)



A weeder comprising a wheel mounted frame having vertically disposed spaced guides, bearings slidably mounted in the guides, springs located in the guides and resting upon the bearings and tending to hold the bearings in lowered position in the guides, a frame connected with the bearings and bridging the space between the guides, a ground engaging wheel journalled upon said connecting frame at a point midway between the ends thereof, and a roller journalled in the bearings and provided with radially disposed blades, said roller being disposed longitudinally of the wheel mounted frame.

1,504,939. WINDING-REEL ATTACHMENT FOR TRACTORS. DAVID EZRA CARMONY, Manilla, Ind. Filed Mar. 28, 1924. Serial No. 702,645. 1 Claim. (Cl. 242—95.)



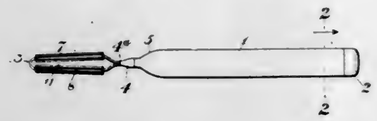
A winding reel attachment for traction wheels of a motor vehicle comprising a plurality of elongated rods threaded at their inner ends for engagement with the threaded openings provided in the hubs of said traction wheel, a pair of disks supported on said rods, spacing sleeves mounted on said rods and between said disks, additional spacing sleeves mounted on said rods between the hubs and the inner disks whereby said disks are supported in spaced relation with respect to each other and with respect to the hub of the traction wheel.

1,504,940. TELEPHONE-RECEIVER CIRCUITS. GLENN W. CARPENTER and WENDELL L. CARLSON, Washington, D. C. Filed Jan. 29, 1921. Serial No. 440,992. 13 Claims. (Cl. 179—78.)

1. In a telephone receiver circuit the combination of telephone cords, an amplification circuit and means for shielding said cords from extraneous electrical influences comprising a metallic shield enclosing said cords substantially throughout their length and an electric connection between said shield and said amplification circuit.

1,504,941. HEATING SYSTEM. WILLIAM ALBERT COLLVER, Marshfield, Oreg. Original application filed Apr. 21, 1922, Serial No. 555,861. Divided and this application filed June 6, 1923. Serial No. 643,758. 2 Claims. (Cl. 126—121.)

1. A fireplace heater including a fireplace, a smokestack, a chimney surrounding the smokestack at the upper end and having valved air inlets, air ducts disposed between the chimney and smokestack and leading upwardly from the inlets and then downwardly, a casing about the fireplace, air pipes in said casing at opposite sides of the fireplace, and communicating with the air ducts to receive air therefrom, and balanced valves controlling the outlet of air from said pipes to the interior of the casing and subject to variations of pressure therein.

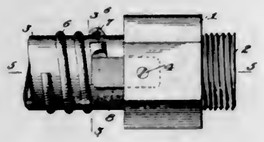


1,504,942. ORTHODONTIC APPLIANCE. THOMAS MCLOYD COMEGYS, Shreveport, La. Filed Sept. 8, 1923. Serial No. 661,601. 1 Claim. (Cl. 32—19.)

An orthodontic device which includes a pair of anchor bands adapted to be cemented to teeth in the mouth, a pair of teeth-engaging elements connected at one end to the anchor bands, sleeves on the other ends of said elements, each sleeve adapted to receive portions of the other element than the one on which it is mounted whereby the elements may be adjusted to bear against the surface of the teeth intervening between the anchor bands to hold them in their normal alignment, the sleeves adapted to engage with the elements which they embrace with sufficient friction to hold the elements in any adjusted position.

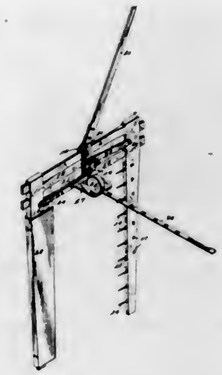
1,504,943. SANITARY TOOTHBRUSH. ROBERT W. CONGER, Bristow, Okla. Filed June 22, 1923. Serial No. 647,197. 1 Claim. (Cl. 15—202.)

A device of the character described having a head comprising an open frame formed of a continuous piece of wire bent upon itself to form an elongated loop having divergent sides with the ends of the wire bent into engagement with each other at the inner end of the head, whereby to provide a head having an unbroken open space between its two sides: a tapered metallic collar adapted at its smaller end to snugly receive the two meeting ends of the wire, said wire ends and collar being integrally united together inside the collar by soldering; a handle for the device, said handle being reduced at its inner end and provided with a socket adapted to removably receive the inner end of the metallic collar, said divergent sides of the wire head having metallic channels integrally secured to their under sides



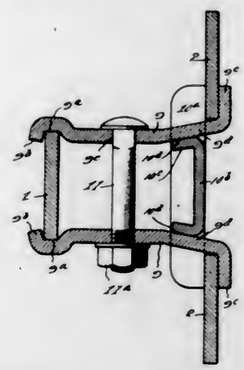
as by soldering; whereby to provide for the head and the channels and the collar an unbroken metallic surface for sterilizing purposes; a plurality of removable tuft blocks for said metallic channels, the hollow handle of the device being made of a shape and size to receive and house the removable head when not in use; and a cap for the outer end of the handle.

1,504,944. ELECTRICAL WATER HEATER. SHELDON E. COOK, Lincoln, Nebr. Filed Oct. 29, 1921. Serial No. 511,291. 2 Claims. (Cl. 219—41.)



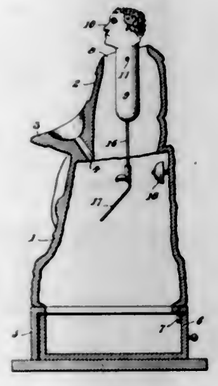
1. An electric water heater comprising two members, one terminating in a standard male thread, the other terminating in a contact button projected beyond the threaded end of said first member and insulated therefrom, whereby the heater may be screwed into a standard electric socket and effect electrical connection therewith for the purposes described.

1,504,945. HOSE PROTECTOR. WILLIAM H. DEMPSEY and ORON J. WAGGONER, Alton, Ill. Filed Mar. 24, 1924. Serial No. 701,475. 5 Claims. (Cl. 285—71.)



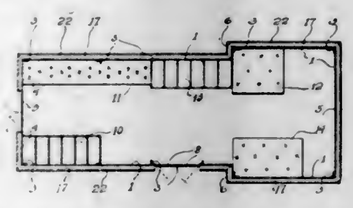
1. The combination with a wire wrapped hose and coupling member, of an external curved tubular protector on the hose-receiving end of said member and into which the free end of the wire wrapping extends.

1,504,946. CUTTING IMPLEMENT FOR CAKES OF ICE. ROBERT A. FERGUSON, Oskaloosa, Iowa. Filed Feb. 28, 1922. Serial No. 539,989. 4 Claims. (Cl. 125—23.)



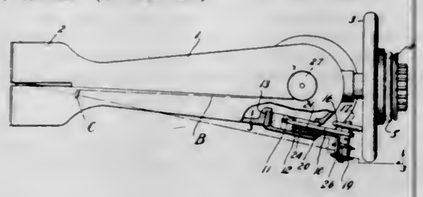
1. In an implement of the class described, the combination of two side members, guides at the upper ends thereof, each guide being fixed to one of the members and slidably connected to the other, a series of sharpened ice cutting points on the inner edge of each of said members, means for manually forcing the said members toward each other, and a base supported at the central portion of the device at the top and designed to slidably rest upon a cake of ice to support the implement in position over a cake of ice, for the purpose as stated.

1,504,947. CLAMP FOR BUMPER BARS. ROBERT A. FLUM and GEORGE R. REED, Kalamazoo, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Oct. 20, 1923. Serial No. 669,659. 5 Claims. (Cl. 293—55.)



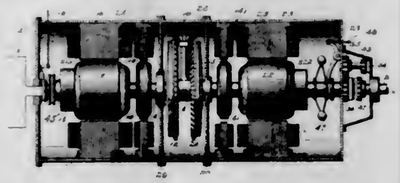
1. In a bumper, the combination, with a pair of front vertically spaced bars, of a bar spaced rearwardly from the first mentioned bars, a clamping device for connecting the last mentioned bar with the two first-mentioned bars, the said clamping device comprising a pair of opposed clamping plates each having at one end a seat for an edge of the third bar and each having at its opposite end a flanged portion adapted to engage the front face of one of the first two bars, respectively, each of said plates having a tapered surface, the said surfaces constituting a rearwardly convergent seat therebetween, clamping members adapted to cooperate with the rear or inner faces of the first two plates, the said members being connected by an intermediate portion having tapered surfaces engaging the convergent seat formed between the said plates, and means located between the said intermediate portion and the seats at the rear or inner ends of the clamping plates, for adjusting the said plates toward each other.

1,504,948. TOY BANK. ANTHONY FOLTA, Clarkson, Nebr. Filed Mar. 6, 1923. Serial No. 623,198. 2 Claims. (Cl. 46—36.)



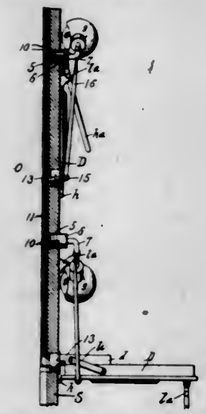
1. In a toy bank of the type described, a hollow support, a key locked sliding door mounted in the lower end of the support, said support having a coin chute therein, a bar pivotally mounted in the upper end of the support and carrying a head at its upper end, means carried by the lower end of the bar traversing the longitudinal axis of the coin chute adapted to be engaged by a coin for pivotally moving the bar and head, the pivotal mounting for the bar including lateral pins projecting therefrom, shoulders on the inner face of the support on which the pins are mounted, ball bearings interposed between the pins and shoulders, and straps secured to the shoulders and overlying the pins for retaining the latter on the shoulders.

1,504,949. ARMORED BODY FOR AUTOMOBILES, TRACTORS, CARS, AND LIKE VEHICLES. CLARENCE A. GIBBS, Hoboken, N. J. Filed June 10, 1922, Serial No. 567,257. Renewed Jan. 5, 1924. 15 Claims. (Cl. 89—36.)



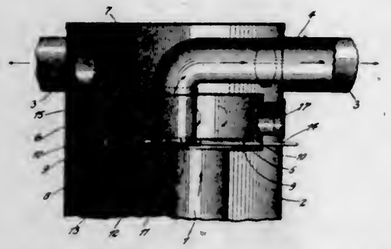
15. In a structure of the character described, an inner steel frame forming a body, a multiplicity of bullet proof panels fixedly secured to the outer face of said body, a safety vault secured at each side of the body, a series of deposit boxes secured at opposite sides of the body, doors secured at one side of the body, doors secured to the rear end of said body, bullet proof glass windows secured within each of said doors and within each side of the body, and steel shutters for each of said windows adapted to cover the same when in action.

1,504,950. BOBBIN WINDER. CHARLES H. GREENWOOD, Canton, Ohio. Filed Jan. 26, 1923. Serial No. 615,125. 6 Claims. (Cl. 242—22.)



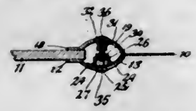
1. In combination with a sewing machine having a goose neck and head, a bobbin winder mounted upon the goose neck and provided with a horizontally disposed bobbin spindle located substantially transversely to the goose neck and disposed toward the operator of the machine.

1,504,951. DIFFERENTIAL TRANSMISSION. CHALMERS G. HALL, Washington, D. C. Filed May 11, 1921. Serial No. 468,673. 3 Claims. (Cl. 172—239.)



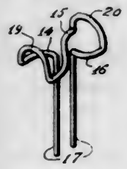
1. A mechanism comprising a differential gearing, interconnected electromagnetic units coupled to the respective sides of said gearing, exciters mechanically coupled to said electromagnetic units, the power circuits of said exciters being cross-connected to said units.

1,504,952. AUTOMATIC LIGHTING DEVICE. JACOB HIEB, Seattle, Wash. Filed Sept. 12, 1922. Serial No. 587,814. 3 Claims. (Cl. 240—5.)



1. The combination with an oven and a hinged door for opening and closing the oven, of an electric circuit including a lamp, an arm carrying said lamp and a portion of said electric circuit, said arm being pivotally mounted in position to move the lamp into and out of the position in front of the oven, and means including a link for connecting said arm to said door so as to effect movement of said arm and its lamp when the door is opened and closed, said means also being automatically operable for opening and closing said electric circuit.

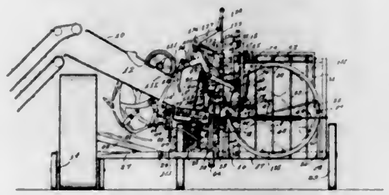
1,504,953. HOT-AIR FURNACE. GEORGE F. ISORIG, St. Louis, Mo., assignor of one-half to John G. Satterfield, St. Louis, Mo. Filed Dec. 10, 1923. Serial No. 679,559. 4 Claims. (Cl. 126—202.)



1. In a hot air furnace, the combination with a combustion chamber and a smoke outlet flue, of a drum opening into the combustion chamber and into the outlet flue, a baffle wall in the drum of greater diameter than the opening into the combustion chamber spaced from the bottom of the drum and from the side wall of the drum, and a spiral wall upon the baffle forming a tortuous passage from the edge of the baffle wall to the opening into the outlet flue.

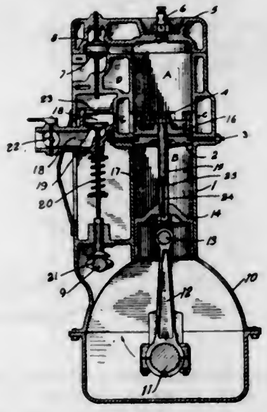
1,504,954. FRAME FOR AUTOMOBILE CURTAIN WINDOWS AND THE LIKE. JOHN C. KAMP, Saugerties, N. Y. Filed Dec. 5, 1921. Serial No. 519,832. 4 Claims. (Cl. 296—145.)

3. A frame for an automobile curtain window and the like, comprising frame members adapted to engage with opposite sides of the fabric and pane, a clamping member arranged between said frame members and adapted to engage the fabric opposite to one of said frame members, and unitary means having parts for connecting said clamping member with the respective frame member and parts for connecting the frame members with each other.



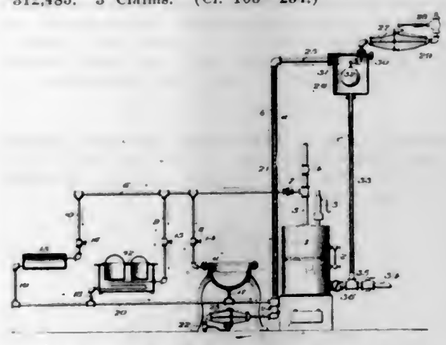
1,504,955. CAP BUTTON. WARREN F. KAYNOR, Waterbury, Conn., assignor to Waterbury Button Company, a Corporation of Connecticut. Filed Sept. 8, 1921. Serial No. 499,297. 16 Claims. (Cl. 24—96.)

1. In a uniform cap-button, a back, a shell, and a wire shank having a looped portion located between the back and the shell, said shank serving to positively space the shell from the back.



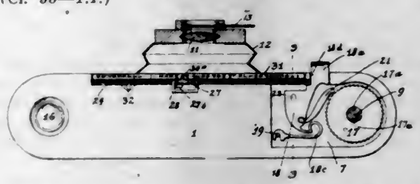
1,504,956. SHOCKER ATTACHMENT FOR BINDERS. MYRON P. KING, Blockton, Iowa. Filed Nov. 8, 1921. Serial No. 513,830. 12 Claims. (Cl. 56—4.)

1. In combination, a grain binder having a delivery chute and a pivoted tongue member with a grain shocking mechanism designed to receive bundles of grain from the chute of said binder, and to form them into a shock and deliver the chock to the ground, the said shocking mechanism being provided with a frame pivotally mounted on supporting wheels, said frame being provided with a laterally extending rigid member pivotally connected to the forward end of the pivoted tongue of said binder, and a pivoted laterally extending link substantially parallel with the first said rigid member, and pivotally connected to the rear end of said pivoted tongue.



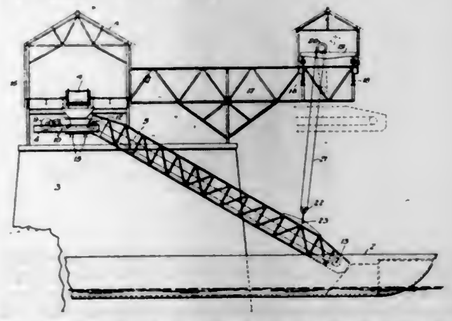
11. A shocker attachment for binders comprising a shock forming mechanism, means for moving bundles from a binder to the said forming mechanism, means for discharging a shock from the said forming mechanism to the ground surface in an upright position, means for discharging an extra bundle to the ground adjacent to the shock while the said shock is being discharged, and means for driving all of said mechanisms.

1,504,957. INTERNAL-COMBUSTION ENGINE. WILLETT J. LA TOURRETTE, Denver, Colo. Filed Oct. 2, 1923. Serial No. 666,058. 4 Claims. (Cl. 123—75.)



1. In an internal combustion engine; a cylinder; a partition member intermediate the end of said cylinder, said partition member having an opening; a crank casing connected to the lower end of said cylinder; a crank shaft rotatably mounted in said casing; a piston reciprocally mounted in each end of said cylinder, said pistons being connected by means of a rigid bar passing through the partition member; a crank pin on the crank shaft; means comprising a rod for connecting said crank pin to the lowermost piston whereby the rotation of the crank shaft will reciprocate the pistons; means for admitting air into the space between the pistons and the partition member as the pistons move away from said member; means for compressing air when the pistons move towards the partition member; and means for controlling the amount of air that enters the space between the upper piston and the partition member.

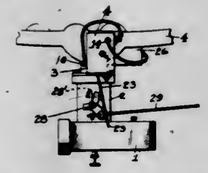
1,504,958. STEAM-HEATING SYSTEM. JAMES J. LAWLER, Pelham, N. Y. Filed July 22, 1919. Serial No. 312,485. 3 Claims. (Cl. 103—254.)



1. Means for effecting a flow of steam condensation comprising a steam generator, heating elements in communication therewith, a riser for condensation, a thermostatically controlled exhaust associated with the lower end of the riser, and a return pipe in communication with the upper end of the riser.

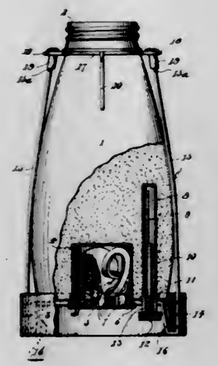
1,504,959. PHOTOGRAPHIC CAMERA. EINAR LESCHBRANDT, Philadelphia, Pa., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 10, 1919. Serial No. 303,133. 18 Claims. (Cl. 95—1.1.)

1. A film-roll camera having in one of its sides an exposing passage to permit light to enter to the film, a shutter movably mounted opposite said passage, a tape provided with characters, a guide member in which said tape is movable across the passage to permit different characters to be projected upon the film, and means for moving the film with a step-by-step movement relatively to said passage.



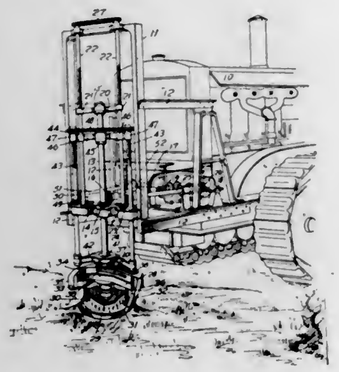
1,504,960. APPARATUS FOR LOADING BARGES. LEE LLEWELLYN, Dormont, Pa., assignor to Pittsburgh Coal Washer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1921. Serial No. 463,507. 3 Claims. (Cl. 214—14.)

1. In combination, a pool providing for flotation and movement of a receiving vessel, a superimposed structure and means supporting it thereover, a conveyor leading



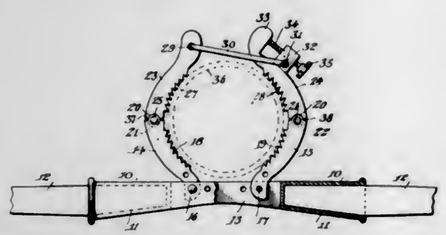
onto said structure and having a delivery terminal over the middle portion of the pool, a receiving and delivery conveyor having an upper turntable portion located below the first named conveyor and a lower vertically and laterally adjustable portion, an extension of the superimposed structure, and means thereon for raising, lowering and laterally moving the last named conveyor.

1,504,961. AIR HEATER FOR INTERNAL-COMBUSTION ENGINES. VERNE J. LUDWICK, Malta, Mont. Filed Mar. 11, 1922. Serial No. 543,123. 4 Claims. (Cl. 123—122.)



1. A device for admitting hot air to an intake manifold of an engine comprising, a closed casing, a tubular casing within said closed casing having one end open and extended through one side wall of the closed casing and further having means therein to provide a valve seat, a valve head on said seat, a stem extending from said head through the rear of said tubular casing, a spring positioned on said stem within said tubular casing and normally tending to open the valve, an opposing spring on and connected to said stem exteriorly of the tubular casing and normally tending to close the valve, means upon one side of said valve for conducting air into said tubular casing, means upon the other side of said valve for conducting hot air therefrom to said intake manifold, and a pivoted lever having one end traversed by said stem exteriorly of said tubular casing and further interposed between the tubular casing and one end of said last mentioned spring and adapted to be actuated simultaneously with other actuating mechanism of the engine to open or close said valve to control the passage of hot air therethrough to the intake manifold.

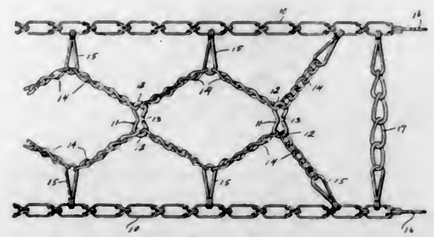
1,504,962. CARBIDE CAN. MIKE LUTENBERGER, Blocton, Ala. Filed Oct. 15, 1923. Serial No. 668,773. 1 Claim. (Cl. 220—12.)



In a carbide can including a body having a removable upper end closure, a smaller receptacle set into the lower end of the can having a closure opening outwardly thereof, a relatively long tubular member extending into the lower end of the can, a lamp pick disposed in the tubular member, and a protector for the lower end of the can and the side walls thereof.

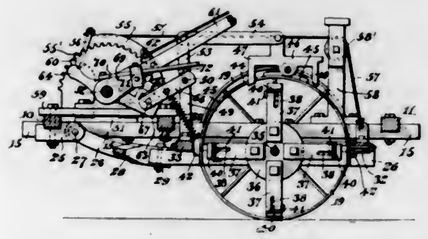
1,504,963. STUMP CUTTER. EDWIN A. MCKOY and GEORGE D. MOORE, New Orleans, La. Filed May 23, 1921. Serial No. 471,624. 10 Claims. (Cl. 144—2.)

1. The combination with a power plant, of a spindle journaled to rotate upon a vertical axis and to be moved longitudinally, simultaneously and independently from the power plant, a head carried at the lower extermity of the spindle, a lever fulcrumed upon the head upon one side of the spindle and extended to the opposite side, an arcuate cutting member carried by the lever with the fulcrum as its center of curvature, a sleeve slidable upon the spindle and controlling the movement of the lever on its fulcrum, and means actuated from the power plant for moving the sleeve.



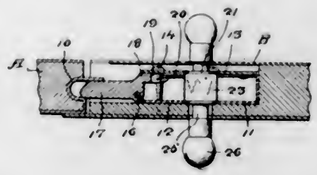
1,504,964. PIPE WRENCH. HOWARD R. NEWLAND, Bens Run, W. Va. Filed Mar. 30, 1923. Serial No. 628,738. 2 Claims. (Cl. 81—66.)

1. A wrench device comprising a stock adapted to support a lever handle, inner jaw devices swinging from said stock, outer jaw devices swinging from said inner jaw devices, a link member swinging at one end to one of said outer jaw devices, and means carried by the link member cooperating with the other outer jaw device to produce strain longitudinally of said link member.



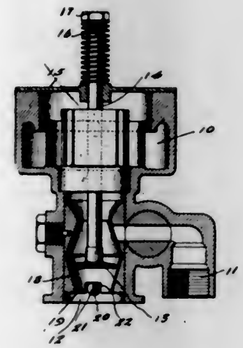
1,504,965. ANTISKID CHAIN. FRANK M. NIMS, Muskegon, Mich., assignor of one-fourth to Henry L. Gwatkin and one fourth to Floyd M. Gwatkin, both of Muskegon, Mich. Filed Mar. 21, 1923. Serial No. 626,561. 1 Claim. (Cl. 152—14.)

In an anti-skid chain, the combination with the usual spaced side chains, of spaced links arranged transversely of the side chains intermediate the same and provided at each end thereof with an eye, said eyes being arranged in a common plane and flatly opposing the tread of a tire to which the chain is attached, a pair of chains engaged with each eye and diverging from one another toward the adjacent side chain, adjacent chains of corresponding eyes of adjacent transverse links converging toward one another, and a hook link secured to each



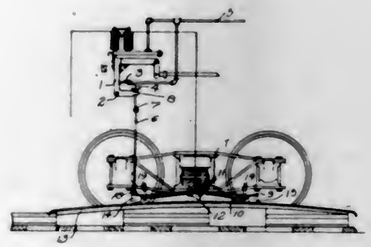
side chain intermediate each pair of adjacent transverse links, each hook link having engaged therewith the free ends of a pair of such adjacent chains.

1,504,966. WEEDER. MATHIAS OLSEN, Dutton, Mont. Original application filed Oct. 28, 1922, Serial No. 597,576. Divided and this application filed Sept. 5, 1923. Serial No. 660,991. 2 Claims. (Cl. 97—215.)



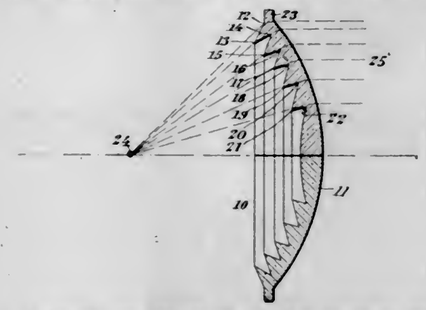
1. In an apparatus of the class described a drum device including a plurality of radiating arms, each of said arms having a longitudinally directed closed slot, a weed eradicating blade having studs extending from the ends and rotatively engaging in said slots, each of said studs having a laterally directed head adapted to pass through the slots when the blade is disposed in one position and to rotatively lock the blades to the arms when in another position.

1,504,967. LATCH. OLIVER H. ORENDORFF, Bloomington, Ill. Filed July 9, 1923. Serial No. 650,456. 3 Claims. (Cl. 292—228.)



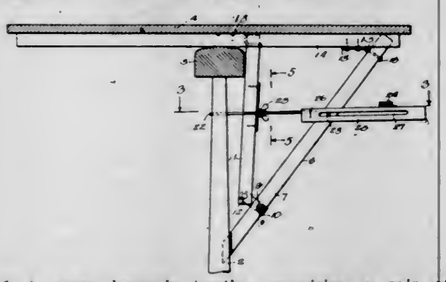
1. A latch device for a hingedly mounted door comprising a keeper mounted on the door frame, a casing carried by the door, a spindle rotatably mounted through the door and through said casing, a latch pivoted at one edge of the casing and co-operating with said keeper, a spring within the casing engaging the latch for urging it into an inclined position to clear the keeper, an arm pivoted within the casing and normally engaging the latch for holding it against movement to inclined position, a barrel on the spindle for moving said arm, and a spring within the casing in the path of movement of said arm for opposing movement thereof to its latch disengaging position.

1,504,968. ENGINE GOVERNOR. FRED OWENS, Somerset, Ky. Filed July 23, 1921. Serial No. 487,165. 1 Claim. (Cl. 137—152.)



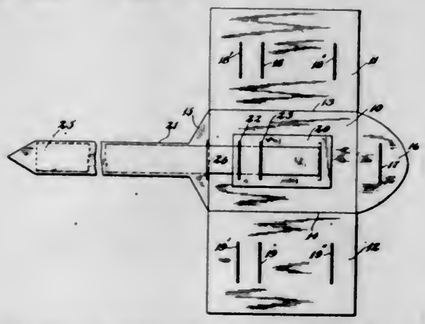
In combination with the fuel passage of an internal combustion engine, a governor comprising a sleeve located at the outlet end of the passage, said sleeve having a tapered bore with the restricted end of said bore disposed toward the outlet end of said passage and having diametrically spaced notches at its restricted end defining seats, a cylindrical rock-shaft extending transversely through the fuel passage within said seats and supporting said sleeve and a reduced flattened portion provided upon the shaft at its point of engagement with the seats, whereby rotation of the shaft will regulate the position of the sleeve.

1,504,969. RAMP SHOE. CHARLES A. PARKER, Haugan, Mont. Filed June 23, 1923. Serial No. 647,277. 5 Claims. (Cl. 246—192.)



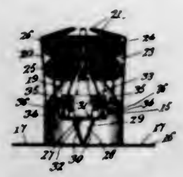
4. In a flexible resilient ramp shoe the combination with a pair of leaves rigidly joined together at one point and adapted for attachment to a support, a contact member having front and rear open ends and an attaching flange on said member located between the free ends of said leaves and attached to one of said leaves.

1,504,970. OPTICAL SYSTEM. EMILIO PASCUCCI, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed July 19, 1921. Serial No. 485,841. 4 Claims. (Cl. 240—106.)



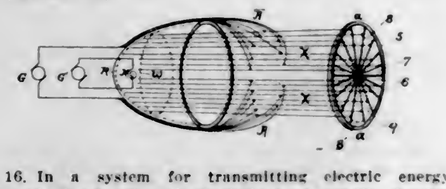
1. A Fresnel lens having on one face concentric zones united by miters, the miters being undercut, whereby they will be parallel to the path of the rays passing through the lens.

1,504,971. PAPER-HANGER'S STAIR TRESTLE. PAUL J. POLLNICK, Brooklyn, N. Y. Filed Sept. 24, 1923. Serial No. 664,541. 3 Claims. (Cl. 304—33.)



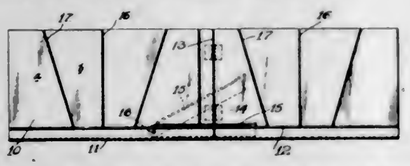
1. A paper hanger's trestle, comprising a pair of brackets for supporting a table, each of said brackets comprising a diagonal bracing bar, a vertical bracing bar, a hook adapted to engage a support, and tensioning means acting on said braces and on the hook for clamping the brackets rigidly to a support.

1,504,972. SAFETY ENVELOPE. JOHN POZIOMEK, Tarentum, Pa. Filed Dec. 6, 1922. Serial No. 605,218. 4 Claims. (Cl. 229—82.)



1. A safety envelope comprising a front part, a plurality of slotted flaps adapted to be folded upon said front part, a stiffener, means integral with one of said flaps and adapted to be successively passed through the slots in said flaps, and separate means engaging said stiffener for covering said first named means.

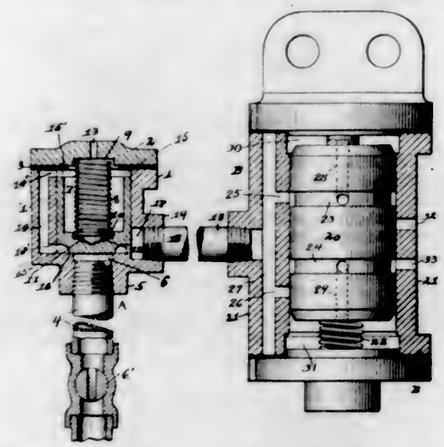
1,504,973. FUEL MIXER FOR INTERNAL-COMBUSTION ENGINES. CARL GUST PRYTS, Milbank, S. Dak. Filed Apr. 21, 1924. Serial No. 707,962. 3 Claims. (Cl. 48—180.)



3. In a mixing device, a tubular member provided with two sets of spaced inwardly extending prongs; a bridge member removably positioned within said tubular member and provided with inclined gas deflecting surfaces, said surfaces being also provided with passages whereby a portion of said gas may pass through said member; a pair of fans provided with vanes arranged in the path of the gases deflected by said surfaces, whereby said fans may be caused to rotate; and a coiled spring arranged to form an annulus positioned and held between said sets of prongs.

1,504,974. SYSTEM FOR TRANSMITTING ENERGY WITHOUT WIRES. CONRAD RENO, Springfield, Mass. Filed Mar. 1, 1920. Serial No. 362,283. 54 Claims. (Cl. 250—1.)

16. In a system for transmitting electric energy through closed and confined wireless and metallic circuits, the method of endowing electrons with motion along the conductors of said circuits which consists in exposing each circuit to the action of a spirally revolving magnetic field.



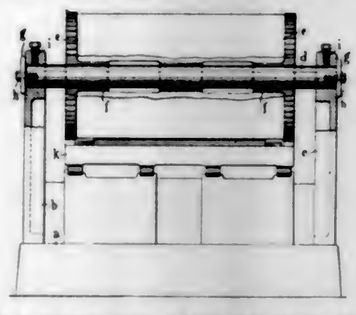
1,504,975. PATTERN FOR HALF-SOLE BLANKS. EUGENE E. RING, Minot, N. Dak. Filed Apr. 17, 1922. Serial No. 553,547. 2 Claims. (Cl. 33—5.)

1. A pattern of the character described formed in two sections, each section being formed of sheet metal, the sheet metal adjacent corresponding edges of each section being bent to form a flange, the sections being hinged to each other so that they may be turned over one upon the other, and means for locking the sections in aligned relation, said means being engageable with the flanges and extending across the joint between the sections.

1,504,976. STARTING VALVE. ROBERT F. RINGLE, Zelienople, Pa., assignor to Herman Pneumatic Machine Company, Zelienople, Pa., a Corporation of Pennsylvania. Filed July 25, 1919. Serial No. 313,232. 14 Claims. (Cl. 121—17.)

1. A starting valve comprising a casing having a chamber therein, an inlet passage, an outlet passage, an exhaust port, said inlet and outlet passages and said exhaust port communicating with the chamber, a reciprocable valve in the chamber, a resilient means for normally holding said valve seated over the inlet with the exhaust port open, said valve being movable to open position when the pressure on the inlet side thereof exceeds the resistance of said spring, said valve presenting an increased area to air pressure when so opened whereby less pressure is required to hold it open than to open it initially, said valve in its open position closing the exhaust port.

1,504,977. FILM-ROLL SUPPORT FOR CAMERAS. JOHN A. ROBERTSON and ROBERT KROEDEL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 8, 1922. Serial No. 586,987. 8 Claims. (Cl. 95—31.)

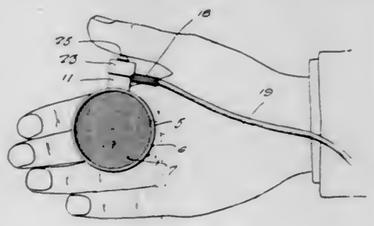


1. In a camera, the combination with a camera body comprising a shell and an inner frame spaced from the walls of the shell, of a bifurcated strip of resilient material mounted on the side of the frame and providing two arms, one of which is laterally flexible and fitted with a film spool center and the other of which furnishes a fixed bearing support for a guide roll for film supported on the film spool center.

1,504,978. LIQUID-LEVEL INDICATOR. THOMAS W. ROBBINS, Butte, Mont. Filed Mar. 22, 1921. Serial No. 454,537. 4 Claims. (Cl. 177—351.)

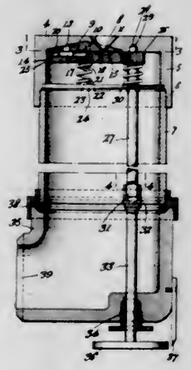
2. In a liquid level indicating apparatus, an elongated member adapted to be lowered into a liquid, electrical contact members arranged upon said member longitudinally thereof, means whereby an enclosure may be formed about the contact carrying member with restricted openings for admitting the liquid, a heating element disposed in said enclosure, and electrical circuits and indicating devices connected with said contact members whereby the height of liquid within the enclosure may be indicated at a remote point.

1,504,979. STIFFENING OF PRINTING PRESSES. MAX ROCKSTROH, Klein Sedlitz, near Pirna, Germany. Filed Oct. 12, 1920. Serial No. 416,585. 2 Claims. (Cl. 101—250.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



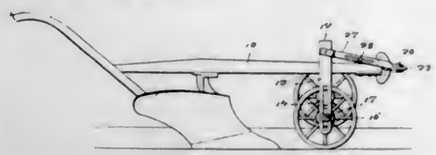
1. In a printing press, a base, side frames carried by and extending upwardly from said base, said side frames each having an aperture adjacent its upper end, an axle extending through said apertures, each end of said axle having means associated therewith and engaging the outer side of one of said frames to prevent said frames from spreading, each of said frames having means associated therewith and engaging said axle to secure said axle against rotation, and a pressure cylinder rotatably mounted on said axle.

1,504,980. ELECTRIC LAMP. JOHN SCHULTZ, New Britain, Conn. Filed Dec. 7, 1923. Serial No. 679,146. 4 Claims. (Cl. 177—329.)



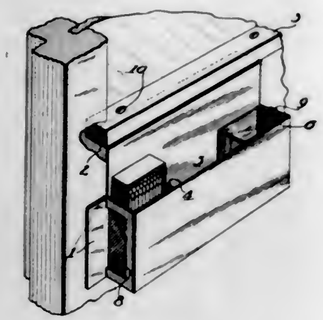
4. A signal and illuminating lamp of the character described comprising a lamp casing of cup shape having its open end closed by means of a lens plate, a tube extending through the top of the casing and having means upon its inner end within the inner casing for detachable supporting engagement with the base of an electric lamp, a switch including a plug fitted within the upper

end of said sleeve, said switch further embodying a longitudinally movable switch rod normally in circuit breaking position and depressible longitudinally of the sleeve for closing a circuit, said switch rod being exposed at the upper end of the sleeve, and means to attach the back of the lamp casing against the back of the index and forefingers of the user's hand with the switch carrying sleeve inclined upwardly and inwardly toward the user's thumb, said sleeve being also inclined upwardly and toward the back of the lamp casing for facilitating engagement of the switch rod by the thumb, the means for attaching the lamp by the fingers com-



prising a vertical plate fixed to the back of the lamp casing and having vertically aligned slotted flanges, and an adjustable elastic band threaded through the slots of said flanges, and a bracket including an upstanding member positionable through the slots of the plate for supporting the lamp casing at the side or from the dash board of a vehicle with the closure plate presented toward the side or dash board of said vehicle, said lamp casing having a window in a side thereof, said bracket further including a horizontal lower and intermediate portion upon which the lamp casing is adapted to rest when the upstanding member of said bracket is positioned through the slots of the plate flanges.

1,504,981. OIL BURNER. DUNCAN I. SELFRIDGE, Strafford, Pa. Filed Dec. 1, 1923. Serial No. 677,975. 3 Claims. (Cl. 299—119.)

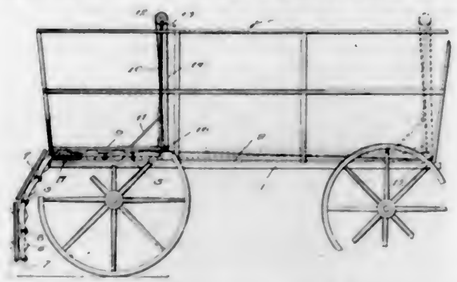


1. An oil burner comprising a tip having an oil escape opening, a member rotatably mounted within the tip and eccentric to the tip with separate oil chambers therein of varying capacities and having ports in said member to register with the escape opening, said ports being of different sizes in proportion to the respective chambers, said member having tangential grooves or ducts connecting with the chambers and with the interior space of the burner, and means to rotate the member.

1,504,982. PLOW ATTACHMENT. HAROLD A. SHANER, Muncy, Pa. Filed Aug. 2, 1922. Serial No. 579,208. 4 Claims. (Cl. 97—131.)

2. An attachment for plows, comprising a cross member formed at its ends with arches having their outer arms slotted, wheels journaled within the arches and having their spindles adjustably mounted along said slots, and adjustable braces connected with the cross member and with the beam.

1,504,983. SMOKING SET. ADOLPH J. SHARY, Los Angeles, Calif. Filed Aug. 14, 1923. Serial No. 657,279½. 1 Claim. (Cl. 206—31.)



A smoking set comprising a receptacle having an end wall provided with an opening, a partition wall disposed transversely of the receptacle and spaced from the end wall thereof which is provided with the opening, a match box body support mounted upon the bottom of the receptacle and located between the partition wall and the end wall of the receptacle which is provided with the opening, means for attaching the receptacle to the frame work of an automobile machine, said receptacle having at its rear side a flange which is disposed beyond that end of the receptacle having the opening, said flange having end portions which extend above and below the upper and lower edges of the opening and the said flange adapted to bear against the frame of the body of the automobile machine.

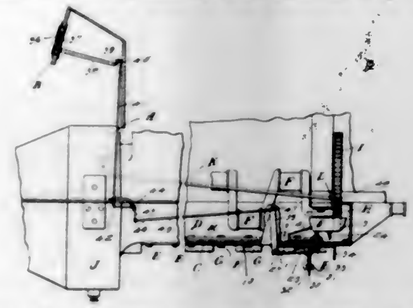
1,504,984. LOADING DEVICE. CHARLES H. SHEDENHELM, Fremont, Ohio. Filed Sept. 29, 1922. Serial No. 591,377. 1 Claim. (Cl. 214—83.)

In combination with a wagon, pivotally inter-connected carriages consisting of substantially U-shaped body portions having downwardly disposed lips formed upon their inner sides and forwardly and rearwardly disposed bearing arms, rollers rotatably mounted between said forwardly and rearwardly disposed bearing arms, tracks disposed longitudinally of the wagon floor in parallel relation for receiving said carriages, the downwardly disposed lips of the body portions of said carriages engaging the inner sides of said tracks, platforms arranged upon the upper portions of the body portions of said carriages and inter-connecting certain of the same, standards fixedly mounted upon one of said platforms, a windlass rotatably mounted in the upper ends

of said standards, a cable disposed longitudinally of the wagon floor having the forward end thereof connected to the forward end of the wagon floor, a contractile

spring connected to the remaining end of said cable and to the rearward end of the wagon floor, the intermediate portion of said cable passing upwardly and being coiled about said windlass, as and for the purpose set forth.

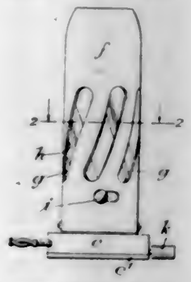
1,504,985. COMBINED HOLDING AND COUPLING DEVICE. JOHN N. SHELLER, Danville, Ill. Filed Nov. 7, 1923. Serial No. 673,304. 4 Claims. (Cl. 241—11.)



1. A combination holding and coupling device comprising an integral holding and an integral connection section, said holding section consisting of a vertically disposed rectangular frame formed of flat top, bottom, front and rear bars and providing a rectangular opening for the passage of a belt, said frame having its rear bar provided with a plurality of rigid piercing barbs and a rearwardly extending threaded shank, and said connecting section consisting of a disk and a tapered extension having its reduced end projecting rearwardly from the disk thereby providing in connection with the disk a peripheral groove gradually increasing in width outwardly and providing means for the connecting of a suspender with the connecting section, said connection section having means cooperating with the threaded shank for detachably connecting the sections together and further for coupling the device in position.

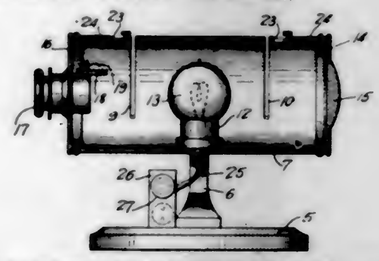
1,504,986. PROCESS OF TREATING NITRATED CARBOHYDRATES. WALTER O. SSELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1921. Serial No. 454,207. 36 Claims. (Cl. 52—20.)

1. The process which comprises subjecting a nitrated carbohydrate to the action of a reducing agent in weak solution at a temperature in excess of 60° C.



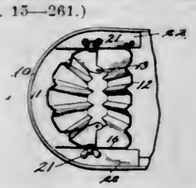
1,504,987. LUBRICANT INDICATOR. JOHN W. SOFGE, South Jacksonville, Fla. Filed Apr. 8, 1922. Serial No. 550,796. 8 Claims. (Cl. 184—11.)

8. A lubricant indicating mechanism for an internal combustion engine including a receptacle depressible by gravity on accumulation of lubricant therein, balls pivotally mounting said receptacle within the engine, said receptacle having an outlet port, a valve for said outlet port having a stub depending therethrough for engagement with an obstruction, said receptacle having an inwardly extending dome, a stem depending from said



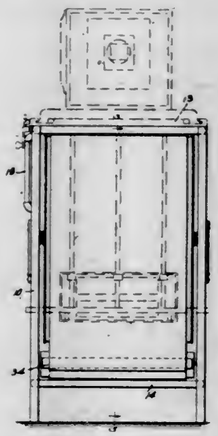
dome, a lever disposed exteriorly of the engine, a bolt extending through the lever, said stem being in engagement with said lever, a spring on said bolt urging said lever upwardly, a crank arm on said lever, and indicating mechanism operable through movement of said crank arm.

1,504,988. APPARATUS FOR PERMANENTLY WAVING THE HAIR. HUBERT SPEETJENS, Kensington, London, England. Filed Apr. 20, 1922. Serial No. 555,720. 4 Claims. (Cl. 219—14.)



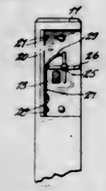
1. A tubular electric heater for hair waving formed with venting apertures or slots capable of being regulated by an adjustable sleeve or shutter.

1,504,989. STEREORADIOSCOPE. BENJAMIN L. SPITZER, New York, N. Y. Filed Apr. 8, 1921. Serial No. 459,778. 3 Claims. (Cl. 88—29.)



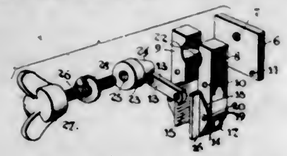
1. An instrument of the character described comprising a tube having negative receiving slots near opposite ends, illuminating means arranged in the tube between the slots and in line with the negative and magnifying means at opposite ends of the tube through which negatives placed in the slots may be viewed, one of said magnifying means being stereoscopic.

1,504,990. MOP WRINGER. JOSEPH W. STAFFORD, Atlanta, Ga. Filed Aug. 9, 1922. Serial No. 580,684. 4 Claims. (Cl. 15—261.)



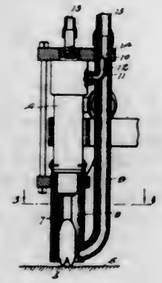
4. A device of the character described, comprising a pair of corrugated members one of which is curved and the other substantially flat in general contour, said members being in angular relation to one another and means adapted to support said members in a vessel with either the flat or curved member resting against the wall of the vessel.

1,504,991. DRYING MACHINE. JOSEPH STERN, New York, N. Y. Filed June 2, 1921. Serial No. 474,328. 10 Claims. (Cl. 34—5.)



2. In a drying machine, a drying drum, a belt passing around said drum and forming means for driving said drum, an electric motor for driving said belt, means for heating said drum, said heating means being operable during operation of the drum, and means for automatically cuting off the supply of heat to the drum upon cutting off the power thereof.

1,504,992. GATE LATCH. BENJAMIN F. STEWART, Tuff, Tex. Filed July 16, 1923. Serial No. 651,875. 1 Claim. (Cl. 292—340.)

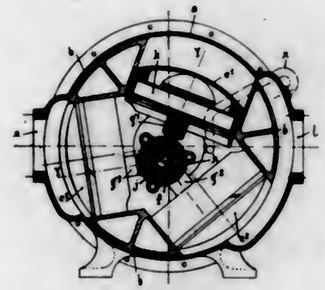


A keeper of the character described, comprising a body portion rotatively mounted on a gate post, radially projecting wings or fingers carried by said body portion, a leaf spring mounted independent of said keeper, one end of said leaf spring being curved in the arc of a circle to provide a pawl, said pawl having its free end projecting between certain of said wings or fingers to prevent rotation of said keeper in one direction, and said pawl being curved in the arc of a circle of smaller diameter than a circle embracing the outer ends of said wings or fingers whereby it will yieldingly permit rotation of said keeper in the other direction, substantially described.

1,504,993. FUSE-CLIP CLAMP. PETER STRUGHOLD, St. Louis, Mo. Filed Dec. 10, 1923. Serial No. 679,808. 7 Claims. (Cl. 200—134.)

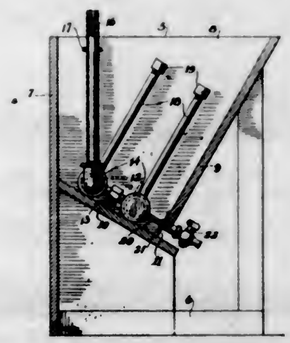
1. A fuse clip clamp comprising a base plate, a pair of clamping jaw shanks pivotally mounted on and extending inwardly from said plate, a clamping jaw pivotally connected to and projecting from the inner end of each shank and having a clamping face arranged at the inner side of a shank, said clamping faces opposing each other, a coupling bar for said shanks, a wedge element operating between the shanks for shifting said jaws into clamping position, and means extending through said element and engaging with the base plate for operating said wedge element.

1,504,994. DUST REMOVER FOR STONE-DRESSING MACHINERY. EDWARD M. TOBIN and EMMET M. WHITE, Barre, Vt. Filed Apr. 14, 1922. Serial No. 552,666. 2 Claims. (Cl. 125—8.)



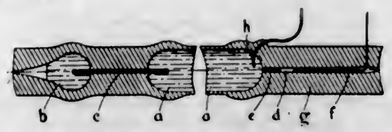
1. The combination with a stone dressing machine operated by compressed air, of a hood almost encircling the tool of the machine whereby an open slot is provided, a suction tube arranged with one end positioned adjacent said slot, said end being substantially round, a pipe extending from the exhaust of said machine into said tube, said pipe having a section extending centrally of and parallel to the tube whereby the discharge from the pipe will be centrally of the tube and in a direction away from the end positioned adjacent said slot, and means connected with the end of the tube opposite that arranged adjacent the slot for guiding the dust and air from the tube to a discharge point.

1,504,995. SUCTION AND DELIVERY PUMP OF THE ROTARY TYPE. PAUL VOREAUX, Paris, France, assignor to Societe Anonyme Bavox, Paris, France. Filed Aug. 10, 1922. Serial No. 581,001. 2 Claims. (Cl. 103—161.)



1. A rotary apparatus comprising a stationary casing, a unit set of revoluble cylinders, pistons movable within said cylinders and actuated by the movement of the latter, piston rods independent of each other whereof

the ends are in contact and staggered in the lengthwise sense, a stationary shaft in eccentric position with respect to the axis of rotation of said cylinder set and



extending through the ends of the piston rods, and means permitting said pistons to rotate upon said eccentric shaft while sliding within the cylinders.

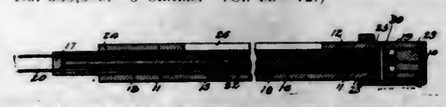
1,504,996. AUTOMATIC STEAM SAND DRIER. JOHN PINCKNEY VOSS, Dubach, La., assignor of one-half to Vanda Arthur Davidson, Dubach, La. Filed Jan. 17, 1924. Serial No. 686,828. 9 Claims. (Cl. 34—34.)

6. In a drier, a box having vertical end and back walls, a front wall inclined upwardly and forwardly, and a bottom inclined downwardly and forwardly and perpendicular to the front wall, said front wall having its lower edge spaced from the bottom to form a discharge slot for the sand, and a heating device in close proximity to the inclined front wall.

1,504,997. MINUTE CAPILLARY TUBE APPLICABLE TO TEMPERATURE SUDDEN-CHANGE ELECTRIC-CIRCUIT CLOSERS AND OTHER INSTRUMENTS. CHARLES LESLIE WALKER, Aberdeen, Scotland. Filed Sept. 19, 1923. Serial No. 663,718. 8 Claims. (Cl. 200—141.)

3. A combination comprising a vitreous container formed with compensation and overflow passages, a charge of mercury therein, a platinum capillary tube sealed into said compensation passage, and second platinum capillary tube sealed into said overflow passage.

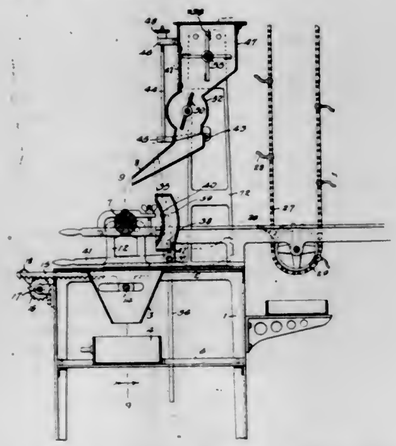
1,504,998. SEPARABLE BUTTON. WILLIAM WEINBERGER, New York, N. Y. Filed May 16, 1924. Serial No. 713,756. 3 Claims. (Cl. 24—108.)



1. A separable button, comprising a head portion, an auxiliary portion linked to said head and having a projecting shank, and a co-operating receiving member adjustable over said shank and comprising an inside member having a raised central part and a center opening, a disk attached to the under face of said raised parts and having a plurality of radial cuts projecting from the center point, whereby movement of said shank through the center point will cause the points of the material between the cuts to spring in the direction of the movement of the shank and to bite into the surface of the latter when the attempt is made to move it axially in the opposite direction.

1,504,999. ATTACHMENT FOR WELL-DRILLING TOOLS. LESTER M. WENTLING, Foxburg, Pa., assignor of one-eighth to Rayburn Reichart, Parkers Landing, Pa.; one-eighth to Donald G. Jordan, St. Petersburg, Pa.; one-eighth to James Wentling and one-eighth to Albert L. Nevel, both of Foxburg, Pa., and one-fourth to C. E. Harrington, Kittanning, Pa. Filed MAR. 14, 1923. Serial No. 625,052. 4 Claims. (Cl. 255—16.)

2. A device for the purpose indicated comprising a tubular casing, a rod slidably engaged in said casing, a plurality of compression springs surrounding the rod, washers slidably mounted on the rod and interposed between the compression springs, a split bushing mounted on the rod adjacent the lower end, and means for securing said bushing in place and constituting a thrust for said compression springs.

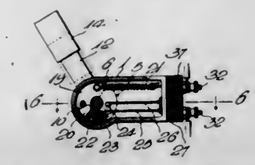


1,505,000. FILM OR PLATE HOLDER. EMMETT EDWIN WHITING, Wabasha, Minn. Filed May 13, 1922. Serial No. 560,689. 6 Claims. (Cl. 95—72.)

1. A film or plate holder comprising a member with which the films or plates are detachably associated, a light excluding envelope having one open end adapted to

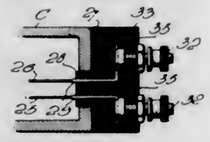
telescopically receive the carrier member, and a frame having one open end and a window opening in one side adapted to telescopically receive the envelope with the film carrier member arranged therein whereby the films or plates are positioned with respect to the window opening for exposing therethrough upon withdrawal of the envelope from the frame.

1,505,001. ROTARY BAKING MACHINE. CARL WIMSON, New York, N. Y. Filed May 2, 1923. Serial No. 636,181. 13 Claims. (Cl. 107—1.)



2. A baking machine, comprising a roller, means for rotating the roller, a burner, means for relatively moving the roller and burner in respect to each other to vary the distance therebetwe n, means including a spout for directing batter onto said roller, and means for adjusting the discharge end of said spout so as to regulate the space on the roller receiving the batter.

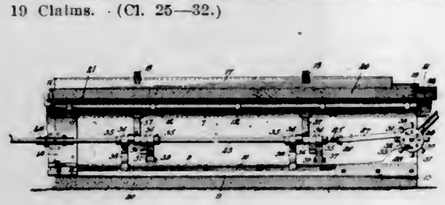
3. A baking machine, comprising a rotatable baking roller, means for discharging batter onto said roller, means for cooking the batter on the roller, a runway arranged adjacent said roller, means for discharging the roller onto said runway, and a conveyor for conveying the roller to a distant point after it has been discharged onto said runway.



12. In a baking machine of the character described, a baking roller for receiving the batter to be baked, a pair of carriages for rotatably supporting said roller, a rack extending from each of the carriages, a pinion meshing with each of said racks, a shaft rigidly connected with each of said pinions, means for supporting said shafts, and means for rotating said shafts for moving said racks and carriages.

1,505,002. RAILWAY SIGNAL SWITCH. GEORGE ZINT, Wapakoneta, Ohio. Filed Mar. 26, 1923. Serial No. 627,773. 4 Claims. (Cl. 246—250.)

1. A circuit controlling device comprising a casing adapted to be stationarily mounted at one side of a railway rail, a pivoted vertically swinging arm at the outer side of said casing consisting of a relatively stationary lower section and a normally raised downwardly yieldable upper section, means for swinging said arm normally upward to an inclined position in the path of a car wheel, whereby a wheel traveling in one direction will swing the entire arm downwardly whereas a wheel moving in the other direction will merely depress said upper section of the arm, and a circuit controlling means in the casing operated by said arm.

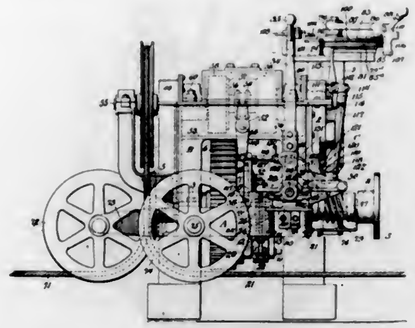


1,505,003. CONTACT-MOUNTING MEANS. GEORGE ZINT, Wapakoneta, Ohio. Original application filed Mar. 26, 1923, Serial No. 627,773. Divided and this application filed Jan. 2, 1924. Serial No. 683,975. 2 Claims. (Cl. 200—166.)

1. In a contact mounting means, a pair of insulators secured together and having openings out of alinement with each other, a contact passing through the opening of one insulator and having a lateral end clamped between the two insulators, and a binding post in the opening of the other insulator having a grooved head whose groove receives said lateral contact end.

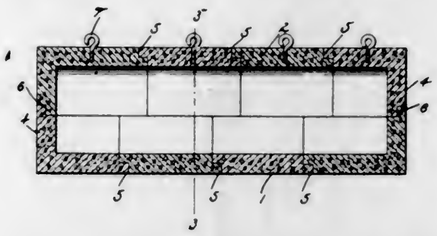
2. A structure as specified in claim 1; one of said insulators being grooved to receive a portion of said lateral contact end.

1,505,004. CONDUIT MOLD. THOMAS DE LA MARE, Tooele, Utah. Filed Sept. 20, 1920. Serial No. 411,642. 19 Claims. (Cl. 25—32.)



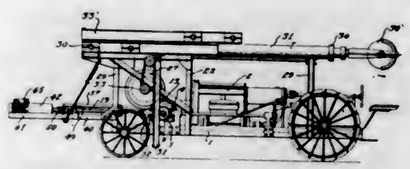
9. Apparatus for molding a continuous concrete conduit in a trench comprising an expansible shell, and means for expanding and contracting said shell, said means comprising a pull rod extending axially of the shell, a plurality of toggle arms secured against longitudinal movement on the pull rod and extending substantially radially of the shell and fixed at their outer ends to the inside of the shell, means for moving the pull rod, said means being self-locking when the shell is expanded to approximately its maximum, and means for positively locking the pull rod moving means whereby the shell may be maintained intermediate the expanded and contracted states.

1,505,005. POWER SETWORKS FOR SAWMILL CARRIAGES. GEORGE WASHINGTON DORMAN, Everett, Wash., assignor to Sumner Iron Works, Everett, Wash., a Corporation of Washington. Filed June 10, 1918. Serial No. 239,158. 13 Claims. (Cl. 143—120.)



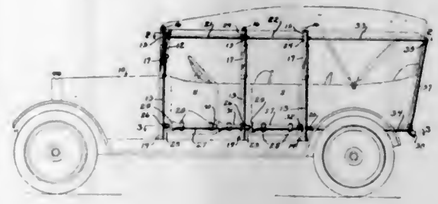
1. In power set works for saw mill carriages, a shaft for effecting movement of the saw carriage knees, another shaft driven at a low speed by the first shaft, a disk secured to the second shaft, an index provided on the face

of said disk, a ring having a scale thereon and mounted upon the disk, a bracket secured upon a fixed support, another bracket secured to the ring and having a slot, and a



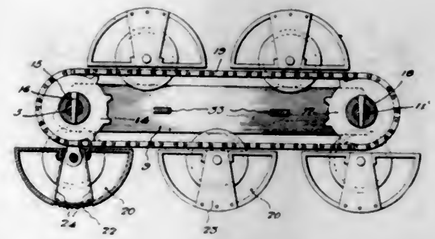
securing element passing through the two brackets and received within the slot for permitting limited adjustment of the ring relative to the disk.

1,505,006. BURIAL VAULT. HERBERT WILLIAM COLLINS, Grand Forks, British Columbia, Canada. Filed July 31, 1922. Serial No. 578,720. 1 Claim. (Cl. 72—7.)



A burial vault of the class described comprising a body and a top, each composed of a plurality of sections made of concrete, the middle sections being of channel form and the end sections having end walls, said sections being connected together by lap joints and the top being connected with the body by a lap joint which is formed in the straight abutting edges of the sides and ends of the top and body and handles on the sections of the top so that the top can be put in place a section at a time.

1,505,007. WELL-PULLING APPARATUS. CLARENCE E. COX, Warren, Ohio, and OMAR E. JONES, Franklin, Pa. Filed June 6, 1922. Serial No. 566,262. 4 Claims. (Cl. 255—35.)

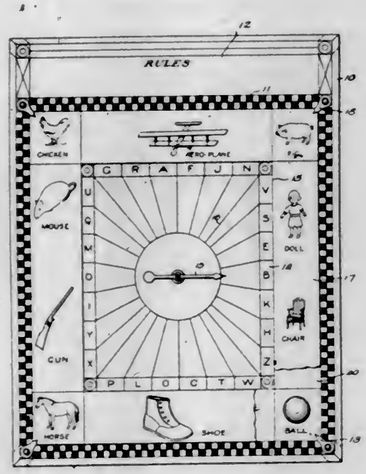


1. A well-pulling apparatus comprising a tractor; a source of power mounted thereon; means mounted on the tractor for handling and placing pipe sections; and a support for a pipe wrench, comprising a frame, having a portion hingedly connected with the tractor whereby the pipe wrench may be folded into a position to permit unobstructed use of the pipe-section-handling means.

1,505,008. WIND AND DUST SHIELD. MICHAEL CURRAN, Danville, Pa. Filed May 10, 1923. Serial No. 638,022. 2 Claims. (Cl. 280—15.)

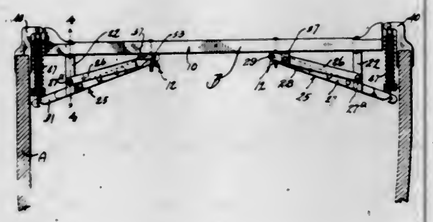
1. The combination with a touring car of the phaeton type, of substantially vertical troughs arranged on the sides of the vehicle between, in front of, and in rear of the doors respectively, said troughs having their open sides facing the front, and having outlets through their bottoms, and conduits connected with the outlets and leading to the rear of the vehicle, said conduits having separate intermediate sections secured to the doors with the ends of said intermediate sections spaced from the remaining portions of the conduits sufficiently to permit the doors to open.

1,505,009. TRUCK. FELIX DE BORGGRAVE, Chicago, Ill. Filed May 13, 1921. Serial No. 469,258. 1 Claim. (Cl. 180—9.1.)



In a motor vehicle, the combination of a chassis, propelling means for the vehicle including road surface engaging elements each comprising a semi-circular body, serrated road engaging plates attached thereto at right angles to their flat sides, an end brace attached to each body, radial braces upon the interior of the body, and means for imparting movement to the propelling means.

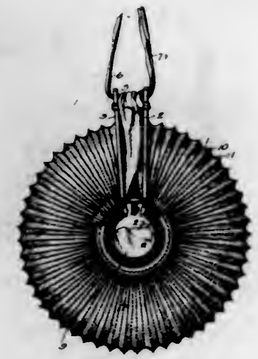
1,505,010. EDUCATIONAL GAME. JAMES H. DEEN, New York, N. Y. Filed July 31, 1923. Serial No. 654,899. 7 Claims. (Cl. 46—63.)



1. In an educational game, a game board having a band of letters marked thereon enclosing an area, a spinner mounted in said area for indicating the different

letters in said band, a band of objects marked on a plate shaped for enclosing said band of letters, said

objects suggesting words for spelling by the use of the letters indicated by the spinner, and means mounted on the board for retaining said plate in position.



1,505,011. ADJUSTABLE SEAT ARRANGEMENT FOR VEHICLE BODIES. HENRY J. DERY, Sanborn, N. York. Filed May 15, 1922. Serial No. 561,100. 8 Claims. (Cl. 155—9.)

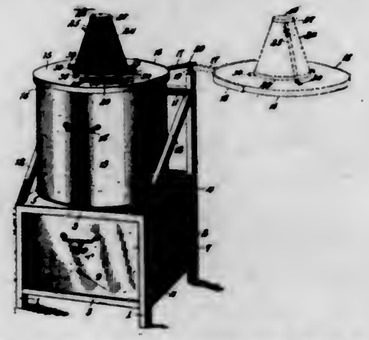
1. In a seat structure, the combination with a vehicle body, of a seat member, collapsible supporting arms pivotally connected to said seat member, means resiliently connecting said arms at their free ends to said vehicle body, and clamping means upon said seat member for maintaining the supporting arms collapsed thereon, whereby said seat may be supported in elevated position from said vehicle body.

1,505,012. HAND BAG. GABRIEL DISTEFANO, Brooklyn, N. Y. Filed July 27, 1923. Serial No. 654,250. 5 Claims. (Cl. 150—28.)

1. A hand bag, comprising a body formed arc-shaped in cross section and bent to produce a ring effect, a frame connected to each end of said body, means for connecting said frames together, said means including a pair of binding wires connected to said body and acting

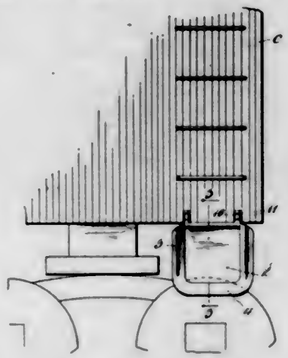
as hinges for the frames, and a covering member for covering said wire and the center of said body when formed in a ring.

1,505,013. SCRAPER AND TAMPING ROD. JOHN JAMES DIXON, Barrackville, W. Va. Filed July 11, 1923. Serial No. 650,928. 5 Claims. (Cl. 86—21.)



1. A device of the class described comprising a stem, a tamping head formed on one end of said stem, a cap removably secured to said head, an extension carried by said stem at the end opposite to said head, and a scraper removably secured to said extension.

1,505,014. COMBINATION GARBAGE CAN. ALEXANDER G. DUNCAN, deceased, late of Cedar Rapids, Iowa, by Harold W. Duncan, administrator, Cedar Rapids, Iowa, assignor to Harold W. Duncan, Cedar Rapids, Iowa. Filed June 17, 1921. Serial No. 478,313. 4 Claims. (Cl. 43—120.)

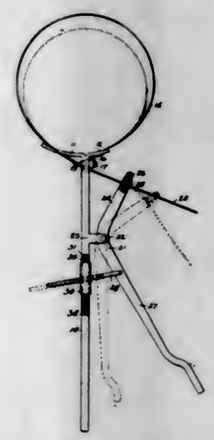


1. The combination with a garbage can haging a lid provided with an elevated, substantially circular boss having a screened opening therein, a series of rests secured to the lid in spaced relation to the periphery of said boss, an inner wire cone supported by said rests and

having an opening at the top and bottom, the opening at the bottom being of a greater diameter than said boss, whereby an entrance to said cone is provided between it

and the boss, and an outer wire trap body closed at the top and provided with supporting frame work detachably secured to the lid above and around the inner cone.

1,505,015. CAR STEP. JAMES DUNLAP, Jr., East Pittsburgh, Pa. Filed July 19, 1923. Serial No. 652,652. 11 Claims. (Cl. 105—443.)



2. A car step comprising a body portion having concavo-convex flanges upon the forward portions of the opposite sides thereof adapted to direct the foot of a user into engagement therewith, and a downwardly extending flange formed upon the forward portion of the bottom thereof.

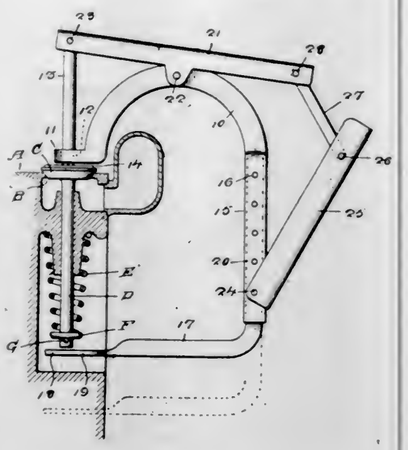
1,505,016. REFRIGERATOR DISPLAY COUNTER. ALBERT H. EHRLICH, St. Joseph, Mo. Filed Oct. 12, 1921. Serial No. 507,255. 1 Claim. (Cl. 62—69.)

An ice container of substantially rectangular form, the side walls thereof being provided with vertically arranged recesses and a transverse recess arranged in the bottom thereof, the said transverse recess converging to approximately half the height of said container, drainage cocks arranged at the bottom of said container on either side of said transverse recess, and an outlet for said container, said outlet being arranged at an approximately horizontal line with the highest part of the said transverse recess.

1,505,017. PISTON-RING TOOL. HENRY A. G. FORNELIUS, Clifton, N. J. Filed Jan. 19, 1923. Serial No. 613,757. 3 Claims. (Cl. 29—86.4.)

1. A piston ring tool comprising a shank, a flexible resilient strip secured at one end to one end of the shank, a plurality of spaced guide means formed at the said end of the shank through which the free end of the strip is trained and by which said strip is engaged at circumferentially spaced points whereby to maintain the same in ring form, and means pivoted to the shank having connection with the free extremity of the strip for effecting circumferential contraction and expansion of the strip upon manipulation of the said pivoted means.

1,505,018. HEADLIGHT CONTROL. JOHN B. GIACHETTO and BENJAMIN TEX, Kincaid, Ill. Filed Sept. 7, 1923. Serial No. 661,454. 1 Claim. (Cl. 74—39.)

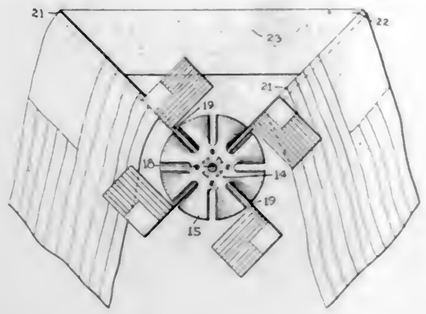


A clamp comprising a flexible strap which is centrally bent upon itself to provide an eye for a shaft and having lapping portions projecting from the eye which are connected and which are further formed with projections providing arms each of which terminating in straight extensions and one of said extensions being lipped, a nut on the last mentioned extension, and a bolt passing through both extensions and engaging the nut.

1,505,019. VALVE-SPRING LIFTER. PAUL S. GRAHAM, Winters, Tex. Filed Dec. 23, 1922. Serial No. 608,739. 2 Claims. (Cl. 29—86.3.)

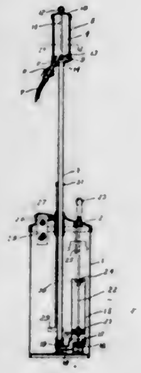
1. A valve spring lifter comprising a pair of bars slidably adjustably connected, one bar terminating in an extension engageable upon the valve and the other terminating in a forked extension engageable slidably upon the valve stem, a lever pivoted upon one of said bars, a stem slidable through said extension and carrying a

disk engageable upon the valve, the free end of said stem being pivotally connected with one end of said lever, a second lever pivoted upon said second named



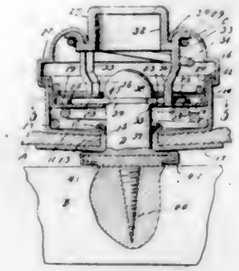
bar and a link pivotally connected with the other end of said first named lever and the free end of said last named lever.

1,505,020. HEADER FELT. ERNEST M. GUILLAUME, Worcester, Mass., assignor to The Felters Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1923. Serial No. 669,420. 4 Claims. (Cl. 20—52.)



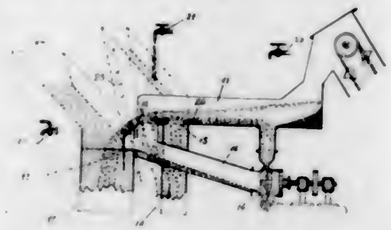
1. The combination with a window frame having a channel in which a glass pane slides, of a header for the upper portion of the channel, comprising a strip of material adapted to be seated in the channel, and a secondary strip of compressible fibrous material imposed upon the first-mentioned strip, and means arranged longitudinally of both strips for securing them together under tension, whereby the compressible strip is compressed to form a groove for receiving an edge of said pane.

1,505,021. ORNAMENTAL DISPLAY DEVICE. DODSON HASLUP, Grafton, W. Va. Filed Oct. 30, 1923. Serial No. 671,682. 3 Claims. (Cl. 248—37.)



1. In a device of the class described, an adjustable clamp adapted to be secured to a support, a bracket secured to one end of the clamp, a wind wheel mounted for rotation in said bracket, and a plate spaced from said bracket and forming therewith a clamp for flag staffs.

1,505,022. DISPENSING APPARATUS FOR LUBRICATING OILS AND THE LIKE. WILLIAM T. HATMAKER, Dayton, Ohio, assignor to The National Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 1, 1920. Serial No. 362,186. 2 Claims. (Cl. 221—100.)

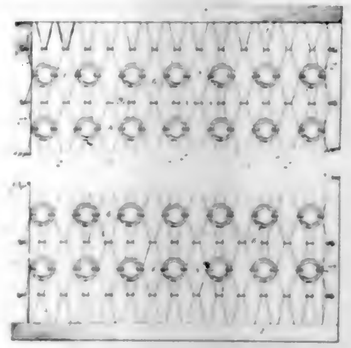


1. A liquid dispensing apparatus, comprising a portable main receptacle, a discharge conduit carried by and extending above said main receptacle, a delivery receptacle supported by and communicating with said discharge conduit at a point above said main receptacle and having an outlet near the bottom thereof, a pump cylinder mounted within said main receptacle and communicating with said discharge pipe, a piston mounted in said cylinder, a rod connected with said piston and extending beyond the end of said receptacle, a stop extending from the wall of said main receptacle, and a lug carried by said piston rod adapted to be moved into and out of alinement with said stop rod by the rotation of said piston rod.

1,505,023. SELF-EJECTING FASTENER. JOSEPH F. HENCH, Waterbury, Conn. Filed June 28, 1922. Serial No. 571,542. 19 Claims. (Cl. 24—211.)

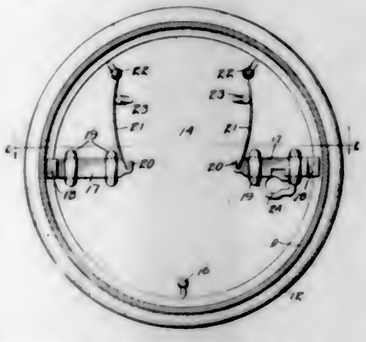
9. In a fastener, latch means engageable with a separable part, a depressible releasing head, means on said releasing head to retract said latch means through depression of said head, and spring means coacting with said latch means to impart ejecting movement to the fastener upon disengagement of the latch means with the part.

1,505,024. APPARATUS FOR WASHING MINERALS AND OTHER SUBSTANCES. RENÉ AUGUSTE HENRY, Liege, Belgium. Filed Apr. 14, 1923. Serial No. 632,056. 1 Claim. (Cl. 83—82.)



An improved apparatus for washing and separating minerals and other substances, comprising, a closed circuit structure, including a main trough, a return trough and connecting conduits for the troughs, a plurality of openings in the main trough, one of which openings leads out of the closed circuit structure, and is used for the heavier particles of material, another of which openings leads to the return trough and is used for non-separated material, and another of which openings leads to a settling tank, and is used for the lighter particles together with water, the settling tank having an opening connecting with the return trough for leading said water back to the closed circuit structure solely by gravity.

1,505,025. RESILIENT SUPPORTING SURFACE, MATTRESS, AND THE LIKE. THOMAS HILTON, London, England. Filed Mar. 29, 1924. Serial No. 702,900. 7 Claims. (Cl. 5—267.)

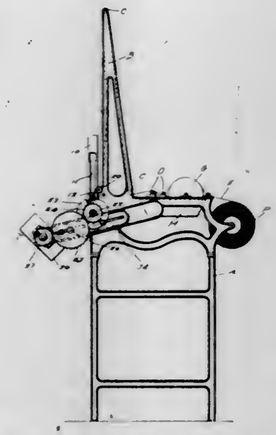


5. In a spring mattress, the combination of a series of helical springs arranged in longitudinal rows, a series of cords stretched longitudinally across and secured to the bases of said springs, there being four cords to each row of springs, the two inner cords converging from each spring toward the mid-points between the springs where said cords are connected to each other, and the two outer cords diverging from each spring and each being connected midway between the springs to the nearest cord of the next row of springs.

7. In a spring mattress, the combination of a longitudinal row of helical springs, a pair of cords stretched longitudinally of said row and connected with each of the springs, and means alternating with the springs to connect the cords of the pair to each other, said

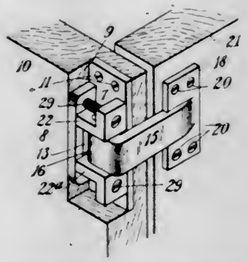
cords converging from their respective connections with the springs to the point where they are connected to each other.

1,505,026. METER BOX. JULIUS H. HOLMGREEN, San Antonio, Tex. Filed Aug. 18, 1922. Serial No. 582,773. 3 Claims. (Cl. 137—13.)



1. In a meter box, a cover adapted to be moved axially into closing position, bolts carried by said cover, guiding means for said bolts, and spring means operating on each bolt in the rear of said guiding means to retain the cover in position.

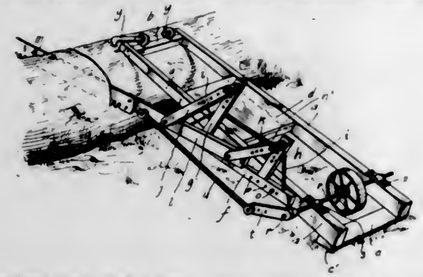
1,505,027. BUMPER. HERBERT S. JANDUS, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 23, 1922. Serial No. 602,727. 10 Claims. (Cl. 293—55.)



2. A clamping device for securing together an upper and a lower bar and an intermediate bar, said device comprising an upper and a lower member adapted respectively to engage the upper edge of the uppermost bar and the lower edge of the lowermost bar, a pair of intermediate members each having oppositely facing seats adapted to receive respectively an edge of the intermediate bar and the adjacent edge of another bar, and means for adjusting the first two members toward each other.

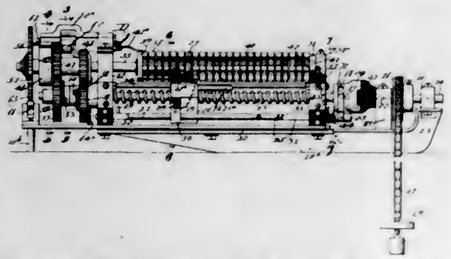
1,505,028. BANDING-MACHINE ATTACHMENT. EMIL C. KARLSON, Lynn, Mass. Filed Nov. 11, 1922. Serial No. 600,341. 3 Claims. (Cl. 164—49.)

1. An atachment for banding machines consisting of a vertically slidably mounted knife, cams for raising the knife, spring means urging the knife downwardly, gear operated means for driving said cams, a shaft journaled above the movable knife and carrying kicker rollers, a ratchet on said shaft, and a pawl associated with one end of the movable knife and co-operating with the ratchet for partially rotating the shaft and rollers at each upward movement of the knife.



1,505,029. CONSTRUCTION OF HINGES. HENRY R. KELLERMAN, Paddington, near Sydney, New South Wales, Australia, assignor to Henry Petrie Fletcher, Sydney, New South Wales, Australia. Filed Aug. 31, 1921. Serial No. 497,132. 2 Claims. (Cl. 16—135.)

1. A hinge comprising a bracket element having a base and a plate angular to said base, said plate having a slot, bearing members fitted in said slot in spaced arrangement, screws detachably fastening said bearing members to said slotted plate, a hinge pin carried by said bearing members, a hinge piece of angular formation pivotally mounted at one end on said pin, and an attachment plate at the opposite end of said hinge piece.

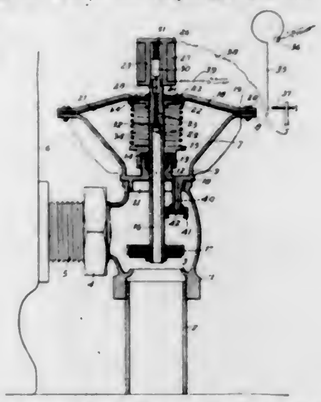


1,505,030. DRAG SAW. GEORGE F. KENTCH, Clatskanie, Oreg. Filed July 13, 1922. Serial No. 574,677. 4 Claims. (Cl. 143—68.)

1. In a saw of the character described, a main frame, an auxiliary frame pivoted at one end on said main frame for movement in a vertical plane, the auxiliary frame comprising a longitudinal member provided with upright members, a pivot projecting laterally from the upper end of each of said upright members, an arm pendent from each of said pivots, said arms being of unequal length, a saw-carrying arm pivotally suspended from said

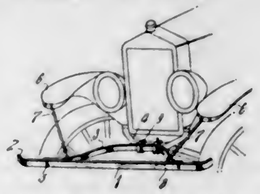
pendent arms, and a prime mover mounted on said main frame and driving connection therefrom to the saw carrying arm.

1,505,031. LONG-DISTANCE AUTOMATIC SIGNALING MECHANISM. LECROY E. KING, Douglas, Ariz. Filed Mar. 15, 1920. Serial No. 365,936. 28 Claims. (Cl. 177—351.)



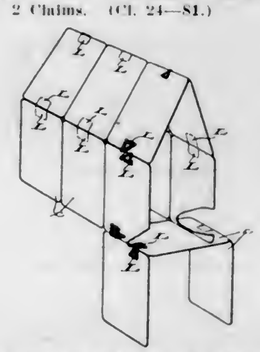
13. A signaling mechanism of the character described comprising a longitudinally extending shaft, a series of contact disks mounted thereon and rotatable therewith, the contact disks being in electrical engagement with each other, a screw-threaded shaft extending parallel to the first named shaft, a slide engaged and shifted thereby, a contact finger on said slide and engageable with the contact disks, each of said contact disks having on its periphery spaced portions adapted to make and break a circuit through the contact finger as the contact disks are rotated, each of said contact disks having spaced portions arranged to give a different signal from the spaced portions of any other contact disk, and the series of disks, means for rotating the screw-threaded shaft in opposite directions, a spring operatively connected to one end of the first named shaft, a winding device operatively connected to the other end of said spring, means operatively connecting the screw-threaded shaft and the winding device and acting to wind up said spring when the screw-threaded shaft is rotated in either direction, stop means normally preventing the unwinding of the spring, and means actuated by the rotation of the screw-threaded shaft in either direction to intermittently release said last named stop means to permit the unwinding of the spring and the rotation of the first named shaft, and means for returning the stop means to its active position after the release of said spring.

1,505,032. AUTOMATICALLY-CONTROLLED VALVE. EDWARD WILLIAM KLEIN, Atlanta, Ga. Filed Mar. 22, 1921. Serial No. 454,441. 2 Claims. (Cl. 137—139.)



1. In a device of the character described, a casing having an inlet opening and an outlet opening, valve means controlling the passage between said openings, a vacuum chamber having a wall formed of a flexible diaphragm, said diaphragm connected with a hollow valve stem secured to the valve first mentioned, said hollow valve stem constituting a passage between the inlet side

of said valve and the vacuum chamber, spring means operating to extend the diaphragm and lift the first

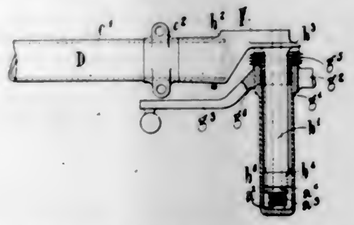


mentioned valve, valve means between the vacuum chamber and the passage between the inlet and outlet openings to permit the drawing off of condensations from said chamber, and valve means in said valve stem passage controlling the same.

1,505,033. AUTOMOBILE BUMPER. ALBERT KLUG, Columbus, Nebr. Filed Jan. 30, 1924. Serial No. 689,538. 4 Claims. (Cl. 293—55.)

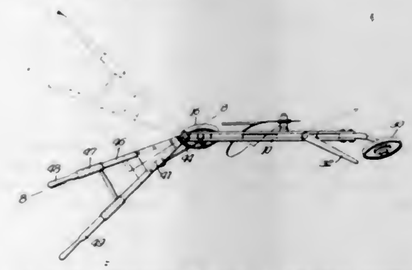
1. An automobile bumper comprising a transverse bar with deflected end portions, a bowed spring bar connected at its ends with the transverse bar and curved away from the same and adapted to be connected adjacent to its center to an opposed end portion of an automobile chassis or frame, and connections on the bowed spring bar at intermediate points in the length thereof and adapted for connection to fenders.

1,505,034. TOY CONSTRUCTOR. ISRAEL KUSSNER, New York, N. Y. Filed Oct. 7, 1922. Serial No. 593,095. 2 Claims. (Cl. 24—81.)



1. A card coupling device of the character described, consisting of a single piece of wire having nested jaws at its respective ends and having its intermediate portion located diagonally relative to the jaws and bent whereby the nested jaws are at an angle to each other.

1,505,035. PISTON RING. SELIPH JOSHUA LAMORA, St. Johnsbury, Vt. Filed Jan. 15, 1924. Serial No. 686,381. 1 Claim. (Cl. 74—109.)

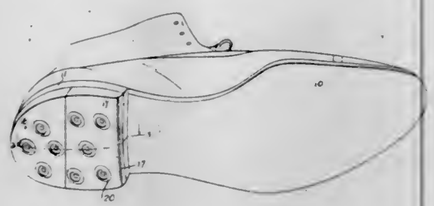


A piston ring, comprising a curved strip, said strip having a recess in one end at a point spaced from its edges, a tongue on the other end of the strip fitting said recess and the extremities of the ends of the strip having V-shaped engaging portions.

1,505,036. VEHICLE SPRING. FREDERICK WILLIAM LANCHESTER, London, England. Filed Oct. 23, 1918. Serial No. 259,152. 14 Claims. (Cl. 267—64.)

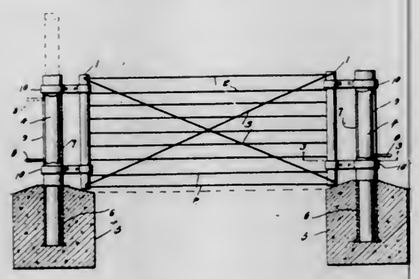
1. An elastic road wheel suspension mechanism including a closed reservoir of relatively large capacity filled with liquid, a ram of relatively smaller dimensions as compared with the reservoir in open communication with said reservoir and on which ram said vehicle rests, said liquid acting as the elastic medium in said mechanism.

1,505,037. PLOW. CHARLES W. LANDERS, Pensacola, Fla. Filed Apr. 7, 1922. Serial No. 550,487. 4 Claims. (Cl. 97—137.)



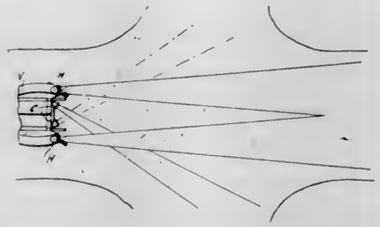
1. A plow comprising a beam, a standard secured to and depending from the beam, a plow share carried by said standard and including a land side and a mold board, interchangeable handles connected with the rear portion of the beam and adapted to be extended from either side thereof, draft means detachably connected with the forward portion of the beam and designed to be disposed in an inclined direction from either side thereof in correspondence with the arrangement of the handles, and a pair of steering wheels supported upon adjustable standards connected with the beam.

1,505,038. RUBBER HEEL. CHARLES WILLIAM LAVERS, Halifax, Nova Scotia, Canada. Filed June 14, 1921. Serial No. 477,526. 2 Claims. (Cl. 36—35.)



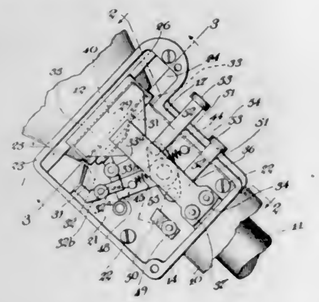
1. In a rubber heel, a positioning plate adapted for attachment to the lift of a permanent heel and provided with openings therein, and a body portion having an

inner concave surface formed with teats for engaging the openings in said plate to properly position said body portion with respect to said plate and lift the major



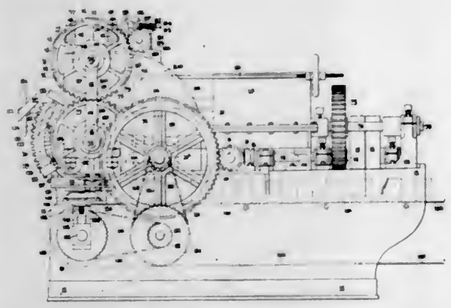
portion of the area of said concave surface being spaced from the adjacent face of said plate to provide an air cushion.

1,505,039. FARM GATE. OSCAR T. LAY, Grassy Butte, N. Dak., assignor of one-third to Henry G. Schwartz, Killdeer, N. Dak. Filed May 4, 1923. Serial No. 636,622. 1 Claim. (Cl. 39—87.)



A gate, a tube at each end of the gate and having a longitudinal slot in a side thereof, a post movable in each of the tubes, a handle projecting laterally from each of the posts and passing through the longitudinal slot of a tube, a base for the lower end of each post, and a tube let into the base and adapted to receive the lower end of the post.

1,505,040. ROAD-ILLUMINATION CONTROL FOR VEHICLES. WILBUR A. LAYCOCK, JOHN C. FARRAR, and HARRY H. WOLBERT, Delta, Colo., assignors to Motor Curve Light Company, Delta, Colo., a Corporation of Colorado. Filed Jan. 6, 1923. Serial No. 611,055. 13 Claims. (Cl. 240—7.)



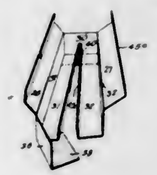
1. In combination with a vehicle embodying forwardly directed headlights and a pair of curve lights directing light toward opposite sides of the road, means for illuminating the curve light directed toward either side of the road upon a turning movement of the vehicle toward that side of the road, and single means for simultaneously illuminating both of said curve lights.

1,505,041. CIRCUIT MAKER AND BREAKER. WILBUR A. LAYCOCK, JOHN C. FARRAR, and HARRY H. WOLBERT, Delta, Colo., assignors to Motor Curve Light Company, Delta, Colo., a Corporation of Colorado. Filed Mar. 1, 1923. Serial No. 622,117. 6 Claims. (Cl. 200—59.)

1. In an electric switch of the class described, a casing constructed for attachment to the steering post mast of a motor vehicle and having a chamber, a plate of insulating material fixed within the chamber and having a lateral outwardly projecting flange upon its upper end, a rib projecting inwardly from the top wall of the casing parallel with and spaced above said flange to provide a guideway between the rib and the flange, a movable switch element mounted for rectilinear reciprocating movement in said guideway, circuit controlling means associated with said movable switch element, and means to operatively connect said movable switch element to the steering post, said movable switch element having a head engaging the outer faces of the rib and the flange, and said circuit controlling means including a resilient yieldable contact member having one end fixed in the casing and having its other end bearing upon the head of the movable switch element to retain the latter in its guideway.

1,505,042. PRESS FOR THE MANUFACTURE OF HOLLOW EARTHENWARE ARTICLES. EDMUND WILLIAM LEIGH, Shanklin, Isle of Wight, England. Filed Nov. 10, 1922. Serial No. 600,165. 28 Claims. (Cl. 25—78.)

1. A rotary press for the simultaneous stage by stage manufacture of hollow earthenware articles, comprising a rotary carrier-head, a series of moulding cylinders in said head, a hopper for successively filling each of said moulding cylinders with plastic material, means for subsequently compressing said plastic material within the moulding cylinder to partly mould the article so as to form a base connected to a thick annular wall both of plastic material, means whereby said thick annular wall of plastic material is after that subjected to extrusion to form the relatively thin annular wall of the hollow earthenware article, a cradle for supporting the article while it is being extruded and a travelling conveyor to successively receive and remove the completed articles.



1,505,043. CELLULOSE ETHER AND PROCESS OF MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed June 10, 1922. Serial No. 567,430. 19 Claims. (Cl. 260—152.)

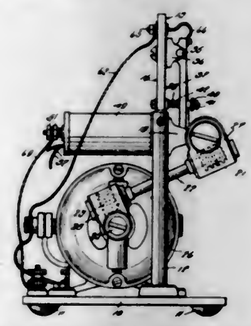
19. An ethyl ether of a cellulosic body, which is insoluble in water at 16° C., and above, but which swell perceptibly in water at between 5 and 10° C., which product can be made by treatment of an ethyl derivative of a cellulosic body soluble in water at 16° C., either alone or in the form of reaction mixtures which contain such an ethyl cellulose, with caustic alkali and an ethylating reagent in the presence of a quantity of caustic alkali which amounts to not less than one-tenth and not more than one-fourth of the quantity of the water contained in the reaction mixture.

1,505,044. INSOLUBLE CELLULOSE ETHER COMPOUND AND PROCESS OF MAKING THE SAME. LEON LILIENFELD, Vienna, Austria. Filed June 10, 1922. Serial No. 567,429. 6 Claims. (Cl. 260—152.)

3. A cellulose derivative not readily soluble in water which comprises the reaction product of a cellulose ether with a tannin.

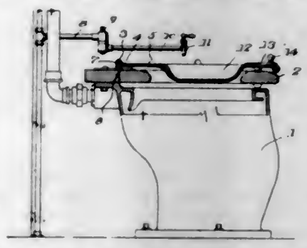
1,505,045. RECEPTACLE. CHARLES LOHRMAN, Wantagh, N. Y. Filed Apr. 19, 1923. Serial No. 633,274. 1 Claim. (Cl. 229—27.)

A receptacle, comprising a body made from a blank having sides and ends and provided with a flap extending from each side at top and bottom and of a width equal to one half the width of the receptacle, each flap having a right angular terminal portion provided with a notch in its longitudinal edge and extending into the receptacle, the terminal portions of the top flaps being in alinement with the terminal portions of the bottom flaps and the terminal portions of the top and bottom flaps being in engagement with each other to form a two-ply wall dividing the receptacle into two compartments.



1,505,046. SIGN HOLDER. CHARLES H. LUSH, Freeport, N. Y., assignor to Beacon Mfg. & Sales Co., Inc., Freeport, N. Y., a Corporation of New York. Filed Oct. 3, 1923. Serial No. 666,382. 3 Claims. (Cl. 40—125.)

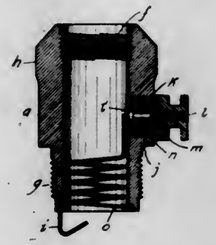
1. A sign holder, comprising a pair of standards having horizontal base portions, a base plate rigidly secured to each base portion, each of said plates having a horizontal section and a vertical section, an outer frame element of substantially an L-shape in cross section formed with pressed up lugs at the bottom, means for removably securing said frame to said base plates, said securing means connecting the frame to the base plates on their horizontal portions and vertical portions, an inner frame element disposed within the



outer element, and removable fastening elements at the top of the frame co-acting with said lugs for locking said inner frame element to the other frame element.

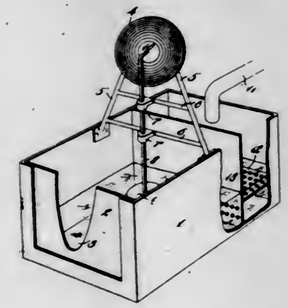
1,505,047. MAKE-AND-BREAK ELECTRICAL SIGN CONTROL. PERRY V. MCCASH, Seattle, Wash. Filed May 15, 1922. Serial No. 561,189. 3 Claims. (Cl. 200—27.)

1. In a sign flasher, a panel having a plurality of tubular electro-magnets mounted thereon, each said magnet being wound with a wire helix, a spring-pressed plunger reciprocatively mounted in each said magnet, a bar pivoted at one end and engageable with an end of each said plunger, and a plurality of cam-wheels mounted to rotate in unison and arranged to maintain said bars in contact with said plungers and at one stage of their rotation to abruptly release the same.



1,505,048. ATTACHMENT FOR TOILETS. JOHN M. MCLEOD, San Pedro, Calif. Filed Mar. 31, 1924. Serial No. 703,259. 2 Claims. (Cl. 4—3).

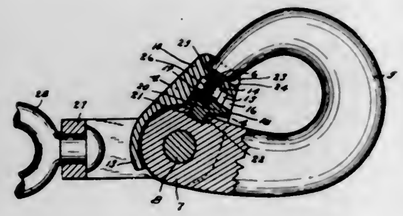
1. In combination with a toilet bowl or hopper and the seat therefor, of a basin comprising a ring base hingedly secured to the rear of the seat and designed to



normally rest thereon, a basin having its sides pivoted to the ring base beyond the center thereof, and said basin having an extension forming a handle which normally rests on the outer portion of the base.

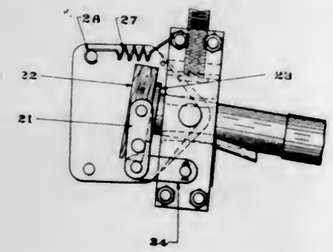
1,505,049. SPARK PLUG. STEWART J. MASON, Portland, Oreg., assignor of one-half to Eugene L. Wiederman, Portland, Oreg. Filed May 31, 1921. Serial No. 473,731. 6 Claims. (Cl. 123—169.)

1. In a spark-plug of the character described, a shell, a core removably secured in one end of the shell, such core provided with one of the electrodes, the shell being provided with a hole located approximately midway between its ends, a bushing inserted in said hole, an insulating plug inserted in said bushing, a binding post secured in said insulating plug, and extending therethru into the interior of the shell, a heating coil having one end fastened to said binding post, and its opposite end grounded in the open end of the shell, said heat coil encircling the electrode carried by the core but being spaced from said core and its said electrode.



1,505,050. WEIR METER. CHARLES C. LAURITSEN, Cleveland, Ohio, assignor to The Ohio Body and Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 19, 1920. Serial No. 359,933. 8 Claims. (Cl. 73—167.)

1. A liquid meter provided with a weir notch having a minimum and maximum liquid level, the shape of said notch being such that the quantity of liquid flowing therethrough will at all levels be directly proportional to the square of the height of said liquid above the minimum level.

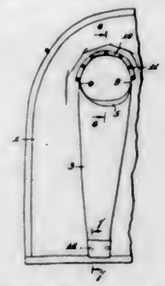


1,505,051. LOCK FOR HOISTING HOOKS. FRED LINDGREN, Renton, Wash.; Olof Lindgren executor of said Fred Lindgren, deceased. Filed Aug. 22, 1921. Serial No. 494,129. 1 Claim. (Cl. 24—241.)

The combination with a clevis having a hook pivotally connected thereto, said hook having a shank provided on its inner edge with a bolt receiving recess and having a point that terminates near said recess, said recess being in alinement with the said hoook pivot and point, of a latch member pivoted on said shank, and having a slotted outer end that is adapted to fit over the hook point when the said latch member is moved to close the gap betwen the shank and the point of said hook, said latch member having a longitudinally extending cylindrical recess formed therein and having a groove in one edge thereof that is connected with said recess by a slot of less width than said groove, said cylindrical recess being in alinement with said hook pivot, shank carried recess, and hook point when the latch is in its

closed position, a plunger reciprocable in said recess in said latch member, a stud on said plunger arranged to enter the shank carried recess, a spring for urging said plunger toward the shank of said hook, a plug seated in said latch slot for retaining said spring in the cylindrical recess, said plug being positioned below said hook point when the latch is in its closed position, and a thumb piece fitted in said plunger and disposed within the groove of said locking member adjacent the inner side of the latch member.

1,505,052. MANDREL SUPPORT. GEORGE L. MATHER, Milwaukee, Wis., assignor to The Federal Rubber Company, Cudahy, Wis., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,962. 6 Claims. (Cl. 18—2.)

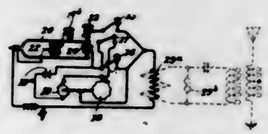


6. In combination, a pivoted mandrel support, means for closing the end of a mandrel supported thereby said closing means comprising a pivoted cushion member operatively connected to said pivoted support whereby tilting of said pivoted support causes said cushion to engage the end of the mandrel.

1,505,053. GARMENT. DAVID MILLHAUSER, Brooklyn, N. Y. Filed Feb. 23, 1924. Serial No. 694,679. 3 Claims. (Cl. 2—90.)

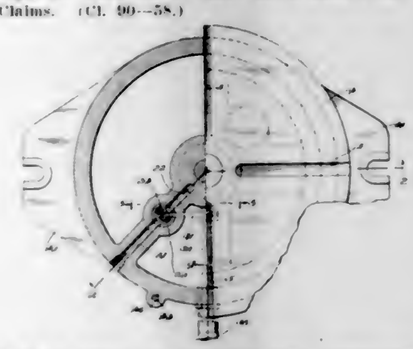
3. A garment, provided with a body and a pair of sleeves, said garment presenting a sweater structure, each of said sleeves having means projecting from the lower part of the upper ends thereof permanently secured to the body for holding the sleeves permanently to the body,

and means on the upper half of the upper ends thereof for removably connecting said upper ends to said body whereby said last mentioned means may be disconnected



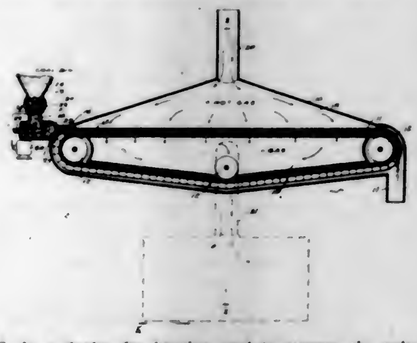
and the sleeves forced into the body for exposing the armholes whereby the resulting structure will present a vest.

1,505,054. GREASE GUN AND LIKE APPARATUS. CHARLES ERIC MILNER, Birmingham, England, assignor to Benton & Stone Limited, Birmingham, England. Filed Nov. 26, 1923. Serial No. 677,111. 2 Claims. (Cl. 221—78.)



2. A filling or charging device for grease guns and like lubricating apparatus, comprising a plurality of radially disposed blades, a handle at one end of the blades, a slotted cover through which the blades can slide, and means on the inner end of the blades for preventing detachment from the cover, substantially as described.

1,505,055. SECRET SYSTEM FOR RADIOTELEGRAPHY. AGUSTIN R. MOLINS, Habana, Cuba. Filed May 19, 1922. Serial No. 562,054. 6 Claims. (Cl. 250—9.)

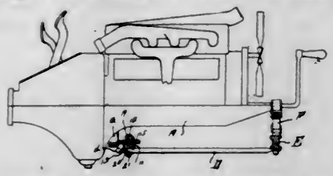


1. A secret radio communication system, comprising in combination a radio transmitting apparatus, a control circuit, a tuning fork located in said control circuit, a plurality of contacts carried on one side of said fork and a single contact carried on the other side of said fork, an electromagnet electrically connected to a source of supply with one of said contacts whereby said tuning fork is continuously vibrated, a keying circuit connected in series with said control circuit and one of said contacts on one side of said fork, an automatic transmitting device connected in series with said control circuit and the other contact on the opposite side of said fork whereby said transmitter is caused to radiate a series of signals during spaced intervals in said keying circuit, and receiving means at the radio receiving station responsive to signals transmitted by said keying circuit but irresponsive to signals transmitted by said automatic transmitting device.

1,505,056. INDEX BASE. EUGENE F. MURRAY, Chicago, Ill. Filed Jan. 7, 1922. Serial No. 527,754. 18 Claims. (Cl. 90—58.)

1. In an index base, a movable table, compressed air locking means for locking the table against movement, and a combined index pin and valve for controlling passage of compressed air to said locking means.

1,505,057. COAL-DISTILLING APPARATUS. WILLIAM FRANK NAGEL, Ensley, Ala. Filed Apr. 19, 1922. Serial No. 555,555. 3 Claims. (Cl. 202—4.)

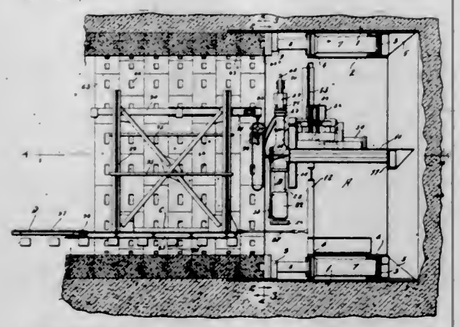


3. In a device for heating coal to remove the volatile matter therefrom, a container having its top and bottom inclined downwardly and upwardly respectively from its center to the ends, said container having a gas inlet in its top at the center of length, and a coil outlet at one end, an endless conveyor formed of spaced bars, and mounted in the container, means for feeding coal onto the conveyor, and an exhaust pipe leading from below the upper run of the conveyor out through one side of the container.

1,505,058. RADIUS-ROD ADJUSTING ATTACHMENT. ROY L. NAUGLE, Blackstone, Va. Filed June 16, 1923. Serial No. 645,787. 5 Claims. (Cl. 267—66.)

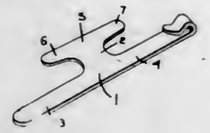
1. An attachment for the radius rods of motor vehicles comprising a U-shaped clamping member, a transversely extending clamping member disposed below the U-shaped clamping member, a screw passing through the U shaped clamping member and having at one end a

spherical head, and an eye-bolt having a screw-threaded eye through which the screw passes, the shank of the



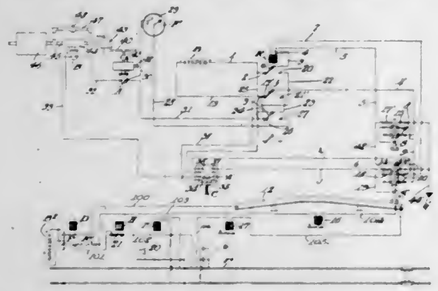
eye-bolt passing through the transversely extending clamping member, and a nut on the eye-bolt operatively engaging the last named calmping member.

1,505,059. LAWN OR HEDGE CUTTER. EDWARD NIST, Oak Park, Ill. Filed Feb. 24, 1923. Serial No. 620,987. 2 Claims. (Cl. 30—1.)



1. A lawn or hedge cutter comprising a pair of cutting blades, a spring for normally urging said blades apart, an up-right connected to one of said blades, a supporting handle pivotally connected to said up-right, an operating rod rotatably carried by said up-right, said up-right having its lower end bent transversely, a crank rod journaled in said transversely bent end, a universal joint connecting said crank rod and operating rod, and a pitman connecting the crank rod to the cutting blade other than the one to which said up-right is connected.

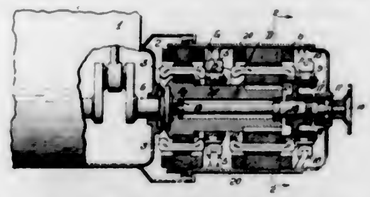
1,505,060. APPARATUS FOR EXCAVATING TUNNELS. LE ROY A. QUAYLE, Cleveland, Ohio, assignor of one-half to George B. Hong, Cleveland, Ohio. Filed Feb. 26, 1920. Serial No. 361,578. 12 Claims. (Cl. 61—84.)



1. In tunnel constructing apparatus, the combination of a shield, propelling means incorporated in the shield, an erector carried by the shield, a drag platform coupled to the shield, and a drag track coupled to the platform.

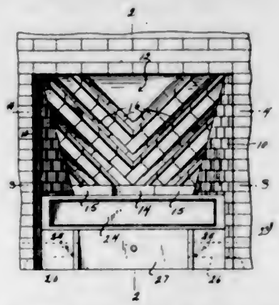
1,505,061. MARCEL WAVER. GEORGE ROSNOSKY, Allston, Mass., now by judicial change of name George Ross. Filed Nov. 10, 1922. Serial No. 600,055. 2 Claims. (Cl. 132—39.)

1. A hair waving device comprising a flat body presenting a centrally disposed T-shaped head and stem and arms extending in opposite directions from said stem about which arms and stem a strand of hair may be repeatedly wound in the general form of a figure 8 and in which the loops will be superimposed and crossed alternately upon opposite sides of said body adjacent said stem and between said arms and head and means for retaining the free end of said strand of hair.



1,505,062. TRAIN-CONTROL SYSTEM. ARCHIBALD G. SHAVER, Chicago, Ill., assignor, by mesne assignments, to Regan Safety Devices Company, Incorporated, a Corporation of New York. Filed Apr. 25, 1919. Serial No. 292,548. 24 Claims. (Cl. 246—49.)

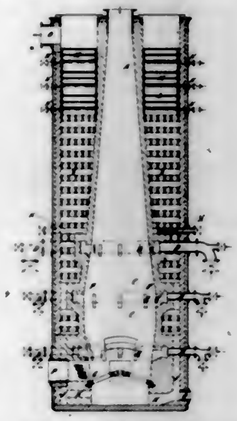
1. In a train control apparatus, in combination, road side mechanism including an energy transmitting device, an electrical source of energy therefor, and means responsive to "safe", "caution" and "danger" track conditions for reversing the direction of flow of and for discontinuing the current fed from said source of energy to said energy transmitting device; and vehicle carried mechanism comprising a source of energy, a translating device normally energized by said vehicle source of energy and influenced by a reversal of direction and a discontinuance of current fed thereto, means for connecting said vehicle source of energy to said translating device and cooperating with the roadside transmitting device for effecting the substitution of the roadside source of energy for the vehicle source of energy for influencing and operating the said device in the movement of the vehicle, a vehicle carried device for automatically controlling the movement of the vehicle and instrumentalities for operating the same to produce proceed, speed restrictive and stop effects, said instrumentalities being under the control of said translating device and the said effects being produced under normal, reverse and no flow of current fed to the translating device.



1,505,063. ELECTROMAGNETIC CHANGE-SPEED SYSTEM. HARRY L. TANNER, Brooklyn, N. Y. Filed Dec. 18, 1917. Serial No. 207,799. 14 Claims. (Cl. 290—10.)

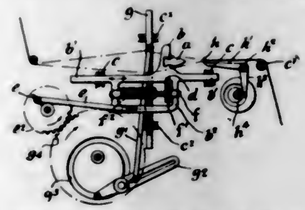
1. In a transmission system for automotive vehicles employing an internal combustion engine as a prime mover, the combination with a driving shaft driven from said prime mover and a driven shaft, of a dynamo-electric machine having a rotatable part coupled to said driven shaft, a rotatable part coupled to the driving shaft and a stationary part surrounding both of said

rotatable parts, said rotatable parts having magnetic non-slip, non mechanical means for causing one of said rotatable parts to drive the other of said rotatable parts at a one-to-one ratio.



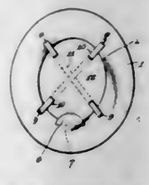
1,505,064. FIREPLACE BACK. FRANK S. THORNE, Portland, Oreg. Filed July 30, 1921. Serial No. 488,561. 2 Claims. (Cl. 126—130.)

1. In a fireplace, a grate, a forwardly and upwardly inclined fire back provided with a plurality of parallel grooves diverging upwardly from the middle line of the fire back and having their lower ends terminating above the grate and forward projections formed in the rear wall of the fireplace above the grate and below the lower ends of said grooves, the projections being arranged in spaced relation to define a passage leading to the lower ends of all of said grooves, the said projections serving as stops for preventing the engagement of the logs on the grate against the fire back and the passage and said passage serving to direct the flames into the lower ends of said grooves.



1,505,065. PROCESS FOR THE PRODUCTION OF HYDROGEN OR GASES RICH IN HYDROGEN. JOHN HENRY WEST, Bayswater, and ARTHUR JAQUES, Waterloo, England. Filed Oct. 5, 1922. Serial No. 592,496. 9 Claims. (Cl. 48—198.)

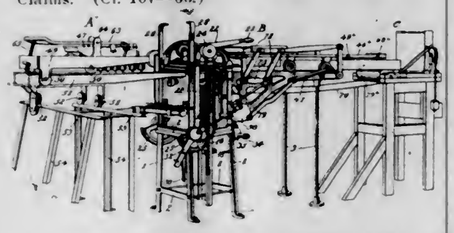
1. A process for the production of gases rich in hydrogen which consists in completely gasifying coal in an apparatus comprising an upper retort chamber, and a lower producer chamber arranged in open communication with the retort chamber so as to allow the carbonized coal to fall directly from the retort to the producer, the series of steps of completely gasifying the coal consisting in carbonizing the coal by subjecting it to temperatures which increase gradually as the coal passes from the inlet of the retort chamber to the top of the producer chamber, cracking the vapors and gases produced during the carbonization of the coal in the retort chamber by passing them in a downward direction through the zone of highest temperature located in the neighborhood of that part of the fuel bed situated at the bottom of the retort portion and the top of the producer portion of the apparatus, subjecting the carbonized fuel in the producer chamber to simultaneous treatment with steam and air, and regulating the quantities of steam and air employed and the points at which the said steam and air are admitted into the producer chamber so that the zone of highest temperature is located at the top of



the producer chamber and the temperature decreases gradually from the aforesaid zone through the fuel bed in the producer down to a temperature of comparatively low value at the bottom of the producer chamber where the gases are drawn off.

1,505,066. LOOM. CARL ECCART, Arbon, Switzerland, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Oct. 7, 1922. Serial No. 592,949. 2 Claims. (Cl. 139—138.)

1. In a loom, the combination with a lay of a shuttle actuating mechanism comprising a rack gear (*d*) mounted to reciprocate on the lay, an elongated spur gear (*f*²) supported on the lay and in operative relation with said rack gear, a rack gear (*g*) in operative engagement with said elongated gear and supported for reciprocation in fixed bearings, and means to reciprocate said last named rack gear.

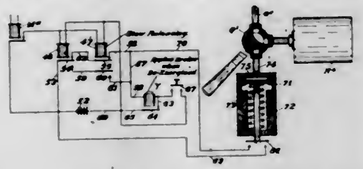


1,505,067. SANITARY CLOSET-SEAT COVER. ALBERT J. LAHMER, Toronto, Ontario, Canada, assignor of one-half to George William Knowling, Detroit, Mich. Filed Nov. 11, 1922. Serial No. 600,252. 2 Claims. (Cl. 4—243.)

1. As a new article of manufacture, a closet seat cover made of a single piece of material cut to provide concentric slits affording a plurality of extensible straps

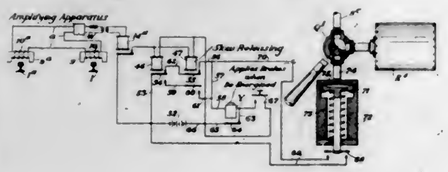
and a drag member which may be depressed and supported by said straps at such points as to sustain a load on said drag member, said straps by virtue of said slits being tearable intermediate the ends thereof to part when the load becomes too great.

1,505,068. ICE-CREAM-CONE MACHINE. LEWIS H. LANIER, Newport, Ky., assignor to The French Brothers-Bauer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 10, 1919. Serial No. 329,702. 11 Claims. (Cl. 107—66.)



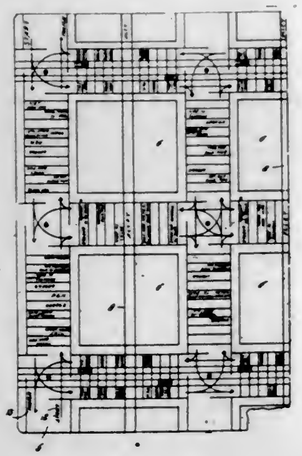
1. The combination with a series of molds and a corresponding series of cores, means for separating the cores from the molds, with the cores provided with a cylindrical portion projecting with the cores into the mold cavities when closed to cause the baked material to adhere to the cores when withdrawn.

10. The combination with a series of molds and a corresponding series of cores, means for separating the cores from the molds, trimming mechanism to trim the pastry forms, a plate forming part of the trimming mechanism provided with a series of openings corresponding to the number of cores to catch and hold the pastry forms, a batter receptacle shiftable into the pathway of the cores to deposit the batter in the molds when separated, and adapted to contact with the carrier plate to shift same to the cooperating part of the trimming mechanism, whereby the baked pastry forms may be removed simultaneously with the deposit of fresh batter in the molds.



11. In combination with a plurality of baking machines with a plurality of sets of pastry molds, of guide rails mounted in front of and transversely of said machines, a carriage to move on said rails, and a batter receptacle mounted on and adapted to move transversely of said carriage into a position over the top of the molds to deliver the batter downwardly to the molds, whereby a single batter receptacle may be used in succession to supply batter to a plurality of sets of molds of a plurality of baking machines.

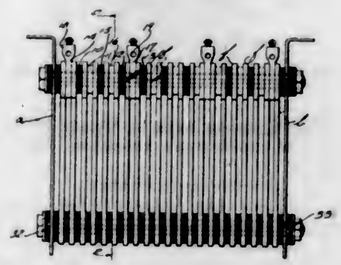
1,505,069. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1920, Serial No. 364,458. Renewed Aug. 9, 1922. Serial No. 580,816. 28 Claims. (Cl. 246—63.)



11. Railway traffic controlling apparatus comprising means in the trackway for supplying energy to a vehicle, apparatus on the vehicle responsive to the energy supplied by said trackway means, retarding mechanism on the vehicle controlled by said apparatus and effective for a fixed interval of time after the cessation of energy from said trackway means, and manually operable means on the vehicle for preventing said mechanism from retarding the vehicle during said interval of time.

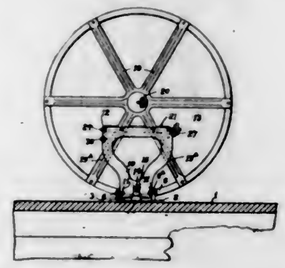
1,505,070. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Mar. 9, 1920, Serial No. 364,458. Divided and this application filed Aug. 17, 1922. Serial No. 582,504. 19 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising a magnet on a vehicle, apparatus located in the trackway for causing said magnet to be energized while traffic conditions in advance are safe but not when traffic conditions in advance are dangerous, a quick releasing relay and a slow releasing relay controlled by said magnet and each arranged to be de-energized when the magnet becomes de-energized, brake application mechanism controlled by said relays and set into operation during the interval between the opening of the quick releasing relay and the opening of the slow releasing relay, and manually operable means on the vehicle effective to prevent said brake application mechanism being set into operation during said interval.



1,505,071. GAME APPARATUS. HERBERT FRASER, Minneapolis, Minn. Filed Dec. 12, 1923. Serial No. 680,146. 3 Claims. (Cl. 46—63.)

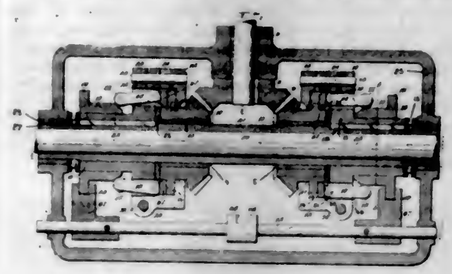
1. In a game, a game board whose surface contains the representation of the streets of a town or city which divides the surface of the game board into a plurality of blocks, certain of the streets terminating at the corners of the board, start and finish indications at each corner of the board, the streets being divided into sections, indications in certain of the street sections for denoting location of penitentiaries, garages and the like, further indications in other of said street sections denoting penalties in the advance of a game piece from its starting to its finishing point, game pieces movable over the face of the board to follow the street indications, and curved



and straight arrow lines at the street intersections for denoting a plurality of courses which may be followed by each game piece in moving from start to finish points thereof.

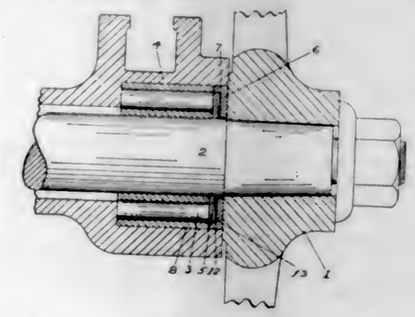
1,505,072. ELECTRICAL RESISTANCE. HAROLD M. WAMSLEY, Norwood, Ohio, assignor to William H. Keller, Norton, Va. Filed Nov. 13, 1922. Serial No. 600,582. 11 Claims. (Cl. 219—69.)

1. An electrical resistance grid having interior legs of greater cross section than legs located exteriorly thereof.



1,505,073. DISK TALKING MACHINE. HORACE LEOPOLD TUCKER BUCKLE, Ylewsley, England. Filed Feb. 23, 1924. Serial No. 694,718. 3 Claims. (Cl. 274—16.)

1. In a talking machine, the combination of a turntable, a diaphragm normally arranged in a plane substantially parallel thereto and provided on its under side with a rigid spider frame, and means supporting said diaphragm and including a rigid frame adapted to extend over the turn-table and pivoted to swing toward and away from the same, said last mentioned frame extending under the diaphragm and being pivotally connected beneath the same to the spider frame thereof, whereby to house the supporting frame between the diaphragm and the turn-table.



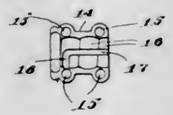
1,505,074. DISK CLUTCH REVERSER. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 28, 1921. Serial No. 473,323. 10 Claims. (Cl. 74—59.)

1. A motion-transmitter combining a clutch unit presenting an open end having an internal annular recess; a gear having an annular flange at the end of its hub located in said annular recess; an annular shoe adjacent the outer face of said flange; a pressure element for clamping said gear flange between said shoe and a side-face of said annular recess; a tubular member on which said gear is journaled; a frame providing journals for

the ends of said tubular member; and an axially-shiftable shaft translatably splined within the bore of said tubular member.

1,505,075. JOURNAL BEARING. GLENN G. RHINEVAULT, Saginaw, Mich., assignor of one-half to Wm. B. Mershon & Co., Saginaw, Mich., a Corporation of Michigan. Filed Feb. 21, 1924. Serial No. 694,253. 3 Claims. (Cl. 64—22.)

1. In combination, a journal, a chambered journal box having an apertured closure through which the journal projects, an annular disk fixed to the journal within said box, a face of said disk provided with outwardly extending grooves, said grooved face revolvable in proximity to the inner face of said closure.

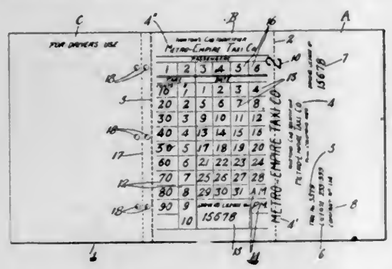


1,505,076. SYSTEM OF ELECTRICAL INSTALLATION. ARCHIBALD T. SAMPSON, Lynn, Mass., assignor to Sampson Axcess System, Inc., Lynn, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1923. Serial No. 631,571. 4 Claims. (Cl. 247—3.)

1. The improved method of electrical installation which consists in providing metallic conduits to receive and carry electric wires, installing said conduits permanently in position in a building, weakening a portion of said conduits at a plurality of desired points along the length thereof without injuring or disturbing the

wires within the conduits, whereby the conduits are left intact, the weakened portions at such points constituting, when removed, a portion of an outlet receptacle therefor, then removing the weakened portion at any desired point without injuring or disturbing the wires, then completing the construction of the outlet receptacle at such desired point while the conduit is permanently in position and to lead power from the through wires independently of cutting the same, and then adding means to clamp the outlet receptacle on the conduit at the point from which the weakened portion has been removed.

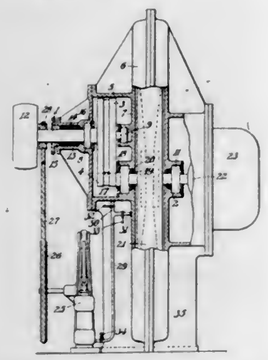
1,505,077. THREADLESS COUPLING FOR PIPES AND THE LIKE. ARCHIBALD T. SAMPSON, Lynn, Mass., assignor to Sampson Axcess System, Inc., Lynn, Mass., a Corporation of Massachusetts. Original application filed Dec. 15, 1919, Serial No. 344,927. Divided and this application filed Apr. 21, 1923. Serial No. 633,737. 3 Claims. (Cl. 247—25.)



1. An improved coupling for flexible armored cable, comprising non-threaded clamping means, helical grooves therein for cooperating with the armor, and a longitudinal groove in one of said non-threaded clamping means for retaining a strengthening means for the cable in position.

1,505,078. SEPARATION OF ALKALI-METAL SALTS BY AQUEOUS SOLUTION OF AMMONIA. CLINTON E. DOLBEAR, San Francisco, Calif., assignor to Industrial Research Co., San Francisco, Calif. Filed Aug. 21, 1923. Serial No. 658,643. 2 Claims. (Cl. 23—22.)

1. The improvement in the separation of alkali-metal salts from each other, which comprises leaching the mixed salts with aqueous ammonia and separating the liquid from the undissolved portion of the salts.



1,505,079. TAXICAB IDENTIFIER. HARRY EDGAR MILLS, New York, N. Y. Filed Apr. 9, 1923. Serial No. 630,749. 2 Claims. (Cl. 283—7.)

1. A taxicab identifier comprising a sheet, said sheet divided into three portions by perforations to permit of separation of one portion from another, one of said separable portions having means to identify the driver, taxicab and company and the other two of said separable portions having identical means to identify the fare, number of passengers and the day of the month,

the said identical means being so located and arranged that when the portions are superposed they will be in registration.

1,505,080. MEANS FOR MAINTAINING VACUA OR PARTIAL VACUA. PAUL SHISHKOFF, Richmond, England, assignor to Margaret Ellen Deborah Smith, London, England. Filed Dec. 10, 1921. Serial No. 521,431. 5 Claims. (Cl. 74—6.)

1. In a power transmission system the combination of a high speed rotating element, a low speed rotating element, gearing connecting said elements, an air-tight casing enclosing said elements and gearing, means for coupling said low speed element to mechanism external to said casing, and means for extracting air from said casing.

Patents Nos. 1,505,081 to 1,505,934.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 325—No. 3. TUESDAY, AUGUST 19, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 1, 1924.*

Lone Star Blacking & Mfg. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Tom A. Tirado, jr., 703 West Alabama Street, Houston, Tex., for registration of a trade-mark and trade-mark registered May 31, 1910, No. 78,255, to Lone Star Blacking & Mfg. Co., 852 Commerce Street, Dallas, Tex., and a notice of such declaration sent by registered mail to said Lone Star Blacking & Mfg. Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Lone Star Blacking & Mfg. Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 2, 1924.*

Eagle Water Heater Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the American Heater Corporation, of 1100 North Sixth Street, St. Louis, Mo., for registration of a trade-mark and trade-mark registered August 7, 1906, No. 55,000, to the Eagle Water Heater Company, 126–130 Sixth Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Eagle Water Heater Company at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Eagle Water Heater Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

TRADE-MARKS CANCELED.

90,621. Adhesive cement. Edward F. Beach, St. Louis, Mo. Registered Mar. 11, 1913. Canceled July 21, 1924.

120,985. Certain named foods. Manteca Canning Co., Stockton and Manteca, Calif. Registered March 19, 1918. Canceled June 11, 1924.

140,295. A chemical compound for frosting for electric-light bulbs. William F. Rau, Troy, N. Y. Registered March 8, 1921. Canceled June 25, 1924.

141,994. Kosher scouring powder. Kirkman & Son, Brooklyn, N. Y. Registered May 3, 1921. Canceled June 25, 1924.

155,168. Hosiery. Paramount Knitting Company, Chicago, Ill. Registered May 16, 1922. Canceled May 27, 1924.

161,020. Certain named household furniture. Harry J. Kerlin, Altoona, Pa. Registered October 31, 1922. Canceled June 25, 1924.

165,926. Rain coats and waterproof garments. The Badger Raincoat Co., Port Washington, Wis. Registered March 20, 1923. Canceled June 11, 1924.

168,037. Dentifrice. Florence N. Lewis, doing business as Elizabeth Arden, New York, N. Y. Registered May 8, 1923. Canceled August 1, 1924.

183,717. Measuring containers and measures for liquids. Dover Stamping & Manufacturing Company, Cambridge, Mass. Registered May 6, 1924. Canceled June 25, 1924.

183,836. Egg beaters, scoops; cake, biscuit, and doughnut cutters; coal sieves, shovels, and spoons. Dover Stamping & Manufacturing Company, Cambridge, Mass. Registered May 6, 1924. Canceled June 25, 1924.

Condition of Applications Under Examination at Close of Business August 8, 1924.

(Total number of applications awaiting action, excluding Trade-Mark Division, 60,340; Trade-Mark Division, 1,832. Oldest new case, Dec. 6, 1923; oldest amended, Dec. 8, 1923. The dates given are 1924 except where * indicates 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

ROSEN AND FISCHEL *v.* TERRY.

No. 1,506. Decided January 2, 1923.

[285 Fed. Rep. 1016.]

1. INTERFERENCE—APPLICATION AND PATENT—BURDEN OF PROOF.

Where an interference was declared between an application of T. and a patent granted to R. and F. before T.'s application was filed, the burden of establishing his case beyond a reasonable doubt rested on T.

2. SAME—ORIGINALITY.

Decisions of the Patent Office tribunals that R. and F. had no part in the invention in issue affirmed.

Mr. Geo. L. Wilkinson and *Mr. Henry M. Huxley* for Rosen et al.

Mr. R. O. Hinkle for Terry.

SMYTH, *C. J.*:

[1] An interference was declared between the application of Samuel L. Terry and a patent granted to Rosen and Fischel. The patent issued before the application was filed, and therefore the burden of establishing his case beyond a reasonable doubt rests on Terry. The patent involved relates to a locking mechanism for an automobile, and is expressed in two counts. We give count 1:

The combination of a steering-shaft having its upper end provided with a reduced extension and a projecting threaded stud, a journal-collar mounted on said reduced extension and provided with a bolt-socket and with a circumferential groove, a nut securing said journal-collar to said shaft, a steering-wheel having a spider provided with a hub mounted on said journal-collar and protecting said nut, a pin in said hub engaging said circumferential groove, and a lock mounted in said spider and equipped with a bolt adapted to engage said socket.

[2] The question involved is one of originality, which depends for its solution upon matters of fact. Each of the three tribunals of the Patent Office made a careful analysis of the testimony. According to the Examiner of Interferences, Terry—

established his right to the invention beyond any reasonable doubt.

The Examiners in Chief said—

that there is absolutely no corroboration of the contention of Rosen and Fischel that they had any part in the invention of the matter in issue,

and the Commissioner declared that there was no basis in the testimony for the claim of Rosen and Fischel that they had any part in the invention. Our study of the record convinces us that these conclusions are correct, and therefore the action of the Commissioner is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

BANCEL *v.* MEIER.

No. 1,625. Decided March 3, 1924.

ESTOPPEL—COPYING CLAIM FROM A PATENT—COPIED CLAIM BROADER THAN PREVIOUSLY MADE BY APPLICANT.

Where B. copied the claim forming the issue from M.'s patent more than two years after the issue of the patent and based his right to copy the claim upon claim 3 of his original application, *Held* that if the claim in issue enlarged B.'s original claim 3 rather than restricted it then B. would be precluded from copying the claim by reason of the limitation fixed in the case of *Chapman and Chapman* v. *Wintroath*, 1920 C. D. 465.

Mr. Geo. F. Scull for Bancel.

Mr. Joshua R. H. Potts, *Mr. Brayton G. Richards*, and *Mr. Geo. V. Parkinson* for Meier.

Before ROBB and VAN ORSDEL, Associate Justices, and SMITH, Judge of U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This is an interference proceeding in which it appears that appellee Meier filed an application August 6, 1915, on which a patent [1,159,783] was granted November 9, 1915. Appellant Bancel originally filed his application May 23, 1913, which was allowed November 30, 1915. It, however, became forfeited for nonpayment of the final fee, and a renewal of the original application was filed by Bancel on November 27, 1917.

On December 4, 1918, Bancel copied into his application, by way of amendment, claim 5 of the Meier patent, which reads as follows:

In a boiler, the combination with water tubes, tile supported by the water tubes and forming a chamber, a heater located in the chamber, and means for controlling the flow of smoke and gases through said chamber, substantially as described.

More than two years having elapsed between the issue of the Meier patent and the date when Bancel copied the claim, it must appear that in the original application of Bancel, there was a claim for the same subject matter as the issue. Bancel bases his right to copy the Meier claim upon claim 3 of his original application, as follows:

An apparatus for absorbing heat from hot gases comprising a boiler provided with a plurality of paths in which the boiler tubes are located and through which the furnace gases pass from the furnace to the smoke-stack, in combination with heat absorbing means located between said paths through which a portion of said gases are adapted to pass from a point of high pressure to a path of low pressure, and means for regulating the flow of gases through said heat absorbent means.

The Commissioner of Patents denied Bancel's right to copy the claim, for the reason that his original claim 3 does not involve the same subject matter as the claim of the issue, Meier's claim 5. From this decision Bancel appeals.

We think the Commissioner was right. The claim in issue includes "tile supported by the water tubes," while claim 3 included means forming "a plurality of paths in which the boiler tubes are located" and and heat-absorbing means "between said paths." The latter are limitations not found in the claim in issue. If the claim were allowed appellant it would preclude appellee from using tile casing since appellant's claim is broad enough to include any means. It is insisted, however, by appellant, that inasmuch as the claim in issue is narrower than his claim 3, he is not precluded from making the claim by reason of the

two-year limitation established by the rule announced in *Chapman* v. *Wintroath*, 252 U. S. 126; 1920 C. D. 465. On the contrary it is urged by counsel for appellee that the claim in issue enlarges Bancel's claim rather than restricts it. If this be true Bancel would be precluded from copying the claim by reason of the limitation fixed in the Wintroath case.

We are, however, in agreement with the Commissioner of Patents to the effect that the claim in issue involves an invention substantially different from that set forth in Bancel's original claim. As said by the Commissioner:

It is clear that Meier aimed at the specific construction and support of the tile chamber in a boiler of the usual construction, while Bancel aimed at the broad arrangement of a heater located between two passages for hot gases. Throughout his correspondence Bancel refers only to his cross flow superheaters. This is emphasized by Bancel's claim 3—that the gases go through his superheater "from a point of high pressure to a point of low pressure." These words are without material significance when applied to Meier.

The whole theory of the Bancel application is to avoid the prior art, which related to a direct flow of the gases on their way from the furnace to the smokestack. Hence to distinguish from the prior art, Bancel relied upon a cross flow of the gases from the point of high pressure to the point of low pressure. In this view of the case, it is quite clear why no construction was included in the terms of claim 3, or indeed of Bancel's disclosure, in which the heat-absorbing means or superheater was located in a path leading directly from the furnace to the smokestack. With this distinction between the construction of the Meier patent and of the Bancel application, it necessarily follows that the Bancel claim and application do not cover the construction of the Meier patent.

It is, therefore, unnecessary to consider the question of abandonment, and other objections raised, since appellant is not entitled to make the claim in issue.

The decision of the Commissioner of Patents, is affirmed.

The decision of Assistant Commissioner Fenning, rendered in this case March 5, 1923, is as follows:

Meier appeals from a decision of the Examiners in Chief awarding priority to the applicant Bancel.

Bancel has the earlier filing date, but he did not make the precise claim of the issue until more than two years after the grant of Meier's patent. Unless he claimed substantially the same invention before he made the claim constituting the issue he is estopped to make the claim now. *Chapman and Chapman* v. *Wintroath*, 1920 C. D. 465; 252 U. S. 126.

Meier contends that he and Bancel stood in the relation of employer and employee; but in view of Meier's preliminary statement showing that he conceived the invention after Bancel had filed his application it is not seen how Meier's contention can establish priority for himself. It is immaterial to the question of priority whether the contract between Meier and Bancel gave Meier any claim to an invention made by Bancel.

It seems that Bancel was a kind of patent adviser to Meier and that one of his duties was to keep Meier informed as to United States patents and other publications relating to steam boilers and superheaters. This being the case, it is significant that Bancel did not discover and contest Meier's claim until more than two years after his patent issued, and then inserted the claim only after Meier's death.

The real contention is whether Bancel claimed the invention in issue before he copied Meier's claim 5. The count reads:

In a boiler, the combination with water tubes, tile supported by the water tubes and forming a chamber, a heater located in the chamber, and means for controlling the flow of smoke and gases through said chamber, substantially as described.

Bancel's original claim 3 as amended October 10, 1913, reads:

3. An apparatus for absorbing heat from hot gases comprising a boiler provided with a plurality of paths in which the boiler tubes are located and through which the furnace gases pass from the furnace to the smokestack, in combination with heat absorbing means located between said paths through which a portion of said gases are adapted to pass from a point of high pressure to a path of low pressure, and means for regulating the flow of gases through said heat absorbing means.

He bases his contention on the allegation that his original claim 3 is for the same invention as the issue. The issue includes "tile supported by the water tubes," a limitation not found in Bancel's claim 3, and Bancel's claim 3 includes "means forming a plurality of paths in which the boiler tubes are located," a limitation not found in the issue. Bancel's claim 3 locates the heat-absorbing means "between said paths," and this also is not in the issue. It is clear that Meier aimed at the specific construction and support of the tile chamber in a boiler of the usual construction, while Bancel aimed at the broad arrangement of a heater located between two passages for hot gases. Throughout his correspondence Bancel refers only to his cross-flow superheaters. This is emphasized by Bancel's claim 3—that the gases go through his superheater "from a point of high pressure to a point of low pressure." Those words are without material significance when applied to Meier.

The case resembles *Wintroath* v. *Chapman and Chapman*, 1918 C. D. 9, where no claim for fluid and ball bearings in combination was inserted by the applicant until after his opponent's patent was granted, although the original claims were much broader than the issue, and the bearings themselves were particularly claimed.

In *Leonard* v. *Everett*, 281 Fed. Rep. 594, it was held that an applicant who was claiming an apparatus could copy method claims from a patent more than two years after the patent was granted; but in this case the method was inherent in the apparatus, and the first inventor of one was necessarily the first inventor of the other.

Bancel's original claim 3 is not for the same invention as the count of this interference.

Bancel argues or assumes that chambers formed of tile, brick, or other separate components are old, that there is nothing but the tubes in water-tube boilers of this type to support such a chamber, and that when the chamber is supported on the tubes it must be somewhere toward the center of the cross section of the boiler. This series of hypothetical statements, each supported by the preceding one, is too weak to support the proposition that there is no real difference between Bancel's claim 3 and the issue. It is evident at a glance that the chamber might be supported on legs resting on the bottom of the boiler or hangers depending from the top or on transverse or longitudinal rods supported by the sides or ends.

The opinion of the Examiners in Chief is reversed, and priority is awarded to the patentee Meier.

Court of Appeals of the District of Columbia.

IN RE DEUTZ AND ORTENBERG, INC.

No. 1,637. Decided March 3, 1924.

1. TRADE-MARK—"HOUSE OF FRANCE"—DECEPTIVE MARK.
The word "House" as used in this mark indicates an individual, firm, or corporation. Therefore the words "House of France" indicates a French firm or a branch of a French firm, and, appellant being neither, the court affirmed the decision of the Patent Office that the mark is deceptive.

2. SAME—SAME—GEOGRAPHICAL MARK.
Even if the appellant were a French firm or a branch of a French firm it would have no right to the exclusive appropriation of a term equally available to every real House of France doing business in this country.

Mr. C. A. Weed for Deutz and Ortenberg, Inc.
Mr. T. A. Hostetler for the Commissioner of Patents.

Before ROBB and VAN ORSDEL, Justices, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

Appeal from a decision of the Patent Office refusing registration of the words "House of France," as a trade-mark for blouses, waists, gowns and dresses.

Applicant is a New York corporation and alleges use of this mark since March of 1922. The Examiner of Interferences refused registration on the ground that the mark merely has geographical significance, applicable to any business house located in France, and that, as applied to a house not located in France, it is deceptive. Responding to this Office action, the applicant did not assert that its goods were made in France, but alleged that, as applied to the dresses and other articles of clothing upon which it was used, it was suggestive of that—

good taste, style, line and blend of colors which is essentially French, and is not merely significant of any "business house in France." * * * Since therefore Paris has been considered the acme of perfection in style, a trade mark such as applicant's suggesting the emulation of French lines and style as the distinguishing feature of applicant's goods, would act to create a demand for his goods, and therefore accomplish the purpose of the trade mark.

The Assistant Commissioner, in disposing of the case, said:

Applicant's mark is believed to clearly indicate to the average purchaser that the wearing apparel, gowns, waists, etc., were imported from a business house in France. The use of the word "house" to indicate a commercial or importing house is well-known. When such word is applied to wearing apparel, the inference is at once drawn that the apparel came from that commercial or business place. When the statement is added that this is a commercial place of France, the conclusion is fairly reached by the average purchaser in this country that the clothing was imported from a business house located in France. In this sense, therefore, the mark would be clearly deceptive unless such were the fact. The whole meaning of the mark is geographical as to origin of the goods.

[1, 2] That "House," as used in this mark, indicates an individual, firm, or corporation, is clear. The words "House of France," therefore, as clearly indicate a French firm or a branch of a French firm. Appellant is neither, and, even if it was, would have no right to the exclusive appropriation of a term equally available to every real House of France doing business in this country.

For the reasons stated in detail by the Patent Office, the decision is affirmed.

Affirmed.

The decision of the First Assistant Commissioner, rendered April 20, 1923, is as follows:

The applicant corporation has appealed from the decision of the Examiner of Trade-Marks denying registration to the mark "The House of France", as applied to blouses, waists, gowns, and dresses, in Class 39, Clothing. The denial of registration was based on the ground that the words were merely geographical and that they were also deceptive.

Applicant has cited as precedents the registration of the marks "Madeira House", "Jardin de Paris", "Southern Home", and "California Home", and has strenuously contended that these registrations are conclusive in favor of the registration of applicant's mark.

The mark "Madeira House" is displayed in a particular manner upon a banner, and the mark "California Home" is used in connection with a double triangle. It is believed these are sufficient to distinguish these registrations from the case at bar. The mark "Southern Home" is, at best, merely suggestive that the wheat from which the flour was made grew in the South. The word "Home" has been deemed a good technical mark in connection with many registrations. Without passing upon the validity of the registration of this mark "Southern Home" it is sufficient to here note that the objections to this registration are not the same as urged against the registration of applicant's mark. The mark "Jardin de Paris", applied to perfumery, is fairly deemed fanciful. Perfumeries are not obtained from gardens, save in a very secondary sense. There is no direct deception in applying such a mark to such goods. No one would be likely to be deceived into believing the perfumery had come from a garden in Paris. The long process intervening between the production of flowers in a garden and the manufacture of perfumery is sufficient to take from the average mind any thought that the mark is geographical or descriptive of the origin.

Applicant's mark is believed to clearly indicate to the average purchaser that the wearing apparel,

gowns, waists, etc., were imported from a business house in France. The use of the word "house" to indicate a commercial or importing house or a manufacturing or broker's place of business is well known. When such word is applied to wearing apparel, the inference is at once drawn that the apparel came from that commercial or business place. When the statement is added that this is a commercial place of France, the conclusion is fairly reached by the average purchaser in this country that the clothing was imported from a business house located in France. In this sense, therefore, the mark would be clearly deceptive unless such were the fact. The whole meaning of the mark is geographical as to origin of the goods.

It is believed such a mark should not be registered, and the decision of the Examiner of Trade-Marks is affirmed.

ADJUDICATED PATENTS.

(D. C. Del.) The Smith patent, No. 943,280, for improvements in bessemerizing copper matte, *Held* not anticipated and valid. *Peirce-Smith Converter Co. v. United Verde Copper Co.*, 298 Fed. Rep. 763.

(C. C. A. N. Y.) The Dossleman patent, No. 1,014,211, for a paint remover, claims 7 and 8 *Held* not infringed. *Chadeloid Chemical Co. v. Charles McAdam Co.*, 298 Fed. Rep. 713.

PATENT SUITS.

T. M. 87,574, H. B. Taylor, Pills for female complaints, appeal filed Oct. 2, 1923, C. C. A. (3d Cir.), Doc. 3086, *I. J. Taylor et al. v. E. E. Bostick.* Order affirming decree of district court (notice dated June 21, 1924).

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,342,678, H. H. Houghton, Valved coupling for lubricators, decided July 1, 1924, claims 1, 2, and 3.

Pat. 1,454,741, Howard and Turner, Hot top for multiple casting of metal ingots, decided July 8, 1924, claims 1, 2, 3, 10, and 11.

Changes in Examining Divisions.

Order No. 2,876, Aug. 1, 1924, reads as follows:

It is hereby directed that new Examining Divisions 50, 51, 52, and 53 be established, and that the following classes and subclasses be transferred thereto, this order to take effect immediately:

Division 50, Examiner C. L. Blake, in charge:
- Classes 106, Plastic Compositions, from Division 6.
- 134, Liquid Coating Compositions, from Division 6.
- 154, Laminated Fabric and Analogous Manufactures, from Division 15.
- 91, Coating, from Division 17.

Division 51, Examiner C. D. Backus, in charge:
- Classes 250, Radiant Energy, from Division 16,
- 178, Telegraphy, the following subclasses, from Division 16:

Systems

- 44 Wave transmission
- 45 Loaded circuit
- 45 Loading coils.

- 179, Telephony, the following subclasses, from Division 16:

Systems

- 2 Composite
- 3 Telegraphy
- 4 Metallic circuit,
- 15 Multiplex.
- **170 Repeaters.**
- **171 Relays.**

- 250, Radiant Energy, the following subclass from Division 48:
  - **41 Condensers.**
- 176, Electric Lamps, from Division 42.

Division 52, Examiner E. C. Morgan, in charge:
Classes 258, Railway Mail Delivery, from Division 4.
248, Supports, from Division 8.
284, Valved Pipe Joints or Couplings, from Division 33.
285, Pipe Joints or Couplings, from Division 33.
287, Rod Joints or Couplings, from Division 33
227, Fire Escapes, from Division 46.
228, Ladders, from Division 46.
304, Scaffolds, from Division 46.
286, Packed Shaft or Rod Joints, from Division 49.
288, Joint Packings, from Division 49.
Division 53, Examiner M. K. Peck, in charge:
Classes 11, Books, Making, from Division 5.
281, Books, Strips, and Leaves, from Division 5.
282, Manifolding, from Division 5.
283, Printed Matter, from Division 5.
135, Tents, Canopies, Umbrellas, and Canes, from Division 2.
120, Stationery, from Division 38.
35, Educational Appliances, from Division 46.
129, Paper Files and Binders, from Division 46.
156, Curtains, Shades, and Screens, from Division 46.

Associate (First Assistant) Examiner C. J. Spencer is hereby assigned as Acting Examiner in charge of Division 16.

The transfer of the following additional classes is also directed, to take effect immediately:

Class 181, Acoustics, from Division 23 to Division 5.

Class 274, Sound Recording and Reproducing, from Division 23 to Division 5.

Class 149, Hides, Skins, and Leather, from Division 11 to Division 6.

Class 127, Sugar, Starch, and Carbohydrates, from Division 31 to Division 6.

Class 159, Concentrating Evaporators, from Division 31 to Division 6.

Class 85, Driven, Headed, and Screw-Threaded Fastenings, from Division 13 to Division 11.

Class 164, Cutting and Punching Sheets and Bars, from Division 14 to Division 11.

Class 58, Horology, from Division 47 to Division 23.

Class 161, Time Controlling Mechanism, from Division 47 to Division 23.

Class 20, Wooden Buildings, from Division 46 to Division 33.

Class 305, Land Vehicles, Wheel Substitutes, from Division 10 to Division 41.

Class 3, Artificial Body Members, from Division 20 to Division 43.

Class 32, Dentistry, from Division 20 to Division 43.

Class 213, Railway Draft Appliances, from Division 44 to Division 43.

Class 122, Liquid Heaters and Vaporizers, from Division 18 to Division 46.

Class 169, Fire Extinguishers, from Division 43 to Division 46.

Class 185, Motors, from Division 45 to Division 47.

Class 267, Spring Devices, from Division 45 to Division 47.

Class 34, Driers, from Division 36 to Division 49.

Class 210, Liquid Separation or Purification, from Division 43 to Division 49.

It is hereby directed that the following classes be established in Division 16:

Class 136, Batteries, with the following subclasses taken from class 204, Electrochemistry, in Division 3, in which class they are abolished:

Batteries
49 Anodes,
54 Carbon,
50 Cathodes,
52 Connectors,
51 Diaphragms,
47 Earth,
48 Gas,
33 One fluid
55 Iron,
34 Zinc
39 Chlorides,
37 Chromates,
35 Nitrates,
38 Oxides,
36 Sulphates,
46 Piles,
29 Secondary,
40 Two fluid
56 Iron,
41 Zinc
45 Chromates,
42 Nitrates,
43 Sulphates
44 Gravity,
53 Vessels and supply devices.

Class 201, Resistances and Rheostats, with the following subclasses taken from class 219, Electric Heating and Rheostats, in Division 3, in which class they are abolished:

48 **Rheostats**
49 Lamp socket,
50 Compressible
51 Pile,
52 Spring,
53 Embedded resistance,
54 Pile,
55 Continuous resistance
56 Helix,
57 Liquid,
58 Penetration,
59 Reel,
60 Tapering,
61 Ping boxes,
62 Rectilinear slide,
63 **Resistance elements**
64 Embedded
65 Fluid,
66 Granular,
67 Incased coils,
68 Piles,
69 Zigzag grids,
70 Zigzag helix,
71 Compound helix,
72 Granular,
73 Lamellar
74 Ribbon,
75 Carbon,
76 Composition.

It is hereby directed that the title of class 219, Electric Heating and Rheostats, be changed to read class 219, Electric Heating.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 19, 1924.

[VOL. 325. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 147,151. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FREDERICK BLANK & CO., doing business as United States Cotton Mills, New York, N. Y. Filed May 3, 1921.

UNITED STATES COTTON MILLS

NE PLUS ULTRA
CCC
MADE IN U.S.A.

Applicant hereby disclaims the right to the exclusive use of the words "Ne Plus Ultra" and "Made in U. S. A." apart from the trade-mark as shown on the accompanying drawing.

Particular description of goods.—Cotton Sheetings.

Claims use since Apr. 1, 1920.

Ser. No. 153,960. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GEORGE SELLAR, Glasgow, Scotland. Filed Oct. 10, 1921.

THE PURPLE HEATHER 2989 SCOTCH GINGHAM

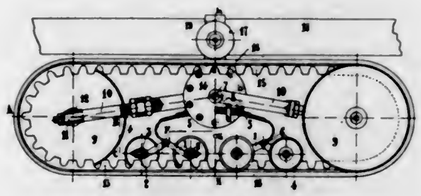
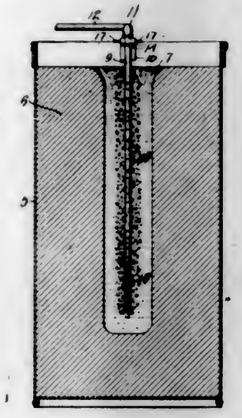
REISSUES



AUGUST 19, 1924.

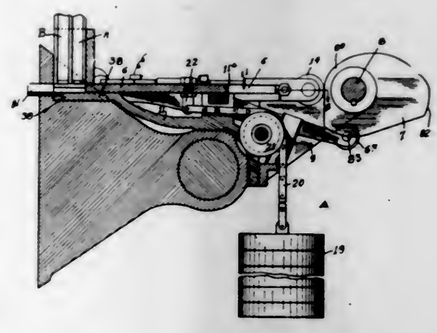
15,893. TIRE CHAIN. FREDERICK TAYLOR GAUSE, Wilmington, Del. Filed Apr. 24, 1924. Serial No. 708,831. Original No. 1,434,111, dated Oct. 31, 1922, Serial No. 517,515, filed Nov. 25, 1921. 6 Claims. (Cl. 152—14.)

1. A tire chain comprising two side chains, a plurality of cross chains, a chain substantially longer than said cross chains extending diagonally from one side chain to the other and permanently associated therewith, said side chains being broken at substantially their points of intersection with the diagonal chain, and means for creating a tension between the free ends of the tire chain and locking said chain in operative position.



15,894. SUPPORTING AND DRIVING BAND FOR MOTOR CARS. ADOLPHE KÉGRESSE, Paris, France. Filed May 26, 1924. Serial No. 716,069. Original No. 1,480,078, dated Jan. 8, 1924, Serial No. 457,109, filed Mar. 30, 1921. 16 Claims. (Cl. 180—9.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an automobile, an endless, flexible supporting and driving band; supporting wheels around which the band passes; and a system of rollers supporting the weight of the axle and bearing upon the band; said supporting wheels being devoid of rigid connection with the roller system and being adapted to rest freely upon the band and to rock vertically about an axis without acting on the chassis or on said roller system.



15,895. AIR-AGITATING TUBE FOR REFRIGERATING SYSTEMS. ROBERT F. LINDSAY and ROBERT H. HEMPHILL, Charleston, S. C.; said Lindsay assignor of his entire right to Thomas W. Carroll, Charleston, S. C. Filed Apr. 24, 1924. Serial No. 708,830. Original No. 1,442,410, dated Jan. 16, 1923, Serial No. 538,949, filed Feb. 24, 1922. 19 Claims. (Cl. 62—159.)

1. A supporting device for agitator tubes for ice cans, having means at one end for detachable engagement with the ice can, and having means at the other

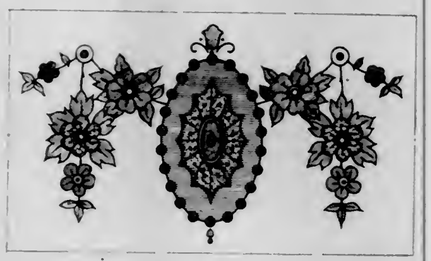
end for pivotally connecting the upper end of the tube thereto.

15,896. TYPE-FEEDING DEVICE. CARL F. NAYER, Los Angeles, Calif., assignor, by direct and mesne assignments, of one-half to William E. Kier, Chicago, Ill., and one-half to Albert I. Appleton, Evanston, Ill. Filed Apr. 21, 1924. Serial No. 708,079. Original No. 1,414,148, dated Apr. 25, 1922, Serial No. 420,866, filed Nov. 1, 1920. 32 Claims. (Cl. 101—57.)

1. In a printing device having mechanism for printing form letters, the combination with the driving means thereof, of a device driven thereby, an element operatively controlled by said device and having dwells at predetermined points in its operative course for receiving and discharging type.

15,897. BIFOCAL-LENS BLANK. GEORGE A. CLEMENT, Mount Vernon, N. Y., assignor to General Optical Company, a Corporation of New York. Filed June 27, 1924. Serial No. 722,876. Original No. 1,494,889, dated May 20, 1924, Serial No. 630,880, filed Apr. 9, 1923. 3 Claims. (Cl. 88—54.)

1. A product of manufacture comprising a set of bifocal lens blanks formed by fusing a small piece of glass having a relatively high index of refraction to a major piece of glass of lower index of refraction, the set being made up of a plurality of series according to base curve and each series being made up of a plurality of units according to the index of refraction of the small piece of glass, the index of the small piece of glass being



different for each unit of a series but being the same for the corresponding units of the several series and the base curve being different for the several series but being the same for the units of each series.

DESIGNS

AUGUST 19, 1924.

65,437. LIGHTING FIXTURE. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1924. Serial No. 9,864. Term of patent 14 years.

The ornamental design for a lighting fixture as shown.

65,438. BOBESCHE. HAMILTON T. HOWELL, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 30, 1921. Serial No. 457,069. Term of patent 14 years.

The ornamental design for a bobesche, as shown.

65,439. WRAPPER FOR CHEWING GUM, CANDY, AND CONFECTIONS. LOUIS HURWITZ, Philadelphia, Pa. Filed June 11, 1924. Serial No. 9,856. Term of patent 3½ years.

The ornamental design for a wrapper for chewing gum, candy and confections as shown.

65,440. BARBER'S SIGN. WALTER F. KOKEN, Webster Groves, Mo. Filed May 29, 1924. Serial No. 9,741. Term of patent 14 years.

The ornamental design for a barber's sign, as shown.

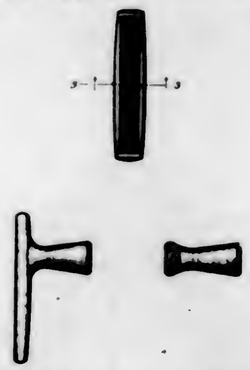
65,441. BARBER'S SIGN. WALTER F. KOKEN, Webster Groves, Mo. Filed May 29, 1924. Serial No. 9,742. Term of patent 14 years.

The ornamental design for a barber's sign, as shown.

65,442. LAMP BRACKET. NATHAN A. LEVITAN and JACK J. BRAZ, Brooklyn, N. Y. Filed Apr. 19, 1924. Serial No. 9,319. Term of patent 3½ years.

The ornamental design for a lamp bracket, as shown.

65,443. STATUETTE. BENJAMIN H. LOUTHAIN and STEWART G. HONECK, Milwaukee, Wis. Filed Apr. 25, 1923. Serial No. 5,938. Term of patent 3½ years.

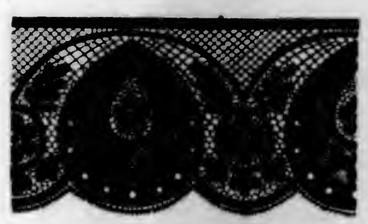


The ornamental design for a statuette, as shown.

65,444. BOOKSTACK. ANGUS S. MACDONALD, Great Neck, N. Y., assignor to Snead & Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 21, 1922. Serial No. 4,360. Term of patent 14 years.

The ornamental design for a bookstack as shown.

65,445. HANDLE FOR AUTOMOBILE DOORS. ROLLO MARPLE, Charlotte, Mich., assignor to Hancock Manufacturing Company, Charlotte, Mich., a Corporation of Michigan. Filed Mar. 3, 1924. Serial No. 8,803. Term of patent 3½ years.

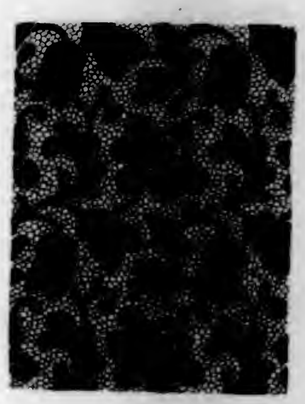


The ornamental design for a handle for automobile doors, substantially as shown and described.

65,446. CANDLESTICK. HARRY A. MCGILL, Youngstown, Ohio. Filed June 2, 1924. Serial No. 9,769. Term of patent 3½ years.

The ornamental design for a candlestick, as shown.

65,447. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 7, 1924. Serial No. 9,817. Term of patent 14 years.

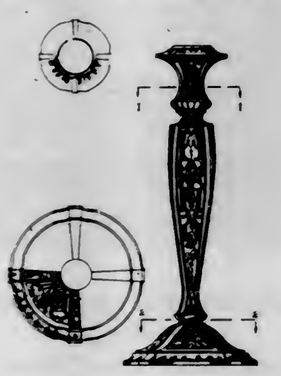


The ornamental design for lace substantially as shown.

65,448. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 20, 1924. Serial No. 9,924. Term of patent 14 years.

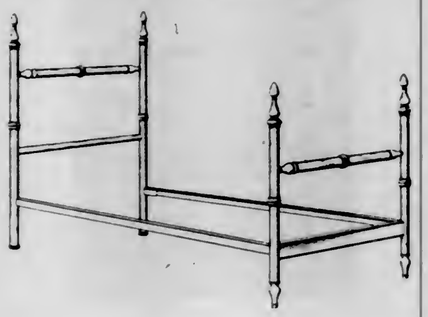
The ornamental design for lace substantially as shown.

65,449. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 20, 1924. Serial No. 9,925. Term of patent 14 years.



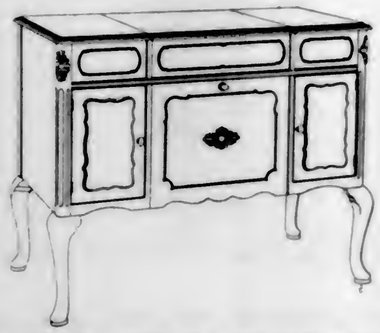
The ornamental design for lace substantially as shown.

65,450. PNEUMATIC TIRE TREAD. CHARLES ALTON PFAHL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1923. Serial No. 4,991. Term of patent 14 years.



The ornamental design for a pneumatic tire tread as shown.

65,451. CANDLESTICK. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, a Copartnership of New York City. Filed May 11, 1923. Serial No. 6,137. Term of patent 7 years.

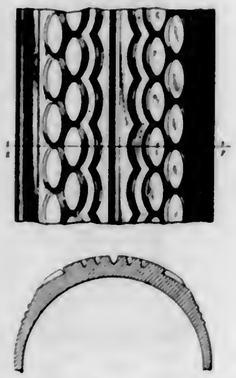


The ornamental design for a candlestick, as shown.

65,452. BEDSTEAD FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 3,549, Term of patent 14 years.

The ornamental design for a bedstead frame as shown.

65,453. PHONOGRAPH CABINET. CHARLES E. SWANSON and FRANK C. BURTON, Chicago, Ill., assignors to Cheney Talking Machine Co., Chicago, Ill., a Corporation of Illinois. Filed June 8, 1922. Serial No. 2,573. Term of patent 3½ years.

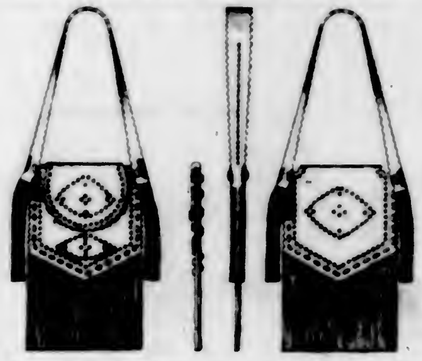


The ornamental design for a phonograph cabinet as shown.

65,454. HEATING STOVE. JONES T. TEMPLETON, St. Louis, Mo., assignor to The Buck's Stove & Range Company, St. Louis, Mo., a Corporation of Missouri. Filed May 24, 1924. Serial No. 9,701. Term of patent 14 years.

The ornamental design for a heating stove, as shown.

65,455. PNEUMATIC TIRE. JOHN C. TUTTLE and EDWARD M. SEARS, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 9, 1924. Serial No. 9,839. Term of patent 14 years.

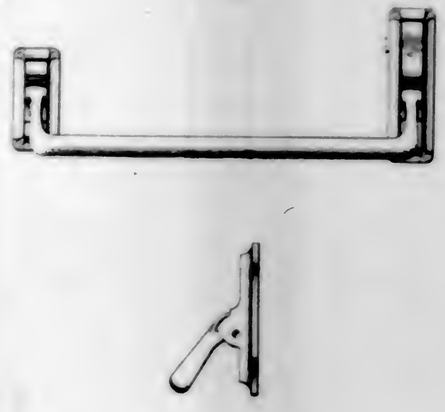


The ornamental design for a pneumatic tire as shown.

65,456. CANDLESTICK. GUSTAVE E. VILLABET, New York, N. Y., assignor to William R. Noe & Sons, a Copartnership, New York, N. Y. Filed May 11, 1923. Serial No. 6,135. Term of patent 7 years.

The ornamental design for a candlestick, as shown.

65,457. HAND BAG OR SIMILAR ARTICLE. NANNABELL WHORREY, Akron, Ohio, assignor of one-half to William W. Glasgow, Akron, Ohio. Filed Feb. 21, 1924. Serial No. 8,692. Term of patent 3½ years.

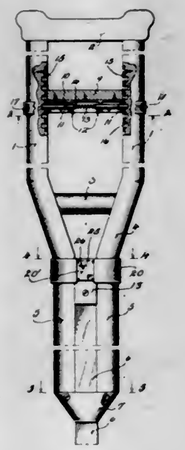


The ornamental design for a hand bag or similar article, as shown.

65,458. FINGER RING. FRANCIS H. WITTSTEIN, Newark, N. J. Filed Dec. 11, 1923. Serial No. 7,995. Term of patent 3½ years.

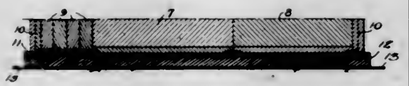
The ornamental design for a finger ring, as shown and described.

65,459. PANIC BOLT. HENRY F. VOE, Detroit, Mich. Filed Jan. 5, 1924. Serial No. 8,251. Term of patent 7 years.



The ornamental design for a panic bolt, as shown.

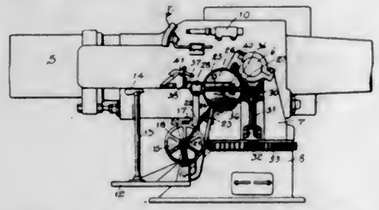
PATENTS



GRANTED AUGUST 19, 1924.

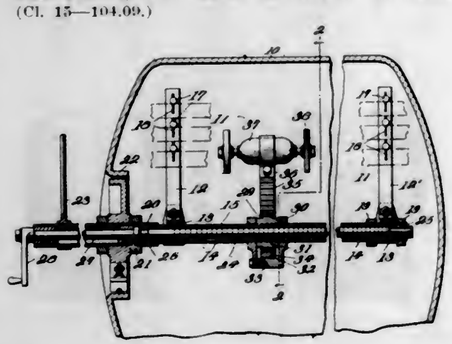
1,505,081. CRUTCH. OTTO H. ARNDT, Clintonville, Wis. Filed Jan. 16, 1923. Serial No. 612,973. 1 Claim. (Cl. 135—50.)

An adjustable crutch comprising a frame adapted to fit beneath the user's arm and having a pair of spaced parallel members provided with a plurality of notches upon their opposed faces, a leg adjustably guided between said members, a pair of plungers carried by said leg and adapted to enter any of said notches, and means for operating said plungers and for locking them in their notch engaging positions.



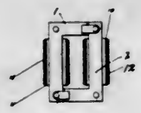
1,505,082. PROCESS AND BACKING FOR USE IN LEAD MOLDING FOR ELECTROTYPES. HARRY M. BLAETZ, Philadelphia, Pa. Filed July 24, 1920. Serial No. 398,760. 12 Claims. (Cl. 41—25.)

1. The process of lead molding which consists in simultaneously pressing the entire surface of a lead sheet placed between the original and a plastic backing, thereby distributing the backing locally as the pressure is applied and equalizing the reactive pressure of the backing over all parts of the lead.



1,505,083. GUN-SIGHTING MECHANISM. ROBERT S. BLAIR, South Orange, N. J. Filed July 2, 1918. Serial No. 243,007. 7 Claims. (Cl. 89—41.)

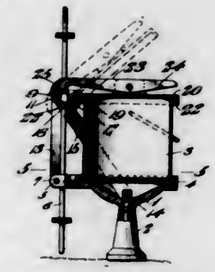
7. In combination with a gun, a mount therefor, means for pointing ordnance comprising a pedal shaft and pedals associated therewith, a saddle upon which the pointer is adapted to be seated while operating the pedals, a pair of stationary hand grips in front of the operator, firing mechanism associated with one of said grips, means associated with the other adapted to control the rate of movement of the gun irrespective of the rate



of movement of the pedals, and a clutch member interposed between the pedal shaft and gun adapted to be actuated by said last mentioned means.

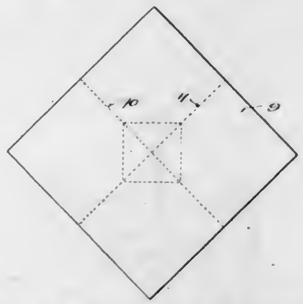
1,505,084. APPARATUS FOR REMOVING SCALE FROM BOILERS. DALE L. BREED, Ticonderoga, N. Y. Filed Feb. 24, 1922. Serial No. 538,970. 15 Claims. (Cl. 15—104.09.)

1. A boiler cleaning apparatus comprising a rotatable shaft, supporting means therefor, a reciprocable carrier actuated by said shaft, an abrading member supported by said carrier and operable independently of the shaft and the carrier, means for rotating said shaft, and means for adjusting said carrier longitudinally of the shaft.



1,505,085. RADIO RECEIVING APPARATUS. CECIL E. BRIGHAM, Washington, D. C., assignor, by mesne assignments, to Dubilier Condenser & Radio Corporation, New York, N. Y., a Corporation of Delaware. Filed July 15, 1922. Serial No. 575,140. 6 Claims. (Cl. 175—356.)

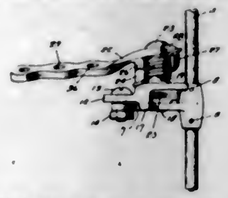
1. A radio frequency transformer comprising in combination a substantially closed magnetic core, a primary winding, and a secondary winding on said core in coupled



relation, said windings having extremely small distributed capacity at the frequencies for which they are designed to operate, the core having a magnetic leakage gap therein of a size designed for introducing losses to a degree necessary to enable said transformer to operate effectively over a broad band of frequencies.

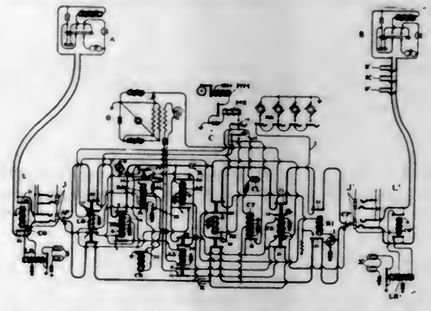
1,505,086. STAND AND COVER FOR GARBAGE RECEPTACLES. WILLIAM H. BUCKLEY, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,768. 9 Claims. (Cl. 220—1.)

1. A stand for a garbage receptacle adapted to be supported on the ground and attachable to a fence, consisting of a tray, a fixed upper bolt, a pedestal for said tray, means for connecting said tray to a fence, a receptacle removably supported upon said tray, a hinged cover for holding said receptacle in place upon said tray, and means carried by said hinged cover to cooperatively engage with said upper bolt to maintain the cover in elevated position for removal of said receptacle.



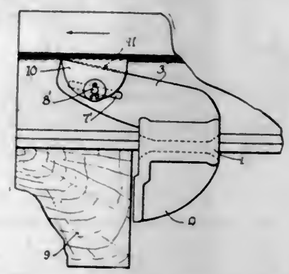
1,505,087. PAPER PACKAGE. PETER J. CHRISTMAN, Jr., Green Bay, Wis. Filed July 18, 1923. Serial No. 652,242. 1 Claim. (Cl. 206—57.)

A package of paper composed of a plurality of rectangularly shaped units, each comprising a sheet folded in two directions to form a book of four leaves, said units having corresponding corners folded in the same directions on a diagonal line intermediate said corners and the center of said units.



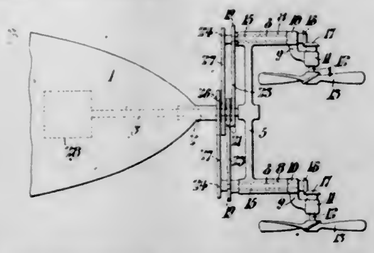
1,505,088. FOOT-CONTROLLED ACCELERATOR. JOHN C. CREAGMILE and CHARLES W. HARTMANN, Oakland, Calif. Filed July 2, 1923. Serial No. 648,929. 5 Claims. (Cl. 74—39.)

1. A foot pressure operated accelerator for Ford engines comprising a member secured to the pull rod arm of the throtle rod of said engine, a pivot on said member in oblique relation to the plane of rotation of said arm, a lever mounted on said pivot, stops adapted to limit the movement of said lever relative to said member, a pull rod connecting said lever with the throttle lever of the carbureter of said engine, yieldable means



normally urging said lever to throttle closing position, and means responsive to foot pressre for actuating said lever.

1,505,089. TELEPHONE SYSTEM. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 20, 1915, Serial No. 15,835. Renewed Mar. 10, 1920, Serial No. 364,872. Patent No. 1,439,071, dated Dec. 19, 1922. Divided and this application filed Sept. 27, 1922. Serial No. 590,760. 10 Claims. (Cl. 179—10.)

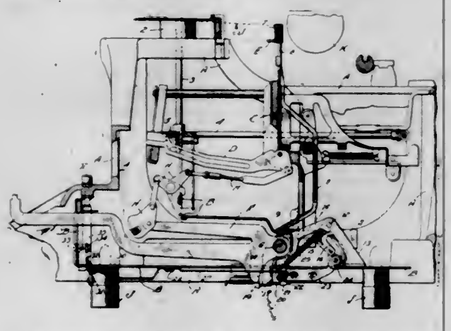


1. A telephone system, including a plurality of telephone lines, link circuits for interconnecting said lines as calling and called lines, automatic ringing means and a connection register for said link circuits, operator-controlled means for actuating said ringing means to apply ringing current to the called line and for actuating said connection register when one of said link circuits is connected to an idle called line, and means to prevent the actuation of said ringing means and connection register by the operation of said key when connection is made with a busy called line.

1,505,090. RAIL ANCHOR. JOHN A. DIENNER, Chicago, and ALEXANDER C. MABEE, Villa Park, Ill. Filed Feb. 5, 1923. Serial No. 616,917. 23 Claims. (Cl. 238—315.)

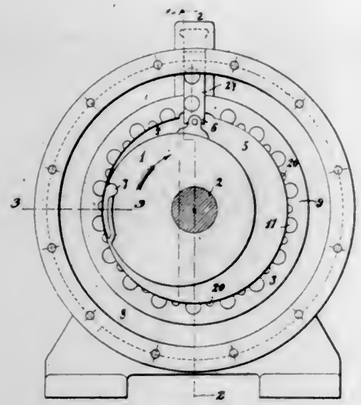
22. In a rail anchor having a frictional rail engaging surface, the combination of movable means actuated by slippage of the rail with respect to said surface for increasing the pressure upon said surface.

1,505,091. FLYING MACHINE. EDMUND WATERMAN DWIGHT, Philadelphia, Pa. Refiled for abandoned application Serial No. 40,164, filed July 16, 1915. This application filed May 28, 1923. Serial No. 642,039½. 10 Claims. (Cl. 244—23.)



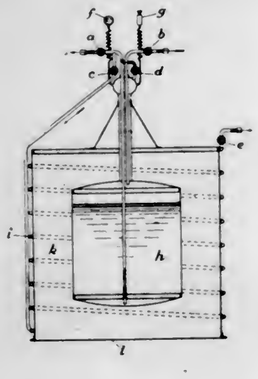
9. The combination with a plurality of propeller shafts each carrying a propeller wheel; of a single rotary carrier having bearings for the respective shafts with axes extending transversely to the axis of said carrier; and connecting means, whereby said carrier may be rotated while said propeller shafts are rotated and without changing the direction of the axes of said propeller shafts.

1,505,092. CANDLE MAKING. HENRY J. GRUPE, Mount Vernon, N. Y. Filed Oct. 6, 1921. Serial No. 505,757. 5 Claims. (Cl. 87—21.)



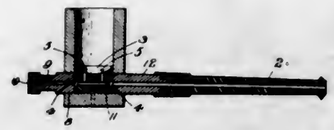
1. In combination with one end of a candle wick, a resilient retaining member through which said wick projects.

1,505,093. RIBBON MECHANISM FOR TYPEWRITERS. DE WITT C. HARRIS, Pineland, Fla. Filed May 3, 1922. Serial No. 558,077. 5 Claims. (Cl. 197—157.)



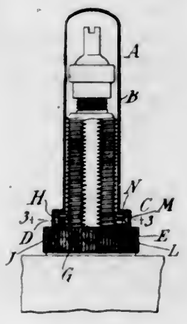
1. A typewriter having, in combination, ribbon-vibrating mechanism including a rock shaft extending transversely of the typewriter, a lever pivoted between its ends at one side of the typewriter, the rear arm of said lever being connected to said shaft, an operating element located in the longitudinal median plane of the typewriter, a connection between said element and the forward arm of said lever, and two finger keys arranged to move said element in opposite directions.

1,505,094. ROTARY ENGINE, PUMP, AND THE LIKE. HUGO HEINRICH, Zwickau, Germany. Filed Mar. 20, 1918. Serial No. 223,665. 13 Claims. (Cl. 286—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



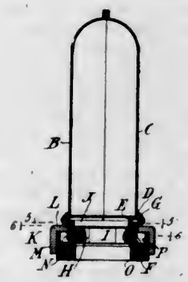
1. In a rotary engine, a rotary cylinder, a stationary cylinder, a packing ring between said cylinders, said stationary cylinder and packing ring being provided with coacting recesses and members, the members arranged to cross the joint between the packing ring and the stationary cylinder.

1,505,095. DEVICE FOR DEVELOPING GAS UNDER PRESSURE FROM LIQUEFIED GASES. PAUL HEYLANDT, Berlin-Sudende, Germany. Filed Jan. 3, 1921. Serial No. 434,823. 7 Claims. (Cl. 62—92.)



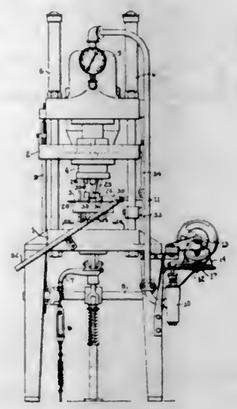
1. A portable device for storing and transporting liquefied gas, comprising an internal metal vessel adapted to hold a liquefied gas, an envelope of insulating material adapted to prevent the radiation of cold from, and the absorption of warmth by, the said vessel, an inlet for introducing liquefied gas into the vessel, a charging valve controlling the said inlet, a discharge pipe leading from the said vessel to the exterior, a discharge valve controlling the discharge pipe, a passage leading from the vessel into the discharge pipe, and a valve controlling the said passage.

1,505,096. TOBACCO PIPE. JAMES W. IVORY, Philadelphia, Pa. Filed Dec. 4, 1919. Serial No. 342,568. 2 Claims. (Cl. 131—12.)



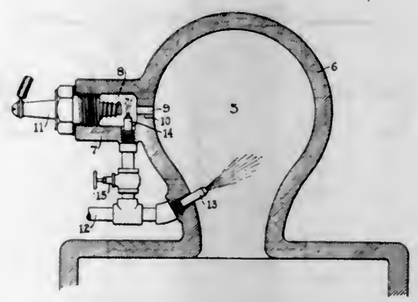
1. In a smoking pipe, a bowl, a stem, an auxiliary air supplying means, the latter in communication with said bowl and said stem, and a perforated placement in the bowl in communication with said bowl and in contact with said auxiliary air supplying means.

1,505,097. DUST CAP FOR TIRE VALVES. HENRY P. KRAFT, Ridgewood, N. J. Filed July 17, 1919. Serial No. 311,459. 2 Claims. (Cl. 152—12.)



1. A dust cap having a cap portion, a foot portion in fixed relation with a part of said cap portion and cooperating therewith to form an annular recess, an opening in said cap portion, and spring catch means in said recess and having engaging means projecting inwardly through said opening.

1,505,098. DUST CAP. HENRY P. KRAFT, Ridgewood, N. J. Filed Apr. 5, 1920. Serial No. 371,221. 3 Claims. (Cl. 152—12.)

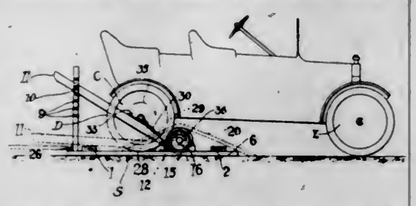


1. A dust cap for tire valves or the like having a sheet metal sleeve non-rotatably mounted at the bottom of the cap, a rim washer permanently connected to the sleeve in longitudinally fixed relation therewith, and carrying a packing gasket and a filling piece between said gasket and the top of the rim washer.

1,505,099. POWER PRESS. FRANK E. LAYMAN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 10, 1919. Serial No. 281,703. 9 Claims. (Cl. 113—50.)

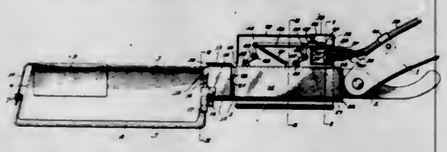
1. The combination with a press having a die part for projecting the pressed article, said die part having projecting and return movements during the return stroke of said press, of means for gripping the article upon projection thereof and for releasing the same upon a given return movement of said die part and means associated with said former means for throwing the article from said press immediately upon release thereof by said former means.

1,505,100. INTERNAL-COMBUSTION ENGINE. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 8, 1918. Serial No. 238,849. 3 Claims. (Cl. 123—32.)



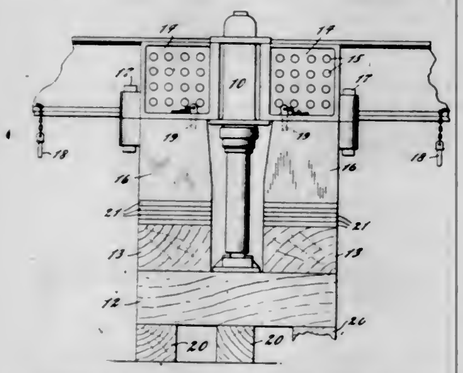
1. In an internal combustion engine, the combination with a casing having parts providing a combustion chamber and an ignition chamber in communication therewith, of an ignition plug penetrating said casing and extending within said ignition chamber, and means for supplying fuel to said chambers jointly and for cutting off the supply of fuel to one of said chambers at will.

1,505,101. POWER TAKE-OFF FOR MOTOR VEHICLES AND THE LIKE. CHARLES MCCOY, Chicago Heights, Ill. Filed Mar. 17, 1921. Serial No. 452,968. 8 Claims. (Cl. 74—106.)



1. In combination, a motor vehicle drive wheel, a driven wheel adapted for driving engagement with said

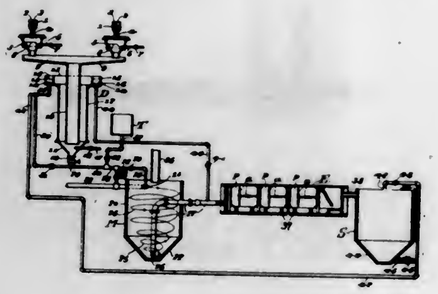
drive wheel, means directing said drive wheel along a path approaching said driven wheel, said means being



adjustable to change said path and thereby the driving engagement between the drive wheel and the driven wheel.

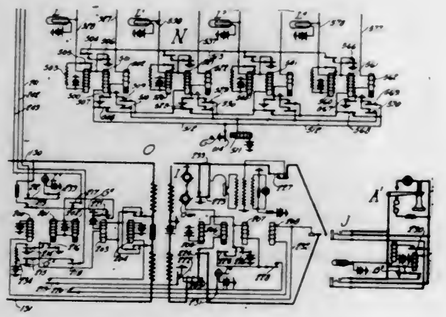
1,505,102. SAFETY RAZOR. LAURIER A. MAYNARD, Highland Park, Mich. Filed Dec. 16, 1922. Serial No. 607,293. 3 Claims. (Cl. 30—12.)

1. The combination of a razor blade, a guard normally parallel to the cutting edge of the razor blade, means pivotally supporting the ends of said guard at the ends of the razor blade, means for limiting the pivotal movement of said guard, and means normally engaging said guard to produce pressure thereon when said guard is swung to one side or the other of said razor blade.



1,505,103. LOADING MACHINE. THOMAS SPENCER MILLER, South Orange, N. J. Filed Dec. 15, 1922. Serial No. 607,044. 10 Claims. (Cl. 212—5.)

1. Logging apparatus, comprising a portable platform, loading machinery carried thereby, means for supporting said platform comprising adjustable means, and means pivotally attached to the platform for holding the platform in adjustable position independent of said adjustable means.

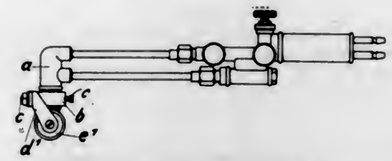


1,505,104. ELECTROCHEMICAL PROCESS OF TREATING LIQUIDS. FRANK N. MOERK, Philadelphia, Pa. Filed Mar. 23, 1923. Serial No. 627,036. 48 Claims. (Cl. 204—25.)

1. The method of treating liquid, as sewage, water, etc., which comprises introducing into the liquid a reagent producing with a content of the liquid, a precipitate, thereafter electrically treating the liquid in the

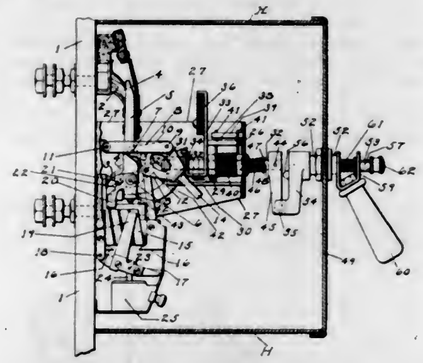
presence of said precipitate, and thereafter clarifying said liquid by sedimentation.

1,505,105. MULTIOFFICE TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1920. Serial No. 397,322. 19 Claims. (Cl. 179—27.)



1. In a telephone system, automatic and manual exchanges, a plurality of register sets at the manual exchange accessible to calling automatic subscribers for registering called telephone numbers, an indicating device common to said register sets for showing registered numbers to an operator, a consecution controller for switching registered calls on to said indicating device one at a time, and means in said controller for testing said register sets for registered calls in regular order without regard to the order in which they are taken for use, said means including circuit arrangements such that the controller always begins testing with a particular register set whenever testing is resumed after an interval during which no registered calls are waiting.

1,505,106. BURNER FOR THE AUTOGENOUS CUTTING OF METALS. HANS WILHELM CHRISTIAN SCHRÖDER, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Finkenberg, Lubeck, Germany. Filed Aug. 18, 1921. Serial No. 493,485. 2 Claims. (Cl. 266—23.)

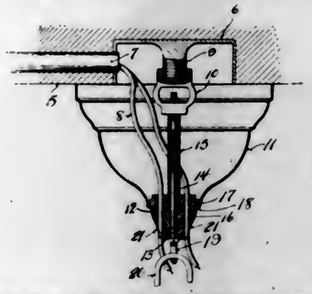


2. In a burner for the autogenous cutting of metals, the combination of a burner head, a guiding carriage con-

nected with said head and comprising two arms provided with L-shaped slots whereby said arms are capable of

being rocked up and down and moved in the direction of the transverse axis of the carriage relatively to said burner head and guiding rollers journalled on said arms.

1,505,107. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, Pa. Filed Dec. 3, 1920. Serial No. 427,979. 38 Claims. (Cl. 200—107.)

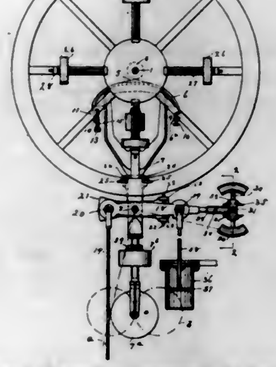


1. The combination with an automatic circuit breaker comprising a movable contact member, an operating member therefor, and automatic tripping mechanism, of an actuating member detached from said operating member adapted to engage and actuate said operating member to reset said circuit breaker, manually operable means for tripping said circuit breaker, a housing enclosing the aforesaid structure, and means within said housing and detached from and positioned for actuating said actuating member and said manually operable tripping means operable from the exterior of said housing and movable with a wall thereof to and from operative position.

37. Automatic circuit breaker mechanism comprising a movable switch member, means for restraining it in normal position, and automatic tripping mechanism, of an actuator detached from said switch member and adapted to reset it, a tripping member separate from said actuator disposed in detached relation with respect to said restraining means, and means for actuating said tripping member and for actuating said actuator independently of said tripping member.

1,505,108. ELECTRIC-FIXTURE HANGER. PETER W. SPRECHER, Milwaukee, Wis. Filed Oct. 30, 1922. Serial No. 597,838. 1 Claim. (Cl. 240—85.)

In an electric fixture the combination of a supporting hickey having a threaded lower aperture, a canopy, an insulating block located within said canopy at its lower end, a screw passing through the lower portion of said canopy and through said insulating block and threaded through the aperture in said hickey, a spacing sleeve positioned within said hickey and said insulating block and adapted to force said insulating block into intimate engagement with the inner portion of said canopy when said screw is tightened, said canopy and said block having

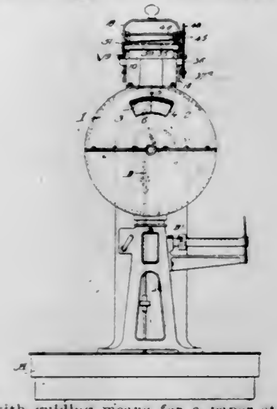


aligning apertures through which electric leads may be passed, and a supporting ring extending through apertures in said canopy into said insulating block.

1,505,109. PROCESS FOR ELECTRODEPOSITING LEAD UPON IRON. BERTRAND S. SUMMERS, Port Huron, Mich. Filed Feb. 23, 1923. Serial No. 620,825. 8 Claims. (Cl. 204—1.)

1. A process of electro-plating lead on iron which consists in forming a solution of lead, immersing the iron to be treated therein, immersing aluminum anodes therein and connecting the anodes and the iron cathodes with a suitable source of direct current.

1,505,110. WEIGHING MECHANISM. CARL GUSTAV VON POST, Stockholm, Sweden; Anna von Post, executrix of said Carl Gustav von Post, deceased, assignor to Aktiebolaget Original-Odhner, Gottenborg, Sweden, a Corporation of Sweden. Filed Sept. 28, 1921. Serial No. 503,949. 10 Claims. (Cl. 265—62.)

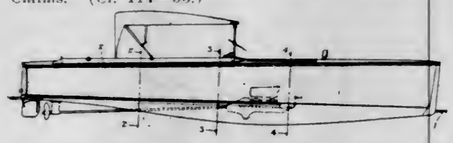


1. A weighing mechanism comprising an indicator having a shaft, straps extending in opposite directions with relation to said shaft, an arm having a member provided with a surface upon which said straps operate, said surface being substantially flat at the mid-portion and similarly curved outwardly on opposite sides of said mid-portion, and means to rock said arm.

1,505,111. RECORDING WEIGHING SCALE. GUSTAF VON POST, New York, N. Y.; Anna von Post, executrix of said Gustaf von Post, deceased, assignor to Aktiebolaget Original-Odhner, Gottenborg, Sweden, a Corporation of Sweden. Filed May 27, 1921. Serial No. 473,005. 22 Claims. (Cl. 234—1.)

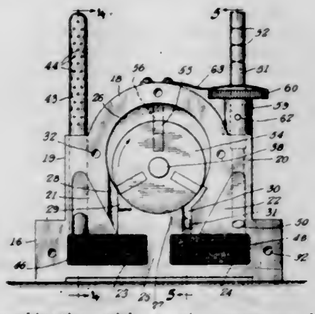
1. Recording mechanism for weighing scales comprising in combination number wheels adapted to be set

corresponding to the weight of goods to be recorded, and means including a lever to operate said wheels and



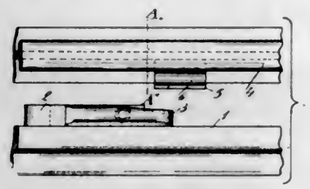
provided with guiding means for a paper strip and with means to impress the strip against said wheels to record their numbers upon the strip.

1,505,112. APPLYING PROTECTIVE COATINGS. JOSEF VON VASS, Budapest, Hungary. Filed Oct. 14, 1920. Serial No. 417,029. 10 Claims. (Cl. 91—70.)



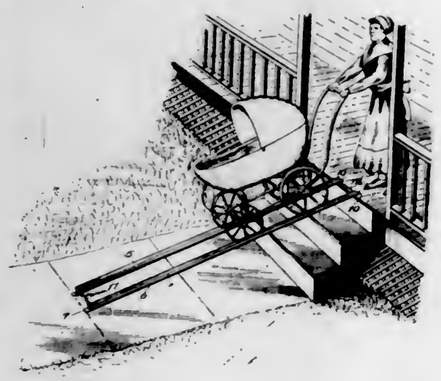
1. The method of waterproofing surfaces which consists in spraying onto the surface to be protected a mixture of plastic bituminous material and solid granular material so as to force said mixture into the surface interstices.

1,505,113. MOTOR BOAT. HUGH MILTON WARNOCK, Penetanguishene, Ontario, Canada, assignor to Gidley Boat Company, Limited, Penetanguishene, Ontario, Canada. Filed Oct. 30, 1922. Serial No. 597,993. 3 Claims. (Cl. 114—56.)



1. A motor boat having a bottom sloping downwardly from bow and stern to amidship and convexedly curved in cross section in the forward portion, said bottom presenting plane surfaces at the after end sloping slightly downward from the water line to keel.

1,505,114. AIR COMPRESSOR. CHARLES WEBER, Newark, N. J., assignor to Weber Pearl Bath Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 19, 1923. Serial No. 633,063. 8 Claims. (Cl. 230—30.)

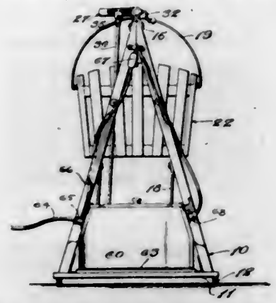


1. In combination with an air compressor having an outlet tube containing a lateral port, of a rotatable sleeve on said tube having plurality of unequal perforations each selectively registerable with said port to adjustably vent the tube.

1,505,115. SIGNALING DEVICE FOR RAILWAY SWITCHES. HUGO WESTESON, Vasteryik, Sweden. Filed Feb. 29, 1924. Serial No. 695,953. 2 Claims. (Cl. 246—210.)

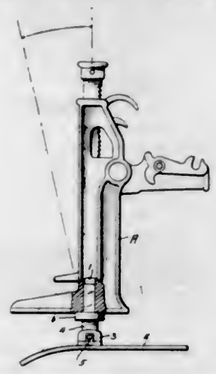
1. In a signaling device for railway switches, the combination with a switch tongue and the adjacent rail toward which said tongue moves when the switch is closed, a yieldably supported movable member carried by said tongue between the latter and said rail and arranged to be actuated by the wheels of cars entering from a track not switched in, and a detonating cartridge supported on the rail between the latter and the switch tongue and disposed below the path of the said member in its movement with said tongue.

1,505,116. CARRIAGE TRACK. EDWARD C. WIEBE, Aberdeen, Idaho. Filed Apr. 26, 1923. Serial No. 634,888. 2 Claims. (Cl. 238—10.)



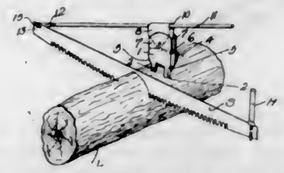
1. A runway for baby-carriages embodying a pair of tracks disposed in spaced relation to permit the walking of a person between the same, telescopic rods adjustably connecting the tracks together at their upper and lower ends, and oppositely pitched angularly extending supporting feet formed on the terminals of the tracks.

1,505,117. ELECTRICALLY-OPERATED SWING. LAWRENCE OTTO WITHEN, Capac, Mich. Filed Mar. 29, 1923. Serial No. 628,569. 1 Claim. (Cl. 155—59.)



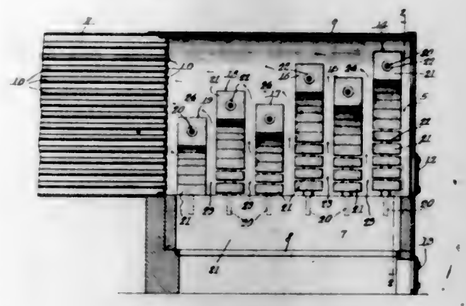
A swing comprising a base, a pair of upstanding straddled legs at each end of the base, a bracket for each pair of legs uniting their upper ends and constituting a bearing, a shaft mounted to oscillate in said bearings, arms extending from said shaft, a rocking member suspended at the free ends of said arms, and means actuated from a source of power adapted to oscillate said shaft; said means including a lever on said shaft, a slide on said

lever, an endless screw in said lever engaging with said slide, a crank handle on said screw for adjusting the position of the slide on the lever, and an actuating rod



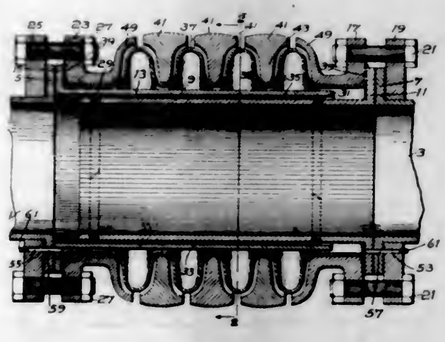
pivoted on said slide, an electric motor on said base, and suitable connection between said motor and said actuating rod.

1,505,118. LIFTING JACK. ROBERT F. WOOD and WILLIAM H. MCCARTHY, Mahanoy Plane, Pa. Filed Sept. 15, 1923. Serial No. 662,846. 1 Claim. (Cl. 254—1.)



In combination with a jack provided with a socket in its lower end, a foot, an elongated plate having one end portion disposed on a curvature in a direction away from the jack when the foot and jack are assembled, a pair of transversely spaced ears carried by the plate inwardly of but in close proximity to the curved portion thereof, a pin having one end portion extending between the ears and pivotally engaged therewith, said pin being insertible within the socket in the lower end portion of the jack, said pin intermediate its ends being provided with an outstanding flange to limit the insertion of the jack.

1,505,119. SAW GUIDE. RICHARD A. ZIMMERMAN, Spokane, Wash. Filed Apr. 16, 1923. Serial No. 632,561. 3 Claims. (Cl. 143—163.)

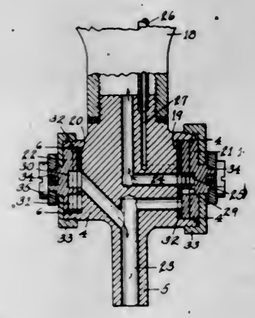


1. The combination with a base member of a pivoted head supported to oscillate thereon, a rod slidable in said head, a manually operated reciprocable saw, and a pivotal connection between said saw and rod.

1,505,120. HEAT ABSORBING AND RADIATING APPARATUS. NICHOLAS J. ZUZULIN, Minot, N. Dak. Filed Jan. 22, 1924. Serial No. 687,882. 3 Claims. (Cl. 110—92.)

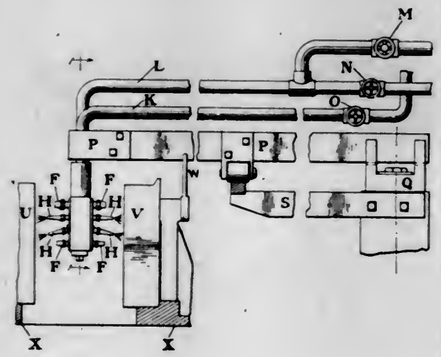
1. A furnace including a combustion chamber and a fire box at the bottom thereof, and a plurality of upstanding arches arranged within the combustion chamber and longitudinally spaced therein providing upwardly discharging passages for the combustible gases, the tops of the arches being arranged in staggered relation affording combustion pockets in communication with said passages, said combustion pockets being arranged at different elevations, each arch embodying an inverted U shaped rod, and a plurality of earthen blocks strung upon the arch and held thereon in spaced relation.

1,505,121. EXPANSION JOINT. HAMILTON ALLPORT, Reading, Mass. Filed June 6, 1921. Serial No. 475,264. 16 Claims. (Cl. 285—90.)



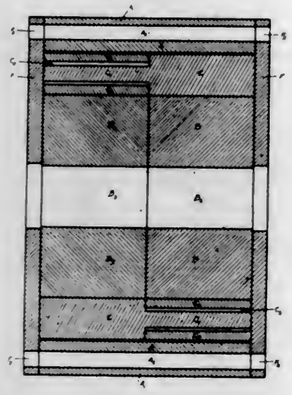
3. In an expansion joint, the combination of a pair of pipes of a pipe line, an expansible bellows having ends secured to said pipes, a pair of telescoping sleeves secured to said pipes respectively, said bellows being expansible and said sleeves having telescoping relative movement on expansion of the pipe line, and widely spaced rings between said sleeves for stiffening and guiding the same in their telescoping movement.

1,505,122. LIQUID-DISPENSING DEVICE. HENRY A. ALLWARDT, Battle Creek, Mich. Filed Dec. 5, 1922. Serial No. 605,064. 2 Claims. (Cl. 225—26.)



1. In a dispensing device of the class described, the combination with a water receptacle and a syrup measuring receptacle, of a valve body having oppositely facing

water and syrup valve seats, water and syrup inlet passages open to said water and syrup valve seats, water and syrup receptacle passages communicating with the bottoms thereof and open to said water and syrup valve seats, a discharge passage open to both of said valve seats, a vent tube projecting upwardly within said water receptacle and opening at the top thereof, said valve body having a vent tube passage open to said water valve seat, and a vent discharge passage open to said

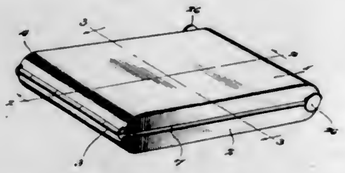


water valve seat, rotary disk valves having groove-like ports in their faces adapted when in one position to connect the said receptacle passages with the said inlet passages and when in another position to connect the receptacle passages with the discharge passage, the water valve having an independent port adapted to connect the vent tube passage with the vent discharge passage prior to the connection of the water receptacle passage with the water discharge passage, and an operating means common to both of said valves.

1,505,123. MOLD CLEANING, HEATING, AND LAMP-BLACKING DEVICE. ALEX ANDERSON, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Sept. 7, 1923. Serial No. 661,378. 2 Claims. (Cl. 22—88.)

1. In a combined lampblack burner, cleaner and heater, a passage for the admission of lampblacking depositing gas, a separate chamber for the admission of heating and cleaning gases, burners for the heating and cleaning gases, separate burners for the lamp-blacking gas.

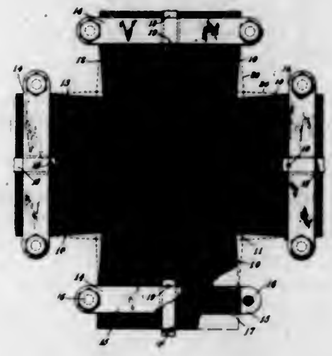
1,505,124. DIFFERENTIAL. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,333. 15 Claims. (Cl. 74—7.)



1. In a differential: a driving member; a driven member; and a plurality of locking rollers between the driving member and the driven member, the said locking rollers being arranged in contact with each other.

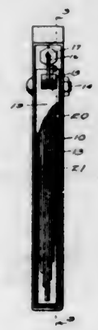
1,505,125. BELT CLASP. CLIFFORD G. ARMSTRONG, Meriden, Conn., assignor to The C. G. Armstrong Manufacturing Company, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 25, 1924. Serial No. 694,895. 3 Claims. (Cl. 24—191.)

1. In a belt clasp or buckle, a front plate, lateral flanges on the plate, a pintle supported by the flanges, a semisleeve mounted for oscillatory movement upon the pintle, an inclined operating lever integral with one edge of the sleeve, a cam integral with the opposite edge of the sleeve and adjacent the front plate, and a spring on the pintle engaging the cam.



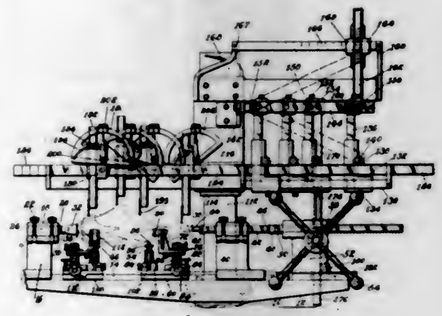
1,505,126. DEVICE FOR MAKING AND CARRYING CIGARETTES. JOHN ATKINSON, Minnedosa, Manitoba, Canada. Filed Feb. 3, 1923. Serial No. 616,727. 4 Claims. (Cl. 131—5.)

1. A device for the purpose set forth comprising a frame member provided at one end in its upper edges with notches, a fixed table carried by said frame member and spaced from the notched end of the same, an apron secured to the end of the table and extending over the same and secured to the end of the frame member to form a pocket between the same and the adjacent end of



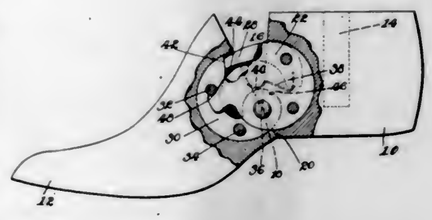
the table, a pin normally seating in the notches in the frame member and adapted to travel along the said member, and a roller loosely mounted on said pin to engage the apron whereby travel of the roller along the frame member will cause the pocket of the apron to roll along the apron and the table.

1,505,127. WOVEN-FABRIC TEST PIECE AND METHOD OF TESTING WOVEN FABRIC. HIRAM D. AYRES, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1920. Serial No. 357,315. 7 Claims. (Cl. 73—51.)



1. A woven-fabric test-piece in the form of a cross with free ends, having the transverse threads withdrawn from its arms adjacent to the central quadrilateral.

1,505,128. AUTOMOBILE SIGNAL. EMIL BERN, Des Moines, Iowa. Filed Jan. 22, 1923. Serial No. 614,328. 1 Claim. (Cl. 116—41.)

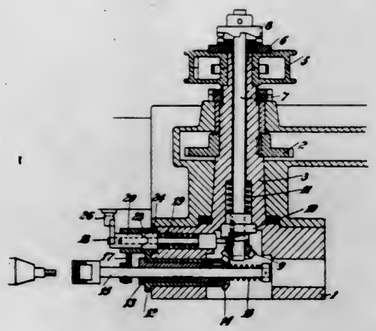


In a device of the class described, a casing member adapted to be fixed to a vehicle, a swinging casing pivoted at its upper end to the fixed casing, and a number of indicator elements pivotally mounted within the swinging casing and adapted to swing downwardly below the swinging casing when said swinging casing is moved outwardly and upwardly, the pivot of the indicator elements being spaced below the pivot of the swinging casing.

1,505,129. LAST-BLOCK-CENTERING MACHINE. STANLEY E. BOYNTON, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Dec. 13, 1920. Serial No. 430,242. 28 Claims. (Cl. 33—3.)

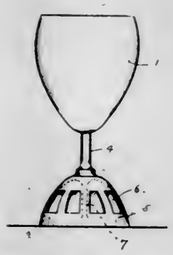
1. A centering machine having dogs for engaging the work, and an alternate set of dogs for engaging the model, the dog supporting means being constructed and arranged to hold the model dogs within the positions occupied by the work dogs, to provide for adequate stubs on the work.

1,505,130. LAST. STANLEY E. BOYNTON, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed June 25, 1921. Serial No. 480,472. 16 Claims. (Cl. 12—136.)



1. A last comprising a forepart and a heel part arranged for relative collapsing movement, and a locking member positively holding the parts against such movement and mounted in one of the said last parts, the other last part being constructed and arranged to engage the locking member when it is moved from operative position to hold it in inoperative position, and to free it again by virtue of the relative movement between the locking member and the said other last part consequent on the collapse of the last.

1,505,131. AUTOMATIC TURRET LATHE. THEODOR EUGEN BUSCHMANN, Chemnitz-Kappel, Germany. Filed Mar. 11, 1921. Serial No. 451,649. 5 Claims. (Cl. 29—40.)



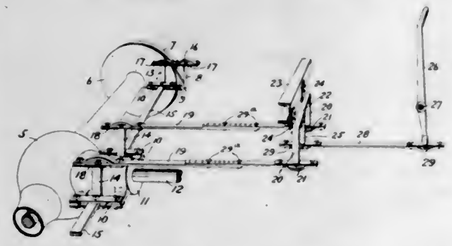
1. The combination with an intermittently rotatable tool carrier, of axially movable rotatable tools on said carrier, tool driving means on the carrier, a cam-faced coupling member in operative connection with said driv-

ing means and said tool, spring-actuated coupling operating means on the carrier, means on said tools engageable

with said coupling operating means, and relatively stationary operating tappets in the circular path of movement of the coupling operating means.

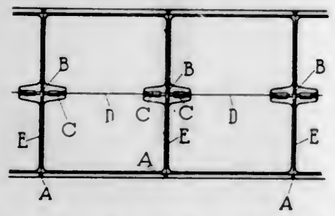
1,505,132. CUP. PETER DELICH, Nopeming, Minn. Filed Nov. 12, 1923. Serial No. 674,393. 1 Claim. (Cl. 65—22.)

A receptacle of the type described comprising a principal body portion and a separable cap therefor, said cap and body portion when united being substantially egg shaped and hollow, a pedestal for said body portion screw threadedly unitable to the lower end thereof either externally or internally, the hollow base of said pedestal being somewhat similar in shape to the interior of the body portion and snugly fitting therein below the line of separation between the body portion and the cap, and a diametrically disposed web transverse the hollow base portion and formed integral therewith for the purpose described.



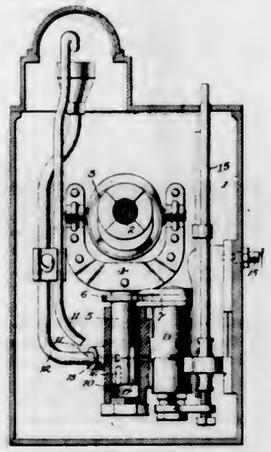
1,505,133. COMBINED MATCH HOLDER AND CIGARETTE CONTAINER. WILLIAM ROBERTS DERBY, Augusta, Ga. Filed Feb. 27, 1924. Serial No. 695,508. 5 Claims. (Cl. 206—48.)

1. In combination with a cigarette packet, a match holder comprising an attaching plate having stems integrally formed therewith, said match stems having heads applied thereto, the attaching plate bein gpasted to the packet, and a covering for the match stems and heads thereof, said covering completely surrounding the match stems and heads and consisting of paper treated so as to be impervious to moisture and so as to insulate the matches and the heads thereof from the cigarettes to pre-



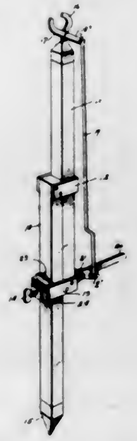
vent the substances of the matches from penetrating to the cigarettes and impairing the flavor or quality or otherwise affecting the same.

1,505,134. BRAKE MECHANISM FOR AUTOMOBILES. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed May 17, 1922. Serial No. 561,594. 5 Claims. (Cl. 188—2.)



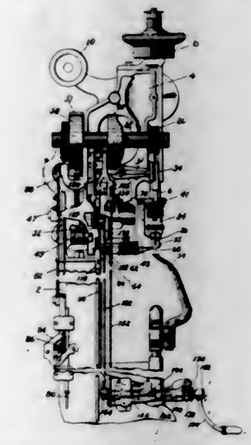
2. Brake mechanism for vehicles comprising a braking device, a brake actuating lever, means adapted to afford a connection between said brake and lever, and flexible means adapted to support and connect said first mentioned means to said brake and lever.

1,505,135. AIRSHIP. LUDWIG DÜRR, Friedrichshafen, Germany, assignor to the Firm: Luftschiffbau Zeppelin, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,539. 3 Claims. (Cl. 244—3.)



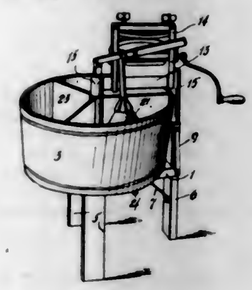
1. In a rigid airship in combination, a rigid tubular frame, a plurality of gas cells surrounded by said frame, bracing wires between two gas cells meeting substantially in the centre line of said frame, a tension member extending longitudinally through said frame and said cells and fixed to said bracing wires and short axially extending sleeves connected with the cell walls traversed by said tension member and loosely but closely fitting around said member.

1,505,136. LUBRICATOR. JOHN ERICKSON, Madison, Wis., assignor to Madison-Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Jan. 4, 1923. Serial No. 610,618. 3 Claims. (Cl. 184—27.)



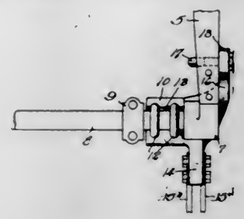
3. In a force feed lubricator, the combination of a cylinder having an intake and an exhaust opening; a piston mounted in the cylinder; means serving to reciprocate the piston and likewise to oscillate the same about its axis; and an exhaust and an intake port formed in the piston, cooperating with the openings aforesaid, the intake port being so arranged with reference to the intake opening as that the intake port and its opening will not register during the initial suction movement of the piston, and immediately after the exhaust port is closed.

1,505,137. CLOTHESLINE SUPPORT. CHARLES A. GEE, Elmira, N. Y., assignor of one-half to Ethel A. Jones, Elmira, N. Y. Filed July 23, 1923. Serial No. 653,285. 1 Claim. (Cl. 68—12).



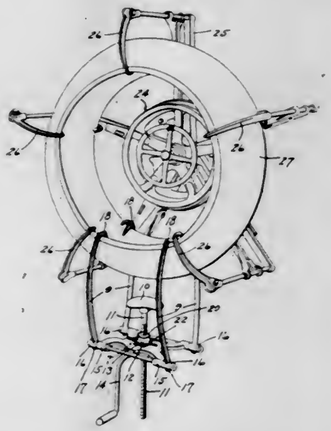
A clothes line support of the character described comprising two sections having sliding engagement with each other, means for holding the sections in any longitudinally adjusted position, a fixed jaw mounted upon the upper end of the uppermost section, a pivoted jaw coacting with the first named jaw and having an extension or handle, a rod pivoted to the handle and extending downward along the second named section, and a lever pivoted to the lower end of the second named section and operatively connected to said rod whereby the jaws may be closed.

1,505,138. MACHINE FOR INSERTING FASTENINGS. JOSEPH GOULDBOURN, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 18, 1920. Serial No. 389,869. 16 Claims. (Cl. 1—26.)



1. In a machine of the class described, means for inserting screw-threaded fastenings comprising a rotary spindle for screwing the fastenings into the work, means for feeding the work past the spindle to cause a row of fastenings to be inserted in the work, means adapted to be actuated by the operator during operation of the machine on a piece of work to vary the normal feed of the work from one range to another, and means carried by the machine for determining the ranges of feeding movement of the work.

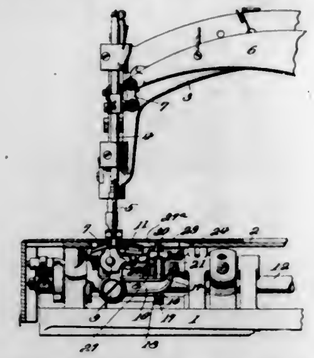
1,505,139. WASHING MACHINE. GEORGE W. GRISWOLD, Dallas, Tex., assignor of one-half to Henry I. Warden, Dallas, Tex. Filed Aug. 24, 1921. Serial No. 495,002. 1 Claim. (Cl. 68—19.)



In combination with a frame having a central vertical post and a side vertical post spaced from the central post, a tub having a central vertical socket rotatably receiving the central post so as to be supported by the latter on the frame in spaced relation to the side post, a cross bar having depending sockets engaged over the upper ends of the posts, clothes engaging means, means to actuate said means, and means to pivotally connect the actuating means to the cross bar.

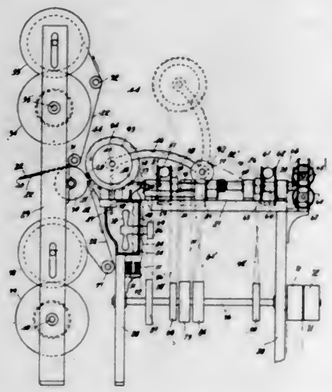
1,505,140. BUMPER. JOHN D. HALE, Chicago, Ill., assignor to Stafford Sales Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1923. Serial No. 661,929. 8 Claims. (Cl. 293—55.)

1. A bumper attaching bracket comprising a tridentate structure one of the arms thereof being provided with a recess radial from the juncture of the arms, a second arm of said structure extending upwardly from the juncture of the arms, and a third arm formed with a recess in a vertical face to receive an adjacent portion of a bumper.



1,505,141. COMBINED TIRE-CASING TURNER AND WORK SUPPORT. PAUL E. HAWKINSON, Minneapolis, Minn., assignor to Kehawke Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 1, 1923. Serial No. 616,284. 8 Claims. (Cl. 154—9.)

8. A device of the kind described comprising a body, a pair of parallel rock shafts journaled on the body, a pair of grapple arms on each rock shaft and having hook-equipped outer ends for engagement with a tire casing to support said body therefrom, an endwise movable shaft mounted in the body and having a head for engagement with the tread of the tire casing, and means for projecting the shaft to turn a section of the tire casing inside out.

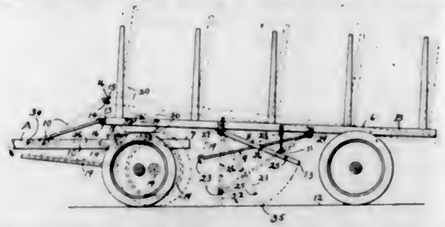


1,505,142. ROTARY TAKE-UP FOR SEWING MACHINES. JESSE J. HEAP, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1919. Serial No. 289,218. 9 Claims. (Cl. 112—248.)

1. A rotary take-up for sewing machines including a rotating shaft, a single take-up cam carried thereby and having a concentric portion formed with a segmental groove lying at the periphery of said concentric portion, said take-up cam having a smaller concentric portion and eccentric portions, the bottom of said segmental groove

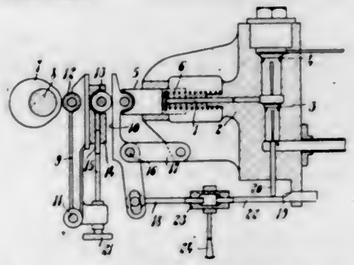
being flush with the periphery of the smaller concentric portion and the eccentric portion adjacent the ends of said concentric portion having said segmental groove.

1,505,143. METHOD OF AND MACHINE FOR MAKING RUG STRIPS. FREDERICK J. HENRY, Taunton, Mass. Filed June 9, 1923. Serial No. 644,479. 14 Claims. (Cl. 117—54.)



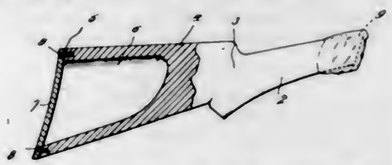
6. A machine for making rug strips comprising means for guiding a laminated strip composed of sections forming a pieced rug strip, and a pair of tapes between which the sections are interposed, means for separating the tapes from the pierced strip and winding up the tapes, feeding means acting on the portion of the pieced strip emerging from between the tapes, means for applying a longitudinally extending connecting thread to the strip, a tubular rotating twister arranged to receive the strip and the connecting thread, and provided with means for engaging the strip to twist the latter, and means carried by the twister for helically coiling a securing thread around the central portion of the strip and around the connecting cord.

1,505,144. LIFT FOR TWO-WHEELED TRAILER VEHICLES. FRED S. HERBERT and HERMAN J. MOONEY, Colorado Springs, Colo. Filed Apr. 5, 1920. Serial No. 371,513. 2 Claims. (Cl. 280—33.1.)



1. In the combination of an automotive tractor and a two-wheeled trailer detachably secured to said tractor, and having upright and pivoted leg supports to sustain

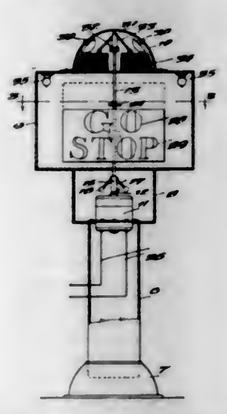
the front end of said trailer when the tractor is removed therefrom, and having means on the underside near the front end of the frmae of the trailer for pivotally connecting it with the top of the rear part of the frame of said tractor, which means comprises a downwardly extending king-pin secured rigidly to the under side of the frame of said trailer and a socket hole in a metal plate on the top of the frame of said tractor provided to receive said king-pin and a locking element 18 slidably



mounted in said plate and provided to lock said king-bolt therein; the combination of the supplemental guide brace 10, comprising a yoke-shaped brace pivotally secured at its spread front lower ends to the side frames of said tractor and pivotally and detachably secured at its upper rear end to the front end of the trailer frame, and provided to guide said king-pin into said socket hole and to sustain part of the strain that would otherwise come on said king-pin in operating said trailer.

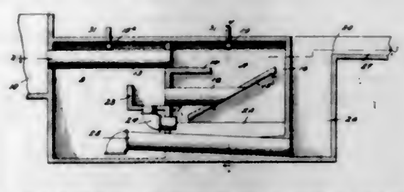
1,505,145. INTERNAL-COMBUSTION ENGINE. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed July 28, 1922. Serial No. 578,252. 5 Claims. (Cl. 123—140.)

1. In an internal combustion engine having a fuel supply pump with its plunger, the combination of means comprising a lever system for operating said plunger, said means being adjustable so as to permit variation of the relative speed of operation of the plunger without materially affecting the relative moment of beginning of the injection, with means to cut off the injection after the piston has completed a predetermined part of its discharge stroke.



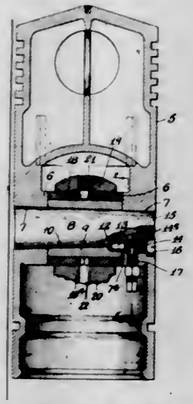
1,505,146. GUNSTOCK. LEO HOLUB, Hartshorne, Okla. Filed Jan. 24, 1924. Serial No. 688,228. 3 Claims. (Cl. 42—71.)

1. A method of making gun stocks consisting in casting a gun stock of metal having the butt portion and a part of the grip portion in a substantially finished condition, applying a butt plate to the end of the butt portion of the stock, and providing the end of the grip portion with surplus material adapted for removal in fitting the stock with a gun breech whereby an accurate fit may be obtained.



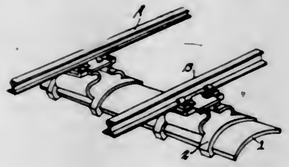
3. As an article of manufacture, a gun stock comprising an integral metallic casting formed with a partially finished grip portion merging into a finished hollow butt, the end of the grip portion being provided with surplus material adapted for removal in finishing said grip portion to accurately receive and fit the breech portion of a gun to which it is applied, and a butt plate secured to the end of the butt portion.

1,505,147. SIGNAL. JOHN F. HURD, Watseka, Ill.; Laura E. Hurd administrator of said John F. Hurd, deceased. Filed Aug. 21, 1923. Serial No. 658,611. 10 Claims. (Cl. 246—126.)



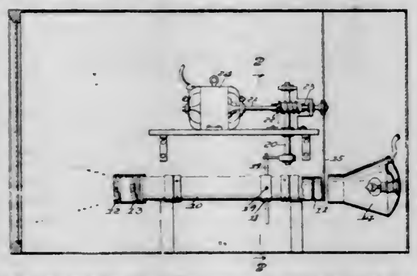
2. A signal of the character described, comprising a movable driving member, a movable driven member, a signal operated by the driven member, and a centrifugal clutch operated by the driving member, said clutch automatically connecting the driving and driven members to actuate the latter by the former when the former is operated and automatically release said driven member when the driving member is stopped.

1,505,148. SEWAGE SEPARATOR. JONATHAN KINDLE, Pitman, N. J. Filed May 22, 1922. Serial No. 562,779. 21 Claims. (Cl. 210—51.)



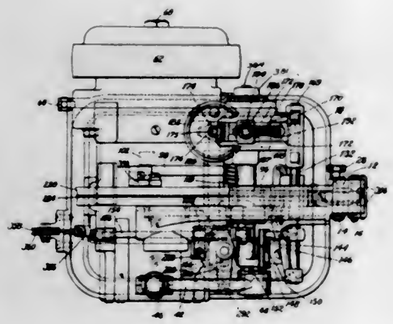
1. In a separator, in combination, a chamber having an inlet, a baffle arranged in said chamber above the bottom thereof and below said inlet, a conduit arranged in said chamber above the bottom thereof and extending through said baffle for conducting fluid from said chamber, the intake end of said conduit being arranged horizontally beneath said baffle, means for receiving the liquid discharged from said conduit, said receiving means being provided with an outlet positioned to maintain the desired depth of liquid in said chamber, and means for conducting away oil collecting on the surface of the liquid in said chamber.

1,505,149. WRIST-PIN CONSTRUCTION. CARL H. KNUDSEN, Brooklyn, N. Y., assignor to The Knudsen Motor Corporation, Wilmington, Del., a Corporation of Delawnre. Filed July 1, 1922. Serial No. 572,264. 12 Claims. (Cl. 74—108.)



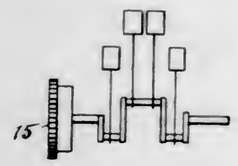
1. A wrist-pin construction for pistons having tapered bosses comprising a tapered wrist-pin adapted to snugly fit the bores of said bosses, a sleeve mounted on and fixed to said wrist-pin and the bore of which is tapered to correspond with the taper thereof.

1,505,150. METALLIC RAILWAY TIE. NICHOLAS P. KOSTECK, Hayden Lake, Idaho. Filed Nov. 10, 1923. Serial No. 673,881. 3 Claims. (Cl. 238—272.)



1. The combination with an arched concavo-convex metallic tie, of a saddle plate thereon having spaced arms encircling said tie, vertically disposed supporting plates above said saddle and horizontally disposed oppositely extending chair plates integral with said supporting plates, a chair seat on said supporting plates and means on the chair plates to prevent lateral movement of said seat, and means on said seat for fastening a rail thereto.

1,505,151. ADVERTISING DEVICE. FRED W. KUNSCHMAN, New York, N. Y. Filed Feb. 14, 1923. Serial No. 618,998. 2 Claims. (Cl. 88—24.)

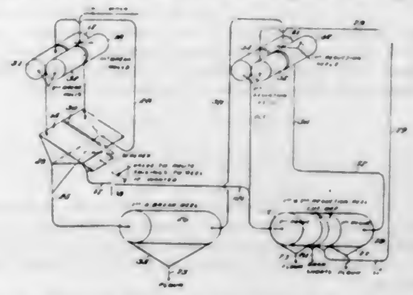


1. An apparatus for the purpose indicated having a revoluble barrel and means for directing a shaft of light therethrough, and a kaleidoscopic chamber arranged in and carried by said barrel in the path of the shaft of light passing therethrough, and means for imparting a step by step rotary movement to the barrel, in combination with means for periodically intercepting the shaft of light.

1,505,152. FASTENER-ATTACHING MACHINE. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Oct. 15, 1920. Serial No. 417,128. 97 Claims. (Cl. 218—10.)

1. In a fastener-attaching machine, a movable attaching member, a fastener-holder movable to deliver fasteners directly into the path of the attaching member, and means for causing the separation of the fasteners and holder.

1,505,153. STARTER FOR INTERNAL-COMBUSTION ENGINES. BENNETT M. LEECE, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 11, 1917. Serial No. 196,059. 6 Claims. (Cl. 290—38.)



2. In a starter for internal combustion engines, an electric motor having an armature and a field winding, a power transmitting mechanism for connecting the motor to the engine and including a pair of power transmitting elements, one adapted to be moved into and out of engagement with the other, a magnet for shifting said movable power transmitting element, said magnet having a winding which for the full time that it and the motor are energized is in series with the armature and in parallel with the field winding circuit of the motor.

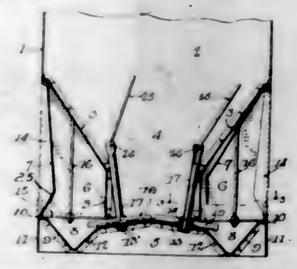
1,505,154. ROLLER GRINDING MILL. LECIUS FREEMAN LITTLE and MARK J. MAYHEW, Owensboro, Ky. Filed June 15, 1922. Serial No. 567,971. 10 Claims. (Cl. 83—12.)

1. In a mill of the class described, the combination of a casing having a roll section and a centrifugal section, a plurality of pairs of coaxially extending break rolls in said roll section, a scalper for receiving the stock as it issues from said rolls, a break reel in said centrifugal

section, means for conveying the throughs from said scalper to said reel, means for returning the overtails from said scalper to one pair of said rolls, a plurality of

pairs of reduction rolls below said break rolls, and means for conveying the material from said reel to said reduction rolls.

1,505,155. BELL. ARTHUR R. MACKENZIE and FREDERICK W. WATSON, Brooklyn, N. Y. Filed May 19, 1923. Serial No. 640,005. 1 Claim. (Cl. 116—148.)

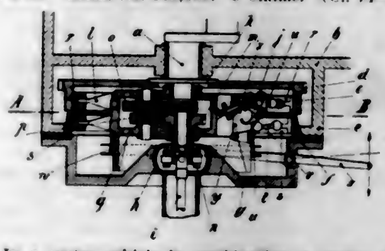


A bell of the class described and a flexible handle therefor, said handle being composed of a doubled cord having a tassel united therewith, the bight of said cord passing through the top of the bell, an open ring connected in the bight of said cord the tongue of said bell being engaged in the ring, and a split sleeve clamped on said cord to retain it in place, said sleeve resting on top of the bell, and holding said ring tightly against the top of the bell.

1,505,156. SCREEN. WILEY M. MANGUM, Purdy, Va. Filed Mar. 17, 1922. Serial No. 544,656. 5 Claims. (Cl. 156—37.)

4. In a screen, the combination with a frame having at its outer side and adjacent its opening an inner screen-supporting surface, blocks projecting from said surface and providing an outer screen-supporting surface spaced from the first-mentioned surface and co-extensive therewith transversely of the frame in its plane, and inner and outer screening spaced from each other secured to said surfaces and projecting beyond the same away from the opening and terminating in edges free from the frame, the outer screening closing the frame opening and the inner screening leaving it open and forming with the outer screening an exit passage from said opening.

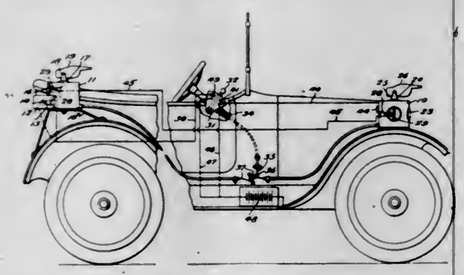
1,505,157. STOCK FEEDER. GEORGE MARKEY, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed July 2, 1921. Serial No. 482,030. 5 Claims. (Cl. 119—54.)



1. The combination of a storage chamber for grain and ground feed, provided with an inclined floor, and a feeding recess, a rotatable feeding wheel on the bottom of said chamber provided with actuating means exteriorly exposed in said recess and an agitator located in the chamber and connected with the wheel, said agitator having an intermediately jointed member adapted to swing to an inclined position with reference to the lower portion.

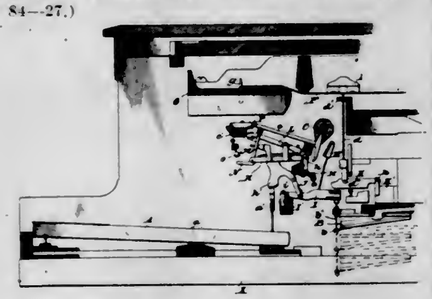
1,505,158. FREQUENCY-CONTROL SYSTEM. DE LOSS K. MARTIN, Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 23, 1921. Serial No. 517,336. 9 Claims. (Cl. 250—2.)

1. A system of distant control which comprises means for transmitting a controlling frequency of small energy, means for amplifying said energy, a synchronous motor responsive to the amplified controlling frequency and a synchronous device operated by the synchronous motor.



1,505,159. DRIVING GEAR FOR MOTOR CARS. KARL MAYBACH, Friedrichshafen, Germany, assignor to the Firm: Maybach Motorenbau Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Sept. 27, 1921. Serial No. 503,668. 5 Claims. (Cl. 74—34.)

1. In a motor vehicle in combination, a motor shaft, a fly wheel on said shaft and a Cardan shaft serving to transmit power, a stationary casing, a coupling rim fixed to said casing, a mechanical change speed gear in said

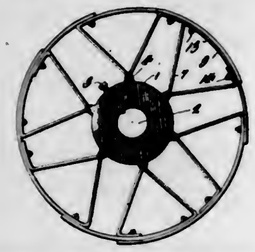


casing comprising planet wheels and a planet wheel carrier incapable of axial displacement, duplicate coupling members attached to said carrier, means for applying either one set of members against said fly wheel or the other set against said rim, and means for alternately carrying said applying means into operative position relatively to one or the other set.

1,505,160. AUTOMOBILE SIGNAL. HARLEY M. MOFFETT, Deshler, Ohio. Filed. Apr. 26, 1921. Serial No. 464,761. 1 Claim. (Cl. 74—39.)

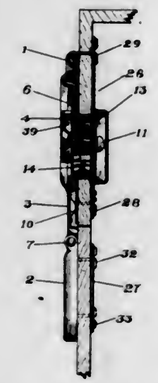
An actuating means for a vehicle signal, the same comprising a casing, means for mounting said casing on an automobile within convenient reach of the operator thereof, a lever pivoted within the casing, a tubular housing connected with the casing and extending downwardly therefrom, a flexible operating element movable within the said housing and connected at one end to said lever intermediate the ends of the latter, said flexible operating element connected at its other end to an arm of a pivoted T-shaped member, a flexible element connected to each of the other arms of the T-shaped member and extending in opposite directions therefrom, a rack bar secured to the outer end of each of the flexible elements last named, guides for said rack bars, vertically extending shafts, pinions on said shafts and in mesh with the teeth of said racks, and a spring within said casing and adapted to retain said lever in neutral position when the lever is returned to such position.

1,505,161. PLAYER GRAND PIANO. MARTIN NICKELS, New York, N. Y., assignor, by mesne assignments, to Welte-Mignon Corporation, New York, N. Y., a Corporation of New York. Filed May 5, 1921, Serial No. 467,180. Renewed Jan. 14, 1924. 3 Claims. (Cl. 84—27.)



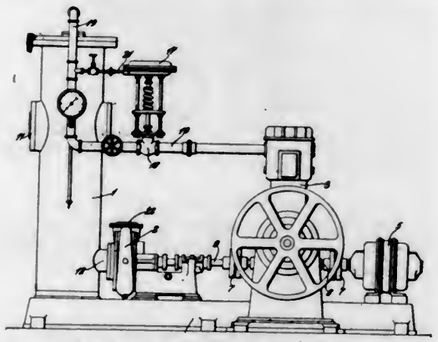
1. In a player grand piano, the combination with a key pivoted between its ends and provided with an element fixed to it at a place rearward of its pivot, a pneumatic rearward of the key and above the plane of the lower surface of the latter and provided with an element to transmit power, a wippen pivoted to a fixed support and contacting with the projection from the key to receive motion therefrom when the piano is being played manually and free to move with relation to said projection when the piano is played under control of a record, a hammer, connections between the hammer and wippen, a back check, a carrying lever therefor, pivoted to a fixed support and arranged above the plane of the upper surface of the key and in a spaced relation to said key, a connection between said carrying lever and the wippen, and an abutment on the power transmitting element in position for directly operating the lever.

1,505,162. VEHICLE OF CONTACT. EUGEN NOWAK, Berlin, Germany. Filed Aug. 29, 1921. Serial No. 496,658. 5 Claims. (Cl. 23—28.)



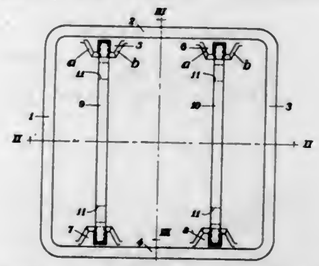
1. The process of producing a catalytic substance, which consists in forming a catalyst diluted by catalytically inert masses, and adding locally to such masses a comparatively small amount of a highly concentrated catalyst.

1,505,163. EXPANSIBLE PULLEY. NELS I. OLSON, Northwood, N. Dak. Filed Nov. 21, 1922. Serial No. 602,396. 4 Claims. (Cl. 64—8.)



1. An expansible pulley comprising a rim formed of a plurality of sections having bodies adapted to slide over one another, each section including a pair of connected spoke members converging toward the center of the pulley, said bodies attached to one spoke member and curved to extend over the other spoke member and means for holding the bodies in adjusted relation in respect to one another.

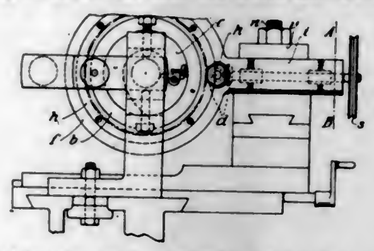
1,505,164. COMBINATION LOCK. ELISÉE PIERRE RAMBAUD, New Orleans, La. Filed May 31, 1922. Serial No. 565,014. 5 Claims. (Cl. 70—55.)



1. A permutation lock comprising in combination, a swingable hasp provided with an integrally formed lock casing, a pin secured to the bottom of the casing, tumblers rotatably mounted on the pin and provided with interengaging lugs for locking the tumblers for differential rotation, the bottom of the casing being provided with slots, lock bolts on the tumbler adjacent the bottom of the casing adapted to be received by said slots and movable through said slots, and a shaft mounted for rotation in line with the pin, a tumbler rigidly connected to the shaft provided with a lug engageable with a lug on the adjacent tumbler on the pin, a cup-shaped knob secured to the shaft and provided with a corrugated side wall, a spring mounted in the knob having a projection adapted to be successively engaged by the corrugations for providing clicks, a spring keeper in the lock casing, the tumblers being provided with notches engageable by the spring keeper when the notches are alined by the differential rotation of the tumblers.

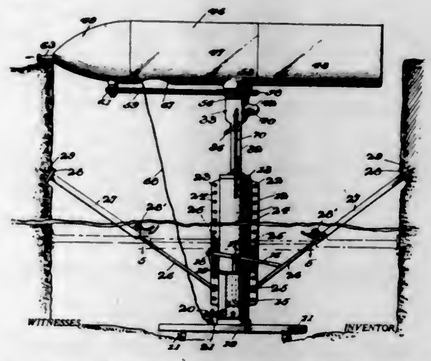
1,505,165. PUMP. WILLIAM H. REEVES, St. Louis, Mo. Filed Nov. 12, 1923. Serial No. 674,230. 19 Claims. (Cl. 103—6.)

1. A pumping unit comprising a driving element, a liquid pump, an air pump, and a worm gear drive having worm and gear shafts connected to said liquid and air pumps and to said driving element.



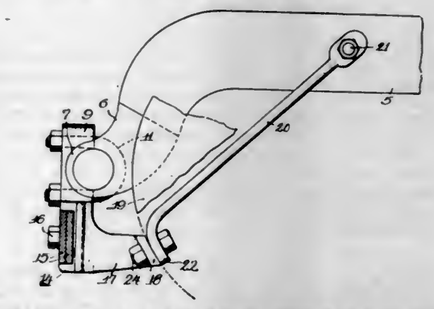
1,505,166. STORAGE-BATTERY JAR. JOHN L. RUPP, Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1922. Serial No. 584,128. 4 Claims. (Cl. 204—29.)

4. A storage battery jar provided with separate plate rests supported on lugs integral with the jar, said rests being spaced from the bottom of the jar and provided with transverse openings to facilitate circulation of electrolyte.



1,505,167. DEVICE FOR EQUALIZING CRANK PIVOTS. WILHELM SCHWEIZER, Basel, Switzerland. Filed Oct. 23, 1922. Serial No. 596,427. 2 Claims. (Cl. 82—9.)

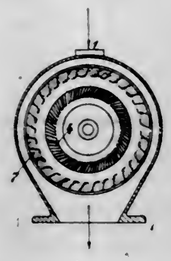
1. A device for equalizing crank pins, comprising, in combination, a crescent-shaped tool holder; a circular carrier having said holder attached to it and having a circular groove on each side; a circular guide member located at one side of said carrier and having a circular ledge engaging the respective groove of the carrier; a ring located at the other side of the said carrier and



being affixed to said guide member and having a circular ledge engaging the respective other groove of the carrier and means for rotating the tool carrier, as set forth.

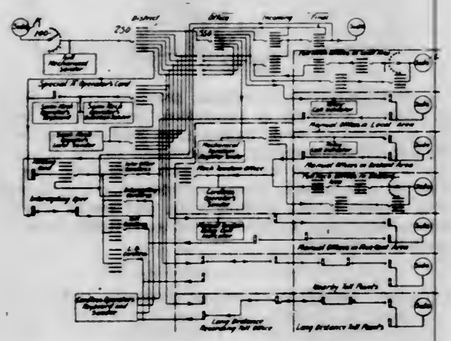
1,505,168. TRENCH-WARFARE DEVICE. CHARLES E. SPARHAWK, Drumbeller, Alberta, Canada. Filed Apr. 5, 1923. Serial No. 630,176. 5 Claims. (Cl. 89—36.)

1. In combination, a running gear adapted to be positioned in a trench or excavation, an elongated housing supported by said running gear, said housing being adapted to accommodate a person and having an opening in its one end through which projectiles may be fired by said person, means for elevating said housing with respect to the running gear, and means whereby said housing may be tilted in either direction with respect to its length.



1,505,169. BUMPER. LEWIS F. STAFFORD, Chicago, Ill., assignor to Stafford Sales Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1923. Serial No. 668,110. 8 Claims. (Cl. 293—55.)

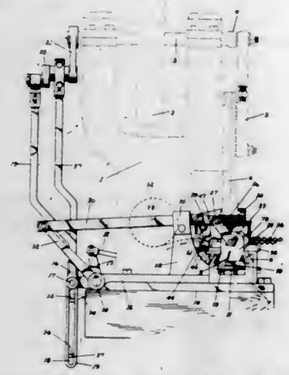
1. A bumper attaching bracket comprising a rectangular plate having a channeled face to receive a portion of a bumper, a vertical block extending above said plate



and having a horizontal recess in its upper portion, and means extending through said block whereby the bracket is secured pendently to a suitable portion of a vehicle.

1,505,170. METHOD OF GRINDING. STEFAN STEINMETZ, Berlin, Germany. Filed Aug. 26, 1921. Serial No. 495,528. 1 Claim. (Cl. 83—42.)

The process of obtaining the nourishing particles in bran, consisting in first separating the bran from the grain in the form of scales or lamellas, secondly cutting these scales or lamellas to bring them into a form other than scales or lamellas, and thereafter grinding the cut lamellas or scales to most finely divided powder.

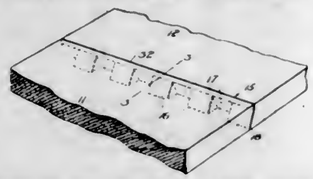


1,505,171. TELEPHONE-EXCHANGE SYSTEM. FRANKLIN A. STEARN, Paterson, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1921. Serial No. 464,242. 46 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a calling subscriber's line, a plurality of called subscribers' lines located in different areas of said exchange, automatic selector switches for extending connections from said calling line, a central office register sending mechanism common to said switches and under the control of said calling subscriber for controlling said switches and effective to cause the complete establishment of connections to called lines in certain of said areas, an operator's position and means effective upon the attempt of the calling subscriber to establish connections with other of said called lines to extend such connections to said operator's position.

1,505,172. RADIATOR-CORE-FORMING MACHINE. ROBERT ROY SWANEY, Sacramento, Calif. Filed June 3, 1922. Serial No. 565,579. 7 Claims. (Cl. 153—15.)

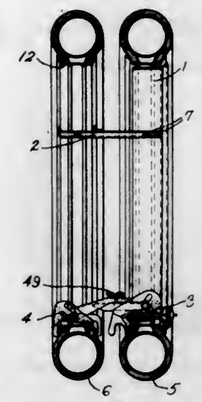
1. In a metal bending machine, a base, a pair of longitudinally alined heads carrying formers thereon both slidably mounted for opposed movement on the base, a disc mounted on the base under the heads, opposed rods



pivotally connected to the disc and to the heads and means for rotating the disc whereby opposed movement is imported to the heads.

1,505,173. WEEDING HOE. FREDERICK TIEMANN, Ordway, Colo. Filed Feb. 3, 1923. Serial No. 616,655. 1 Claim. (Cl. 97—63.)

A hoe blade formed from a strip of metal having an intermediate plane portion provided with a curved cutting edge, the ends of the intermediate portion merging into converging side portions, which have edges curved toward the cutting edge of the intermediate portion, the said side portions merging into socket sections, which abut at their longitudinal edges to form a complete socket for the reception of the handle.

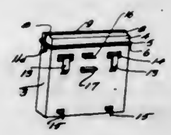


1,505,174. CONCRETE-PAVEMENT CONSTRUCTION. EDWARD K. TRIOL, Seattle, Wash. Filed Feb. 9, 1922. Serial No. 535,258. 6 Claims. (Cl. 94—13.)

1. A broad concrete paving slab having along one side, and at some distance directly below its upper face, alternating projections and recesses with their lateral faces perpendicular to said side and adapted to lie and closely fit in corresponding recesses and projections, respectively, along the margin of a companion slab.

1,505,175. TIRE-CARRIER ATTACHMENT FOR AUTOMOBILE SPARE-TIRE RACKS AND THE LIKE. JOHN C. TURVENE, Dayton, Ohio. Filed Jan. 9, 1922. Serial No. 527,876. 14 Claims. (Cl. 224—29.)

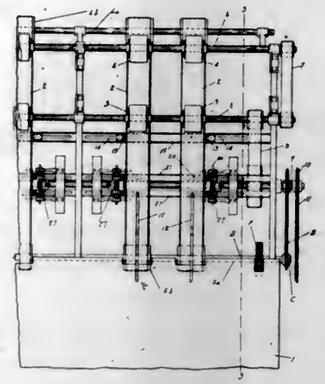
1. In a tire carrier, including in combination with a tire rack, an attachment comprising a support and connected therewith means for securing said attachment to said rack, a lever having a variable pivot center in said support, and an adjustable clamp pivotally connected to



said lever, and adapted upon operation of the lever to be moved into holding engagement with the rim of a tire supported on said rack and in said relation to be interlocked with said lever.

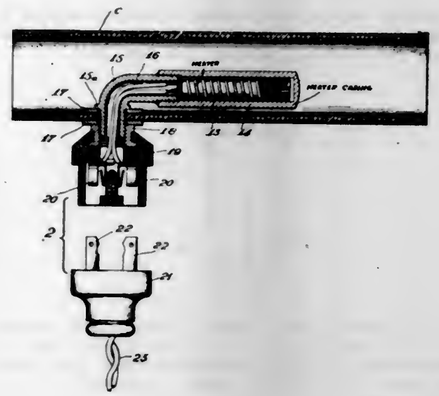
1,505,176. MOLD COATING. STANLEY M. UDALE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Nov. 30, 1923. Serial No. 677,897. 3 Claims. (Cl. 22—187.)

1. A coating for protecting metal molds, consisting of an inert refractory insulating material colloidally subdivided and a small percentage of heat-resisting binder.



1,505,177. FLY-BOOK CASE. GUY VON PRESSENTIN, Spokane, Wash. Filed Apr. 18, 1922. Serial No. 555,082. 1 Claim. (Cl. 43—32.)

The combination with a fly book case having a supporting means and fashioned with a grooved flange around its upper edge, of a lever having angular arms pivoted to the case, a U-shaped bail having trunnions pivoted in said arms, a removable cover having a gasket and flange for co-action with said grooved flange, and perforated spaced ears on the top of said cover whereby the latter is supported on the bail when the cover is removed.

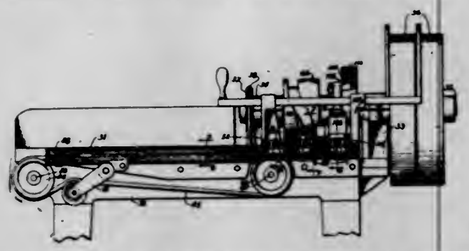


1,505,178. BOX-FOLDING MACHINE. VERNER M. WADE and CHARLES E. ZUSPAN, Fairmont, W. Va. Filed May 16, 1923. Serial No. 639,226. 16 Claims. (Cl. 93—49.)

1. In a machine for folding blanks in the manufacture of containers of paperboard or the like the combination of means for conveying the blanks in extended position with a folding head comprising a pair of brackets, arms pivotally mounted on each of said brackets, a folding frame or arm carried by each set of pivoted arms,

means for arresting progress of one blank at a time in position between said arms, and means for swinging said pivoted arms to swing said folding arms.

1,505,179. HEATER CONDUIT. ROBERT H. WHITELEY, Chicago, Ill., assignor to Edward A. Zimmerman, Chicago, Ill., trustee. Filed Apr. 23, 1923. Serial No. 633,902. 10 Claims. (Cl. 219—38.)

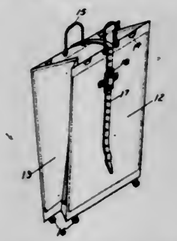


1. In an apparatus of the class described, a section of flexible conduit adapted for insertion in an engine cooling system as a part thereof, and an electric heater located within and supported by said conduit, said conduit serving to protect the heater against direct shocks and to cushion the heater against indirect shocks.

1,505,180. HINGE-FORMING APPARATUS FOR METAL ARTICLES. MAGNUS E. WIDELL, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 30, 1920. Serial No. 407,018. 16 Claims. (Cl. 29—11.)

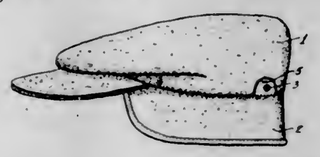
1. In a hinge forming apparatus, the combination of male and female dies for bending hinge-forming elements, and means for feeding the articles to be bent into position between said dies, said feeding means being con-

structed and arranged to engage and propel the next to the most advanced article, the latter being positioned



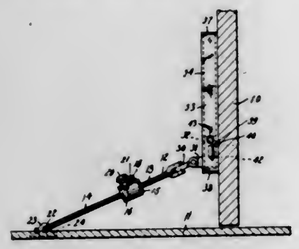
between said dies by said article so engaged, and means for successively feeding such articles to a point within the sphere of operation of said feeding means.

1,505,181. PROCESS FOR OBTAINING THE ACTIVE PRINCIPLE OF LOBELIA. HEINRICH WIELAND, Munich, Germany. Filed July 9, 1920. Serial No. 395,131. 3 Claims. (Cl. 260—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1913.)



3. As a new article of manufacture an alkaloid having the medicinal properties of *Lobelia inflata*, said alkaloid having the formula $C_{21}H_{25}NO_2$, forming colorless crystals melting at 120° C., furnishing an amorphous yellowish-white platinum chloride double salt containing 17.6% Pt, furnishing a difficultly soluble mercurous double salt, its free base being very difficultly soluble in water, its chlorhydrate being easily soluble in water, chloroform, substantially as hereinbefore described.

1,505,182. VEHICLE PACKAGE CARRIER. ERNEST E. WRIXTON, Oakland, Calif. Filed June 22, 1922. Serial No. 570,067. 3 Claims. (Cl. 224—29.)

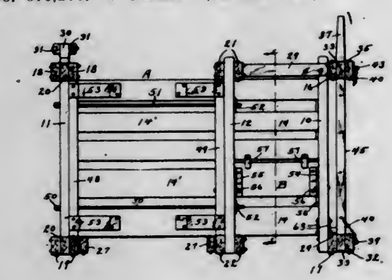


1. A portable and detachable package carrier adapted to be supported and carried by a baby carriage, said carrier having a reinforced frame and provided with attaching means at its top and bottom for attaching the carrier to the baby carriage, and said frame provided with handles for carrying the device when detached from the carriage.

1,505,183. CAP. DAVID ZUCKER, St. Louis, Mo. Filed Jan. 10, 1923. Serial No. 611,724. 5 Claims. (Cl. 2—172.)

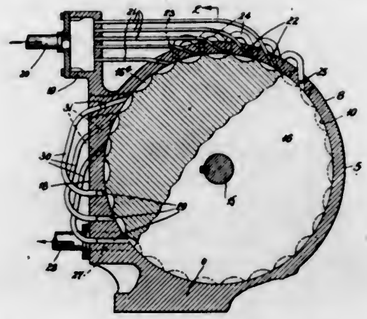
1. A cap having a detachable flap attached thereto by ball-and-socket fasteners, the said fasteners being located in the lower margin of the cap and in the upper margin of the flap, and there being pleats covering the fasteners on the lower margin of the cap when the said fasteners are not in use to provide ample protection between the head of the wearer and the fastener member carried by the cap.

1,505,184. DOOR-SECURING MEANS. ARNOLD ZUKOR, New York, N. Y. Filed May 9, 1923. Serial No. 637,728. 2 Claims. (Cl. 292—338.)



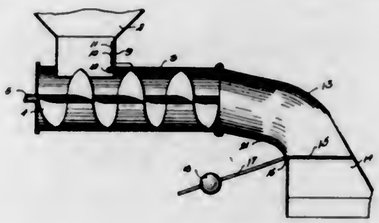
1. A door securing means comprising a bar, an abutment on the floor against which the lower end of said bar is set, a vertical guide on the inner face of the door, a lock slidably arranged in said guide connected with the upper end of said bar, said guide having holes adjacent its lower end for co-operation with locking bolts of said lock to secure the door against forcible entry.

1,505,185. PERMANENT COLORIMETRIC STANDARD FOR HYDROGEN ION DETERMINATION. MARION S. BADOLLET, JOHN HAMILTON, and CHARLES F. WALTON, Jr., Washington, D. C., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Mar. 4, 1924. Serial No. 696,887. 1 Claim. (Cl. 88—14.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



Permanent colorimetric standards for hydrogen ion determinations made from solid and transparent material, and containing permanent colors to correspond with those given by the use of well-known chemical indicators.

1,505,186. ANIMAL CRATE AND HOLDER. CHARLES BEDELL, Glidden, Iowa. Filed Oct. 23, 1923. Serial No. 670,270. 6 Claims. (Cl. 119—99.)

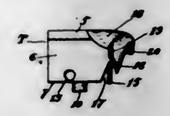


2. An animal crate and holder, comprising posts spaced apart in pairs, cross-bars connecting upper and lower ends of said posts transversely in pairs, slats connecting said posts longitudinally, a door formed by severing a relatively short portion of one of said slats and hinging it for outward swinging movement between two of said posts, a portion of one side of said crate being formed of slats connected by vertical bars and such portion being removably secured between certain of said posts, a floor carried by the lower cross-bars, and means for closing the ends of said crate.

1,505,187. STEAM-TURBINE ENGINE. WILLIAM H. BELKNAP, New York, N. Y. Filed Mar. 27, 1923. Serial No. 627,989. 12 Claims. (Cl. 253—48.)

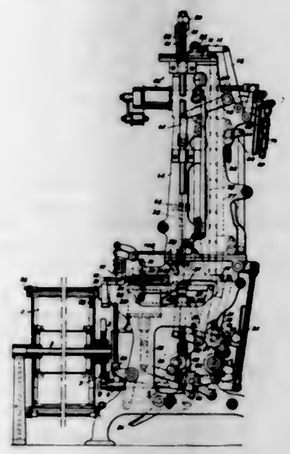
12. A cylinder construction for steam turbine engines of the class described comprising a base, an annular body on said base and divided by a central partition wall into separate cylinders opening outwardly at the opposite sides of said cylinder structure, plates for closing the openings of said cylinders, a shaft mounted in said plates and said partition wall, rotors mounted on said shaft within said cylinders, a plurality of steam nozzles spaced circumferentially of one of said cylinders, and a plurality of exhaust passages at one side of and placed in communication with said nozzles through the pockets of the rotor, means for passing the exhaust steam from said cylinder into the adjacent cylinder, and means for exhausting the steam from said last named cylinder.

1,505,188. FEED REGULATOR. HENRY J. BURNS and GLENN E. TOLLENAAR, Spokane, Wash. Filed Sept. 23, 1922. Serial No. 590,056 1 Claim. (Cl. 83—44.)



In an injecting device the combination with a feed pipe and a hopper having a free opening thereto, of a screw conveyer in the feed pipe, an adjustable device in the hopper and a blade rigid with said device having a lateral cutting edge conforming to and adapted to co-act with the screw conveyer.

1,505,189. FURRING AND FASTENING DEVICE. ORIN T. CROWE, Hayward, Calif. Filed May 16, 1922. Serial No. 561,275. 2 Claims. (Cl. 72—120.)

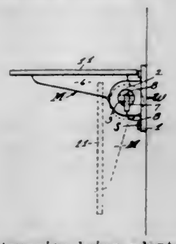


1. In combination, a wall sheathing, a multihumped staple of wide span and pronged at its extremities, and adapted to be driven in said sheathing to the base of said humps, and wire lathing adapted to be received and supported on the top of said humps, forming in conjunction therewith outstanding reinforcement for stucco wall composition, the latter adapted to be spread on the sheathing surface and between and around the meshes of said reinforcement the said humps formed by indents on said span, and said indents adapted to receive holding staples over said supported lathing for presenting a flush surface for the unobstructed use of the plasterer's darby.

1,505,190. SHUTTLE. JEAN B. DAUDELIN, Fall River, Mass. Filed Apr. 13, 1923. Serial No. 631,918. 10 Claims. (Cl. 139—223.)

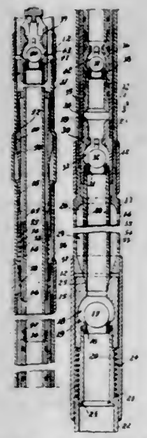
1. In a shuttle having a threading eye, a threader mounted longitudinally of the shuttle throat, a tongue overlying the threading eye and defining with the adjacent portion of the shuttle body a thread inlet port opening into said eye from above and a vertical rib depending from said tongue and extending above and parallel to the longitudinal axis of said eye and constituting a barrier effective to prevent escape of the weft from said eye by an upward lifting movement.

1,505,191. METHOD OF AND MACHINE FOR MAKING HEELS. ADOLPH GEIGER, Stuttgart, Germany. Filed Apr. 2, 1923. Serial No. 629,429. 20 Claims. (Cl. 12—50.)



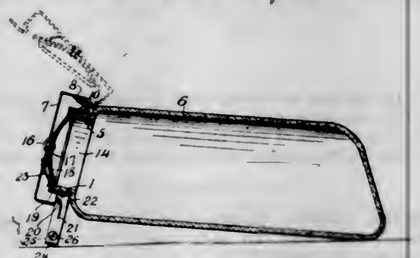
1. The method of making heels by punching a hole in the lifts, applying paste to some of the said lifts and threading a series of said punched and pasted lifts with the holes on penetrating guiding-pins so as to form heels.

1,505,192. HINGE. JOSEPH GERVAIS, Jr., Los Angeles, Calif. Filed Sept. 17, 1921. Serial No. 501,485. 2 Claims. (Cl. 16—143.)



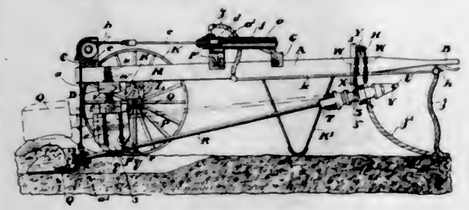
1. A hinge including a fixed member having a bore therein, provided with a peripheral notch, and a movable member comprising an arm having a hub portion with a trunnion centrally positioned thereon, said trunnion

having its sides flattened and its edges adapted to rotatably engage the periphery of the bore in said fixed



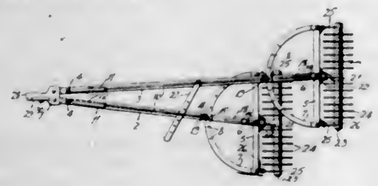
member, and said trunnion being adapted to seat in the notch in said bore for preventing the movement of said movable member.

1,505,193. PUMP. JOHN HAHN, Los Angeles, Calif. Filed July 31, 1923. Serial No. 654,895. 32 Claims. (Cl. 103—179.)



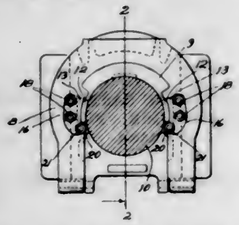
1. A pump comprising pump tubing having an internal shoulder, a standing valve cage provided with a valve and forming a seat, a spring between the cage and the shoulder, a working barrel, a tubular member connected with the working barrel and inserted in the seat, a friction lock between the working barrel and pump tubing to hold the tubular member in its seat, and a valved plunger in the working barrel.

1,505,194. CLOSURE FOR JARS AND SIMILAR CONTAINERS. WILLIAM F. HAMMOND, Kansas City, Mo., assignor to Confectioners' Equipment Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 30, 1921. Serial No. 504,284. 15 Claims. (Cl. 215—1.)



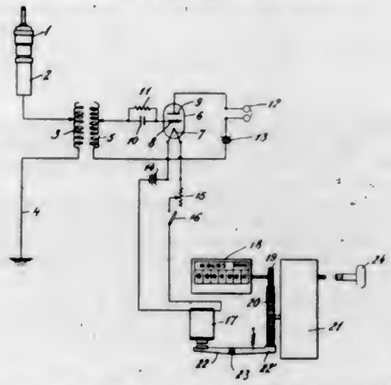
1. In a device of the kind described, means arranged to clamp a jar, a swinging member hinged to said clamping means, a cover carried by said member and adapted to close the mouth of the jar, releasable means for locking the swinging member to said clamping means when the cover is in the closed position, and means for automatically swinging the swinging member to the open position when the locking means is released, substantially as set forth.

1,505,195. TRENCH DIGGER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 1, 1924. Serial No. 696,115. 9 Claims. (Cl. 214—132.)



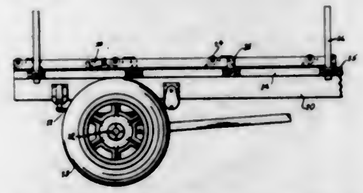
1. An excavating machine comprising a frame, a shovel suspended from said frame, fluid actuated percussive means for driving said shovel forward, means for raising said shovel, and automatic means to tilt and dump said shovel upon elevation thereof to a predetermined height.

1,505,196. HARROW. JOHN G. HANSEN, Cedar Falls, Iowa. Filed Oct. 21, 1922. Serial No. 596,068. 2 Claims. (Cl. 55—83.)



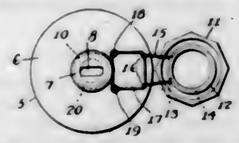
1. In a harrow, a draft plate, recessed frame-bars pivotally connected thereto, one of said bars being longer than the other, cross bars carried by said frame-bars, segments adjustably connecting said frame-bars and connected to said cross bars, bell-crank-levers fulcrumed to said cross bars, harrow blades carried by said bell-crank-levers, hand levers fulcrumed upon said frame-bars and extending into the recessed portions thereof, reach bars disposed in the recesses in said frame-bars and operatively connecting said hand levers and bell-crank-levers, means connecting said hand levers and segments for disconnecting the latter and said frame-bars, and a reach bar connecting said frame-bars.

1,505,197. DRIVER BOX. FRANK L. HOLT, Van Buren, Ark. Filed Nov. 15, 1920. Serial No. 424,073. 8 Claims. (Cl. 64—55.)



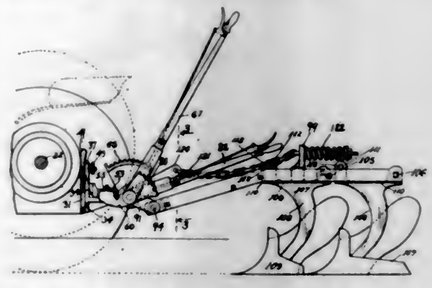
1. A bearing box structure having a bushing for lining the crown portion of the bearing, an adjustable tapered bushing member serving as a lining for one of the sides of said bearing, and adjusting means operative to shift said adjustable bushing member lengthwise or longitudinally of the bearing to take up the wear thereon.

1,505,198. METERING DEVICE FOR RECEIVING STATIONS. CLINTON W. HOUGH, Boonville, N. Y., assignor, by mesne assignments, to Wired Radio Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 19, 1922. Serial No. 589,061. 2 Claims. (Cl. 179—7.)



1. In combination, an instrumentality for receiving and detecting high frequency signaling waves, said instrumentality including a thermionic detector having an electrically heated cathode element, a meter for recording the duration of operation of said instrumentality, an electromagnet for controlling the operation of said meter, and a circuit and source of current common to said cathode element and said electromagnet whereby said electromagnet is maintained energized when and only when said cathode element is energized.

1,505,199. ROLL-BED ATTACHMENT FOR TRUCKS. RALPH E. HOWLAND and LEE E. UTTER, Nashotah, Wis. Filed Jan. 30, 1922. Serial No. 532,905. 6 Claims. (Cl. 214—84.)

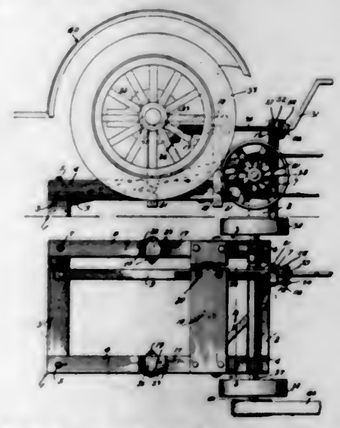


1. A roll bed attachment for vehicles adapted to be removably and interchangeably mounted upon a truck body or upon wagon bolsters, said attachment comprising a skeleton frame, rollers journaled therein, means carried by said frame for engaging a truck body of ordinary construction, and positioning members adjustably and removably carried by the frame for engaging wagon bolsters to retain the frame in position thereon.

1,505,200. REMOVABLE-CAP ATTACHMENT. GEORGE W. ITTNER, St. Louis, Mo., assignor of one-half to John B. Hulett, New York, N. Y. Filed Oct. 16, 1922. Serial No. 594,947. 4 Claims. (Cl. 221—60.)

1. The combination with a part to be covered, of a cap therefor, and flexible means for loosely attaching said cap to said part, comprising a plurality of link members transversely hinged in spaced relationship to both part and cap with the end members rotatably secured to each, whereby said cap may have a bodily movement to and from said part only in a plane substantially coincident with the axes of the cap and part.

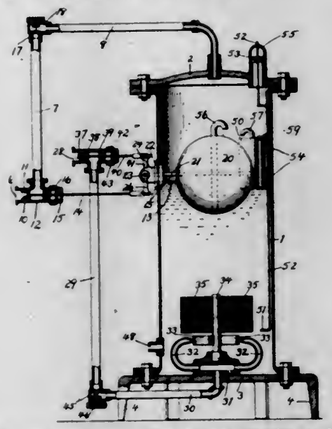
1,505,201. TRACTOR HITCH. OLIVER W. JOHNSON, Geneva, Ohio. Filed June 9, 1923. Serial No. 644,301. 39 Claims. (Cl. 280—33.12.)



1. In a tractor hitch, a member adapted for rigid attachment to the differential gear casing of a tractor, said member having a vertical face and a central horizontal pivot member, a second member pivoted to said first member about such pivot in engagement with said vertical face and carrying a draw bar, and an implement frame pivoted to said draw bar for vertical adjustment relative to said draw bar.

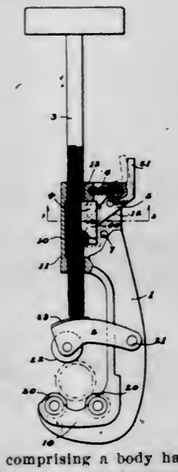
1,505,202. RECOVERY OF MAGNESIUM COMPOUNDS FROM BRINES. EDWARD K. JUDD, Palisade, N. J., assignor of one-third to Alfred M. Thomsen, Alameda, Calif., and one-third to Emerson W. Judd, New York, N. Y. Filed Dec. 12, 1922. Serial No. 606,531. 8 Claims. (Cl. 23—13.)

1. The process of recovering magnesium hydroxide from brines by adding thereto a clarified solution of calcium hydroxide.



1,505,203. AUTOMOBILE JACK. JOHN HENRY KERSHNER, Norton, Kans. Filed May 11, 1923. Serial No. 638,303. 1 Claim. (Cl. 254—91.)

In a device of the class described, a base frame; a support located thereabove; radius arms pivoted to the frame and to the support; a nut mounted to rock on the support; a screw threaded into the nut; means for

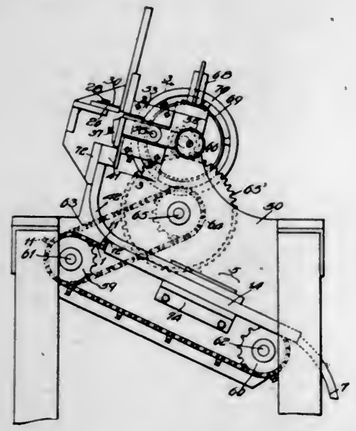


mounting the screw on the base frame for rotation and for vertical swinging movement, said means cooperating with the base frame to limit the longitudinal movement of the screw, the screw constituting means for carrying the support rearwardly.

1,505,204. CARBONATOR. THOMAS J. KIERNAN, Arlington, Mass. Filed Mar. 16, 1922. Serial No. 544,275. 5 Claims. (Cl. 261—93.)

3. A carbonator comprising a tank having a liquid inlet, a gas inlet and a liquid outlet, means for controlling the supply of liquid and gas to the tank, said means consisting of a valve in the liquid inlet, a valve in the gas inlet, a float in the tank, connections between the valves and the float, whereby when one valve is open the other valve is closed, a check valve to prevent liquid from passing into the tank when charged liquid is withdrawn therefrom, a vent, a valve for closing the vent, a float for opening the vent control valve when the charged liquid has been withdrawn from the tank to a predetermined point to permit a fresh supply of liquid to pass into the tank, said float operating to close the vent control valve when the liquid has reached a predetermined level in the tank.

1,505,205. PIPE CUTTER. DAVID KILGOUR, Jr., Seattle, Wash. Filed Apr. 25, 1923. Serial No. 634,469. 4 Claims. (Cl. 81—192.)

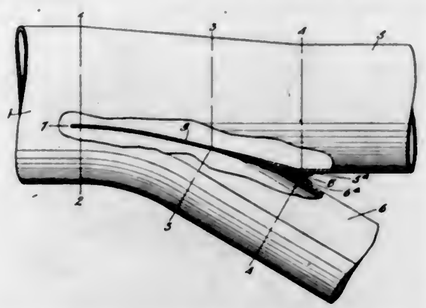


1. A pipe cutter comprising a body having a fixed jaw adapted to act as an abutment to support the pipe, an arm pivoted upon said body, a cutter carried by said arm, a threaded handle bar guided in said body to have a thrust bearing upon said pivoted arm, a locking block threaded complementally to and engageable with the threaded part of the handle bar, a lever pivoted upon the body and to said locking block in an angular position to act as a thrust abutment to hold the block in engagement with the handle bar by the backward thrust of said bar and a spring acting to normally hold said locking block in engagement with the handle bar.

1,505,206. PLASTIC COMPOSITION AND METHOD OF PREPARING SAME. HUGH KNIGHT, Riverside, Calif. Filed Dec. 10, 1921. Serial No. 521,355. 3 Claims. (Cl. 106—31.)

1. The process of making a plastic composition which consists in heating a residual hydrocarbon to melting point, adding thereto metallic oxides previously heated to 100° C., then adding earthy substances previously heated to about 100° C., agitating the mass continually and finally subjecting the entire mass to a temperature of from 300° C. to 350° C. to bring about a reaction of the oxides with the hydrogen of the hydrocarbon.

1,505,207. MACHINE FOR MAKING REENFORCING GIRTHS. ALBERT S. KUX, Chicago, Ill., and ARTHUR G. G. GUENTHER, Grand Junction, Colo., assignors to Signode System, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed June 21, 1920. Serial No. 390,585. 15 Claims. (Cl. 153—2.)

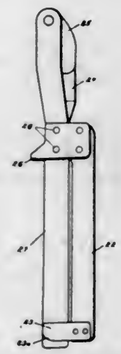


1. A machine of the class described comprising in combination, forming devices for forming reenforcing girths, means to carry the girth material successively to said forming devices, severing means for severing a strip of girth material into sections each adapted to form a single girth, means for causing a gravity feed of the girth material to said severing means, and means for transferring the severed sections of girth material successively to the carrying means to be carried thereby to the forming devices.

1,505,208. BRANCH OR Y-PIPE STRUCTURE. CHESTER W. LARNER, Philadelphia, Pa. Filed Oct. 1, 1923. Serial No. 665,774. 14 Claims. (Cl. 137—75.)

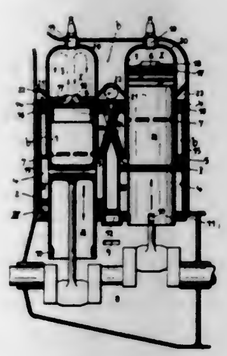
1. A branch pipe construction comprising a bifurcated hollow body portion having end main and branch parts internally of unequal cross-section and fastened together at their meeting edges and having an internally arranged

tie-means and being on each side of said means internally of progressively changing arcuate unequal cross-sections



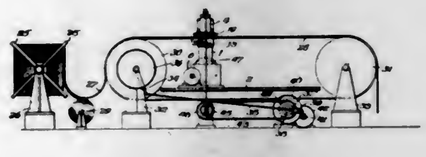
intersecting along the tie-means and merging into the unequal cross-sections of the main and branch parts, substantially as described.

1,505,209. RADIUM-CARRYING DEVICE. FRANCIS I. LEACH and ALBERT A. LEACH, Tyrone, N. Mex. Filed May 12, 1922. Serial No. 560,480. 3 Claims. (Cl. 167—7.)



3. A device for use in discharging gaseous radium emanations from radio active substances into water, comprising a relatively shallow container of a non-corrodible material having one side closed and the free edges of the open side inturned, a block of inert porous material retained within the container with its exposed face of a character to permit the free outward discharge of the gaseous radium emanations, and a radio active substance held within the block beneath the exposed face thereof.

1,505,210. TRUING TOOL. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 17, 1923. Serial No. 613,104. 6 Claims. (Cl. 153—32.)

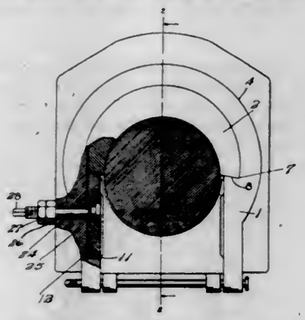


1. In a device for truing fins, the combination with operating means, of members attached to said means, said members providing substantially plane surfaces adapted to engage simultaneously upon opposite sides of a fin in order to render the fin substantially plane.

1,505,211. INTERNAL-COMBUSTION ENGINE. JOSEF LORBACH, Berlin-Friedenau, Germany. Filed Jan. 6, 1921. Serial No. 435,504. 4 Claims. (Cl. 123—59.) Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A two-stroke cycle internal combustion engine, comprising in combination, two cylinders having air and fuel ports therein, flanged differential area pistons adapted to compress air for scavenging and combustion, cross-connections whereby the air compression space of each cylinder is connected to the combustion chamber of the other cylinder, means whereby the flange of each piston operates to pump fuel into the combustion chamber of the cylinder appertaining to said piston, and a nozzle on each piston, communicating by means of ducts with the sides of the piston, whereby the air and the fuel are injected into the combustion chamber when said ducts register with the respective ports of the cylinder.

1,505,212. STOCK-CUTTING APPARATUS AND METHODS. FRANK J. MACDONALD, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 4, 1918. Serial No. 265,305. 32 Claims. (Cl. 164—20.)



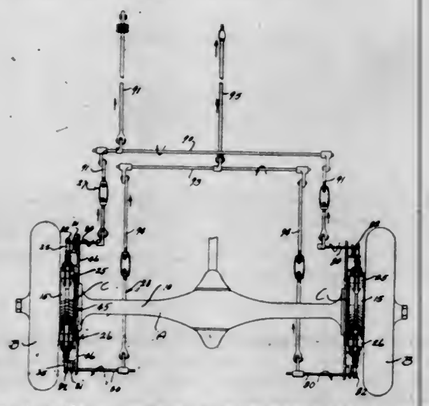
1. The method of cutting sheet rubber or similar material, comprising the steps of bringing said material into contact with a cutting die, and while one surface thereof is held against the die, exerting progressive pressure against the opposite surface of the material.

1,505,213. REMOVABLE CROWN-BRASS-LOCKING DEVICE. LOUIS V. MALLORY and ROBB F. BEST, Kansas City, Mo. Filed June 5, 1922. Serial No. 566,180. 5 Claims. (Cl. 64—42.)

1. In combination a journal box having a shoulder, a crown brass having one edge resting on the shoulder,

a seat in the journal box, a pair of toggle levers, one of which rests in the seat and the other of which is

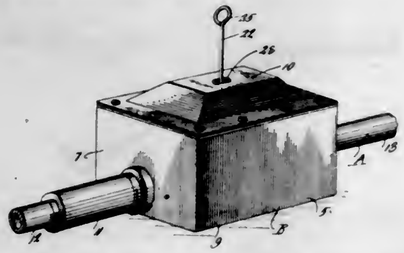
adapted to engage an edge of the crown brass and means for operating the toggle levers to hold the crown brass rigidly with respect to the journal box.



1,505,214. CORE COATING. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Dec. 26, 1922. Serial No. 609,146. 2 Claims. (Cl. 22—189.)

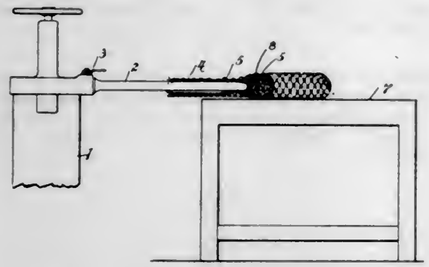
1. An insulating refractory wash for coating dry sand cores consisting of a small quantity of light magnesium oxide powder suspended in water containing a small quantity of glutrin.

1,505,215. METHOD OF INSULATING PIPES. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Apr. 5, 1923. Serial No. 630,165. 3 Claims. (Cl. 91—70.)



3. The method of insulating a metallic surface against the flow of heat which consists in first mixing an insulating powder in water containing a little heat-resisting binder in solution, then cleaning the metallic surface, then heating the metallic surface above the boiling point of water, then painting the cleaned and heated metallic surface with the said insulating wash whereby a thin adherent insulating coating is applied, again heating the metallic surface and repeating the painting process until an insulating lining of the desired thickness is obtained.

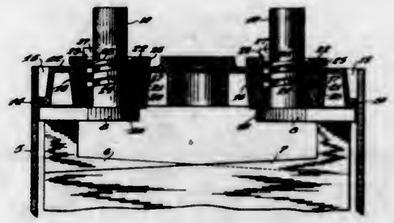
1,505,216. BRAKE CONSTRUCTION. JOSEPH A. MYRICK, Marion, N. C. Filed May 7, 1923. Serial No. 637,336. 14 Claims. (Cl. 188—70.)



5. A brake comprising a brake wheel having a circumferential groove therein, a brake shoe construction including a pair of sections lying in the groove at opposite sides thereof, and operating means between said sections for laterally expanding the same into engagement with the sides of said groove.

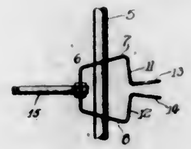
1,505,217. PRESSURE REGULATOR. LOYD C. POWELL, Cushing, Okla. Filed Dec. 17, 1923. Serial No. 681,287. 2 Claims. (Cl. 67—115.)

1. A device of the class described, a casing having a diaphragm in the same, a valve sleeve communicating with one end of the casing, an inlet pipe communicating with the outer end of the valve sleeve, an outlet pipe communicating with the opposite end of the casing, a valve seat in the valve sleeve, a valve adapted to fit upon the seat, a valve rod extending through the sleeve and into the casing attached to said valve, spring means coiled about said rod for normally holding the valve on its seat, a disk head carried by the inner end of the rod, a bell crank pivoted at its angle in the casing having an operating head formed on one end thereof for engaging the disk head of the valve rod, and an operating rod connected with said diaphragm and with the opposite end of the bell crank.



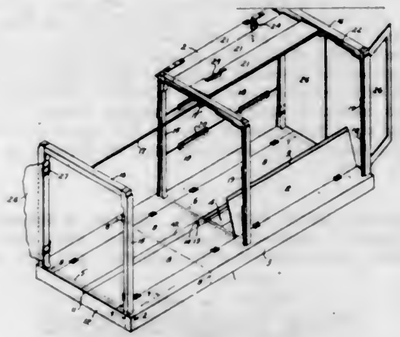
1,505,218. METHOD OF STUFFING SAUSAGE CASINGS. LAURENCE SARTORE, Pittsburgh, Pa. Filed Mar. 26, 1924. Serial No. 701,889. 7 Claims. (Cl. 17—45.)

1. The method of stuffing sausages which consists in surrounding a sausage casing closed at one end with a reticulated fabric, and delivering the filling of the sausage toward the closed end of the casing.



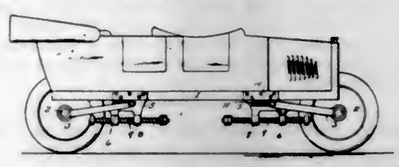
1,505,219. ELECTRIC STORAGE BATTERY. ALBERT SETZER, Providence, R. I. Filed Jan. 17, 1922. Serial No. 529,920. 3 Claims. (Cl. 204—29.)

1. In a battery cell, the combination with the electrodes thereof having relatively broad flat connecting straps extending horizontally thereabove with terminal-posts projecting upwardly therefrom, of a cover overlying the straps with its bottom resting thereagainst, said cover provided with recesses on its top having central openings through which the posts on the straps project, compressible gaskets surrounding the posts within the recesses of the cover, means adjustable on the posts to compress the gaskets within the recesses to seal the



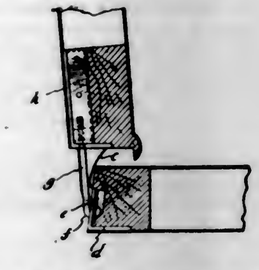
joints between the posts and cover, and means to positively lock said compression-means in adjusted position to prevent release of the gaskets under the effect of shock and strain.

1,505,220. SPRING CLAMP. RALPH R. SHAY, Park Ridge, Ill., assignor to Chicago Apparatus Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 13, 1923. Serial No. 668,272. 2 Claims. (Cl. 24—243.)



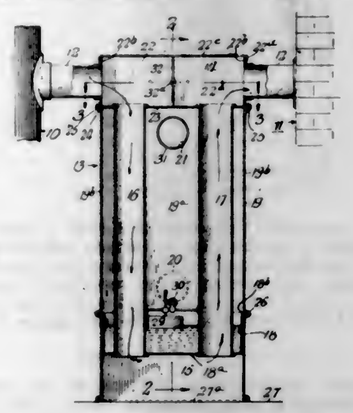
2. A support for laboratory utensils comprising a rod and a spring clamp having two arms with holes thru which the rods extends, the free ends of the arms having finger pieces offset inwardly toward each other from the free ends of the arms and adapted to stop against each other to prevent excessive bending of the arms, and a pin projecting outwardly from the clamp and adapted to support a laboratory utensil.

1,505,221. COLLAPSIBLE STRUCTURE. JOHN J. SHEA, Elmhurst, N. Y. Filed May 13, 1921. Serial No. 469,084. 27 Claims. (Cl. 217—43.)



1. In a collapsible structure, in combination, a base unit, a superstructure having posts adapted to be detachably secured to said base unit, a brace adapted to detachably engage adjacent posts, and slats detachably engaging said posts.

1,505,222. VEHICLE SPRING. SUMNER S. SHEARS, Brooklyn, N. Y. Filed Apr. 6, 1920. Serial No. 371,677. 5 Claims. (Cl. 267—20.)



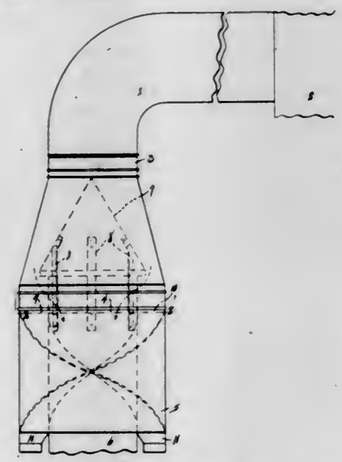
1. In vehicle springs, the combination with a vehicle frame, of levers carried at the end of the frame, buffers at the pivots of the levers, axles at the ends of the levers, brackets depending from the frame, arms depending from the levers, resilient means between the arms and the brackets to limit the swing of the levers and means for adjusting the resilient means.

1,505,223. DOORCHECK. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 21, 1921. Serial No. 523,831. 7 Claims. (Cl. 16—82.)

1. A door check, having in combination, a post fixture, a door fixture, and a rod provided with a non-rotatable nut on one end slidable in one fixture against an abutment and having a swiveling connection removably secured in the other fixture.

1,505,224. HEATING AND VAPORIZING AUXILIARY FOR FURNACES. HARRISON H. SOUTHWORTH, Evanston, Ill. Filed Feb. 23, 1924. Serial No. 694,562. 11 Claims. (Cl. 126—113.)

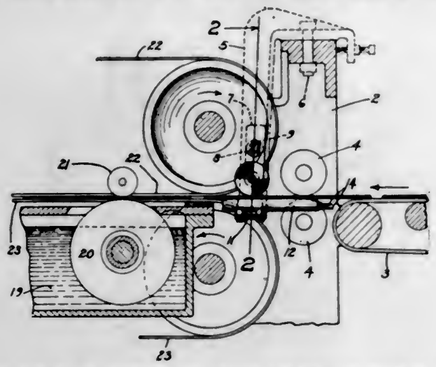
1. A heating and vaporizing auxiliary for furnaces, comprising a hollow header, vertical flue pipes, one leading from and one returning to said header, an open



top water pan through which said flue pipes extend, means providing a vertical return bend connecting the bottom ends of said flue pipes below said pan, one part of said means being the bottom wall of said pan, a jacket enclosing said flue pipes and pan, a cold air conduit leading into said jacket in the neighborhood of said pan, and a warm air conduit leading from said jacket at a point above said tank.

1,505,225. TRUSS. PETER SPECK, St. Louis, Mo. Filed Jan. 11, 1923. Serial No. 612,020. 2 Claims. (Cl. 128—115.)

1. A truss pad, composed of an aluminum body having an open oval concavity in the side that bears against the body of the wearer, and an oval flange surrounding said open concavity and having a comparatively wide surface to bear against the body of the wearer, and said aluminum body having a slot therethrough transversely of the longitudinal axis of the open oval concavity.

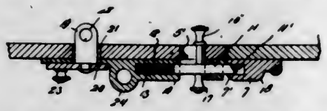


1,505,226. SAND EXTRACTOR. GROVER C. STACEY, Dallas, Tex. Filed Sept. 11, 1923. Serial No. 662,154. 6 Claims. (Cl. 19—77.)

1. A device for extracting sand from a suction line comprising a suction pipe in sections spaced apart, a larger pipe surrounding and forming a sand pocket with one section and tapering to and connected to the other section, and a deflector positioned within said tapering section for throwing the sand into said pocket.

1,505,227. MEANS FOR SOFTENING A CARTON-BLANK SURFACE. EDWIN G. STAUDE, Minneapolis, Minn. Filed Nov. 9, 1922. Serial No. 599,882. 5 Claims. (Cl. 93—2.)

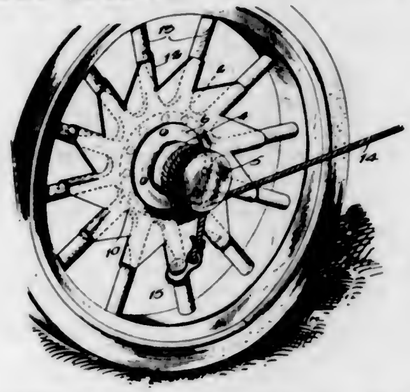
1. In combination with means for feeding a flexible carton or container stock preparatory to applying an adhesive thereto, a bracket, a heating means supported by said bracket and over which the carton blank is fed,



and means for pressing the carton against the surface of said heating means.

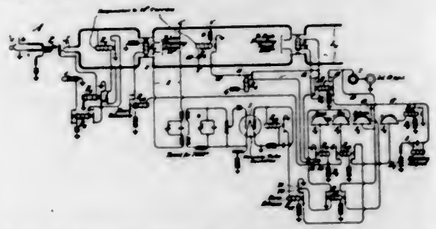
1,505,228. ELECTRIC SWITCH AND LAMP SOCKET. FREDRICH STEHRER, Baltimore, Md. Filed Aug. 31, 1921. Serial No. 497,136. 1 Claim. (Cl. 173—344.)

A lamp socket comprising a pair of upper and lower spaced screw shells of conducting material, a plug of insulation material closing one end of the upper shell, a contact associated with said plug, a centrally apertured spider spanning the other end of said upper shell and in electrical contact therewith, a disk of insulation material closing the last named end of said shell, a second disk of insulation material closing the adjacent end of the lower shell and spaced from the first named disk, spacing brackets arranged between said disks, fasteners passing through said disks and connecting the second named disk therewith and the first-named disk with the aforesaid spider, a switch-contact carried by said second named disk, other fastenings securing said lower shell with said last named lower disk, said other fastenings being in electrical contact with said switch-contact, a spring-pressed circuit closing arm pivoted intermediate its ends on one of the aforesaid spacing-brackets and engageable with said switch-contact, and a rod of conducting material connected with the first named contact on said upper shell and passing through the aperture in said spider, both of said disks and into the interior of said lower shell.



1,505,229. DOOR FASTENER. ROBERT A. STONE and ROBERT H. BASHAM, Columbus, Ohio. Filed June 19, 1923. Serial No. 646,316. 2 Claims. (Cl. 292—283.)

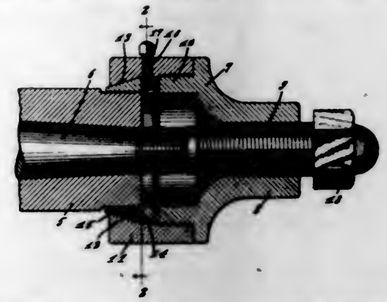
1. In a fastener for doors including a sliding bolt mounted upon the door adjacent one edge of the door frame, a bolt keeper upon the door frame, means for actuating the bolt from either within or without the



building, a swinging hasp secured to said keeper and adapted for positioning over said bolt, and means for permitting of the securing of the hasp in a position over said bolt from either within or without the said building.

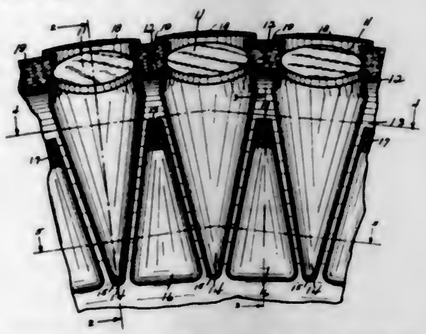
1,505,230. WINDLASS ATTACHMENT FOR AUTOMOBILE WHEELS. JOHN FRANK TAYLOR, Charleston, S. C. Filed Aug. 6, 1923. Serial No. 656,031. 1 Claim. (Cl. 242—95.)

In a windlass attachment for a driving wheel of an automobile; a hollow drum open at one end, said drum having an outwardly extending flange at its open end and being adapted to enclose the outwardly extending hub portion of the wheel, and a plate secured flatwise against the outer face of said flange and having an opening in register with the bore of the hollow drum, said opening in the plate being of sufficient size to permit the extending end portion of the hub to be projected therethrough, said plate being substantially circular in configuration and having spaced laterally struck portions at its outer edge curved to engage with spokes of the wheel.



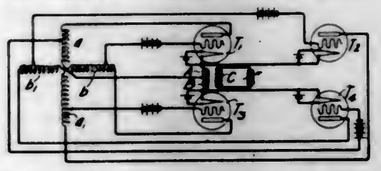
1,505,231. SIGNAL SYSTEM. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,822. 9 Claims. (Cl. 179—43.)

9. In a signaling system, the combination of a transmission line, a source of signaling current of voice frequency, and means responsive to current of a different frequency for automatically controlling the period of application of said signaling current to the said line.



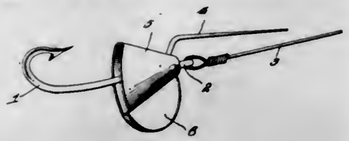
1,505,232. WHEEL PULLER. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed Aug. 2, 1923. Serial No. 655,334. 3 Claims. (Cl. 29—85.)

1. In a device of the character described, a body portion having an extension formed with a threaded opening, said body portion having a threaded extension at its opposite end, a removable pulling ring positioned on the threaded extension of the body portion, said ring having an inclined inner wall, a sectional gripping ring having inclined outer surfaces engaging the inclined inner wall



of the pulling ring, means for connecting the pulling ring to the sectional ring to cause the sectional ring to rotate with the pulling ring, and a pressure bolt extending through the threaded opening of the body portion.

1,505,233. RUT GUARD. CHASE W. WOLFE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1922. Serial No. 594,219. 4 Claims. (Cl. 152—14.)

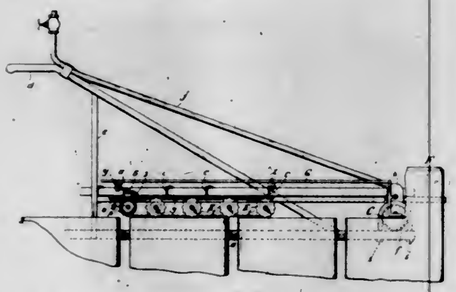


1. A tire provided on each side with a plurality of projections extending radially inwardly from the tread portion thereof and with a plurality of interpositioned projections extending radially outward from a zone on the tire radially inwardly from the tread thereof.

1,505,234. VACUUM-TUBE FREQUENCY CONVERTER. MILTON K. AKERS, Troy, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1920. Serial No. 431,57.. 11 Claims. (Cl. 172—281.)

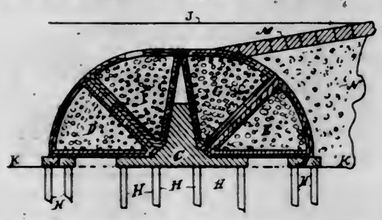
1. The method of frequency conversion which comprises utilizing an alternating E. M. F. to establish unidirectional discharge current, and variably impeding said discharge current in accordance with a second alternating E. M. F. of the same frequency as the first but of different phase.

1,505,235. HOOK. WEST D. ARCHER, Coconut Grove, Fla. Filed June 15, 1923. Serial No. 645,676. 3 Claims. (Cl. 43—27.)



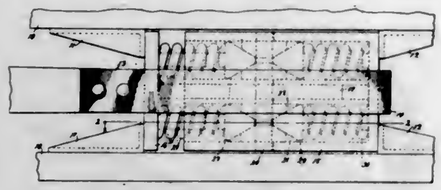
2. A trolling hook having its shank, adjacent to its eye formed with an outwardly rounded bait receiving finger, a cone-shaped guard which is elliptical in cross section and which has both ends open received on the shank of the hook and receiving the finger therethrough.

1,505,236. MANUFACTURE OF LEAVENED BREAD. LORIN H. BAILEY, Washington, D. C., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed May 7, 1924. Serial No. 711,543. 1 Claim. (Cl. 99—10.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



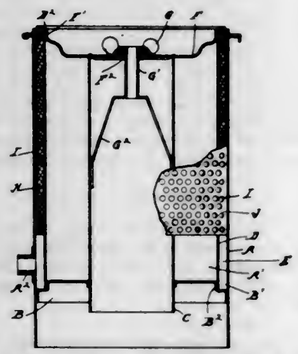
In the manufacture of leavened bread the step of incorporating cocoa in the dough batch to act as a flavoring agent and to improve the keeping qualities of the bread.

1,505,237. PILE-CUTTING SAW. JOHN P. BALL, Chicago, Ill. Filed Sept. 22, 1922. Serial No. 589,003. 6 Claims. (Cl. 143—68.)



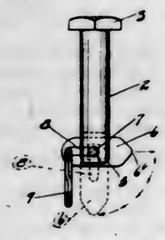
1. A pile-cutting saw, comprising a frame adapted to be disposed across the piling, power-imparting means mounted on said frame and provided with a reciprocating piston, a saw-blade secured to the piston so as to reciprocate therewith, guiding members for controlling said frame, and means mounted intermediate of the sides of the frame and operatively connected with the piston whereby the frame is fed forward while the saw-blade is operated.

1,505,238. BREAKWATER-WALL CONSTRUCTION. JOHN P. BALL, Chicago, Ill. Filed Dec. 13, 1922. Serial No. 606,663. 4 Claims. (Cl. 61—4.)



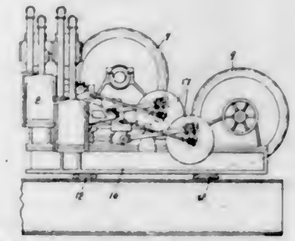
1. In break-water wall construction, a submerged wall consisting of individual units placed in superposed relation, the lower units of said wall being supporting members for a series of wedge-shaped hollow concrete blocks, keying into each other so as to form an arch upper surface, openings in said hollow blocks through which the blocks may be filled with foreign matter subsequent to the positioning of said blocks in place.

1,505,239. DRAFT GEAR. HARRY BARNARD, Chicago, Ill., assignor to Union Draft Gear Co., a Corporation of Illinois. Filed Feb. 10, 1922. Serial No. 535,462. 9 Claims. (Cl. 213—22.)



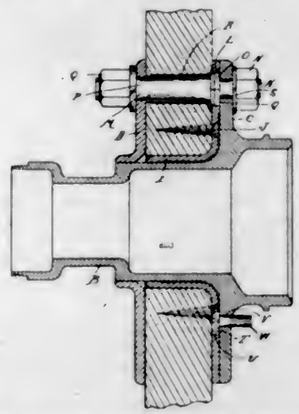
1. In a draft gear, in combination, a casing having a closed end, a friction plate movable on the longitudinal median plane of the casing, a pair of plates frictionally engageable with the opposite faces of the first-named plate, means for preventing relative longitudinal movement of the pair of plates and the casing, and means including springs at each end of said casing for pressing the pair of plates against the central plate.

1,505,240. WICK BURNER. FREDERICK F. BENNETT, Ypsilanti, Mich. Filed July 23, 1923. Serial No. 653,265. 14 Claims. (Cl. 158—74.)



1. In a wick burner, the combination of an outer casing, an annular wick within said casing, and an inner guide for said wick removably clamped to said casing.

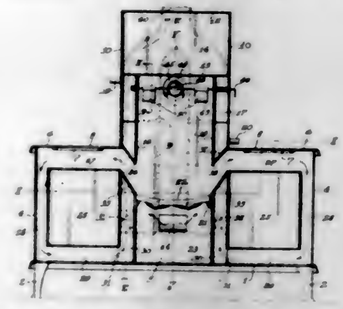
1,505,241. LOCKING ATTACHMENT. WILLIAM O. BERRY, Caro, Mich. Filed Sept. 23, 1922. Serial No. 590,127. 2 Claims. (Cl. 85—3.)



1. The combination with a bolt having a forked end, of a key having an elongated slot in one end thereof and a rivet passing through said slot and connecting the bifurcations of the fork, said slot permitting longitudinal movement of the key to allow it to drop to vertical position, and means engaging the slot when the key is in locked position for preventing movement thereof to the unlocked position.

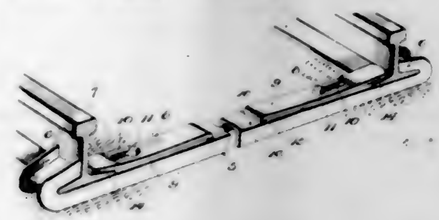
1,505,242. LOGGING MECHANISM. OSCAR B. BJORGE, Portland, Oreg., assignor, by mesne assignments, to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Aug. 20, 1923. Serial No. 658,376. 7 Claims. (Cl. 254—185.)

1. In a logging mechanism, the combination with a platform, of a skidding engine rigidly mounted thereon, and a loading engine pivotally mounted on said platform, the winding drums of said skidding and loading engines being arranged transversely of the longitudinal axis of the platform, and said loading engine being pivoted along an axis parallel to said longitudinal axis.



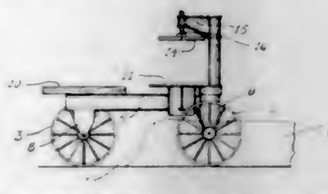
1,505,243. DEMOUNTABLE WHEEL. WILLIAM N. BOOTH, Detroit, Mich. Filed June 29, 1917. Serial No. 177,687. 6 Claims. (Cl. 301—9.)

1. The combination with the hub of a vehicle wheel of the non-demountable type, said hub having a spoke-clamping flange and a detachable spoke-clamping flange adapted to be bolted thereto, of a series of replacement studs having threaded inner and outer ends, the former engaging the bolt apertures in the hub flange and provided with a shoulder for abutting against said flange, nuts for clamping said studs to said flange, nuts for engaging the outer ends of the studs and clamping the detachable flange to the spokes, a bushing for the wheel adapted to sleeve upon the hub, and means on said bushing engaging said studs to lock the same from rotation.



1,505,244. COOKING RANGE. ALBERT A. BRUDER, Holly, Mich. Filed June 3, 1922. Serial No. 565,681. 11 Claims. (Cl. 126—1.)

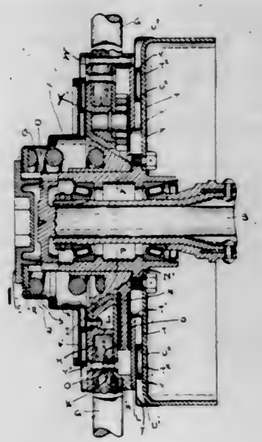
1. A cooking range comprising end cooking tops, a baking oven under each cooking top, a combustion chamber between said cooking tops and ovens, a grate in said combustion chamber, a casing having exhaust flues, and a down flue with the down flue communicating with the combustion chamber at a point beneath said grate, and means



extending across said combustion chamber into the down flue of said casing adapted to produce a siphonic action to withdraw smoke and gases from the top of said combustion chamber and deliver the smoke and gases to the bottom of said combustion chamber.

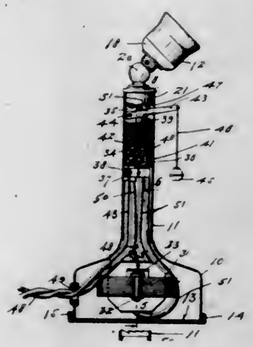
1,505,245. RAIL FASTENER. JULIUS STONE CHRISTMAS, Charleston, W. Va. Filed Mar. 12, 1924. Serial No. 698,794. 6 Claims. (Cl. 238—61.)

1. A rail fastener for use in securing a rail to a tie and including a spring locking bar slidably and rotatably connected to the tie, said bar being flexed longitudinally in the assembly and having one end engaged with the rail, and interengaging means between the opposite end of the locking bar and the tie.



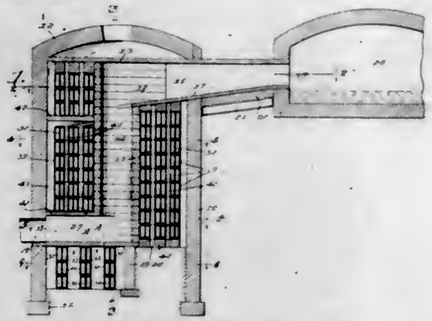
1,505,246. MOLDING MACHINE. ERNEST H. EKSTEDT, East St. Louis, Ill. Filed Oct. 4, 1922. Serial No. 592,302. 2 Claims. (Cl. 22—26.)

1. A molding machine, comprising a transverse bar having depending end portions, a traction wheel mounted on each depending portion, a longitudinal bar extending from one end of the transverse bar and forming with the latter a right angle frame, the forward free end of the longitudinal bar having a depending portion, a traction wheel supported on the last mentioned depending portion, a table supported on the frame at the juncture of the transverse and longitudinal bars, a second table adjacent the transverse bar, means supported on the transverse bar to elevate the second mentioned table, a rotatable



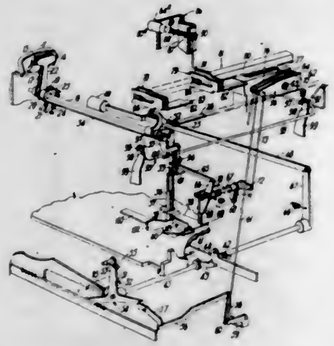
standard extending up from the transverse bar and provided with an arm, a platen mounted at the end of the arm, and means for raising and lowering the platen toward and from the second mentioned table.

1,505,247. RESILIENT WHEEL. FRANK V. ELBERTZ and GIUSEPPE FERRARI, Detroit, Mich.; said Elbertz assignor to said Ferrari. Filed Feb. 6, 1922. Serial No. 534,414. 13 Claims. (Cl. 152—45.)



8. In a wheel, the combination with a hub, of a flange extending radially outward therefrom, an annular outer wheel member universally radially displaceable with respect to said hub and provided with spaced bearing plates for engaging said flange, said flange having a slot formed therein, a driving pin movable in the slot in said flange, a roller surrounding said pin and engageable with the sides of said slot, and anti-friction bearings between said roller and pin.

1,505,248. ELECTRIC CIGAR LIGHTER. VICTOR E. EXTROM, Minneapolis, Minn. Filed Apr. 17, 1922. Serial No. 553,869. 5 Claims. (Cl. 219—32.)

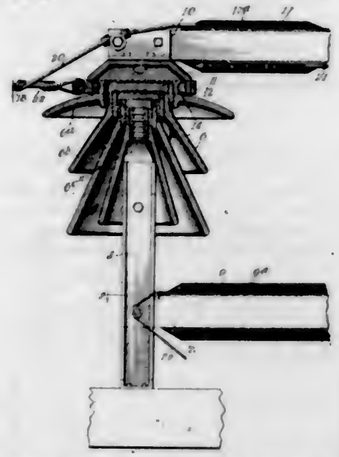


3. The combination with a standard having a hollow base and a displaceable cap provided with a holder, of an electric circuit including a heating element in the holder, a transformer in the base, and a normally open switch in the standard.

1,505,249. RECUPERATOR FOR FURNACES. ADAM FELTON and EDWARD H. KLEMROTH, Muncie, Ind. Filed Feb. 8, 1922. Serial No. 534,976. 20 Claims. (Cl. 263—20.)

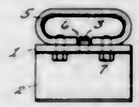
1. A recuperator of the character described having helical air flues, and means for directing products of combustion around said air flues in a direction reverse to the direction of movement of the air in said flues.

1,505,250. COMBINED TYPEWRITING AND COMPUTING MACHINE. EWELL E. FOWLER, East Point, Ga., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 27, 1923. Serial No. 634,966. 5 Claims. (Cl. 235—60.)



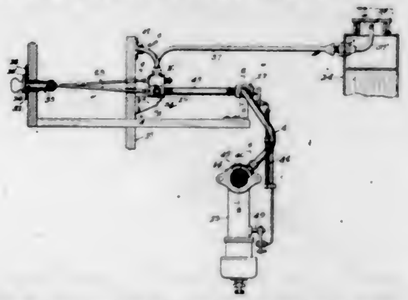
1. In a combined typewriting and computing machine, a keyboard, a traveling carriage to determine computing zones, computing means including state-setting mechanism, bichrome mechanism normally controllable exclusively by said state-setting mechanism, means on the carriage for controlling the state-setting mechanism for different computing zones and for releasing, for certain zones, the bichrome mechanism from the control of the state-setting mechanism, and means for manually releasing the bichrome mechanism from the control of the state-setting mechanism, including a key accessible to an operator at the keyboard, a transverse bail actuable by said key, and an arm on said bail to disconnect the bichrome mechanism from the state-setting mechanism.

1,505,251. FULLER COMPOSITION. ALBERT F. FRENCH, deceased, late of Detroit, Mich., by Mary A. French, administratrix, Detroit, Mich. Filed July 26, 1922. Serial No. 577,745. 3 Claims. (Cl. 134—49.)



1. A filler composition consisting of graphite, two pounds; fuller's earth, eight pounds; gum thus, one pound; and sufficient turpentine to cut the gum thus and make one gallon of the composition.

1,505,252. COMBINED INSULATOR AND TRANSFORMER. ROYAL E. FRICKEY, Chicago, Ill. Filed Mar. 21, 1918. Serial No. 223,705. 22 Claims. (Cl. 175—356.)



1. A device of the class specified comprising an insulator for mounting electrical conductors thereon and a transformer combined with said insulator, the insulator forming part of the magnetic circuit of the transformer.

1,505,253. HOIST-CABLE GUIDE. CHESTER F. GERNERT, Reading, Pa., assignor to Reading Chain Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 685,979. 2 Claims. (Cl. 254—190.)

1. A guide for hoist cables comprising a vertical body having an angled upper end and a lug formed on its lower end and centrally disposed, in combination with a removable loop member formed with an open space to accommodate the lug, and means for securing the loop member to the body.

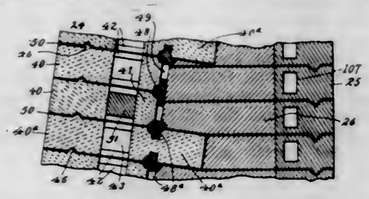
1,505,254. VAPORIZER AND AIR-SUPPLY DEVICE. JULIUS F. GOETZ, Hartford, Wis. Filed Feb. 10, 1919. Serial No. 276,107. 2 Claims. (Cl. 123—25.)

1. The combination with an engine having a carbureter, a radiator and an air heater, of a valve structure comprising a mixing chamber provided with two inlet ports and an outlet port, pipes connecting said inlet ports with the radiator and the air heater, respectively, a pipe connecting said outlet port with the carbureter, a valve in said last mentioned pipe, means operatively connecting said valve with the throttle valve of the carbureter, valves controlling said inlet ports, and means operable from a remote point for controlling independently said last mentioned valves, whereby the relative proportions of air and vapor admitted to said mixing chamber may be varied at will and the mixture delivered to the carbureter controlled simultaneously with the movement of the carbureter throttle valve.

1,505,255. HOSE CLAMP. EGBERT H. GOLD, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,790. 2 Claims. (Cl. 285—84.)

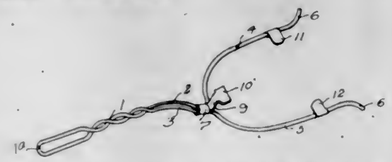
2. A clamp for fastening a flexible hose to a conduit comprising a pair of arcuate sections, one section provided with a hook like tongue, the inner portion of which bears against the hose and the other section with an opening through which the tongue projects, and with a rounded surface for hinging engagement with said tongue, a lug on each of said sections, and means for drawing said lugs together; the ends of said sections remote from the hinged end being narrower in the direction of the length of the hose than the other portions of said sections forming complementary projections at opposite sides of said sections respectively having arcuate inner surfaces of the same curvature as and continuous with the inner surfaces of the other portions of said sections, which projections overlap each other laterally with their interior circumferential edges in contact, for the purpose described.

1,505,256. SPRING WASHER. ROBERT F. GOLDEN, South Orange, N. J., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed May 8, 1923. Serial No. 637,432. 3 Claims. (Cl. 151—36.)



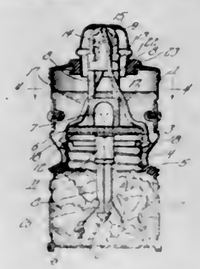
1. A spring-washer of the split-ring type, the inner circumference of which departs from the ultimate plane of compression a distance less than does the outer circumference.

1,505,257. WALL. WALTER GRIFFITHS, City Island, N. Y. Filed Aug. 29, 1923. Serial No. 659,952. 10 Claims. (Cl. 110—1.)



1. A wall, comprising fire-brick, each brick being composed of two brick-bodies which are spaced apart transversely of the length of the brick and connecting members in one piece therewith at the corners of the bodies and extending longitudinally of the length of the brick, one body of each brick, having a rib extending along one side, and

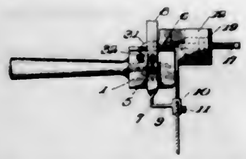
one rib and a groove along the other side and the other end, so that the ribs of each brick will fit into the grooves



of adjoining bricks, and the spaces within the separate brick communicating to provide an air space along the running dimensions of the wall.

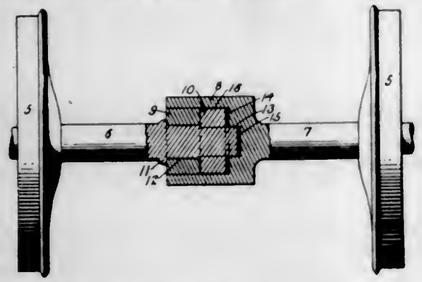
1,505,258. PAN LIFTER. ARTHUR C. HAGEN, Spokane, Wash. Filed Sept. 1, 1923. Serial No. 660,624. 2 Claims. (Cl. 294—33.)

1. A pan lifter comprising a single wire bent to form a handle and terminating in diverging, bow shaped tines, a metal clip embracing the bent portion of the wire at the junction of the handle and tines, an integral arm on said clip, and a flattened, laterally projecting head on said arm.



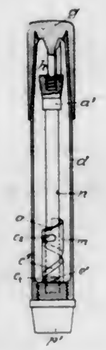
1,505,259. ACETYLENE GENERATOR. AUGIE L. HANSEN, Evanston, Ill., assignor to A. L. Hansen Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 22, 1920. Serial No. 383,374. 16 Claims. (Cl. 48—26.)

7. In a gas generator, the combination of an upper liquid receptacle, a lower receptacle, a double tubular member extending centrally of said receptacles, opening at its ends in said lower receptacle, and adjacent the top of said upper receptacle, a closure in the top wall of said upper receptacle, and forming an air chamber surrounding the upper end of said tubular member, and a tubular wick doubled lengthwise and inserted in said member, with its ends extending into said lower receptacle, means supporting the intermediate looped portion of said wick above the upper end of said tubular member, and branch wicks connected with said looped portion and depending into said water receptacle.



1,505,260. SAW SET. CARL ALFRED HANSON, Portland, Oreg. Filed May 31, 1922. Serial No. 564,928. 20 Claims. (Cl. 76—70.)

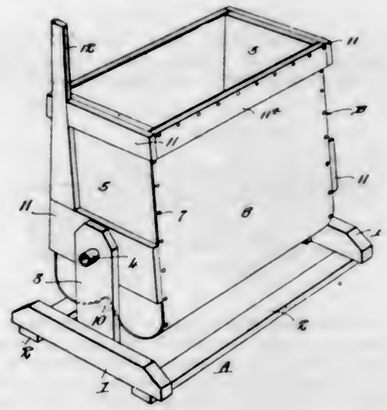
1. In combination, a pair of angularly constructed brackets having normally vertical slots therein, U-shaped clamping members on the terminals of the brackets for engagement with a saw blade, a main block adjustable vertically between the brackets by having threaded studs extending from its ends through the slots of the brackets, a hinged block mounted on the main block and provided



with a tooth receiving recess, and a bore communicating with the recess, a punch including a shank having a piston element intermediate its ends slidably mounted in the bore, and means for limiting the movement of the punch.

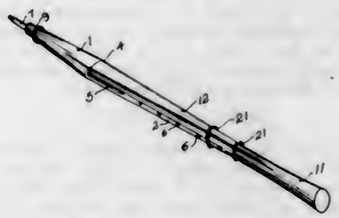
1,505,261. AXLE FOR RAILWAY ROLLING STOCK. OLIVER H. HEISTAND, Baltimore, Md. Filed Apr. 17, 1922. Serial No. 553,501. 3 Claims. (Cl. 295—39.)

1. A wheel-axle comprising two sections, one of said sections being formed integrally with a hollow cylindrical end provided with a substantially integral inwardly extending annulus, the other section having a substantially integral collar which cooperates with the said annulus to prevent disconnection of the two sections, said other section being journalled in the first said one of the sections.



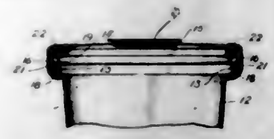
1,505,262. SAFETY FOUNTAIN PEN. WILHELM HENRISCH, Godesberg, Germany. Filed Mar. 10, 1923. Serial No. 624,063. 1 Claim. (Cl. 120—49.)

A safety fountain pen, comprising a barrel having an open end, a nib holder having a feed duct and movable longitudinally in said barrel and adapted to close the same while leaving of the feed duct unobstructed, one of said members having a spiral groove of less pitch at its ends than at the intermediate portion and the other



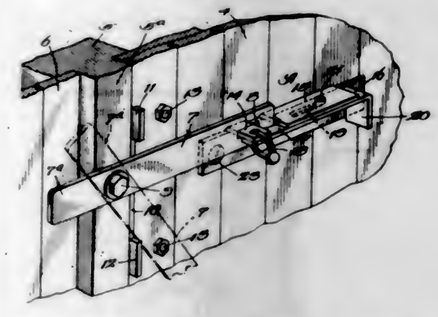
member having a peg projecting into said groove whereby upon rotation of the nib holder relatively to the barrel the nib holder will be reciprocated within the barrel and supported thereby throughout its movement, a cap detachably connected to said nib holder, the connections between the barrel and nib holder and between the nib holder and cap being such that when the nib holder is at its lowermost position, further rotation of the nib holder will draw the cap into closer contact with the open end of the barrel thereby to hermetically seal the same.

1,505,263. CEMENT MIXER. ALBURN O. HEWITT, Terry, Mont. Filed Dec. 6, 1922. Serial No. 605,196. 1 Claim. (Cl. 259—75.)



A concrete mixer comprising a frame and a medially and longitudinally ribbed trough, end pieces for the trough cut to correspond in shape to a transverse section through the trough, a single sheet of material bent to form the sides and bottom of the trough and secured to the side and bottom edges of the end pieces, spaced cross pieces carried by each of the end pieces for reinforcing the same, a shaft extending through the lowermost cross pieces and through the end pieces above the rib of the trough and journalled at its ends in the frame whereby to support the trough, the ends of the upper cross pieces disposed to extend past the side edges of the end pieces, and stringers connecting the ends of the upper cross pieces and secured to the top edges of the sheet of material forming the sides and bottom of the trough whereby to reinforce the top edges of the sides of the trough and form a mouth.

1,505,264. LUMBER GAUGE. CARL HILMERSON, Spokane, Wash. Filed May 31, 1922. Serial No. 564,766. 2 Claims. (Cl. 33—111.)

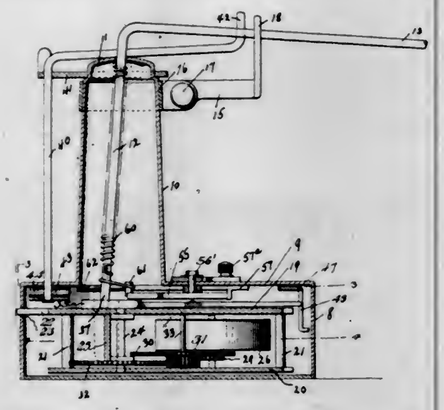


2. The combination in a lumber gauge of a bar having a shoulder and cut out portion forming a flat face, a scale including spaced notches along the edge of said face, a detachable handle portion forming a shield for said scale and provided with a complementary shoulder and flat face, complementary pins and sockets on said bar and handle portion, and a resilient retaining ring for said latter members.

1,505,265. CLOSURE. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 5, 1922. Serial No. 565,986. 4 Claims. (Cl. 220—61.)

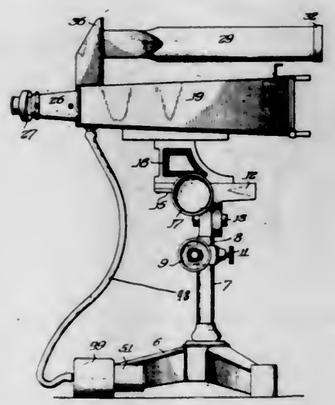
1. A closure for nozzles, bottles and the like, comprising a cap having a vertically movable top and locking sides operated thereby adapted under pressure exerted on the top to expand at the sides to permit its removal and upon pressure upon the sides to contract to lock it in place, and removable means for holding the sides in locking position.

1,505,266. CAR-DOOR-LOCKING DEVICE. FRANK JAGER, Chicago, Ill. Filed Dec. 31, 1919. Serial No. 348,695. 1 Claim. (Cl. 268—6.)



The combination with a door frame, of a sliding door adapted to close the opening provided by said frame, a pair of lugs fixed on said door in vertically spaced relation, and a guiding member loosely fulcrumed on said frame between said lugs in position to engage either of said lugs at will upon swinging movements of the member whereby the door may be moved, said member by reason of the loose fulcrum being capable of passing either lug without engagement therewith.

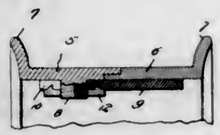
1,505,267. TALKING-MACHINE REPEATER AND STOP. ESKIL H. JOSEPHSON, Long Island City, N. Y. Filed Dec. 23, 1921. Serial No. 524,389. 3 Claims. (Cl. 274—15.)



1. The combination with a phonograph including a tone arm and a turn table, of a repeating attachment for the phonograph including a housing disposed adjacent to the turn table including an upstanding hollow casing, a disk rotatably mounted in the housing at the axial center of and below the hollow casing having an eccentrically disposed pocket therein, an L-shaped reproducer engaging rod rotatably and rockably mounted at the upper end of the hollow casing having the lower end thereof ro-

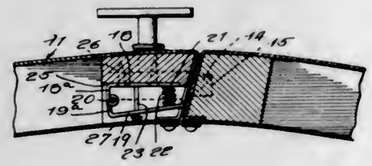
tatably mounted in the pocket, and means for rotating the disk by the turn table after a record has been played, whereby the lower end of the rod will travel a circular

path to cause the raising and tilting of the outer end of the rod to permit the returning of the tone arm to its initial playing position.



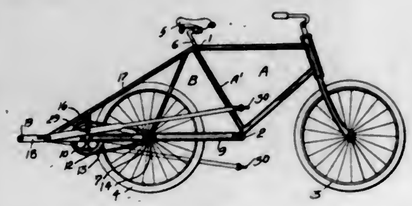
1,505,268. STEREOPHOTOMICROGRAPHIC INSTRUMENT. JOHN DAVID LARSON, Hinsdale, Ill. Filed May 28, 1923. Serial No. 641,887. 9 Claims. (Cl. 95—18.)

1. In an instrument of the character described, the combination of a pair of microscopic lenses, a camera box providing a compartment for each lens, a plate holder for each compartment, a pair of telescope tubes adapted to communicate with their respective lenses, and means for establishing communication between the lenses and said tubes or between the lenses and said compartments at will.



1,505,269. KNOCKDOWN RIM FOR TIRES. JAMES F. MCCAUSLAND, Princeton, N. J. Filed July 17, 1923. Serial No. 652,033. 2 Claims. (Cl. 301—35.)

1. A rim for tires of the class described a pair of half-sections adapted to be positioned together, screw threaded bosses formed upon the inner side of one of said half sections, inwardly extending plate members formed upon the inner side of the other of half-sections, said plates extending beyond the inner edge of said half section

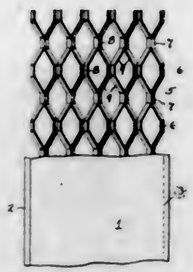


and bifurcated for engagement over said bosses of the other of said half-sections, and nuts adapted to be screwed on to said bosses.

1,505,270. ANTIRATTLER FOR VEHICLE DOORS. ANGELO T. MCCLURG, Bergholz, Ohio. Filed June 2, 1923. Serial No. 643,002. 3 Claims. (Cl. 292—169.)

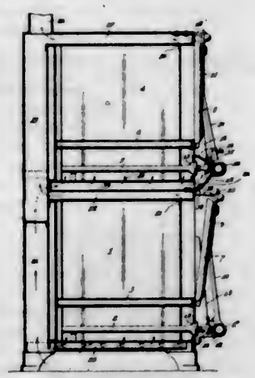
1. In combination with a door, a post with which the door coacts, and a latch carried by the door and engaged in a recess formed in the post, a plate pivoted to the door at one end and having the free end thereof projecting beyond the free end of the door, and a spring engaging between the door and the plate and abutting the plate intermediate the ends thereof.

1,505,271. BICYCLE. BARTLEY G. MCNEIL, Cranbrook, British Columbia, Canada. Filed Sept. 24, 1923. Serial No. 664,471. 2 Claims. (Cl. 208—19.)



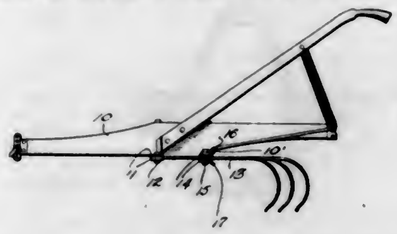
1. The combination with a bicycle frame and the crank axle journaled therein, of a rear extension on the frame having lateral slots and interior guide ways, a tubular slide head in each guide way semi-circular in cross section and a laterally extending bolt on each slide head movable in one of said slots, a lever pivoted on each bolt, a journal bearing for each lever on the crank axle, and pedals on the free ends of said levers.

1,505,272. REENFORCED-RUBBER-COMPOSITION STRIP. JOHN W. MART, Cleveland Heights, Ohio, assignor of one-half to G. Frank Horn, Elyria, Ohio. Filed Feb. 14, 1924. Serial No. 692,836. 4 Claims. (Cl. 154—49.)



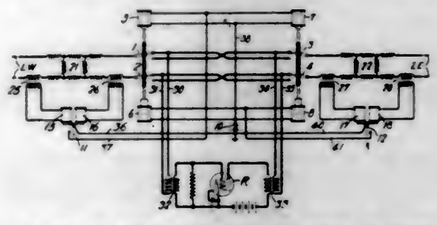
1. A composition flooring strip of substantially rectangular cross section comprising a semi-rigid body formed of rubber compound and having embedded therein a strip

of expanded metal for reinforcing purposes, said expanded metal strip having longitudinal undulations alternately approaching the respective top and bottom



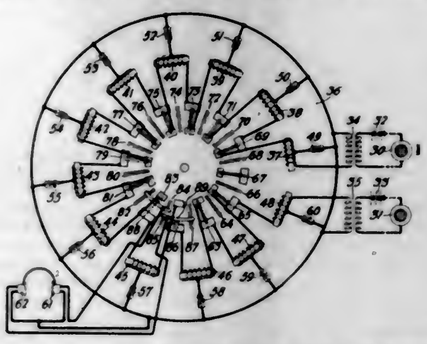
surfaces of said strip at spaced intervals throughout the length thereof and adapted to be elongated in the plane of the flooring.

1,505,273. HOTEL-OVEN CONSTRUCTION. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 19, 1923. Serial No. 633,097. 10 Claims. (Cl. 126—38.)



10. In a double oven, one oven above the other, burners for each oven, air mixers on the burners, and a shield to prevent the products of the lower over from interfering with the air intake of the burners of the upper oven, when lower oven door is open.

1,505,274. SPRING-TOOTHED CULTIVATOR. PORTER A. MAYHALL, Haleyville, Ala. Filed Aug. 2, 1922. Serial No. 579,273. 1 Claim. (Cl. 97—175.)

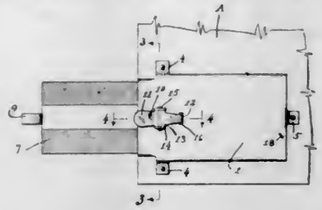


The combination with the beam of a cultivator and its spring teeth, of a pair of superimposed bars secured to and extending from one side of the beam and clamping the forward end of the shank of said spring teeth therebetween, and a second pair of superimposed bars secured to and extending from the same side of the beam rearwardly of the first bars and in parallel relation thereto, said rear bars having the rear portion of the teeth secured therebetween and having their rear longer edges flared away from each other.

1,505,275. OPERATING ALTERNATING-CURRENT RELAYS. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1921. Serial No. 486,040. 31 Claims. (Cl. 178—44.)

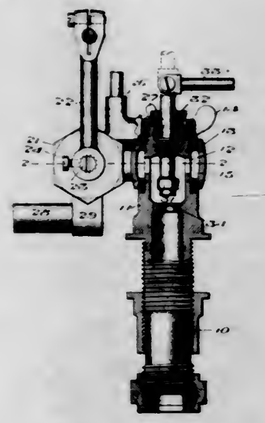
1. A line for transmitting electrical energy in opposite directions, means connected to said line between two spaced points in said line for producing a difference between a characteristic of said energy passing one of said points and said characteristic of said energy passing the other of said points, and a relay so connected to said line and said means as to be responsive to each of said opposite directions of flow of said energy in said line in accordance with the direction of flow.

1,505,276. SYSTEM FOR LOCATING THE SOURCE OF SOUND. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 18, 1921. Serial No. 516,033. 3 Claims. (Cl. 177—386.)



1. In a system for locating the source of sound variations, the combinations of a plurality of transmitting devices, a phase indicating device and an adjustable electrical compensator comprising a plurality of T sections of artificial line, each section composed of a capacity element forming the shank of the T and two windings of an inductance element forming the two branches of the top of the T, and adjustable switching mechanism cooperative with said sections and said indicating device.

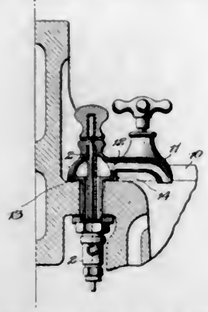
1,505,277. SIGNALING DEVICE FOR MAIL BOXES. JOHN L. MORRIS, Roxboro, N. C. Filed Oct. 9, 1923. Serial No. 667,560. 3 Claims. (Cl. 232—34.)



1. In combination with a mail box; of a signal therefor comprising a supporting member, a signaling element slidably mounted thereon, means for limiting the sliding

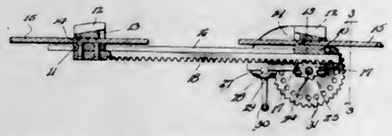
movement of said signaling element, a spring-forced latch pivotally carried on said supporting member and adapted to be automatically engaged with said signaling element

and hold the latter in its indicating position when the same is moved in one direction, and means for automatically returning the signaling element to its non-indicating position upon manually releasing said latch.



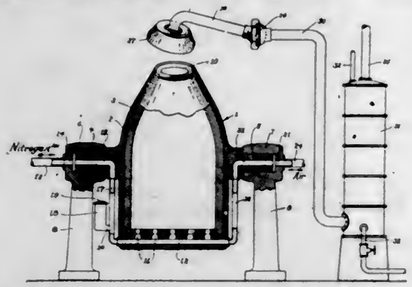
1,505,278. FLUSH VALVE FOR TANKS. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,483. 11 Claims. (Cl. 137—104.)

8. The combination with a valve body, of a pipe having a ported valve-receiving stub, a valve in said stub, operating means for said valve extending outside of said stub, said valve body comprising a valve chamber, a lateral offset passage communicating the chamber with said stub, a valve seat in said chamber, a valve in said chamber adapted to engage said seat, a valve supporting nut removably mounted in the wall of said valve body, said nut having a threaded bore to loosely engage the stem of said valve, and a skirt extending from said nut and engaging said valve to form an extended bearing therefor.



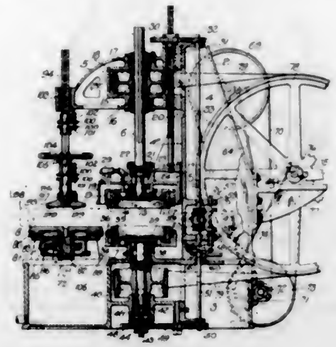
1,505,279. LEVELING BASE FOR LAVATORIES AND THE LIKE. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,495. 1 Claim. (Cl. 285—30.)

The combination in a lavatory, of a supporting slab having a fixture receiving aperture, a fixture having a rounded body provided with an inwardly extending convex lower edge and a centrally disposed shank extending through said aperture, said shank being spaced laterally from the wall of said aperture to permit tilting of the fixture, a leveling ring supported on the slab, about the fixture shank, said ring having a concave upper surface engaging the lower edge of said body, a clamping plate surrounding the fixture shank below the slab and having a peripheral flange provided with diametrically opposed openings, screws extending through said openings and



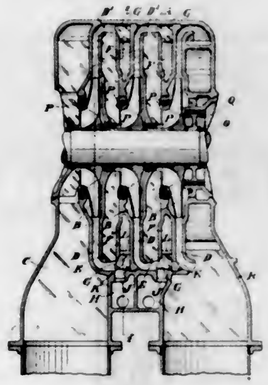
engaging the underside of said slab to permit adjustment of the plate when the shank is in a non-vertical position, and means for removably securing the plate to said shank.

1,505,280. BELT TIGHTENER. ANTHONY F. MUTH, Eldorado, Kans., assignor of five-sixteenths to John J. Muth, two-sixteenths to Wilfred H. Muth, and one-sixteenth to Charles A. Muth, all of Eldorado, Kans. Filed Apr. 28, 1923. Serial No. 635,368. 1 Claim. (Cl. 254—66.)



A belt tightener including companion cross bars, means for clamping the ends of a belt to the upper sides of said bars, spaced guide yokes depending from one of said bars, a rack bar secured to the other of said bars and slidably received through said guide yokes, a gear housing upon one end of the bar having the guide yokes, a shaft journaled upon said housing and said guide yokes, a pinion on the inner end of said shaft between the yokes meshing with the rack bar, driving gearing associated with the outer end of said shaft and mounted in the upper gear housing, and means associated with said gearing and housing to prevent retrograde movement of the gearing.

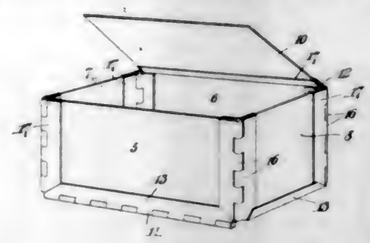
1,505,281. PROCESS FOR THE MANUFACTURE OF STEEL AND THE FIXATION OF NITROGEN. ADRIAAN NAGELVOORT, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed May 25, 1921. Serial No. 472,554. 18 Claims. (Cl. 75—44.)



1. The process for forming steel from molten iron which comprises, subjecting the molten iron to an air blast to remove certain impurities therefrom, and then reacting upon said iron with nitrogen to effect a union between the nitrogen and the carbon present in the iron.

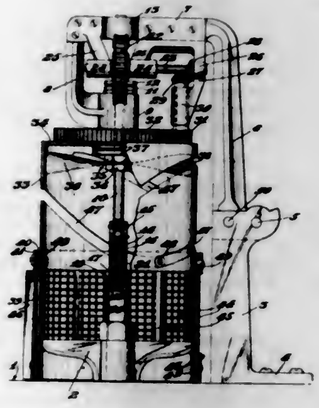
1,505,282. SURFACE GRINDER. DAVID J. NEVILL, Denver, Colo. Filed Jan. 3, 1921. Serial No. 434,668. 8 Claims. (Cl. 51—118.)

1. In a grinder of the character described, opposed grinding members, a table adapted to support the work to be ground for the simultaneous action of the grinding members upon opposite surfaces thereof, and hand-controlled, power-driven mechanism for feeding the members simultaneously or separately to the work.



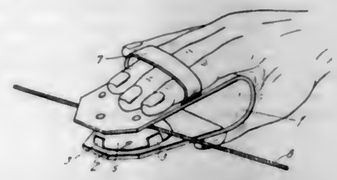
1,505,283. COMBINED GAS EXHAUSTER AND TAR EXTRACTOR. MELACH J. NUSIM, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1924. Serial No. 714,570. 5 Claims. (Cl. 183—77.)

1. A combined gas exhauster and tar extractor for gas, comprising a casing, an impeller rotatably mounted within the casing, a diffuser adjacent the outlet of said impeller and extending radially therefrom, a pressure chamber having an outlet, a tar collecting chamber remote from said diffuser and having no outlet for gas, and a longitudinal passage leading from said diffuser to said pressure chamber and said collecting chamber.



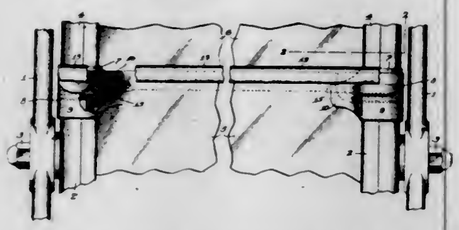
1,505,284. COLLAPSIBLE BOX. BENTON P. O'HARE, Nasonville, R. I. Filed Sept. 17, 1923. Serial No. 663,157. 3 Claims. (Cl. 220—6.)

1. A box comprising side and end panels, co-operating hinge members for the edges of each panel, said members comprising metal strips bent upon themselves to form hinge barrels and each embracing both faces of the panel



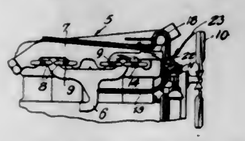
with which it is associated, and hinge pins connecting said barrels.

1,505,285. SAFETY DEVICE. ROBERT F. PADEN, Glendale, Mo. Filed Sept. 17, 1923. Serial No. 663,113. 8 Claims. (Cl. 144—251.)



1. A guard of the character described, comprising a rotatable carrier, a cylinder movably supported on said carrier and normally rotatable therewith, said carrier and said cylinder having a work engagement whereby, when resistance is brought against the cylinder during rotation, the carrier is free to continue rotating while the cylinder lags and the cylinder is thereby caused to move upward on said carrier.

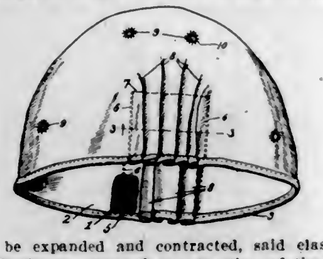
1,505,286. LINE CHALKER. JOHN AUGUST PETERSON, Buffalo, N. Y. Filed June 18, 1923. Serial No. 646,281. 1 Claim. (Cl. 33—87.)



In a line chalker, a flexible strap, a chalk holder upon one side and near one end thereof, a buffer plate upon the same side and near the opposite end thereof, and a finger loop carried by said strap upon the opposite side thereof.

1,505,287. WINDSHIELD CONSTRUCTION. ALBERT T. POTTER, Detroit, Mich., assignor to Ainsworth Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 31, 1921. Serial No. 497,285. 5 Claims. (Cl. 296—93.)

5. In a wind shield, the combination with a sash frame including tubular end members, and a glass panel in said frame having a free edge portion, of corner members for said sash frame at each end of the free edge of the glass panel and comprising socket portions to receive the ends of said tubular sash frame members and provided with channels to receive corner portions of the glass panel, and an upwardly projecting flange on each corner member to overlap a corner member on an adjacent frame, said flanges being curved laterally of said member to conform substantially to a curved side face of the member, and permit a side of corner members on an adjacent frame to extend over the members having the flanges, said flanges forming a continuation of the free edge of the glass panel to receive a channeled weather strip.



1,505,288. AUXILIARY-AIR-SUPPLY DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES A. RIVERS and FRANCIS BACON STUART, El Paso, Tex.; Ara M. Rivers administratrix of the estate of said Charles A. Rivers, deceased. Filed Aug. 12, 1920. Serial No. 402,996. 3 Claims. (Cl. 123—124.)

2. In an auxiliary air supply device for internal combustion engines, an air supply pipe adapted to be connected to the intake side of the engine, a valve in said pipe controlling the flow of air therethrough, means for normally urging said valve into a closed position, a pivoted member connected to said valve and arranged in the line of draft of the cooling fan of the engine for receiving impact of air from said fan for successively opening the valve by increased speed of the engine, said pivoted member being inclined forwardly toward the fan for normally presenting an inclined working face to the line of draft and adapted when operated to successively present said working face toward a right angular position with respect to the line of the draft whereby to increase resistance to the line of draft and effect increased pressure on said pivoted member, and means for adjusting the working length of said pivoted member whereby to vary the effective leverage of said member relatively to the said means for normally urging the valve into a closed position.

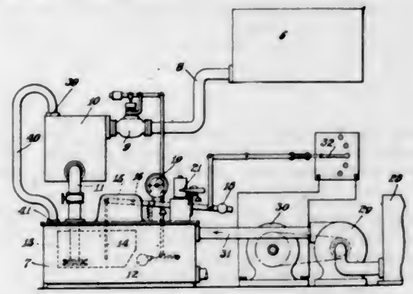
1,505,289. HAIR-PRESSING CAP. CHARLES S. SANDERS, Baltimore, Md. Filed Mar. 16, 1923. Serial No. 625,609. 3 Claims. (Cl. 132—49.)

3. The hair-pressing cap which includes a crown formed of an outer fabric and an inner fabric, and an elastic sheet between and secured to the outer and inner fabrics at one side of the cap, the inner and outer fabrics being provided with puckers or folds at the elastic sheet to permit this

side to be expanded and contracted, said elastic sheet being effective to cause the contraction of the sides for the purpose of holding and pressing the hair of the wearer.

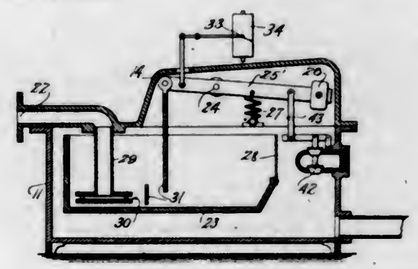
1,505,290. AUTOMOBILE ORNAMENT. EARL M. SCANLAN, Denver, Colo. Filed Aug. 7, 1923. Serial No. 656,211. 6 Claims. (Cl. 40—125.)

1. An automobile ornament of the character described, comprising a monogram composed of a plurality of terminally free interwoven characters made separately of pliable metal and fastened together at their points of intersection.



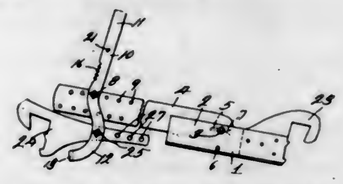
1,505,291. COMBINATION LOCKER. LOUIS SCHAEFER, Jr., Chicago, Ill. Filed Apr. 2, 1921. Serial No. 457,912. 8 Claims. (Cl. 45—31.)

1. A locker provided with a rectangular opening in its front, two interfitting L-shaped doors hinged on opposite sides of said opening and adapted when closed to cover



the same, and a partition within said locker extending rearwardly from the meeting edges of the doors whereby storage spaces for one tenant of the locker is formed to which access may only be had through the door immediately in front thereof.

1,505,292. LIQUID-SUPPLY-CONTROLLING APPARATUS. JOHN A. SERRELL, North Plainfield Borough, N. J. Filed July 18, 1923. Serial No. 652,292. 18 Claims. (Cl. 73—162.)

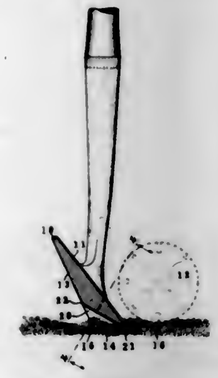


1. Liquid supply controlling apparatus comprising the combination of a primary receiver, a storage receiver, an automatic valve, means controlled by the level of liquid in said storage receiver for operating said valve, a meter delivering into said storage receiver and a static head trap interposed between said valve and said meter.

1,505,293. LIQUID-SUPPLY-CONTROL APPARATUS. JOHN A. SERRELL, North Plainfield Borough, N. J. Filed Aug. 19, 1919. Serial No. 318,605. 11 Claims. (Cl. 73—167.)

1. A liquid meter comprising a yieldingly suspended weir box and means for weighing the liquid momentarily in the weir box.

1,505,294. VEHICLE JACK. CHARLES F. SHOWALTER, Omaha, Nebr. Filed Apr. 24, 1923. Serial No. 634,268. 2 Claims. (Cl. 254—131.)

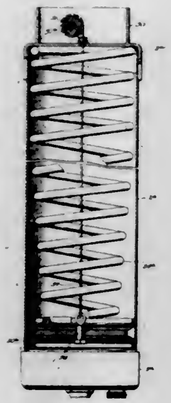


2. The combination with a jack comprising a base, a standard pivotally connected to said base and foldable onto the base, a lever pivotally connected to the standard, of rim engaging members carried by said base and by said lever and forming means for engaging opposite sides of a rim, one of said rim engaging members being pivotally connected to the lever.

1,505,295. METHOD OF RECOVERY OF POTASSIUM AND MAGNESIUM SALTS FROM NATURAL BRINES AND CALCAREOUS MUDS. JOSEPH L. SILSBEE, Salt Lake City, Utah. Filed July 27, 1920. Serial No. 399,338. 5 Claims. (Cl. 23—22.)

1. The method of recovering potassium and magnesium salts from natural brine and calcareous muds of substantially the character described, comprising, evaporating the brine by solar heat, removing the resulting sodium and potassium chloride and producing magnesium chloride mother liquor, adding magnesium oxide to said mother liquor to form a solid, roasting said solid material to thereby produce hydrochloric acid gas and magnesium oxide, treating a fluid mixture of said mud and brine with said hydrochloric acid gas, thereby producing carbon dioxide gas, mixing magnesium oxide and potassium chloride and water and treating the mixture with carbon dioxide gas, thereby producing a double salt of potassium and magnesium carbonate and magnesium chloride.

1,505,296. GOLF CLUB. WALTER L. SMITH, New York, N. Y. Filed June 20, 1922. Serial No. 569,656. 9 Claims. (Cl. 46—4.)

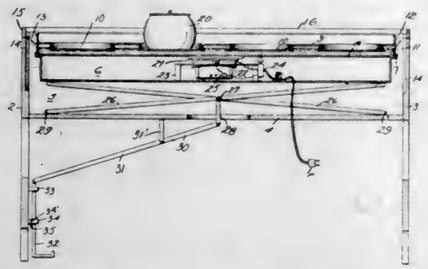


1. A golf club of the niblick type comprising a blade having an inclined front face, a rear face and a sole meeting the rear face, the shoulder formed by the rear face and sole having a plurality of substantially V-shaped furrows formed therein, said furrows extending into the sole and rear face providing channels for the passage of sand and forming a plurality of webs all sides of which converge toward the shoulder, thereby providing webs adapted to cut through the sand with substantially a minimum of resistance.

1,505,297. FIRE EXTINGUISHER. LOWELL H. STEPHENSON, Cleveland, Ohio. Filed Aug. 20, 1921. Serial No. 493,913. 1 Claim. (Cl. 299—92.)

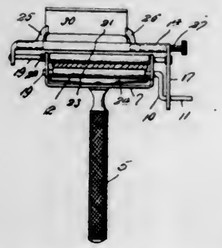
A fire extinguisher comprising, a cylindrical casing, a fixed cover upon one end, a nozzle in said cover, a removable cover upon the other end, means to provide a chamber formed upon the outer side of said removable cover, a revoluble shaft transversely of said chamber and having its ends mounted in said means, one end of said shaft extending outwardly of said means, a drum mounted on said shaft within said chamber, a ratchet mounted on the projecting end of said shaft, a spring pressed pawl carried by said means and engaging said ratchet, a piston

head within said casing, flexible means connected to said head and winding on said drum for normally maintaining the head in proximity to said removable cover, and expansible means interposed between the head and removable cover for projecting the said head forward.



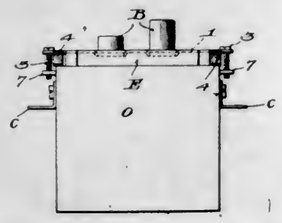
1,505,298. APPARATUS FOR DROP-FORGING AND LIKE OPERATIONS. ARTHUR L. STEVENS, Chicago, Ill. Filed Oct. 8, 1919. Serial No. 329,349. 7 Claims. (Cl. 78—1.)

1. In apparatus of the class described, comprising a forging machine, located on the main floor, a furnace located on the mezzanine floor adapted to heat the billets for said machine, and provided with means actuated independently of the operation of the said machine for controlling the movement and the heating of the billets in the furnace, and means whereby the heated billets may pass by gravity to said machine for immediate forging.



1,505,299. EXTENSION HOT-FOOD TABLE. CHARLES STERN, San Francisco, Calif. Filed July 12, 1921. Serial No. 484,106. 3 Claims. (Cl. 126—33.)

1. A hot-food, serving table having a frame forming a chamber with an open top, a leaf adjustable to cover the chamber, a removable tray conforming to the plan area of the chamber so as to fit in the same, a heating means arranged in the chamber and including a stove pan, of which the tray forms the top, means in the stove pan for

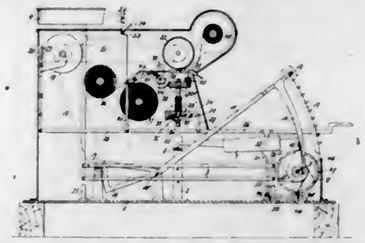


heating the tray, and means for raising the stove pan from a lower position to an elevated position to bring the tray substantially in the plane of the top of the table.

1,505,300. RAZOR-BLADE-STROPPING DEVICE. LEON B. STODDARD, Williamsett, Mass. Filed Feb. 8, 1924. Serial No. 691,408. 4 Claims. (Cl. 51—153.)

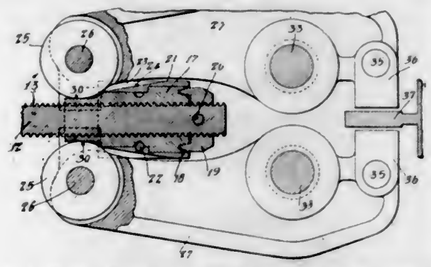
1. In a razor blade stropping device, a handle, a yoke centrally attached to the handle, a screw shaft journalled in the yoke and slidably disposed therein, a blade holder including a yoke fixed to the ends of said screw shaft, a roller disposed within the handle yoke and threaded upon the screw shaft whereby the latter may be shifted transversely of the handle, a rock shaft disposed inwardly of the screw shaft and journalled in the handle yoke, a second roller fixed upon said rock shaft, and operative connections between the rock shaft and the yoke of the blade holder for causing the latter to swing in the opposite direction in which the handle is drawn.

1,505,301. FIXTURE ADJUSTER FOR OUTLET BOXES. HENRY R. THOMPSON, Falls Church, Va., assignor, by direct and mesne assignments, to Pass & Seymour, Inc., Solvay, N. Y., a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,669. 7 Claims. (Cl. 247—20.)



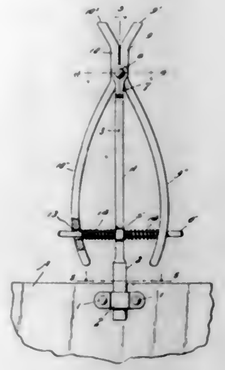
1. In combination with an outlet box and a fixture therein, a bridge carrying said fixture and having a pair of diverging feet at each end thereof, the feet of each pair resting upon the respective edges of opposite walls of the box, and screws passed through the bridge and through parts of the box so as to spread the feet upon inward movement of the screws and to allow the feet to approach upon outward turning of the screws.

1,505,302. COMPOSITION FOR FACING WALLS AND PARTITIONS. ROBERT FREDERICK WILKINS and HARRY CHANDLER, Bristol, England. Filed Feb. 15, 1924. Serial No. 693,114. 3 Claims. (Cl. 106—24.)



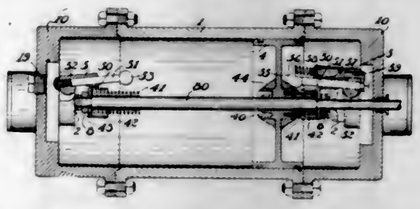
3. For facing walls and partitions in buildings, a composition in simulation of freestone and having solid constituents mixed in approximately the following proportions, namely ,a fine clean sand, 50% white cement, 25%, silver sand, 20%, a compound containing hydrated lime, fat, and alkali metal carbonates, 5%, the said solid mass being mixed with a liquid having constituents in approximately the following proportions, namely, hydrochloric acid, ¼ pint, and a solution containing sulphate of iron ¼ ounce, alum, 1 ounce, the mixture of the said solid mass and the said liquid being effected in approximately the proportion of 8 gallons of the solid mass to 2 gallons of the liquid, substantially as described.

1,505,303. WEIGHING AND RECORDING DEVICE. ARTHUR WOLF, Vienna, Austria. Filed Nov. 27, 1922. Serial No. 603,653. 12 Claims. (Cl. 265—48.)



1. A weighing and recording device comprising in combination, a scale-beam, a weight in the form of a rock arm, means for holding said weight in elevated position a key lever adapted to cause said weight to be lowered and to bear on said scale-beam and means, adapted to be operated by said key lever, for recording the weighing result.

1,505,304. SAFETY DEVICE FOR HIGH-SPEED ELEVATORS. MILO A. BAKER, HERBERT U. DURANT, and SAMUEL U. KING, Los Angeles, Calif. Filed Sept. 24, 1923. Serial No. 664,436. 3 Claims. (Cl. 187—91.)

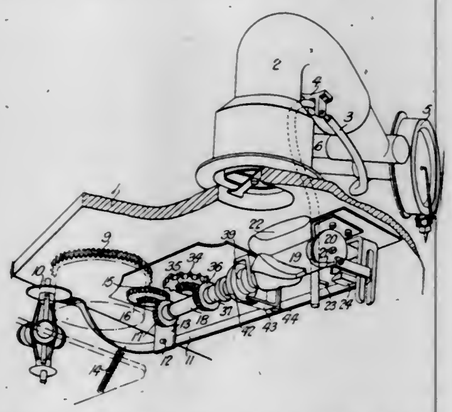


2. A safety device of the character described comprising a shaft having screw threads, a nut engaging the screw threads, means operated by the shaft to releasably engage and rotate the nut, means to hold the nut against rotation after it has been rotated through a certain number of degrees of circular measurement, a shoe, and means operated by the rotation of the nut and thereafter by translation of the nut to move the shoe toward an elevator guide.

1,505,305. REIN HOLDER. ROY T. BANG, Minden, Nebr. Filed Jan. 24, 1923. Serial No. 614,584. 1 Claim. (Cl. 280—185.)

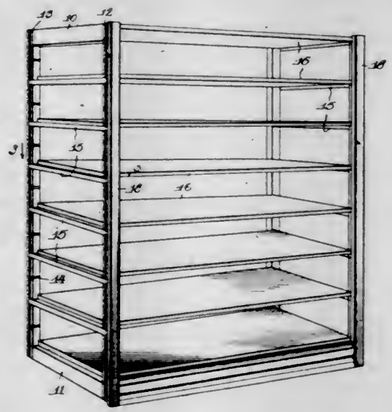
In combination with a support, of a bracket carried by the support, and adapted to receive a vertical supporting arm, a pair of jaws pivoted to the upper end of the supporting arm, a cross rod extending through an opening adjacent the lower end of the supporting arm, pendent arms carried by the jaws, and formed with openings for receiving the opposite ends of said cross rod, and expansion springs surrounding said rod between the supporting arm and the said pendent arms for maintaining the jaws closed.

1,505,306. FLUID METER. CARLOS J. BASSLER, Portland, Oreg., assignor, by mesne assignments, to American Liquid Meter Company, Seattle, Wash., a Corporation of Washington. Filed June 21, 1920. Serial No. 390,605. 15 Claims. (Cl. 73—30.)



1. In a fluid meter, a cylinder, a piston mounted therein, inlet and outlet valves controlling the supply to and discharge from said cylinder, power storage mechanism for operating said valves energized by the piston in its travel, and a detent for said power storage mechanism comprising a dog having a shoulder adapted to be engaged by said power storage mechanism and fixedly pivoted within the cylinder, a trip connected with said dog and adapted to be engaged by the piston to trip the power storage mechanism, and thermostatically-controlled means for varying the relative positions of the shoulder and the trip.

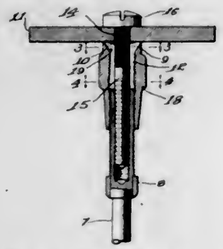
1,505,307. TALKING MACHINE. JACK TAYLOR BENNETT, Glasgow, Scotland. Filed July 5, 1922. Serial No. 572,822. 4 Claims. (Cl. 274—10.)



1. In a talking machine adapted to play automatically a number of records in succession, the combination of a turntable, means for rotating the turntable, a tone arm, a sound box pivotally mounted thereon, a single lever pivoted to the tone arm, a cam, and means adapted to rotate the cam at the end of a record, one end of the lever supporting the sound box and the other end engag-

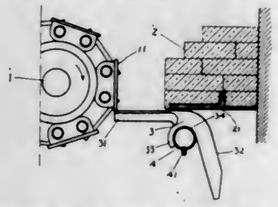
ing the cam, said cam formed to first raise the sound box through said lever, then move it positively to a position clear of the record and turntable, then hold it

stationary during the changing of a record, and finally drop it into position to engage the new record in starting position.



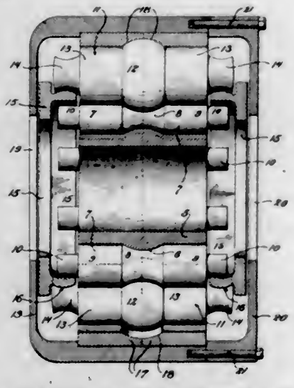
1,505,308. SECTIONAL FURNITURE. HENRY HANSEN BROWN, Chicago, Ill., assignor to International Show Case Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1923. Serial No. 664,059. 10 Claims. (Cl. 211—27.)

1. A store fixture comprising a plurality of upright members, a plurality of shelves having their ends supported upon a spaced pair of upright members, said upright members provided upon their front faces with recesses, cross pieces bridging said recesses, and pilasters fitting the front faces of said upright members and provided with means for engagement with said cross-pieces whereby said pilasters are removably manitained in position.



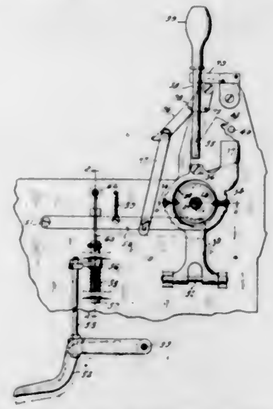
1,505,309. DENTAL MANDREL. IRA A. BURNETT, Chicago, Ill. Filed Nov. 10, 1923. Serial No. 673,888. 3 Claims. (Cl. 32—13.)

1. A dental mandrel comprising a shank having one of its ends slotted and provided with a longitudinally extended bore having screw-threads, said end of the shank being provided with a slotted clamping member and carrying inwardly extended engaging means, said clamping member having its outer surface flared, screw-threads on the shank below said member, another clamping member having a stem provided on its lower portion with screw-threads to engage the threads of said bore and above said threads with engaging means to co-act with



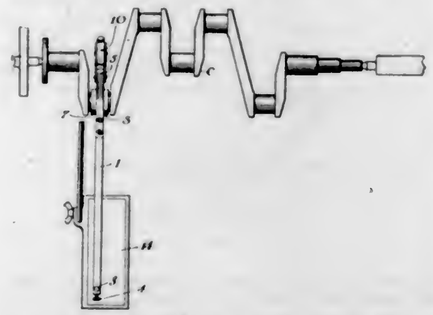
the first named engaging means and adapted to co-operate with the first named clamping member to clamp a disk between them, and a controlling nut mounted on the screw-threaded portion of the shank and co-operating with the first named clamping member to cause said stem to be locked against independent rotary movement.

1,505,310. APPARATUS FOR DUMPING ASH IN CHAIN GRATES. CHARLES WESLEY BURROUGHS, Montreal West, Quebec, Canada. Filed June 1, 1922. Serial No. 565,201. 6 Claims. (Cl. 110—40.)



1. In a device of the class specified, the combination of a chain grate with a plurality of narrow dump plates pivotally supported on a bearing parallel with the end of the grate, having their front ends bearing upwardly on the lower part of the end of the grate.

1,505,311. BEARING. PATRICK H. CALLAGHAN, Philadelphia, Pa. Filed Oct. 30, 1922. Serial No. 597,736. 4 Claims. (Cl. 64—61.)

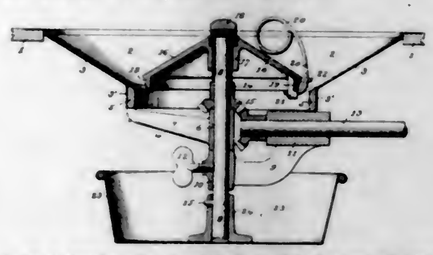


1. An anti-friction bearing comprising a sleeve; an annular series of rollers engaging with the sleeve, the rollers having cylindrical trunnions; an annular series of rollers engaging with the rollers of the first series, the rollers having concave trunnions; spacing rings having a flush inner face adapted to engage the trunnions of the inner series of rollers, and a convex outer face adapted to engage the trunnions of the inner series of rollers, and a convex outer face adapted to engage the trunnions of the outer series of rollers, and means for holding the sleeve and rollers in engagement.

1,505,312. CLUTCH. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1920. Serial No. 418,761. 17 Claims. (Cl. 192—24.)

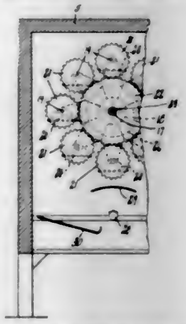
1. In a machine of the character described, the combination with a clutch, of a device for automatically throwing the clutch out of engagement and a separate manually controlled device for operating the clutch to throw it in and out periodically, there being a clutch lever operated by both devices and a manually shiftable extension member therefor which is movable transversely of the clutch lever to cause the latter to be operated by either one of said devices.

1,505,313. RECORDING GAUGE. ALVAH J. COLWELL, Norfolk, Nebr. Filed June 16, 1923. Serial No. 645,775. 5 Claims. (Cl. 234—1.)



1. An instrument for recording the angular deviation of the crank pin of a crank shaft relative to the axis of the main bearing of said shaft, comprising an elongated member, means carried by an end portion of said member to engage the member with the crank pin to be tested, and marking means carried by the opposite end portion of the member.

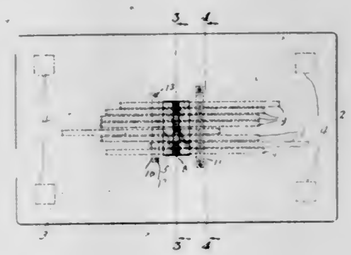
1,505,314. ELECTRICAL GROUNDING CLAMP. WARREN R. COX, Cleveland, Ohio. Filed Aug. 19, 1920. Serial No. 404,601. 2 Claims. (Cl. 173—273.)



1. An electrical grounding clamp, comprising a plate having flanges and a projection extending from one of said flanges, a metal strap having perforations at one end and a pair of openings at its opposite end, a clamping screw extending through said plate and one of said pair of openings, and said strap being wrapped around the flanges with said projection protruding through the second opening and with the end of the strap extended beneath the flanges of said plate, the opposite perforated end of said strap being also adapted to be hooked to said projection when wrapped around a pipe.

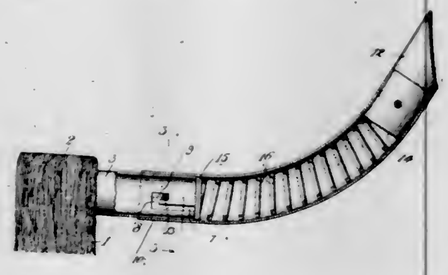
1,505,315. GRADER FOR POPPED CORN. CHARLES CRETORS, Chicago, Ill. Filed Jan. 22, 1923. Serial No. 614,182. 7 Claims. (Cl. 83—92.)

1. In a grader, the combination of a horizontal plate provided with a circular pit the wall of which inclines downwardly towards the center and has a central circular opening, a conical deflector head arranged centrally in said pit and forming in connection with said opening a narrow outlet throat and in connection with the pit wall forming a shallow oppositively tapering annular containing cavity for the substance treated, a stirrer finger arranged in said throat and extending up centrally through the annular mass of material, and means for imparting movement to said finger.



1,505,316. REEL OVEN. WILLIAM WARREN CUMMINGS, Hanover, N. H. Filed June 25, 1921. Serial No. 480,317. 4 Claims. (Cl. 107—59.)

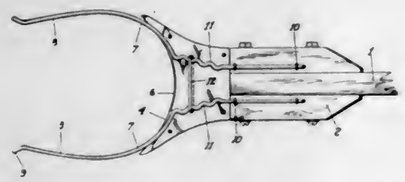
4. An oven having, in combination, a shaft, means to rotate said shaft, a shelf carrier fast to said shaft, a series of shelves rotatably mounted upon said shelf car-



rier and concentric with said shaft, a series of pinions rigidly connected to said shelves, a gear rotatably mounted upon said shaft and meshing into said pinions and means to rotate said gear, whereby said shelves may at all times be locked in a horizontal position.

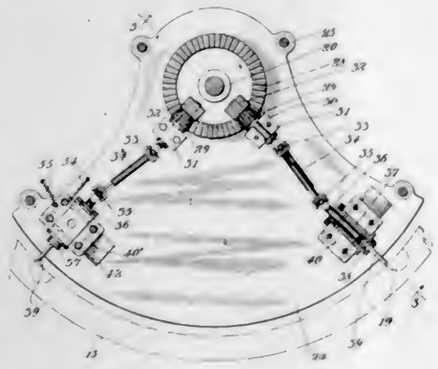
1,505,317. COUNTING CARD TABLE. PETER C. CHRISTENSEN, Hartford, Conn. Filed June 27, 1923. Serial No. 647,995. 1 Claim. (Cl. 235—90.)

In a counting table having a top with a slot through it; a plurality of counting slides supported by the top below the same, each slide having numbers running oppositely from zero upwardly and made visible through said slot by movement of the slides, resilient frictional detents supported by an adjustable strip below the slides and means for simultaneously adjusting the resiliency of the detents.



1,505,318. ATTACHMENT DEVICE. HARRY BERTOW, New York, N. Y. Filed Jan. 11, 1921. Serial No. 436,589. 2 Claims. (Cl. 287—103.)

1. An attachment device of the character as described, consisting of a metal tube having at one end diametrically opposite to each other two slots, having their hook shaped ends running in opposite directions, and at the other end the ends of a wire rope rigidly secured therein, another tube telescopically fitting over the tube referred to above, a pin rigidly secured within the latter tube, a handle secured to same, an annular plate movably arranged within said tube behind the pin, and a spring interposed between said plate and the handle.

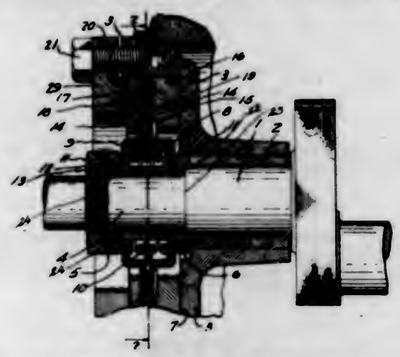


1,505,319. PIE-PAN LIFTER. PAUL BRIX, Stockton, Calif., assignor of one-half to Otis B. Harvey, Stockton, Calif. Filed June 24, 1922. Serial No. 570,547. 8 Claims. (Cl. 294—33.)

1. A lifter for circular pans having a curled rim-flange comprising a handle, a pair of spring wire members projecting beyond the handle and shaped to engage the outside of the pan for substantially one half the circumference thereof, and means projecting upwardly of the

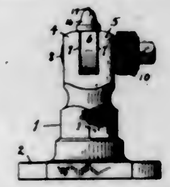
wires for engaging the under side of the rim flange of the pan when the latter is seated between the spring members and pressure is exerted to raise the pan.

1,505,320. MORTISING MACHINE. EDWARD DALLIG, Poughkeepsie, N. Y. Filed Dec. 14, 1923. Serial No. 680,653. 3 Claims. (Cl. 144—69.)



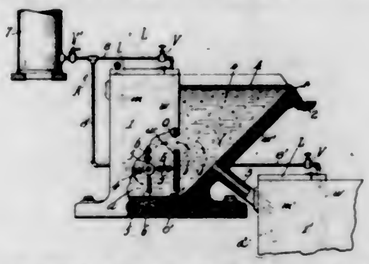
1. A mortising machine comprising a power shaft, spindles geared to said shaft and arranged radially thereto at an angle forming an equal division of a circle endthrust tool carrying spindles connected by universal joints to be driven from said first mentioned spindles; crossed slides upon which the tool carrying spindles are mounted to be given predetermined endwise and laterni movements, a crank for each set of compound slides imparting thereby to each tool the desired movement and a common means for rotating the said cranks.

1,505,321. PACKING FOR SHAFTS. JAMES H. DENNEDY, Detroit, Mich. Filed Sept. 10, 1921. Serial No. 499,805. 6 Claims. (Cl. 286—11.)



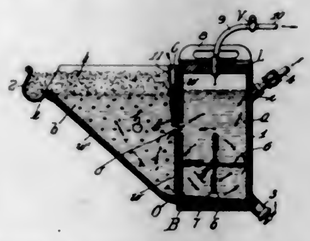
1. In a packing for shaft, in combination, a casing having a recess, a shaft extending centrally through the said recess, a pair of rings fitting within the recess and having companion tapered faces, a pair of centrally apertured diaphragms fitting within the recess and positioned between the tapered faces, a centrally apertured metal disc positioned between and facing the diaphragm, a clamp member having an annular shoulder fitting within the recess, means for drawing the clamp member up to bind the rings diaphragms and disc between the bottom of the recess and the annular shoulder, an annular member secured to each disc at the central aperture, a packing ring carried by each annular member, a sleeve sealed to the

shaft and having an annular flange, a ring at the end of the sleeve opposite the flange, a nut threaded on the



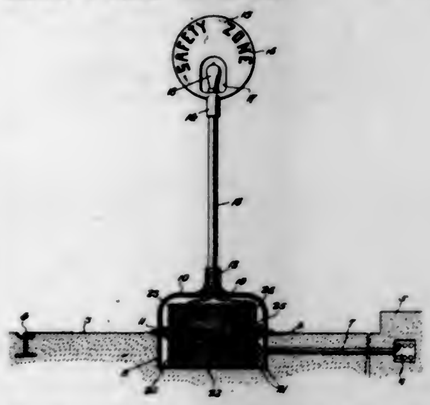
shaft and supporting the ring in position and coiled spring about the sleeve forcing the annular members apart and causing the packing rings to engage the annular flange and ring.

1,505,322. DIAMOND HOLDER. EDWARD DESMON, Detroit, Mich. Filed June 19, 1922. Serial No. 569,375. 5 Claims. (Cl. 125—11.)



2. A grinding wheel dresser comprising a support embodying a pair of jaws, a collar rotatable between the jaws, a pin slidable in the collar and jaws, a diamond setting engaged by the pin and collar, and means to move the pin relative to the collar and jaws to lock the collar and said setting in selected position.

1,505,323. PROCESS OF CONCENTRATING ORES. GEORGE B. EBERENZ, El Paso, Tex., assignor of one-fourth to Edward P. Mathewson, New York, N. Y., and three-fourths to Thomas J. Scanlon, Alton, Ill. Filed Apr. 15, 1920, Serial No. 374,077. Renewed Jan. 5, 1924. 1 Claim. (Cl. 83—85.)

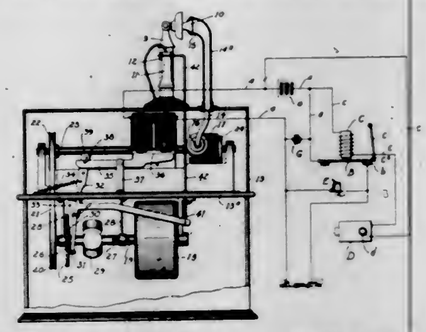


In the concentration of ores, the process which consists in subjecting a charge of ore in pulp form while under agitation to the action of sulfureted hydrogen maintained under pressure against the pulp mass to the exclusion of other selective agents and out of contact with the atmosphere to sulfidize the mineral particles and aerate the pulp mass, then cutting off the supply of hydrogen sulfid, and continuing the agitation in contact with the air at normal atmospheric pressure, causing the resulting bubbles and mineral particles adhering thereto to migrate through the pulp to a region of comparative quiet, and removing the resulting froth from the surface of said region.

1,505,324. APPARATUS FOR AND PROCESS OF CONCENTRATING ORES. GEORGE B. EBERENZ, El Paso, Tex., assignor of one-fourth to Edward P. Mathewson, New York, N. Y., and three-fourths to Thomas J. Scanlon, Alton, Ill. Filed Oct. 22, 1920, Serial No. 418,653. Renewed Jan. 5, 1924. 6 Claims. (Cl. 83—85.)

3. A process of concentrating ores which consists in subjecting a charge of pulp while under agitation to the action of sulfereted hydrogen maintained in direct contact with the surface of the pulp whereby the pulp is impregnated with and aerated by the gas, and intermittently supplementing the action of the sulfureted hydrogen by suitable quantities of atmospheric air admitted to the pulp while being agitated.

1,505,325. SAFETY-ZONE INDICATOR FOR STREETS. JOHN D. ELBERT, San Francisco, Calif., assignor of forty-five one-hundredths to George L. Stewart, San Francisco, Calif. Filed Sept. 13, 1923. Serial No. 662,494. 2 Claims. (Cl. 40—145.)



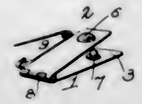
2. A safety zone indicator including a base element counter-sunk beneath the surface of the street, a cover plate mounted on said element and lying flush with the street surface, and an indicator embodying a base element a portion of which latter extends through the plate and into engagement with the first said base element.

1,505,326. PHONETIC BURGLAR AND OTHER ALARM. MARTIN FIELD, Chicago, Ill., assignor of one-half to Ben Goldsher, Chicago, Ill. Filed Oct. 29, 1919. Serial No. 334,137. 1 Claim. (Cl. 179—5.)

A phonetic alarm comprising a telephone service instrument including a transmitter and a receiver hook controlling the talking circuit of said instrument, in combination with a sound record and reproducer therefor.

a sound tube connecting said reproducer and transmitter, mechanism for operating said record, a brake device consisting of a rotatable element on said operating mechanism, a three-arm lever pivoted adjacent the intersection of its arms, a brake-shoe on one of said arms engagenble with said rotatable element to release and stop the operating mechanism, a link operatively connecting a lateral arm of said lever to the receiver hook to raise

and lower the latter, a rock-lever having latching engagement with the third arm of said lever, electro-magnetic means for oscillating said rock-lever, and current conductors connected to said electromagnetic means and having a switch interposed therein whereby the circuit in said conductors is opened and closed and thereby actuates said rock-lever through said magnets to move said three-arm lever.

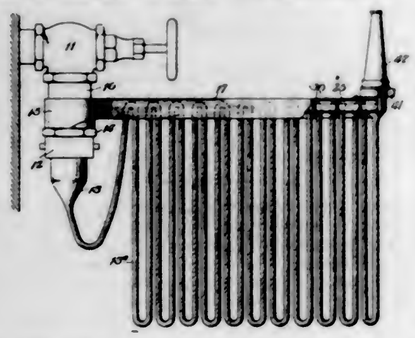


1,505,327. SAND REEL. ROY L. FLETCHER, Washington, Pa., assignor of one-half to The Washington Mould, Machine and Foundry Company, Washington, Pa. Filed July 20, 1922. Serial No. 576,380. 1 Claim. (Cl. 242—117.)

The combination in sand-reels, consisting of a hollow axle or shaft having journals secured in each end thereof, a friction-wheel mounted on said axle or shaft and provided with a series of opposed bevelled key-ways, bevelled keys or wedges adapted to be inserted in said key-ways, said keys or wedges being provided with longitudinal holes for receiving bolts for drawing the keys or wedges inwardly towards each other for securing said friction-wheel rigidly to the axle or shaft, together with a sand-line-reel consisting of two cast-iron discs which are provided with shoulders and bevelled key-ways, rings secured to said axle or shaft and a sheet-metal disc mounted thereon and held in position by said rings, a drum composed of two sections which rest on said shoulders which are formed on the inner sides of the cast-iron discs at their outer ends and on the said rings at their inner ends, rods or bars adapted to pass through the keys or wedges and rings for drawing said keys or wedges inwardly toward each other for clamping the sand-line-reel rigidly to the axle or shaft, all substantially as shown and described.

1,505,328. SHOULDER-STRAP CLIP. RUTH FREEDMAN and PHILIP FREEDMAN, New York, N. Y. Filed Oct. 13, 1922. Serial No. 594,311. 1 Claim. (Cl. 24—85.)

In a shoulder strap clip, two normally open clamping elements, and means for connecting said elements together, means for clasping their free ends in detachable relation, and means for attaching one of said elements to the underside of a garment shoulder, whereby the other element may be passed beneath the shoulder



strap of an adjacent garment to hold said strap in nonslipable relation to the shoulder of the first named garment.

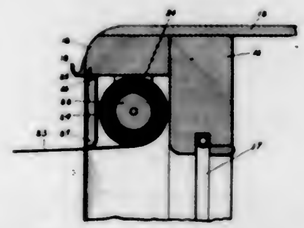
1,505,329. SOCKET FOR VACUUM TUBES OR THE LIKE. CHARLES A. FRIEDRICH, Brooklyn, N. Y. Filed Dec. 9, 1921. Serial No. 521,083. 5 Claims. (Cl. 173—328.)

1. In a socket for a vacuum tube having projecting contact members, an insulation base, terminal members fixed to said body and universally yielding sockets conductively connected to said terminal members and adapted to engage said contact members, so as to support the vacuum tube out of physical contact with said base.

1,505,330. HOSE RACK. HENRY GIBBS, Chicago, Ill., assignor to W. D. Allen Manufacturing Company, Chicago, Ill., a Corporation. Filed Aug. 18, 1921. Serial No. 496,332. 1 Claim. (Cl. 248—28.5.)

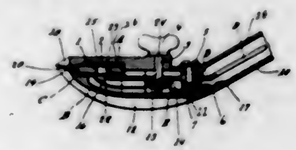
A hose rack of the character described comprising a head, a channel-shaped cover connected to said head, a pair of side supports arranged beneath said cover, one of said side supports comprising an up-standing flange rigidly secured upon the inside of said cover, and hose carrying pins slidably and permanently connected to the other of said side supports and having downturned, hooked ends slidably engaging said supporting flange and releasable from the outer end thereof as the pins are moved outwardly by withdrawal of the hose.

1,505,331. SPRAYING NOZZLE FOR OIL ENGINES. SAMUEL B. GOLD, Independence, Mo., assignor to Weber Engine Company, Kansas City, Mo., a Corporation of Iowa. Filed Mar. 28, 1921. Serial No. 456,321. 2 Claims. (Cl. 299—125.)



1. An injector for oil engines, comprising a body portion having a discharge end provided with a discharge opening of large area and a supplemental discharge opening of small area, a longitudinally extending valve stem

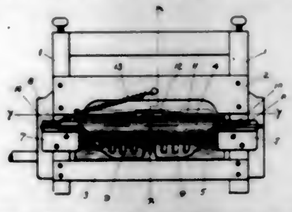
within said body whose inner end is subjected to the pressure within the injector, said valve stem having at its outer end a conical head normally closing the larger opening while leaving the smaller opening unobstructed and having a reduced portion within the body forming



a chamber, a spring surrounding the valve stem within said body and exerting a pressure thereon sufficient to close the valve when the pressure is normal within the injector, but permitting the valve to open when the smaller opening is obstructed.

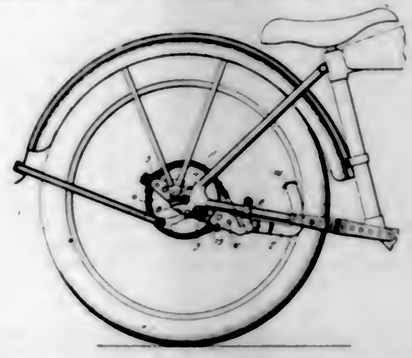
1,505,332. WEATHER SCREEN FOR MOTOR VEHICLES. ABUNDUS GRAVEL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 4, 1918. Serial No. 215,337. 3 Claims. (Cl. 296—99.)

1. The combination with a vehicle having a top and a windshield; of a roller supported beneath a forwardly extending portion of said top; a curtain mounted at one end on said roller to wind and unwind from the bottom thereof and adapted to be connected at the other end to said windshield; and a strip secured at its upper edge to said top in front of said roller, and having its lower edge in engagement with said curtain when said curtain is in extended position.



1,505,333. HAIR CLIPPER. FORREST L. GRAY, Kenmore, Ohio. Filed Sept. 27, 1922. Serial No. 590,757. 11 Claims. (Cl. 30—1.)

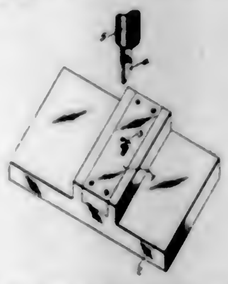
1. In a clipper, a base plate, a cutting comb rigid with the base plate, a movable serrated knife between the base and comb, and a spring pressing the knife away from the base into cutting contact with the comb.



1,505,334. SAFETY DEVICE FOR CLOTHES WRINGERS. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Nov. 16, 1922. Serial No. 601,253. 6 Claims. (Cl. 68—32.)

1. The combination with a clothes wringer having end members and presser rolls journalled therein, of brackets mounted on said end members, a pair of feed arms pivotally mounted at one end to said brackets, and adapted

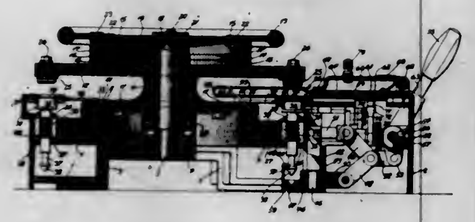
to be freely swung towards the effective point of said rolls and an adjustable rod connecting the feed plates to cause them to function in unison.



1,505,335. BRAKE. WILLIAM S. HARLEY, Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 13, 1920. Serial No. 430,256. 22 Claims. (Cl. 188—18.)

1. A unitary braking mechanism for a vehicle having a brake drum rigidly fastened to a wheel hub thereof, comprising a brake band, a bracket supporting the brake band in operative relation to the brake drum, an actuating lever pivoted on the bracket and connected with the ends of the brake band, and a foot pedal rigidly fastened to the actuating lever.

15. A brake comprising an axle removably connected to a vehicle, a drum on said axle, a brake band for said drum, and a foot pedal connected to said band and removable with said axle from said vehicle.



1,505,336. METHOD OF FORMING STENCIL-CHARACTER PUNCHES AND DIES. STEPHEN D. HARTOG, Belleville, Ill., assignor to John W. Marsh, Belleville, Ill. Filed Jan. 25, 1922. Serial No. 531,024. 5 Claims. (Cl. 76—107.)

1. The method of forming stencil cutting punch plates, which consists in partially cutting through a plate and forcing the material of the cut out portion below the

lower plane of said plate; returning the cut out portion to its original position in the same plate; and forcing the cut out portion above the original upper plane of the same plate.

1,505,337. STENCIL-CUTTING MACHINE. STEPHEN D. HARTOG, Belleville, Ill., assignor to John W. Marsh, Belleville, Ill. Filed Jan. 23, 1922. Serial No. 531,025. 21 Claims. (Cl. 197—62.)

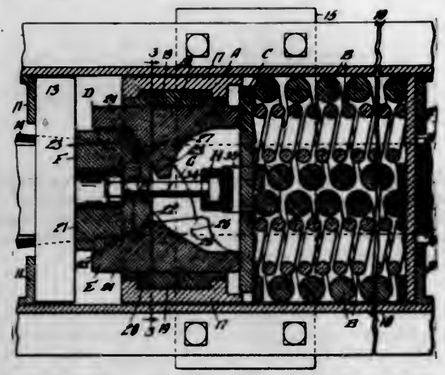
1. In a stencil cutting machine, the combination with a main frame, of a rotary element including spaced carriers, an annular spaced series of punches carried on the under face of the upper one of said carriers, vertically movable die elements mounted in the lower one of said carriers, an actuator for moving the die element upwardly toward the punch elements when the same are brought to the cutting point, operating mechanism for moving said actuator upwardly, a work supporting carriage, escapement mechanism for said carriage, an operating shaft for operating said escapement mechanism and said actuator operating mechanism, and a handle for operating said shaft.

1,505,338. GAS FOR BLOWPIPE USE. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 20, 1918. Serial No. 250,637. 2 Claims. (Cl. 48—199.)

1. A gas for cutting and welding purposes comprising a mixture of hydrogen with from more than 10% and not more than 50% of carbureted water gas of substantially the following composition

C_6H_6	.5	parts	by	volume.
C_nH_{2n}	11.8	"	"	"
CO	31.3	"	"	"
H_2	36.1	"	"	"
CH_4	12.6	"	"	"
C_2H_6	2.3	"	"	"
O_2	.4	"	"	"
N_2	2.3	"	"	"

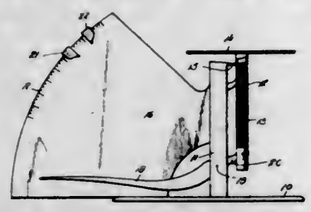
1,505,339. GASEOUS FUEL. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Cleveland, Ohio, a Corporation of Delaware. Filed Jan. 5, 1920. Serial No. 349,586. 1 Claim. (Cl. 48—199.)



A gas for cutting and welding metals comprising a mixture of hydrogen with carburetted water gas in the volumetric proportions of

	Per cent.
Hydrogen	85 to 50
Water gas	15 to 50

1,505,340. GASEOUS FUEL. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company Cleveland, Ohio, a Corporation of Delaware. Filed Jan. 5, 1920. Serial No. 349,587. 2 Claims. (Cl. 48—199.)

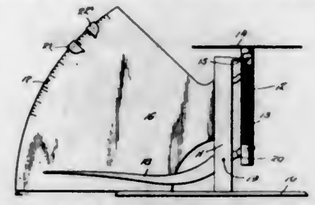


2. A gas for cutting, welding and heating purposes comprising a mixture of acetylene with hydrogen in the proportions of approximately 40% by volume of acetylene to the hydrogen.

1,505,341. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 16, 1922. Serial No. 588,522. 9 Claims. (Cl. 213—32.)

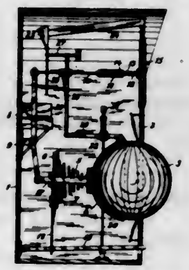
1. In a friction shock absorbing mechanism, the combination with a friction shell having opposed interior friction surfaces; of a spring resistance; opposed friction shoes cooperable with the shell; pressure-receiving and transmitting spreading means, said shoes and said means having a plurality of cooperating sets of faces, part of which are arranged at a relatively keen wedge-acting angle and others at a relatively blunt releasing angle; and auxiliary spreading means between and having direct engagement with said opposed friction shoes.

1,505,342. METHOD OF DETERMINING THE VOLUME OF OCCLUDED GAS IN A PLASTIC MASS. WILFRID P. HEATH, Chicago, Ill., assignor to Mojonnier Bros. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1922. Serial No. 597,521. 2 Claims. (Cl. 73—61.)



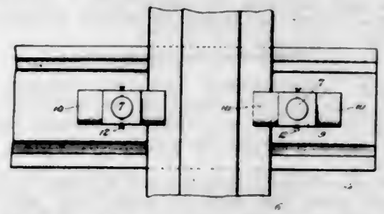
1. A method for determining the degree of occlusion of gas within a plastic matrix by using a scale, a container and a chart showing the weights of the containerful of the matrix inflated to different degrees, said method consisting in determining from the chart the said weight corresponding to the desired degree of inflation, locating the scale indication corresponding to said determined weight, placing upon the scale a containerful of the inflated matrix and comparing the resulting indication with the aforesaid indication, and then, if the two are not the same, varying the amount of occluded gas in the matrix until a subsequent similar weighing shows the first mentioned scale indication.

1,505,343. MEANS FOR DETERMINING THE VOLUME OF OCCLUDED GAS IN A PLASTIC MASS. WILFRID P. HEATH, Chicago, Ill., assignor to Mojonnier Bros. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1922. Serial No. 597,522. 2 Claims. (Cl. 265—39.)



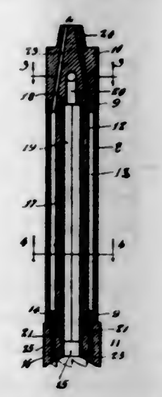
1. A weighing device of the character described comprising a base, a supporting standard, a depending contractile spring supported by the upper end of the standard,

a tubular member with which the lower end of the spring is engaged and by which it is supported, a platform carried by the tubular member, a pointer pivoted to the standard and operatively connected to the tubular member to be



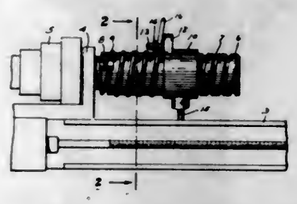
shifted thereby, a scale mounted upon the base and over which the pointer moves, and a marker adjustable upon the scale when acted upon by a certain definite amount of material disposed on the platform.

1,505,344. STRENGTH-TESTING DEVICE. RUDOLF HENTSCHEL, Brieg, Germany. Filed July 3, 1922. Serial No. 572,757. 2 Claims. (Cl. 265—22.)



1. A strength testing apparatus comprising a cabinet, vertical guide rails fitted in said cabinet, a vertical plate guided longitudinally between said guide rails, a transverse rod guided axially in said plate, a punching-ball supported by said rod, a spring arranged on the plate so as to support the rod and oppose movements imparted to the same by blows applied to the ball, springs tending to lift the plate, springs adapted to arrest the plate in different positions and to yield under the blows applied to the ball so as to allow the lifting springs to shift the plate to a fresh position after each blow, levers arranged so as to be operated by the rod in its different positions, a dial, pointers arranged on concentric shafts so as to move over said dial, connections between the different levers and pointers whereby the latter are moved so as to indicate on the dial the extent of the rod movements, means for arresting the pointers in operated position, and means for restoring the elements to their normal position.

1,505,345. RAIL CLAMP. LEOPOLD F. HEPTNER, Johnstown, Pa. Filed Mar. 20, 1924. Serial No. 700,592. 3 Claims. (Cl. 238—340.)

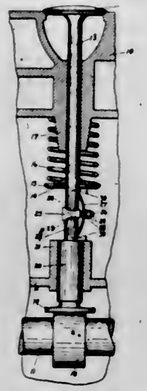


1. A rail clamp for mine ties including a shank engageable through the tie and equipped with a body engageable with the shank, said body including a pair of projections and being rotatable while in operative position on the tie to urge either of said projections into engagement with the rail base.

1,505,346. CORE BARREL. DETREVILLE D. HILL, Huntington Beach, Calif. Filed Sept. 26, 1921. Serial No. 503,126. 5 Claims. (Cl. 255—72).

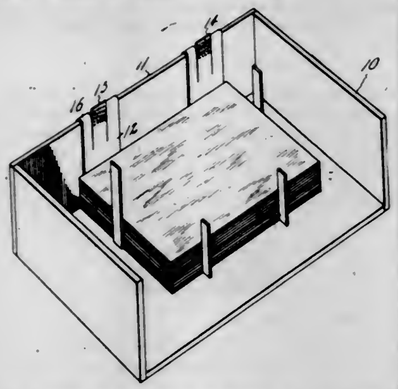
1. In a core barrel, the combination of a sleeve, a tubular head detachably secured to the sleeve, and a longitudinally split core container mounted in the sleeve and projecting therefrom, there being a shoulder in the bore of the head and the sleeve seating against said shoulder.

1,505,347. COIL-WINDING MACHINE. EZRA S. HOYT, Los Angeles, Calif.; R. C. Hoyt, executor of said Ezra S. Hoyt, deceased, assignor to Hoyt Heater Company, a Corporation of California. Filed Apr. 5, 1923. Serial No. 629,991. 5 Claims. (Cl. 153—67.)



1. A coil winding machine comprising a rotatable mandrel having a helical groove in its surface, said mandrel having means to detachably secure the stock in said groove at one end thereof, a travelling collar having a complementary grooved member extending from one side thereof and registering with said helical groove, said collar embracing said mandrel and engaged with said groove, said mandrel forming a guide for said collar, and means to prevent rotation of said collar but permit longitudinal movement thereof.

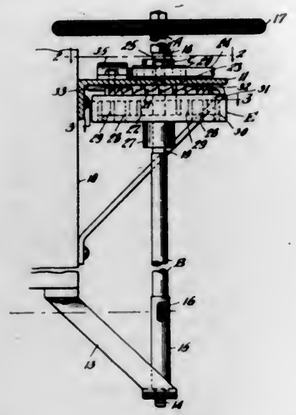
1,505,348. AUTOMATIC TAKE-UP DEVICE. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,772. 7 Claims. (Cl. 123—90.)



1. In an automatic take-up device, the combination of the valve stem and push rod of an internal combustion engine, a wedge mounted between the adjacent ends of said stem and push rod, each of said ends being in direct contact with the wedge and having means to prevent

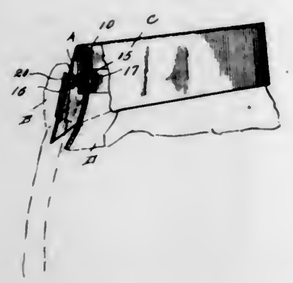
lateral displacement thereof, an extension upon said wedge, a spring mounted upon said extension yieldingly

engaging said stem and said rod and acting to force the wedge therebetween, and means for holding said spring against displacement upon said extension.



1,505,349. SHEET-SEPARATING ATTACHMENT. FRED N. JOHNSON and WILLIAM P. JOHNSON, Dallas, Tex.; said William P. Johnson assignor of his entire right to Charles F. Holmes, Dallas County, Tex. Filed Apr. 2, 1923. Serial No. 629,289. 2 Claims. (Cl. 271—61.)

1. A sheet separating attachment for printing devices comprising a plate, downturned hooks at the upper end of the plate, a finger slit from the plate between the hooks and having a roughened face, and a set screw for displacing the finger from the plate.

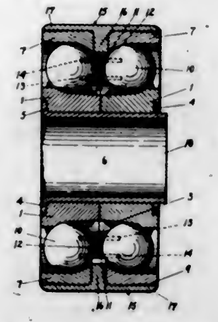


1,505,350. HAND BRAKE. GEORGE A. JOHNSON and JOHN F. O'CONNOR, Chicago, Ill., assignors, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 25, 1923. Serial No. 614,744. 3 Claims. (Cl. 74—119.)

1. In a hand brake, the combination with upper and lower brake staff sections; of a ratchet element and gear rotatable in unison with said upper staff section; means for rotating said upper staff section; a carrier member rotatable in unison with said lower staff section; horizontally arranged gears rotatably mounted on said carrier and meshing with said first named gear; a ring gear supported by and meshing with said carrier gears; and means positively engaging said ring gear for preventing rotation of said ring gear in a counter clockwise direction but permitting clockwise rotation thereof, all of said gears being bodily rotatable in unison for effecting take-up of the brake chain until a predetermined resistance is encountered, whereupon the friction between

said gears is overcome and said gears are rotated relatively to each other while said ring gear is held stationary, thereby multiplying the leverage ratio of said upper brake staff section.

1,505,351. NECKTIE FASTENER. EUGENE F. JOHNSON, Duluth, Minn. Filed Mar. 17, 1923. Serial No. 625,758. 1 Claim. (Cl. 24—64.)

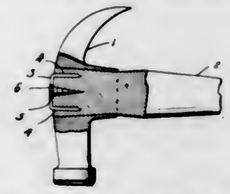


In a device for securing made-up neck ties in place, the combination with a made-up neck tie including a form plate on which the body of a neck tie is secured, a rearwardly extending resilient socket carried by the form plate and extending beyond the body of the necktie, of a collar button comprising a base, a shank, a conical head carried by the shank, and an outwardly extending tapered stud carried by the head adapted to be detachably fitted within said socket, as and for the purpose specified.

1,505,352. ANTIFRICTION BEARING. HARFORD C. KNOWLES, Elmira, N. Y., assignor to The Willys-Morrow Company, Elmira, N. Y., a Corporation of Ohio. Filed May 15, 1919. Serial No. 297,415. 6 Claims. (Cl. 64—36.)

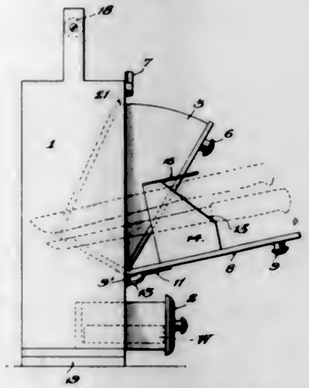
4. In an anti-friction bearing, a pair of annular bearing members whose outer faces are conical with bases together, and an annular casing having an inwardly extending rib engaging adjacent end faces of said bearing members and having oppositely tapered interior faces for firmly engaging the conical faces of said bearing members.

6. The method of assembling a bearing of the character described which comprises positioning the two conical bearing members in opposite sides of the casing, radially



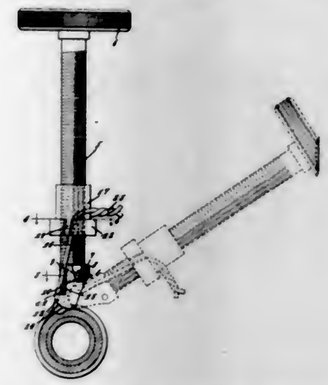
compressing the casing to fit the conical surfaces of the bearing members, and finishing off the exterior of the casing to give it cylindrical surface.

1,505,353. CAGE TRAP. JOHN MARTIN KUSSMAUL, Carbondale, Ill. Filed June 14, 1921. Serial No. 477,440. 1 Claim. (Cl. 43—61.)



In a trap of the character described, a tubular body constituting a trapping compartment formed of an upper and lower longitudinal section, said lower section having one longitudinal marginal portion thereof bent outwardly in overlapping relation to provide a grooved flange, and the other longitudinal marginal portion formed with recesses, hinge-knuckles formed along one longitudinal edge of said upper section and positioned in said recesses, pivot means for securing said knuckles in said recesses, the other longitudinal edge of said upper section fitting in the groove of said flange to form a positive connection between the two sections, catches carried exteriorly upon the upper section, a shiftable bar carried by said lower section having a plurality of engaging fingers for simultaneously engaging said catches upon actuation of the bar, and an end wall common to both sections and carried by one of said sections.

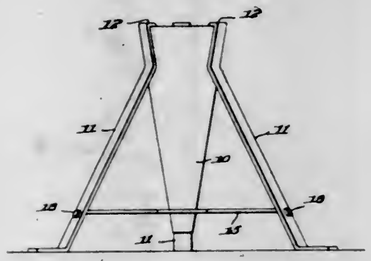
1,505,354. TOOL-HANDLE FASTENER. LOUIS A. LAMARRE, Biddeford, Me. Filed Aug. 25, 1921. Serial No. 495,158. 1 Claim. (Cl. 306—33.)



A wedge formed from a length of flat metal of the same width throughout and having bends across its faces and at right angles to its edges to define a bight portion and parallel arms having parallel flat inner faces in diametrically opposed relation to each other, and a combined wedging and fastening screw extending through the bight portion and positioned directly between the flat diametrically opposed inner faces of said arms with its diameter on a line normal to each of said flat faces whereby the material displaced by the combined wedge and fastening screw exerts a pressure on the flat inner face of each arm at right angles thereto.

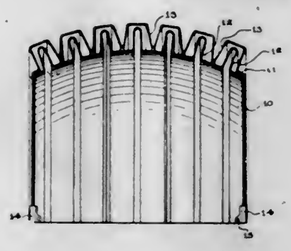
1,505,355. KNIFE CABINET. PETER V. LARSEN, Sioux Falls, S. Dak. Filed Mar. 23, 1923. Serial No. 627,154. 8 Claims. (Cl. 206—15.6.)

1. In a butcher's cabinet, a vertically disposed body having an opening in its front, a knife carrier hinged at its lower end to the body and movable to close said opening, means to hold the carrier when in open position at an incline to the front of the body and a member secured to the carrier and projecting rearwardly of the inner face thereof and having a slot to receive a knife therethrough so as to hold the knife spaced from the inner face of the carrier and having a part formed to engage the inner end of the knife hilt to thereby restrict inward movement of the knife in the slot.



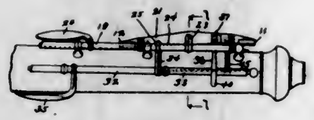
1,505,356. WIRE-TWISTING DEVICE. VICTOR E. LINDFORS, Butte, Mont., assignor of one-half to Jacob Maki, Butte, Mont. Filed Oct. 8, 1923. Serial No. 667,329. 1 Claim. (Cl. 81—93.)

A wire twisting device including a threaded shank, a head swiveled on one end of the shank, said head having diagonally disposed grooves formed in one surface thereof, said grooves defining lateral hook members and a central hook member, a wire drawing member movable on the threaded shank and having lateral slots, said slots adapted to receive a wire to secure a wire to the



wire drawing member, the diagonally disposed grooves adapted to accommodate wire sections to hold the wire sections in spaced relation, said head adapted to engage the article around which the wire is being positioned, and said wire drawing member adapted to move longitudinally of the threaded shank when the threaded shank is rotated to cause the wire to be tightened around the article on which the wire is being positioned.

1,505,357. HOLDER FOR TREES AND THE LIKE. GUSTAV B. LINDQUIST, South Braintree, Mass. Filed Mar. 6, 1923. Serial No. 623,107. 4 Claims. (Cl. 248—38.)



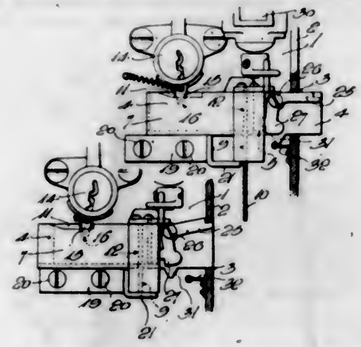
1. In a tree holder of the class described, a conical receptacle adapted to receive tree trunks of various sizes; a plurality of supporting legs for said receptacle, said legs being conically arranged with respect to the axis of said receptacle and having their upper ends bent to form hooks which closely but loosely engage the inner and outer walls of the receptacle adjacent the mouth thereof for an appreciable distance whereby downward pressure imposed upon said receptacle will cause it to wedge between said legs and thereby obviate the necessity of fastening means between said receptacle and said legs.

1,505,358. HAIR WAVER. SARAH A. LOGGINS, Marlin, Tex. Filed Sept. 29, 1923. Serial No. 665,670. 1 Claim. (Cl. 132—38.)

A hair waver comprising inner and outer shells curved longitudinally to fit about the head of the user and curved transversely, the inner shell having outwardly disposed longitudinally extending ribs spaced transversely of the shell and having straight sides and rounded ends, the outer shell having inwardly disposed longitudinally extending ribs fitting between the ribs of the inner shell and having converging sides whereby the space between the side faces of the ribs of the inner and outer shells increases in width towards the free ends of the ribs of the outer shell.

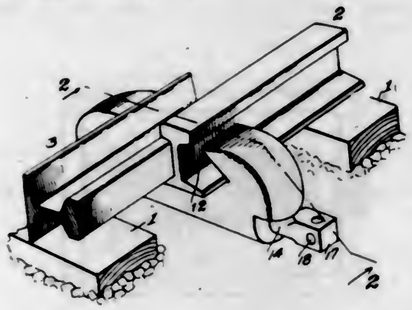
1,505,359. OCTAVE-KEY MECHANISM. ALLEN LOOMIS, Toledo, Ohio. Filed Sept. 14, 1921. Serial No. 500,483. 11 Claims. (Cl. 84—380.)

7. A key mechanism for wood wind instruments comprising two stoppers, a lever extending between said stoppers and articulated to both, a fulcrum support on which said lever is mounted and being arranged for swinging movement about the same axis with the stoppers, a spring actuated presser disconnectedly engaged with said lever arranged to apply force thereon toward the instrument body, a key, and a disengageable pressure transmitting member between said key and fulcrum support arranged to cause raising of said support when the key is pressed upon.



1,505,360. ROPE CLIMBING AND SUPPORTING DEVICE. ALVA LOWERY, Astoria, Oreg. Filed Nov. 13, 1922. Serial No. 600,674. 7 Claims. (Cl. 227—8.)

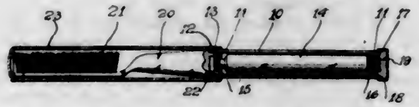
1. In a device of the class described, the combination of a supporting member, jaws movably mounted upon said supporting member including cam surfaces provided with spiral serrations therein, said jaws adapted to cooperate with a rope so that the spiral serrations therein may engage the contour of the rope strands to effect a clamping operation of the jaws on the rope upon movement of the supporting member in one direction along said rope.



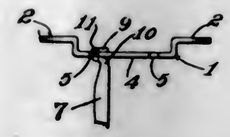
1,505,361. COIN-CONTROLLED LOCK. FRANK MCDANIEL, Detroit, Mich. Filed Feb. 19, 1923. Serial No. 619,960. 5 Claims. (Cl. 194—78.)

1. A coin-controlled lock comprising a bolt, an actuator for said bolt movable with respect thereto, said bolt and

actuator having spaced shoulders between which a coin may be inserted to operatively connect said bolt and actuator, and normally idle means brought into play by movement of the actuator with respect to the bolt for holding the latter against projecion.

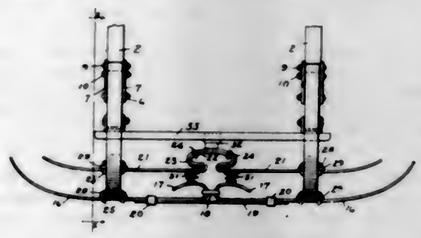


1,505,362. RAIL-CLAMPING DEVICE. JOHN E. MCGRANER, Harrisburg, Ill., assignor of one-third to Marvin Bradshaw and one-third to Roy Bradshaw, Harrisburg, Ill. Filed Mar. 21, 1924. Serial No. 700,846. 2 Claims. (Cl. 238—10.)



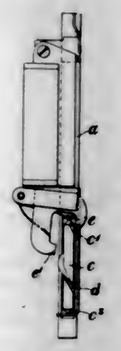
1. In an apparatus of the class described, the combination of a primary and an auxiliary jaw, said auxiliary jaw provided with a cone-like socket, said primary jaw provided with a cone-like wedge adapted to enter said socket, means for drawing the jaws together and holding the same in an assembled position, and a filler member assembled with said jaws.

1,505,363. TOILET CASE. CLYDE W. MATHER, Leonard, Colo. Filed May 6, 1922. Serial No. 558,959. Renewed Nov. 24, 1923. 3 Claims. (Cl. 132—84.)



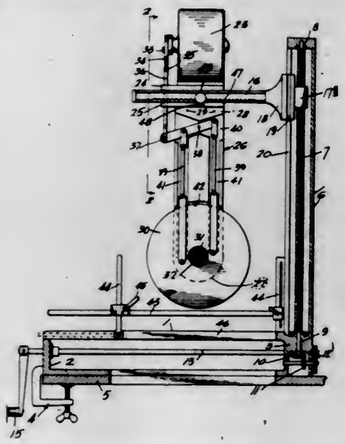
1. In a device of the type described and in combination, a tube, a brush removably engaged with one end of the tube, a cap enclosing the brush and engageable with the brush engaged end of the tube, a closure for the opposite end of the tube, and a dispensing tube having its base removably engaged with the closure and normally concealed within the tube, the tube engaging end of the brush being provided with a recess receiving the dispensing end of said dispensing tube.

1,505,364. CURTAIN SUPPORT. CLARENCE J. ALDEN, Painesville, Ohio, assignor to The Painesville Metallic Binding Company, Painesville, Ohio, a Copartnership composed of Clarence J. Alden and Percy K. Smith. Filed July 19, 1922. Serial No. 575,992. 2 Claims. (Cl. 156—22.)



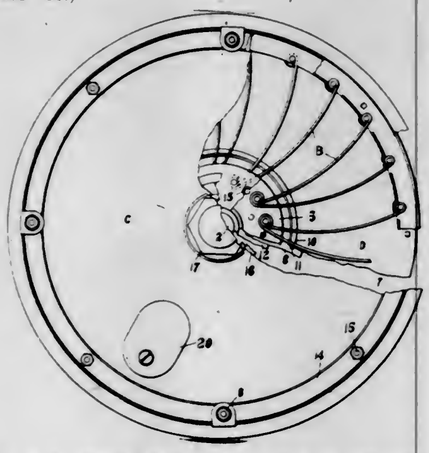
2. The combination with a bracket, of a curtain rod having a flat extension, a portion of said extension constituting a vertically disposed web, shoulders on said extension at either side of said web, said bracket having a narrow vertical slot for the reception of said web, the web being retained in place in said slot by means of said shoulders.

1,505,365. DOUBLE BUMPER. EDWARD A. BANSCHBACH, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,634. 13 Claims. (Cl. 293—55.)



1. The combination with a vehicle frame and a running gear frame, of a pair of bumpers each supported separately from the two frames and one being within the other projecting from the ends of the frames.

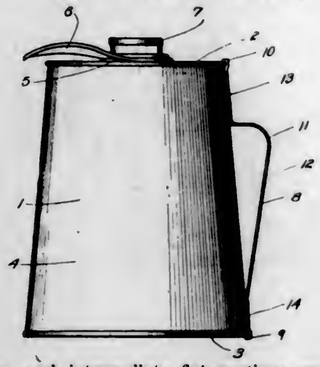
1,505,366. COUNTING MECHANISM OF CALCULATING MACHINES. JAMES MARK MCGINNIS BARR, London, England. Filed Nov. 21, 1923. Serial No. 676,136. 3 Claims. (Cl. 235—91.)



1. Means for releasing separate objects such as balls to the counting mechanism of a calculating machine comprising a reservoir for balls and a rotatable helix of which the pitch is equal to the length of the total number of balls to be released at one time, said helix being arranged in the path of the balls in the said reservoir.

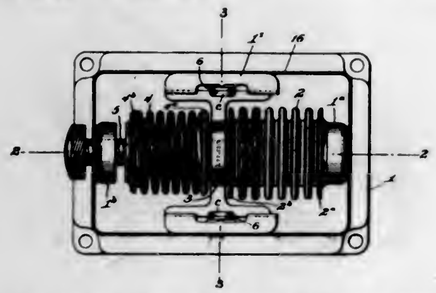
1,505,367. MACHINE FOR CUTTING POCKETS IN GARMENTS. MATHEW F. BIERSDORF, Los Angeles, Calif. Filed Oct. 1, 1921. Serial No. 504,751. 9 Claims. (Cl. 164—74.)

1. In a machine for cutting pockets or the like in garments comprising a base to support said garments or the material for the same, a cutter, and means for independently moving said cutter vertically toward and away from the base and horizontally across the base.



1,505,368. DISK WHEEL. DAVID D. BOHANNON, Oakland, Calif., assignor to Resilient Safe-Wheel Company, Oakland, Calif., a Corporation of California. Filed Mar. 19, 1923. Serial No. 626,060. 2 Claims. (Cl. 301—37.)

2. In a resilient wheel of the character described, a hub, a felloe, a disk secured to the hub, an annular disk secured to the felloe, said disk being slightly flared to contact with the hub disk and being constructed of a thin spring metal to exert a sufficient pressure to constantly maintain a rubbing contact, and a resilient packing member interposed between the disks.

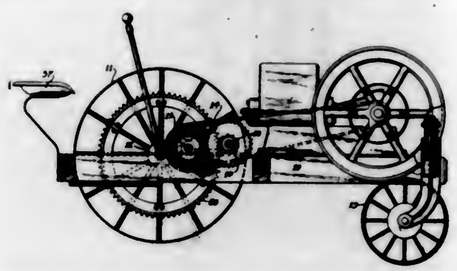


1,505,369. DISPENSING CAN AND HANDLE THEREFOR. SOL BROWN, New Orleans, La. Filed May 8, 1922. Serial No. 559,199. 1 Claim. (Cl. 220—94.)

In combination with a dispensing can having a peripheral head at its upper end and a peripheral bead at its lower end, of a removable handle comprising a strip having its intermediate portion bent to form an open spring-loop, providing a handle bent-over ends comprising hooks to removably engage the beads at the top and bottom

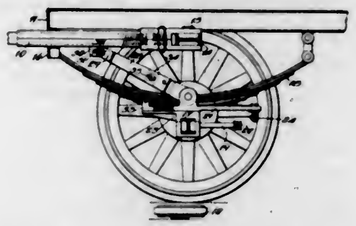
of the can, and intermediate flat portions connecting the hooked ends to the handle, the hooked portions lying snugly against the beads and the intermediate connecting portions lying snugly against the wall of the can to brace the handle with respect to the can.

1,505,370. THERMOSTATIC SWITCH. PAUL H. BUCH and HOWARD M. GROFF, Waterbury, Conn. Filed Apr. 20, 1920, Serial No. 375,225. Renewed Jan. 8, 1924. 7 Claims. (Cl. 200—67.)



1. An automatic switch comprising a pivoted switch member, a terminal, a substantially U-shaped amplifying lever pivotally supported at the ends of the arms of the U, a tension spring connected to the switch member on one side of its pivot and to the amplifying arm on the opposite side of said pivot, a yoke pivotally connected with the arms of said lever, and means for moving said yoke.

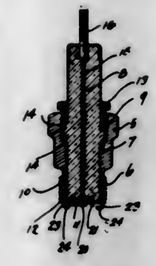
1,505,371. TRACTOR TRANSMISSION MECHANISM. CHARLES H. BUTLER, Oakland, Calif. Filed May 3, 1922. Serial No. 558,050. 1 Claim. (Cl. 180—17.)



A tractor comprising a main frame, an axle at one end thereof, a castor wheel at the opposite end of the main frame, a motor on the main frame, a countershaft operatively connected by sprockets and chain with the motor, said countershaft extending parallel with the axle, a drive shaft for each traction wheel, said shafts being arranged in longitudinal alignment with each other and in parallelism with the countershaft, a driving pinion fixed at the outer end of each drive shaft, a spur gear fixed on each traction wheel with which gears said driving pinions mesh, a forward drive gear and a reverse drive gear rotatably mounted on each drive shaft, said reverse drive gears being disposed adjacent and at opposite sides of the longitudinal center of the main frame, an idler gear for each reverse gear, said idlers being journaled in bearing on the center sill of the main frame, drive gears fixed on

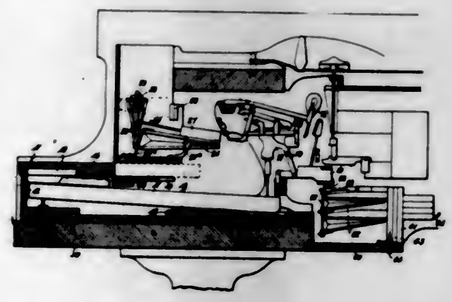
the countershaft in mesh with said idler gears, other driving gears on the countershaft in mesh with the forward drive gears on the drive shafts, clutch elements on the contiguous faces of the forward and the reverse gears of each drive shaft, a sliding sleeve splined on each drive shaft and interposed between the forward and reverse drive gears thereon, clutch elements at each of the ends of said sleeves for cooperation with the clutch elements on the forward and reverse drive gears, independent control

means for each of said sliding sleeves, each of said control means comprising a rock shaft having a yoke connected to the sleeve, said rock shaft extending to the axle, a lever on the axle to actuate said rock shaft, means for maintaining said sleeves in neutral positions, said means comprising transverse rods fixed to the main frame, and lugs depending from the rock shafts and engaging said rod, and compressible springs on the rods pressing against the sides of the lugs.



1,505,372. TRAILER TRUCK. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Manufacturing Company, Beloit, Wis., a Corporation of Wisconsin. Filed Apr. 7, 1920. Serial No. 371,842. Renewed July 7, 1922. Serial No. 573,455. 6 Claims. (Cl. 280—33.55.)

1. A trailer truck having, in combination, a body frame, an axle having swiveled carrying wheels thereon, springs supporting said frame on said axle, a draw bar pivotally mounted on said frame, a steering lever pivoted on a vertical axis on said axle and connected with said wheels, a second lever having its front end detachably connected to said draw bar at a point inward from the end of said body frame and having its rear end connected to said steering lever to rock up and down thereon but to cause rotation of said steering lever about its axis, and means rigid with said axle with which said second lever is arranged to interengage when detached from the draw bar whereby to hold the wheels at right angles to the axle.

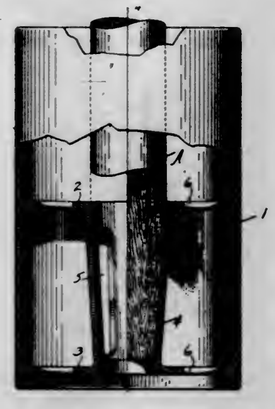


1,505,373. SPARK PLUG. LOYD PINKNEY CARPENTER, Palestine, Tex. Filed Oct. 19, 1920. Serial No. 417,880. 2 Claims. (Cl. 123—169.)

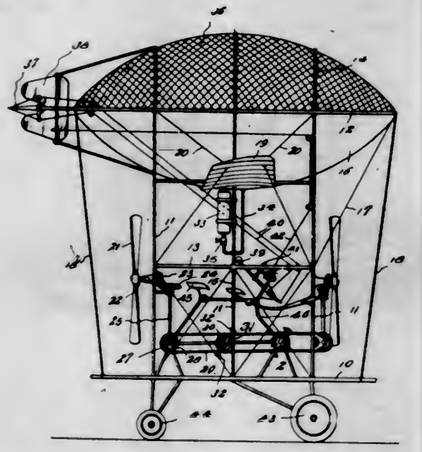
1. A spark plug comprising a metal body casing, an insulating core, a plurality of ground electrodes carried by the casing in depending relation therefrom, a main electrode carried by the insulating core having a depending multi-pointed head thereon, a point being provided for each ground electrode, and a plurality of neutral electrodes relatively insulated from each other and carried by said core in depending relation, a neutral electrode being provided for each point of the multi-pointed head and being placed between its respective point of said multi-pointed head and one of the neutral electrodes whereby

during operation a spark may first jump from the point of the main electrode head to its respective neutral electrode and then to the ground electrode adjacent the same, said core being adjustable in the body casing whereby the distances between the ground electrodes and their respective neutral electrodes may be varied.

1,505,374. RECORD-CONTROLLED GRAND PIANO. TOLBERT F. CHEEK, New York, N. Y., assignor to Welte-Mignon Corporation, New York, N. Y., a Corporation of New York. Filed July 13, 1923. Serial No. 651,344. 19 Claims. (Cl. 84—27.)



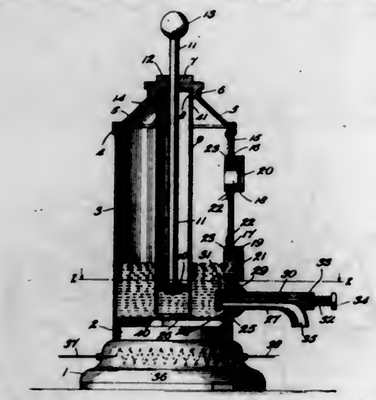
5. A record controlled grand piano comprising a piano action having wippens, a keybed, keys mounted on the keybed, means mounted on the rear of the keys for operating the wippens, a pneumatic unit comprising pneumatics having a rigid mounting relative to each other, the unit, including the pneumatics, being above the bottom of the keybed, the unit having movable abutments operated by the pneumatics and in position to operate movable portions of the piano action, means for securing the unit in place, the rearward edge of the keybed being forward of the greater portion of the pneumatic unit, the piano having an opening through which the unit may be removed through the bottom of the piano upon loosening the securing means.



1,505,375. PUTTING CUP. WILLIAM J. CHENOWETH, Decatur, Ill. Filed June 9, 1922. Serial No. 566,931. 2 Claims. (Cl. 46—4.)

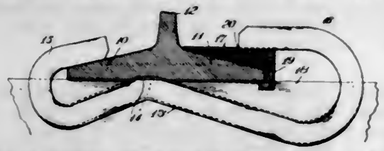
1. A putting cup made in one piece and comprising a cylindrical member formed with spaced annular partitions, one of such partitions being approximately centrally located and the other being located at or near the base of said member and both provided with an annular row of

spaced drain openings, and an axially disposed marker staff receiving and aligning sleeve connecting said partitions, the arrangement of sleeve in its relation to said partitions and said member providing an uninterrupted space around said sleeve and between said partitions.



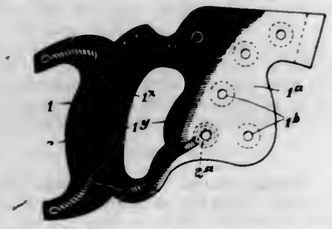
1,505,376. AIRSHIP. CHARLES S. CLOSE, Bolivar, Pa. Filed Oct. 9, 1922. Serial No. 593,372. 1 Claim. (Cl. 244—6.)

An airplane comprising a horizontal base, a plurality of inverted U-shaped members supported thereon, a horizontally arranged substantially elliptical rim secured thereto adjacent their upper ends, rearwardly extending arms carried by the latter, a rudder supported by the arms, wings extending laterally from opposite sides of the inverted U-shaped members and an inflatable bag positioned in the elliptical rim, a foraminous covering overlying the inflatable bag, braces secured to the rim and base and means for propelling the device.



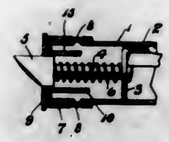
1,505,377. SANITARY LATHER PRODUCING AND DISPENSING APPARATUS. LUIGI A. D'ALESSANDRO, New York, N. Y. Filed Nov. 14, 1922. Serial No. 600,902. 4 Claims. (Cl. 221—94.)

1. A device of the class described comprising a container; a closure member removably secured to said container; means carried by said closure member for agitating the contents of said container; and a controlled outlet



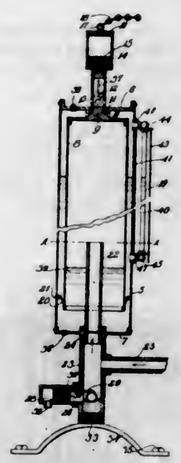
adjacent the bottom of said container, from which said contents may flow by gravity.

1,505,378. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1923. Serial No. 659,584. 10 Claims. (Cl. 238—329.)



1. A rail anchor comprising a body adapted to extend across the bottom face of a rail, jaws carried by said body and overlying the upper faces of the flanges at opposite sides of the rail, the body comprising a bearing for the bottom face of the rail located between the jaws, the parts being so arranged that the device is applicable to a rail from one side thereof and is tightened thereon by transverse movement of the body and jaws with respect to the rail, and comprising a member interposed between one jaw and the upper face of the adjacent flange and provided with a shoulder serving by engagement with the said jaw normally to prevent a reverse loosening movement of the body and the jaws on the rail, said member having a bearing on the outer edge of the adjacent flange for holding the member against movement inwardly with respect to the flange.

1,505,379. TOOL HANDLE. EARLE W. DERR, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 26, 1923. Serial No. 664,910. 1 Claim. (Cl. 145—113.)

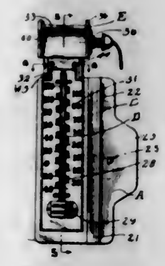


A scroll handle for a hand saw formed of hard sponge rubber with a hard rubber surface and reinforced by a wire following the general contour of the handle, and providing a stiffening means for the blade receiving part of such handle.

1,505,380. LATCH CONSTRUCTION. LUCIEN A. DEXTER, Grand Rapids, Mich., assignor to National Brass Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Feb. 9, 1922. Serial No. 535,217. 5 Claims. (Cl. 292—337.)

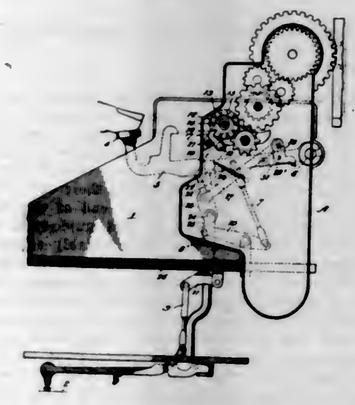
2. In a latch construction, a face plate having an opening therethrough, a cap for sheet metal located against the rear side of the plate and likewise having an opening therethrough in conjunction with the opening in the plate, means permanently connecting the plate and cap together, and a tongue struck from both the plate and cap extending to the rear into said cap, said tongues extending at opposite sides of the openings and being located in parallel relation to each other.

1,505,381. AUTOMATIC FLUID-CONTROL DEVICE. CHARLES H. EASTMAN, Boston, Mass. Filed Feb. 2, 1922. Serial No. 533,727. 14 Claims. (Cl. 50—30.)



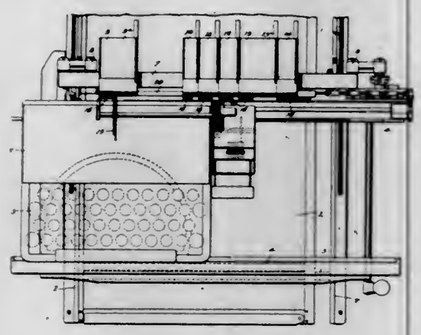
1. An automatic fluid control device having, in combination, a hollow casing closed at its opposite ends, a hollow float in said casing closed at its upper end and open at its lower end, liquid in said casing forming a liquid seal between said casing and float, means to convey fluid to the interior of said float above the liquid therein, a member outside said casing and connected to said float whereby instrumentalities outside said casing may be operated and means operated by said float to open and close communication between the interior of said casing and the atmosphere.

1,505,382. PROCESS OF MANUFACTURING FORMOLOPHENOLIC VARNISHES AND THE LIKE. JOSEPH FILHOL, Lyon, France. Filed June 24, 1920. Serial No. 391,463. 4 Claims. (Cl. 260—4.)



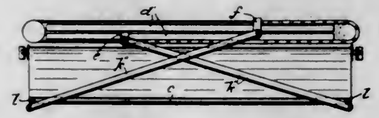
1. A process of manufacturing formolophenolic products consisting in preparing a product of formolophenolic condensation in an alkaline medium, gradually heating same to between 75° and 80° C. until viscosity approaches that of the limit state of polymerization, separating therefrom, in a liquid state the major part of the aqueous liquid, dehydrating the product and then treating the product with a catalyzer composed of acid ester and alcohol, the polymerization being then continued at not above 70° C., until the ultimate hardening stage.

1,505,383. WINDSHIELD THERMOMETER. MAYNARD L. FLICKINGER, Boston, Mass. Filed Mar. 31, 1922. Serial No. 548,493. 4 Claims. (Cl. 73—52.)



1. As a new article of manufacture, an attachment of the class described including a substantially rectangular body plate, an angularly related flange formed on one end of the plate, a supporting foot formed on the flange and disposed at right angles thereto, an inserting tongue formed on the foot having a less width than the attaching foot said flange having an opening therethrough.

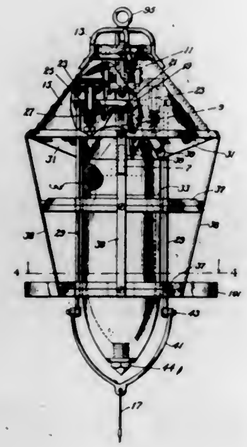
1,505,384. CLEAR-SIGNAL MECHANISM FOR WRITING-ADDING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,253. 6 Claims. (Cl. 235—59.)



1. In a machine of the character described, the combination with an adding mechanism, of a clear signal printing mechanism, a device co-acting with the adding mechanism and controlled thereby, a member movable into and out of position to arrest the movement of the printing mechanism and controlled by said device, and a yielding connection between an element of the printing mechanism and said arresting member.

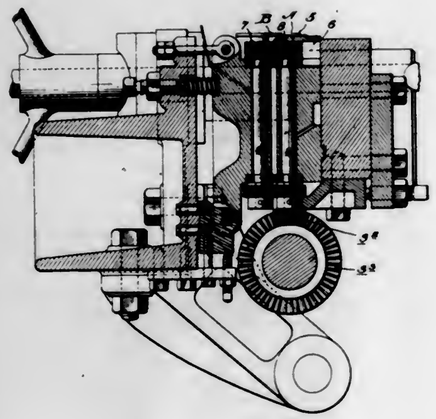
1,505,385. DEBIT AND CREDIT DISTRIBUTION FOR WRITING-ADDING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,250. 8 Claims. (Cl. 235—59.)

1. In a machine of the class described, the combination with a plurality of registers, of a normally stationary laterally movable platen, printing and actuating mechanism operative to print values in a column and to accumulate said values in a register, and means for shifting the platen laterally to permit other items printed in the same column to be accumulated in a different register.



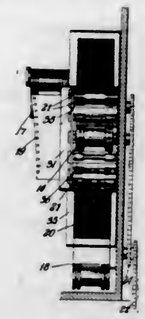
1,505,386. SUNBLIND AND THE LIKE. EDWARD CHISMON GOLDING, London, CHARLES PERKS, Barnes, and ALFRED JOSEPH PEMBERTON, Southend-on-Sea, England. Filed Aug. 29, 1923. Serial No. 659,976. 2 Claims. (Cl. 156—44.)

2. A device of the class described comprising a flexible blind, a spring roller upon which said blind is wound, a stiff rail secured along the outer edge of said blind, a pair of guide-rails arranged in superposed relation extending parallel to said roller, a pair of rods for projecting and retracting said blind having their outer ends connected to said stiff rail, the inner end of one rod being slidably engaged with one of said guide-rails and the inner end of the other rod being slidably engaged with the lower edge of said guide-rail, the inner end of each rod traversing the full length of the guide rail with which it is engaged, an endless band mounted for movement with its upper and lower stretches disposed adjacent the upper and lower guide-rails respectively, means for operating said band, means connecting the inner end of one of said rods to the upper stretch of said band, and means connecting the inner end of the other rod to the lower stretch of said band.



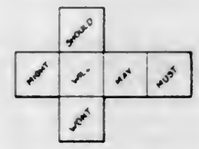
1,505,387. AERIAL BOMB. JOHN B. HADAWAY, Swampscott, Mass. Filed May 28, 1921. Serial No. 473,523. 9 Claims. (Cl. 102—2.)

3. An aerial explosive device comprising a pilot bomb adapted to explode by impact, a follower bomb having a time detonator, a reel carried by one of the bombs, a filament wound upon the reel and having its free end fastened to the other bomb, and a controlling member



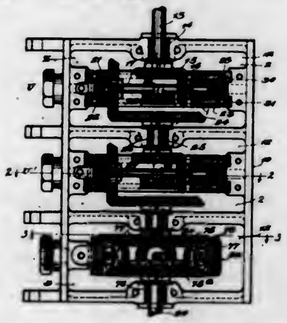
adapted to set before the bombs are launched for arresting the unwinding of the reel and thereby predetermining the length of the filament which will be paid out.

1,505,388. DIE FOR METAL-EXPANDING MACHINES. JOSEPH A. HALLS, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Aug. 30, 1922. Serial No. 585,248. 6 Claims. (Cl. 164—58.)



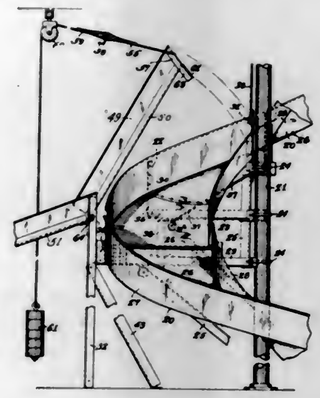
1. A die for metal expanding apparatus comprising a body having on one face thereof and at each side of its transverse center a plurality of obliquely extending shoulders, said shoulders facing outwardly at opposite ends of the die.

1,505,389. FILM-REEL DEVICE. CHARLES F. HERM, Pelham, N. Y. Filed Dec. 28, 1921. Serial No. 525,387. 16 Claims. (Cl. 88—18.7.)



1. A reel device for endless films, comprising separable heads, one of which is adapted to carry a film roll, means on the other for supporting the film roll, and means for withdrawing film therefrom.

1,505,390. AMUSEMENT DEVICE. KAYE HOPE HAMILTON and CECILIA HARDMAN, San Francisco, Calif. Filed June 14, 1922. Serial No. 568,123. 2 Claims. (Cl. 46—56.)



1. An amusement device comprising a plurality of dice, one of said dice carrying pronouns on its various facets, another carrying auxiliary verbs on its various facets, another carrying nouns on its various facets, and another carrying verbs on its various facets, whereby one word of a die considered collectively with a word of each of the other dice will form a sentence.

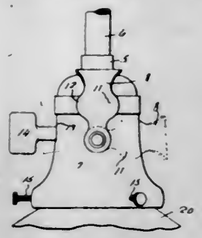
1,505,391. TRANSMISSION. RAYMOND N. ICKES, Altoona, Pa. Filed Mar. 13, 1922. Serial No. 543,378. 5 Claims. (Cl. 74—34.)

1. In combination with a power transmission device, power units forming the device, a frame in each unit, means for rotating the frame, a shaft carried in the frame, bevel gears on the shaft, a lug on the shaft, a locking bar adapted to engage the lug to prevent rotation and means for engaging and disengaging the bar from the lug.

1,505,392. SPIRAL CHUTE. EDMUND R. JOHNSON, Philadelphia, Pa., assignor to Haslett Chute and Conveyor Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1922. Serial No. 597,810. 12 Claims. (Cl. 193—13.)

1. The combination of a spiral chute, a second spiral chute spaced from and lower than the first, a swinging chute section adapted to join the spiral chutes and to be swung free therefrom, and a swinging adjoining chute adapted interchangeably with the free end of the section to connect with an end of one of the spiral chutes.

1,505,393. VANITY BAG AND THE LIKE. NATHAN KASDAN, Bronx, N. Y. Filed Jan. 16, 1922. Serial No. 529,566. 3 Claims. (Cl. 150—46.)

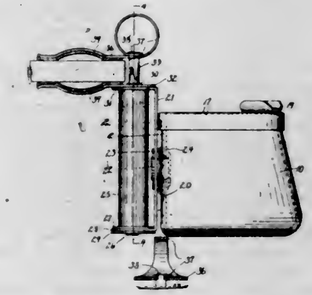


1. A hand-bag comprising a flexible holding-portion or bag proper and a metal frame at the mouth thereof having a cover, said holding-portion comprising an outer fabric layer and an inner fabric layer sewed together along their peripheral edges, and said frame being annular and of approximately inverted U-shape in vertical section forming two depending spaced-apart flanges, the peripheral mouth portions of the bag having concealed between the layers thereof a ring and being, with said ring, secured between said flanges, said ring initially lying loosely between the outer and inner layers of the bag and the line of sewing connecting said layers being outwardly from and independent of said ring, which has the fabric layers suspended from it, the inner fabric layer extending downwardly through the ring and the outer fabric layer extending downwardly from the outer periphery of the ring.

1,505,394. SHADE OR GLOBE SUPPORTING MEANS. WILLIAM L. KORNFELD and ARTHUR R. ENGLANDER, Cleveland, Ohio, assignors of one-fifth to Arthur P. Gustafson, Cleveland, Ohio. Filed June 5, 1922. Serial No. 565,957. 5 Claims. (Cl. 240—132.)

1. For use with a lamp socket having a circumferential enlargement, a globe holder comprising a casing designed to fit over the lamp receiving end of the socket and conceal the same and have its inner end engaged with said enlargement, and a bail hingedly connected to op-

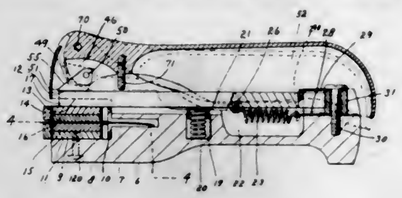
posite sides of the casing and adapted to be swung over the end of the socket remote from the lamp receiving



end for positively holding the casing against withdrawal from the socket, the casing being provided with globe attaching means.

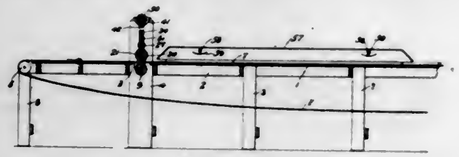
1,505,395. METHOD OF PRODUCING JEWEL SETTINGS. JACQUES KREISLER, New York, N. Y., assignor to Jacques Kreisler & Co., a Firm composed of Jacques Kreisler and Adele Stern, New York, N. Y. Filed Apr. 21, 1921. Serial No. 463,431. 2 Claims. (Cl. 29—10.)

2. A method of making a jewel setting of the character described, which consists in first cutting an arcuate blank having integral flared prongs, then forming said blank and making suitable markings on each prong, joining the prongs by bridges soldered to the opposite edges of said prongs at the markings thereof, and then bending said arcuate blank so as to form an annular bezel having the prongs extending in upright formation about said bezel.



1,505,396. COMBINED ASH TRAY AND MATCH-BOX HOLDER. KENNETH F. LEES, New Haven, Conn. Filed May 15, 1922. Serial No. 560,946. 4 Claims. (Cl. 131—51.)

1. A combined ash-tray and match-holder, comprising a container, a yoke having a central portion and two ends, the container pivotally connected with the central portion between the said ends and clamping means with which the two ends of the yoke are pivotally connected.



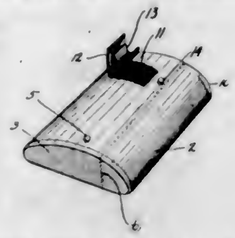
1,505,397. EMBOSSNIG DEVICE. JESSE D. LYON, Cincinnati, Ohio. Filed Oct. 6, 1922. Serial No. 592,715. 11 Claims. (Cl. 101—3.)

1. In a device of the class described the combination of a fixed die, a movable die, means yieldingly resisting movement of the movable die toward the fixed die, an end abutment for the movable die slidably engaging the

movable die, and means yieldingly retaining the movable die in engagement upon the end abutment.

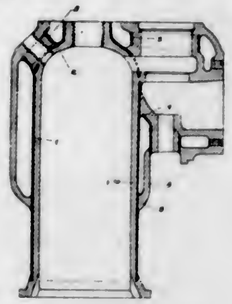
1,505,398. PRINTING MECHANISM. CHENEY A. MCEACHRON, Grand Rapids, Mich., assignor to Alabastine Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 3, 1922. Serial No. 549,115. 6 Claims. (Cl. 101—183.)

1. In a machine of the character described, an endless carrying belt located substantially horizontal, means to drive the same, a plurality of spaced apart printing rollers located over the belt to print sheets carried thereunder by the belt, and elongated drying means located over the belt beyond printing roller, substantially as described.



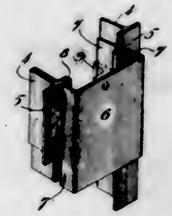
1,505,399. PLASTER LATH. JOHN F. MAKOWSKI, Stockton, Calif., assignor to California Cedar Products Company, Stockton, Calif. Filed May 29, 1923. Serial No. 642,196. 1 Claim. (Cl. 72—116.)

A plaster lath comprising a body, gravel sprinkled thereon, means for adhering the gravel to the body, interstices being formed between the particles of gravel and the adhesive means, and a coating of waterproofing material over the exposed surfaces of the gravel particles and the adhesive means but not filling up the interstices therebetween.



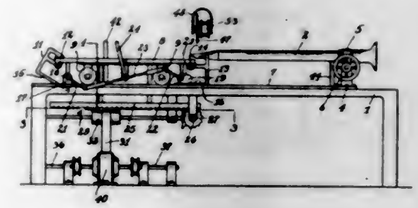
1,505,400. POCKET ASH CASE. HARRY P. MATTHEWS, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,028. 4 Claims. (Cl. 206—38.)

4. A combined ash and match box case including a box having an inner wall extending from end to end to divide the case into an ash-receiving compartment and a match-receiving compartment, one end of the box forming a hinged closure to uncover both of said compartments at one time to discharge contents thereof, the other end of the case having an opening into the match-receiving com-



partment, a hinged spring closure and latch therefor, the ash-receiving compartment having an opening in one side and a hinged spring-closure and latch therefor, the last mentioned spring-closure comprising means forming a seat for a cigar or cigarette when in open position.

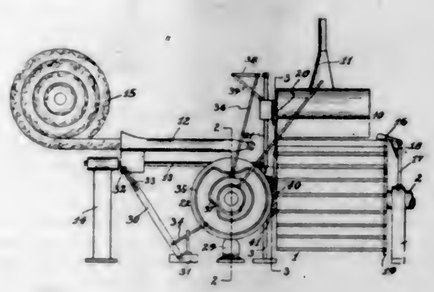
1,505,401. CASTING AND IN THE PROCESS FOR ITS MANUFACTURE. ERNEST MAYER, Antwerp, Belgium. Filed Mar. 14, 1922. Serial No. 543,754. 2 Claims. (Cl. 22—203.)



1. A casting having relatively thick and relatively thin portions, in combination with metal sheets, the sheets being positioned on the surfaces of the relatively thin portions, and embedded in the casting in the relatively thick portions, so as to be enveloped by the casting, the changes from the surface positioning to the embedded positioning occurring at points where there is an abrupt change of thickness in the casting.

1,505,402. MULLION COLUMN. BERNARD T. MESKER, St. Louis, Mo., assignor to Mesker Brothers Iron Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 13, 1922. Serial No. 600,568. 5 Claims. (Cl. 189—75.)

1. In combination, a metal sash element comprising a multi-flanged structural shape, and a metal sash engaging member having a side contour which parallels at least two of the flanges of said element and embraces opposite sides of at least one of the flanges of said element.

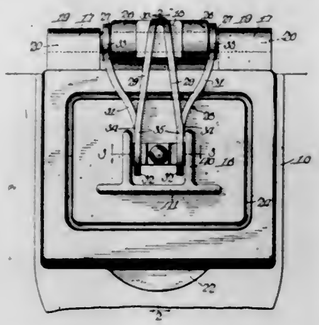


1,505,403. SEAT-PADDING MACHINE. ALLISTER S. MITCHELL, Oakland, Calif., assignor to California Cotton Mills Company, Oakland, Calif., a Corporation of California. Filed June 16, 1923. Serial No. 645,891. 11 Claims. (Cl. 226—43.)

1. A padding machine comprising a bed, a plurality of filling tubes mounted on said bed, a table reciprocally mounted on said bed and means at the forward and rear edges of said table adapted to alternately hold and release the work mounted thereon.

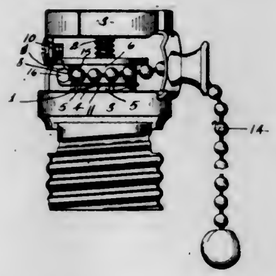
11. A padding machine comprising a table upon which the article to be padded is adapted to be placed, said article having pockets formed therein, tubes positioned in front of said table, said tubes having the padding threaded therein, means to reciprocate said tubes into said pockets, means to cut the padding, an arm pivoted at the rear of said table, and means to actuate said arm to press against the pockets in said article when the tube has been inserted.

1,505,404. SEAT-PADDING MACHINE. ALLISTER S. MITCHELL, Oakland, Calif., assignor to California Cotton Mills, Oakland, Calif., a Corporation of California. Filed Aug. 23, 1923. Serial No. 658,933. 20 Claims. (Cl. 225—44.)



1. A padding machine comprising a drum, vacuum means within said drum whereby the back to be padded is held on the drum a filling tube reciprocally mounted adjacent said drum, means to reciprocate said tube, and means to rotate said drum.

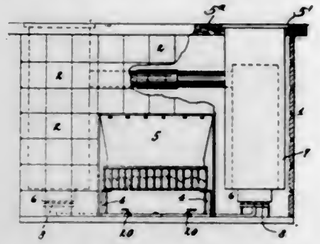
1,505,405. JOURNAL BOX. JOHN L. MOHUN, Omaha, Nebr. Filed June 15, 1923. Serial No. 645,509. 10 Claims. (Cl. 64—23.)



1. In a journal, the combination with the box proper and lid pivotally connected to the box proper to swing about an axis parallel to one of the edges of the lid, said box having a spring bearing lug; of means for applying a substantially equally distributed yielding pressure against the outer face of the lid substantially at

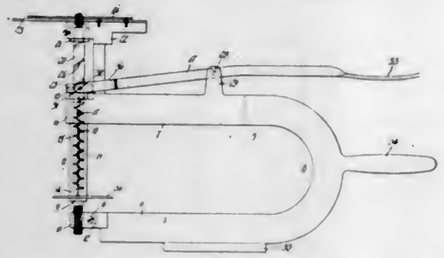
the center thereof, said means comprising a spring element having an end thereof attached to the box proper

and another portion thereof bearing on said lug, said spring element having a portion therein bearing upon the outer face of the lid.



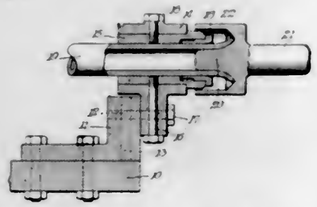
1,505,406. PULL-CHAIN ELECTRIC SWITCH. HARRY J. MOREY, Syracuse, N. Y., assignor to Pass & Seymour Inc., Solvay, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,500. 2 Claims. (Cl. 173—354.)

1. In a pull cord electric switch mechanism, the combination of a member movable about an axis and having a channel for the cord and a wall extending transversely across the channel and formed with an angular flange extending in a circumferential direction and also with an angular slot having an arm extending transversely of said wall and an arm extending in a direction lengthwise of said flange, one of the walls and the last mentioned arm of the slot being arranged nearer the axis of said member than the opposite wall and a cord extending through the transverse arm of the slot and having a head on one side of such transverse wall, such cord with the head thereon being placeable in the transverse arm of the slot through the circumferentially extending arm of the slot, substantially as and for the purpose specified.



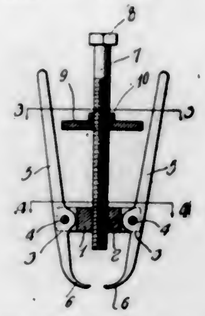
1,505,407. FIREPLACE. WALTER MORK, Berkeley, Calif., assignor of one-half to Karl Wilander, Berkeley, Calif. Filed July 24, 1922. Serial No. 576,955. 2 Claims. (Cl. 126—123.)

1. In a fire place structure, a front wall having a rectangular opening centrally located near the bottom thereof, said opening adapted to receive a fire place grate, vertical end walls, a top member supported by said walls and constituting the ledge of the fire place, the top member having openings therein near its ends, a gas heater unit built into said fire place within said walls and at each side of the opening in the front wall, said units being connected with the top member so as to discharge heated air through said top member, the walls of said fire place being constructed to provide openings



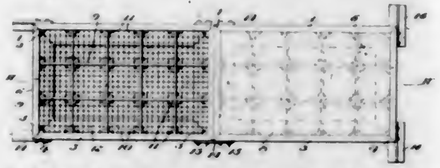
near the bottom of the fire place through which air may be drawn by the heater units, combustion chambers in each of said units, and means for connecting both of said combustion chambers with a single outlet pipe.

1,505,408. SHEET-MATERIAL-MEASURING DEVICE. ERNEST E. MORSE, Woburn, Mass. Filed June 18, 1923. Serial No. 646,002. 6 Claims. (Cl. 33—147.)



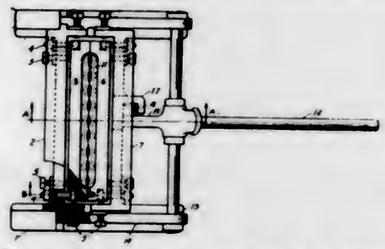
1. A device for measuring the thickness of sheet material having, in combination, a stationary contact member, a slidable contact member oppositely disposed thereto, a frame upon which said contact members are mounted, means to impart a reciprocatory motion to said slidable contact member, a shaft provided with a helical groove and rotatably mounted on said frame, an indicator fast thereto and a projection on said slidable contact member projecting into said helical groove, whereby when said sliding contact member is moved, said shaft will be rotated.

1,505,409. PIPE-FLANGING TOOL. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, Decatur, Ill., as trustee. Filed Nov. 26, 1921. Serial No. 517,943. 17 Claims. (Cl. 153—79.)



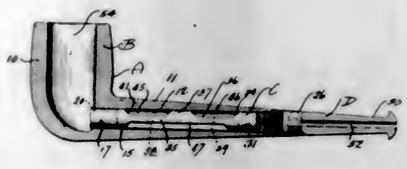
1. A pipe flanging tool having a tapered member to enter and by contact therewith while being moved longitudinally expand a pipe, and a stop member radially offset from said tapering member, and having its operative face extending transversely of the length of the tapering member.

1,505,410. TERMINAL PULLER. GEORGE ALBERT NELSON, Lindsborg, Kans. Filed Dec. 17, 1923. Serial No. 681,252. 1 Claim. (Cl. 29—84.)



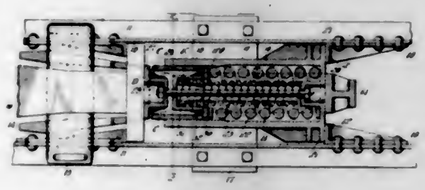
A device of the class described comprising a cross head having a central transverse opening, a pair of elongated levers fulcrumed near one end to the ends of said cross head and having jaws on said one end, the other ends of said levers being in diverging relation with each other, a screw between said diverging lever ends threaded through said central opening, and a lever spreader slidable freely along said screw for contact with said diverging lever ends to prevent inward movement thereof and consequent release of said jaws.

1,505,411. PAVEMENT. JOHN NEWELL, Scarsdale, N. Y. Filed July 11, 1922. Serial No. 574,132. 3 Claims. (Cl. 94—12.)



1. A paving block comprising a frame having a plurality of transverse and longitudinal strips forming pockets, said frame having a marginal horizontal flange for supporting said strips, angle brackets connecting said strips in the corners of the pockets, reinforcing mesh material supported in said pockets on said brackets, and a filling of concrete in the frame covering said strips and reinforcing mesh material.

1,505,412. CASTING MACHINE. JOHN NEWMAN, Oakland, Calif. Filed May 9, 1922. Serial No. 559,580. 5 Claims. (Cl. 92—153.)

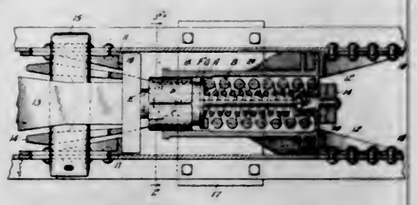


1. In a casting machine, in combination, a stationary supporting frame and a mold member, a movable supporting frame and mold member, said members being adjustable vertically, longitudinally and laterally with relation to the stationary and movable frame and out of contact therewith by tap bolts, and said members adapted to be rigidly supported in adjusted position by holding bolts tensioned against said tap bolts.

1,505,413. NICOTINE FILTER FOR TOBACCO PIPES. OLLIE EARL NICHOLS, Crutchfield, Ky., assignor of one-half to William Simpson Sent, Crutchfield, Ky. Filed Apr. 18, 1922. Serial No. 555,491. 2 Claims. (Cl. 131—12.)

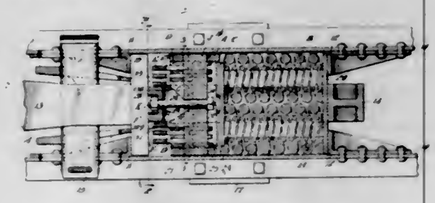
1. As an article of manufacture, a filter for tobacco pipes including cylindrical shaped ends connected by a relatively flat reduced intermediate portion, one of said ends having a groove extending longitudinally through the same to communicate above the top surface of said reduced intermediate portion, the other of said ends having a passageway extending axially and longitudinally therethrough provided with an offset forward end opening upwardly above the top surface of said reduced flat intermediate portion, said intermediate flat portion having a projection of arcuate cross section extending upwardly of the top surface thereof intermediate the ends of said member and having an unbroken arcuate upper face, saidf intermediate portion apertured transversely therethrough upon opposite sides of said upwardly extending projection.

1,505,414. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 4, 1920. Serial No. 414,664. 3 Claims. (Cl. 213—31.)



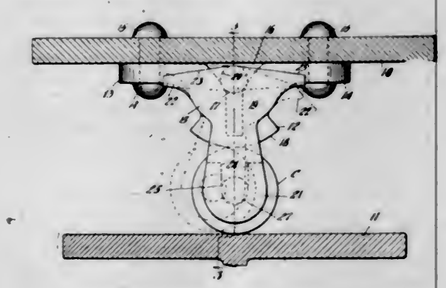
1. In a friction shock absorbing mechanism, the combination with a friction shell and spring resistance: of a plurality of flexible, resilient elements arranged to cooperate with said shell as friction shoes, said elements being arranged in two groups with those of one group alternated with those of the other group, each of said elements being of wedge shape in a lengthwise direction, said elements cooperating with each other as wedges, and all of the elements, considered as a unit, being capable of expansion and contraction.

1,505,415. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 1, 1920. Serial No. 421,168. Renewed Feb. 11, 1924. 7 Claims. (Cl. 213—32.)



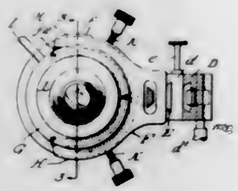
2. In a friction shock absorbing mechanism, the combination with a friction shell: of a spring resistance: and a friction unit movable as an entirety longitudinally of the shell and cooperable with the shell and spring resistance, said unit comprising, a plurality of friction

shoes, outer wedging means having wedge faces cooperable with wedge faces on the shoes, and inner wedging



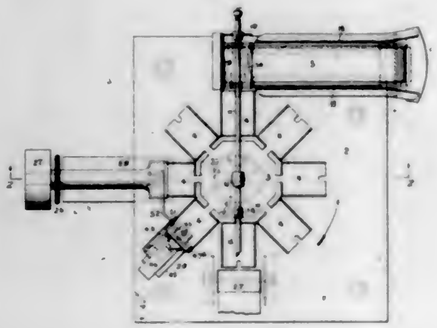
means having wedge faces cooperable with other wedge faces on the shoes, all of said wedge faces being longitudinally overlapped.

1,505,416. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 8, 1921. Serial No. 499,211. 9 Claims. (Cl. 213—33.)



1. In a friction shock absorbing mechanism, the combination with a column-load-sustaining member having a hollow section; of a plurality of relatively stationary friction plates within said hollow section; a readily removable key extending centrally through said plates, anchoring the same to the sides of said member against movement longitudinally thereof; a plurality of relatively longitudinally movable friction plates intercalated with said stationary plates and all responsive to lateral pressure; a spring resistance; and pressure-transmitting and lateral-pressure-creating means coopernble with said intercalated plates.

1,505,417. SIDE BEARING FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 5, 1923. Serial No. 610,757. 12 Claims. (Cl. 64—64.)

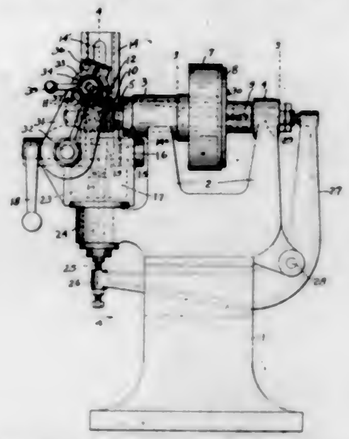


1. In a side bearing for railway cars, the combination with a supporting member having a convex lower bearing face; of a pendulum swingingly supported by said member; and an anti-friction roller carried by said pendulum and co-operable with said convex bearing face.

1,505,418. MICROSCOPE SUBSTAGE. HARVEY N. OTT, Buffalo, N. Y., assignor to Spencer Lens Co., Buffalo, N. Y. Filed May 25, 1923. Serial No. 641,423. 18 Claims. (Cl. 88—39.)

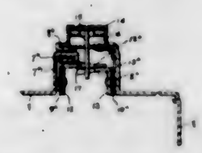
1. A microscope substage including a forked member which is adjustable in a direction parallel with the optical axis of the microscope, and guide means on said forked member adapted to receive substage parts in a direction at an angle to said optical axis.

1,505,419. MACHINE FOR INSERTING SUSPENSION DEVICES IN TOILET-PAPER PACKAGES. PHILIP D. PARSONS, Philadelphia, Pa., assignor, by mesne assignments, to Scott Paper Company, a Corporation of Pennsylvania. Filed Feb. 25, 1922. Serial No. 539,318. 11 Claims. (Cl. 1—40.)



1. In a machine of the character stated, the combination of a perforating mechanism having a vertically reciprocable perforating member for perforating a paper package, with a vertically reciprocating mechanism for inserting a metallic tongue through the perforation in the paper package for holding the sheets thereof together as a unit, conveying means providing horizontal surfaces upon which the paper packages lie for successively feeding paper packages to the perforating mechanism and to the metallic tongue inserting mechanism, and means for intermittently operating the conveying means, the perforating mechanism and metallic tongue inserting mechanism in timed relation with respect to each other.

1,505,420. MACHINE FOR REMOVING BURS FROM GEARS. LORIS PETERSEN, Detroit, Mich., assignor to Joseph F. Lannen, Detroit, Mich. Filed Feb. 19, 1923. Serial No. 619,912. 14 Claims. (Cl. 29—33.)



1. In a machine of the character described, the combination with a gear holder permitting rotation of the

gear, of means engageable with the burred ends of the gear teeth for bending the burs back from the burred

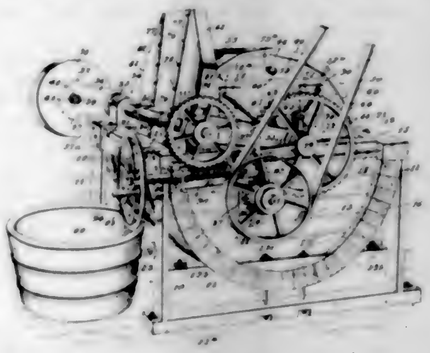
edges of the teeth, and a scraper adapted to bear against the burred ends of the teeth for severing the burs.

1,505,421. REENFORCING MEANS FOR TRAVELING BAGS OR THE LIKE. AUGUST J. PETRIE, West Allis, and EDWIN B. BARTLETT, Milwaukee, Wis., assignors to Milwaukee Stamping Co., West Allis, Wis., a Corporation of Wisconsin. Filed Oct. 27, 1921. Serial No. 510,959. 6 Claims. (Cl. 190—49.)

1. In combination with a traveling bag or the like having a pair of hingedly connected frame members for the side portions of the bag, of reenforcing means comprising a laterally extending member fixed to one of said frame members and a laterally extending member fixed to the other of said frame members, said laterally extending members overlapping and having registering apertures, and a locking device having a downwardly extending tongue adapted to enter said apertures when the side portions are in their closed position

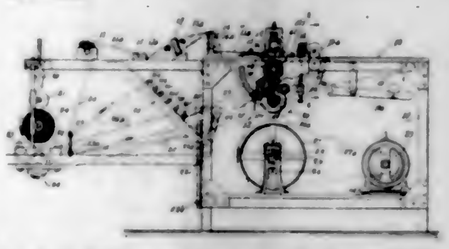
---

1,505,422. SPINNING-MACHINE ROLLER. JAMES C. POTTER, Pawtucket, R. I. Filed Jan. 3, 1922. Serial No. 526,687. 6 Claims. (Cl. 19—141.)



3. A roller of the kind described composed of sections placed in abutment, adjacent sections having centering means consisting of a cylindrical portion on one section and a corresponding recess in the other section, said cylindrical portion and said recess being concentric with their respective sections, and means that connect the sections that comprises coacting parts within an inward extension of said recess.

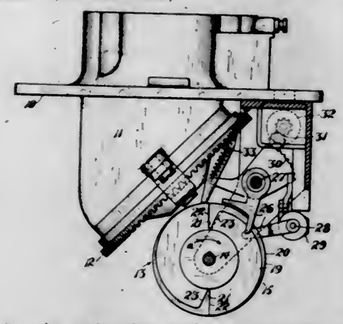
1,505,423. DECOY STRAP. CHARLES NEWTON PROUTY, Spencer, Mass., and WILLARD B. DARTON, Portland, Me. Filed Jan. 6, 1921. Serial No. 435,453. 1 Claim. (Cl. 119—109.)



A decoy strap consisting of a strip of flexible material having a button hole slot near one end, a cooperating notch or notches, and a swivel joint at the other end thereof.

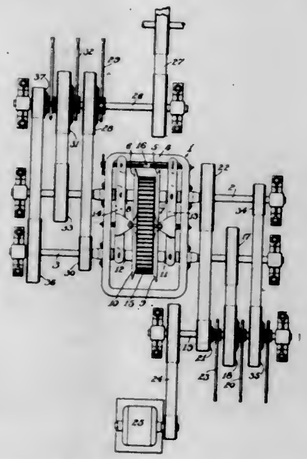
1,505,424. ELECTROPLATING APPARATUS. FORREST G. PURINTON, Waterbury, Conn. Filed Oct. 25, 1922. Serial No. 596,788. 22 Claims. (Cl. 204—11.)

1. In an electroplating apparatus, a plating tank adapted to contain a plating solution, a rotary plating barrel adapted to contain a mass of small articles to be plated, said barrel being mounted on a shaft, an arm pivoted to said shaft, said arm being pivoted on said tank, and means for rocking said arm about its axis to raise the plating barrel out of the plating tank.



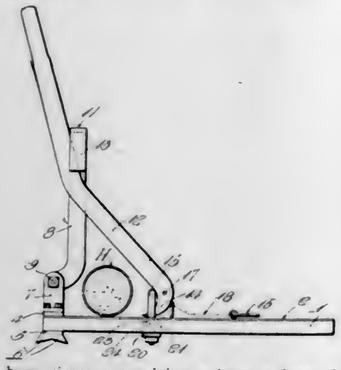
1,505,425. CUTTING MACHINE. NELSON E. RABER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 6, 1921. Serial No. 467,475. 25 Claims. (Cl. 164—49.)

1. In a cutting machine the combination of a stock roll and a mounting therefor, a cutter, means for feeding stock from said roll to said cutter, a liner rewinding roll, means for frictionally driving said rewinding roll, and a



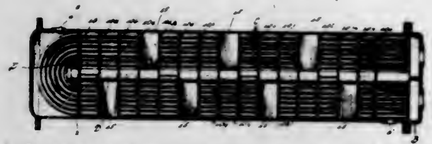
tension device adapted to produce in the liner adjacent said rewinding roll a tension varying widely in response to relatively small variations in the tension of the liner anterior to said tension device.

1,505,426. COIN REGISTER. JOHN RENHOLTS, Oakland, Calif. Filed Aug. 1, 1922. Serial No. 578,867. 2 Claims. (Cl. 235—132.)



1. In a coin registering device, a rotatable shaft, a plurality of coin carrying members on said shaft adapted to separately receive coins of different denominations and to hold coins of different denominations transversely with respect to the path of travel of said members and at different distances from the axis of rotation of said members, the coins of larger denominations being respectively closer to the axis of rotation, a register operated by rotation in a continuous direction, a set of levers mounted to oscillate around an axis parallel to the axis of the coin receiving members, said levers being of different lengths whereby their arc of travel will be in inverse ratio with respect to the positions of the respective coins by which said levers are actuated, and means whereby the various levers when actuated by the coins will each actuate the coin register a definite amount and thus record the different values of the coins actuating the levers.

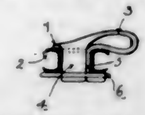
1,505,427. SPEED-VARYING TRANSMISSION. PAUL B. REEVES, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed June 26, 1922. Serial No. 571,081. 9 Claims. (Cl. 74—21.)



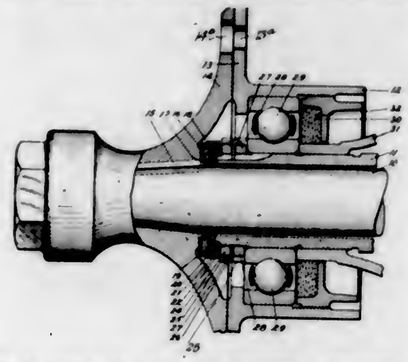
1. The combination of a speed varying mechanism comprising two power elements and intermediate cooperating mechanism by which the speed relationship of said elements may be varied, a primary driver member and a primary driven member, means by which the power elements may be connected to the primary driver at different speed relations, and means by which the power elements may be connected to the primary driven member at different speed relations.

1,505,428. HOSE CLAMP. FRED A. RICHARDS, FREDERIC C. BOCHATEY, and JOHN T. JONES, Golden, Colo.; said Jones assignor to said Richards and said Bochatey. Filed Nov. 2, 1922. Serial No. 598,644. 4 Claims. (Cl. 251—5.)

1. A hose clamp comprising a base, a lever fulcrumed on said base for clamping a hose against the same, an eye on the upper side of said base beyond which said lever swings to clamping position, and a hand lever having a claw-like end engageable with said eye, said hand lever having an operating connection with the first mentioned lever, whereby swinging of said hand lever toward said base will move said first named lever to hose clamping position, said hand lever being then insertible partly through said eye to hold the first named lever in operative position.



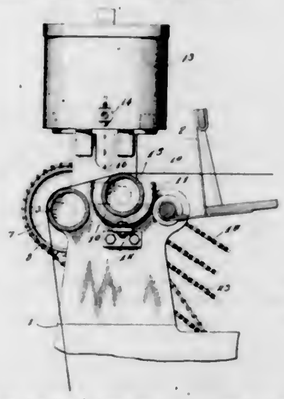
1,505,429. HEAT-EXCHANGE APPARATUS. WILLIAM H. RIPLEY, Hartford, Conn., assignor to The Whitlock Coil Pipe Company, West Hartford, Conn., a Corporation of Connecticut. Filed Apr. 8, 1922. Serial No. 550,564. 11 Claims. (Cl. 257—239.)



3. In an apparatus of the character described, a shell, a plurality of tubes arranged longitudinally therein, and means for causing the fluid within the shell to flow in a generally spiral path and including a plurality of substantially flat baffles spaced apart longitudinally of the shell and arranged at right angles to the length of said tubes, and a longitudinally extending vane between adjacent baffles and extending part way across said shell.

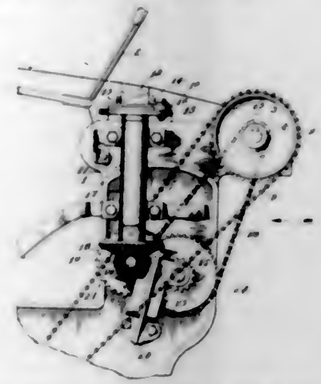
1,505,430. FASTENING FOR FOOTWEAR AND THE LIKE. THOMAS RICHARD ROBERTS and EDMUND FOULKES OWEN, Toronto, Ontario, Canada; said Owen assignor to said Roberts. Filed Apr. 13, 1923. Serial No. 631,789. 5 Claims. (Cl. 24—145.)

2. In boots, shoes and other footwear, the combination of a divided upper; a series of eyelets adjacent each meeting edge of the upper; and lacing members mounted in said eyelets and extending outwardly therefrom, said lacing members having openings therethrough through which a lace may pass, the openings through the lacing members being directed at substantially a right angle to the openings through the eyelets, each lacing member comprising a strip of metal doubled back on itself to form a loop, one end of said strip having a pair of projections adapted to engage beneath the eyelet and a tongue adapted to engage over the eyelet, the other end of the strip being adapted to also engage beneath the eyelet.



1,505,431. AXLE PACKING. GRANT W. ROLLINS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 16, 1917. Serial No. 186,535. 12 Claims. (Cl. 286—7.)

8. A device of the class described comprising the combination of a casing, a shaft rotatable therein, a hub secured to said shaft, a bearing upon said casing for said hub, a retaining member for said bearing, and packing interposed between said retaining member and said hub.

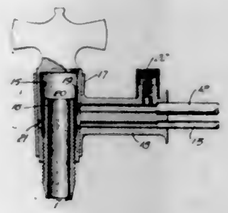


11. As an article of manufacture, a retaining ring for packing within which the packing is adapted to be inserted, said ring having a plurality of spaced lugs extending outwardly from one end thereof and adapted to be held by a support placed end to end with the ring.

1,505,432. MEANS FOR WAXING YARNS. SAMUEL P. RUFF, Jr., Chester, Pa. Filed Apr. 3, 1923. Serial No. 629,576. 5 Claims. (Cl. 91—51.)

1. In a yarn winding machine; a reed; a yarn roller; a trough for smoothing liquid between the reed and roller; a roller mounted in the trough for feeding the liquid to the yarn as it passes from the reed to the yarn roller, and means for actuating the liquid feeding roller.

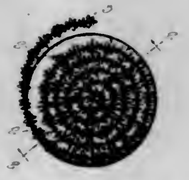
1,505,433. MEANS FOR WAXING YARNS. SAMUEL P. RUFF, Jr., Chester, Pa. Filed Apr. 3, 1923. Serial No. 629,577. 6 Claims. (Cl. 91—36.)



1. In a yarn winding machine, a waxing bar adapted to engage the yarns, and means for reciprocating the waxing bar transversely to the yarns.

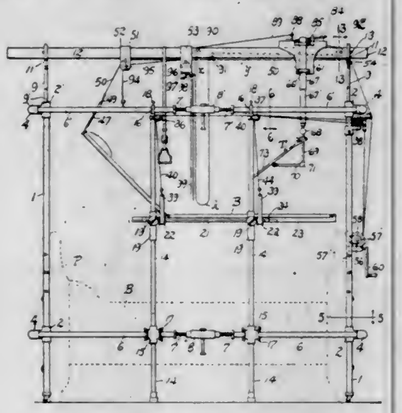
1,505,434. CURTAIN ROD. WILLIAM SCHAEFER, Waterville, Conn., assignor to Berbecker & Rowland Manufacturing Company, Waterville, Conn., a Corporation of Connecticut. Filed Jan. 12, 1923. Serial No. 612,169. 4 Claims. (Cl. 156—19.)

3. A curtain rod comprising a curtain supporting member and two brackets, each bracket being provided with a pivotally mounted socket projecting beyond the end of the bracket to detachably receive the adjacent end of the curtain supporting member, each socket being reversible so as to receive the opposite end of the curtain rod when the bracket is placed at that end of the rod.



1,505,435. BEVERAGE DISPENSER. WILLIAM A. SCHATZ, Astoria, N. Y., assignor to Rotax Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,510. 15 Claims. (Cl. 225—26.)

1. In a liquid dispensing apparatus, in combination, a supply source for a liquid under pressure, a container for a second liquid, a mixing chamber closed at one end, conduits leading to said mixing chamber for introduction thereto of said liquids, a tubular member extending within said mixing chamber and forming a baffle disposed so the liquid under pressure is projected from its con-

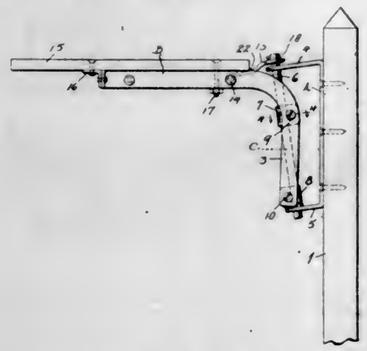


duit directly thereagainst, effecting agitation within said chamber resulting in the mixing of said liquids therein, said tubular member providing a discharge opening for the mixed liquids adjacent the upper part of said mixing chamber, and a nozzle communicating directly with said tubular baffle, said tubular member being adjustable to transact a greater or less extent of said mixing chamber so as to vary the extent of mixing within the mixing chamber.

1,505,436. ORNAMENT FOR LADIES' SLIPPERS. OSCAR SCHILLER, New York, N. Y. Filed Jan. 14, 1924. Serial No. 686,231. 3 Claims. (Cl. 2—245.)

1. An ornament for ladies' slippers or other articles comprising a stiff concavo-convex backing, and a covering of ornamental material directly secured upon the convex side of said backing, the convex formation imparted to the upper side of the ornament by said backing serving to give the appearance of a thick pile or mound of the ornamental material, while the concave lower side of said backing permits its edge to be held tightly against the slipper or other article.

1,505,437. INVALID APPLIANCE FOR BEDS. ALTO SCHWEIZER, Erling, Oberbayern, Germany, assignor to Charles Schweizer, St. Louis, Mo. Filed June 30, 1922. Serial No. 571,870. 1 Claim. (Cl. 5—85.)



In an apparatus of the class described, the combination with a bed-stead of a frame-work positioned around the bed-stead, said frame-work comprising a pair of corner posts at each end, an arch connecting the upper ends of the posts of each pair of corner posts, a rail supported by said arches, and a pair of upright posts on each side of the bed-stead intermediate the corner posts, an auxiliary bed-bottom slidingly mounted on said upright posts, means for raising and lowering said bed-bottom, an adjustable back-rest pivotally connected to the bed-bottom, a strap suspended from the aforesaid rail and connected at one end to the back-rest, the other end of said strap terminating within easy reach of the bed-bottom, means on the rail for gripping the strap to hold the back-rest in any desired position, and means for releasing said grip.

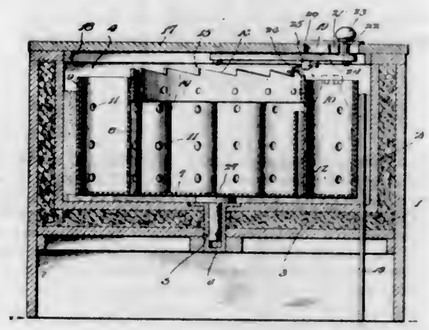
1,505,438. PROCESS OF EXTRACTING TURPENTINE AND ROSIN FROM RESINOUS WOOD. CLARENCE M. SHERWOOD and RAYMOND K. COLE, Brunswick, Ga., assignors to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 18, 1921. Serial No. 470,684. 3 Claims. (Cl. 203—6.)

1. The process of recovering, from resinous wood, turpentine and rosin, which comprises distilling off turpentine from the wood at a temperature insufficient to injure the rosin, and then removing the rosin by two steps; comprising extracting the wood with a volatile solvent and draining off the solution of solvent and rosin until a part of the rosin is thereby removed, and then, while a substantial proportion of the rosin still remains in solution in the wood, displacing with hot water the said rosin solution, causing it to rise to the surface, and separating the rosin solution from the hot water.

1,505,439. MAIL BOX SUPPORT. HANS SKREBERG, Big Bend Township, Minn. Filed Dec. 1, 1922. Serial No. 604,386. 1 Claim. (Cl. 232—40.)

A receptacle support of the class described, including a post, a bracket carried by the post and having an inclined pintle member, a box carrier mounted on said inclined pintle, said box carrier comprising angle bars having the ends of their horizontal arm portions turned outwardly, an angle member secured to the out-turned ends of said angle bars, a platform secured to the angle member and angle bars, and means carried by the vertical arms of said angle bars for engaging the inclined pintle.

1,505,440. ATTACHING LINK FOR TIRE CHAINS. CHARLES SMITH, Duluth, Minn. Filed June 28, 1923. Serial No. 648,291. 5 Claims. (Cl. 59—95.)



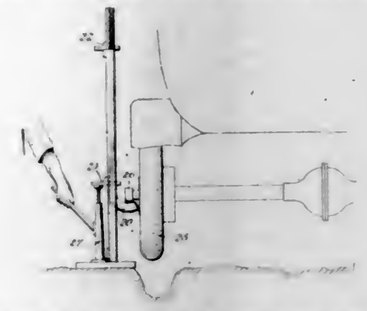
1. An attaching link formed from a single length of metal bent intermediate its ends to define a pair of arms, the terminal portions of which are formed with return bends defining bills, said bills being formed with notches intermediate their ends by means of which the ends of the bills may be forced inwardly.

1,505,441. BOTTLE COOLER AND VENDING APPARATUS. WALTER McE. SMITH, Jackson, Tenn. Filed Oct. 17, 1922. Serial No. 595,211. 2 Claims. (Cl. 211—9.)

1. An apparatus for the purpose set forth comprising a heat-resisting cabinet, a carrier rotatably mounted in the cabinet and spaced from the bottom and the walls of

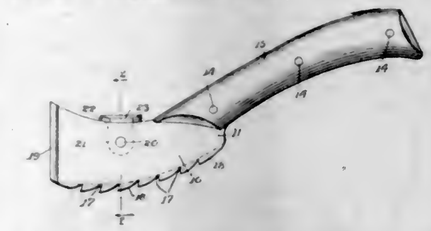
the same, means for maintaining bottles placed within the carrier adjacent the walls of the same, a top for the cabinet having an opening therethrough to permit with-

drawal of bottles from the carrier, a cover for said opening, and interengaging means on the cover and the carrier whereby when the cover is moved to closed position the carrier will be rotated one step.



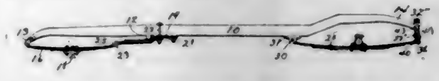
1,505,442. FLUID-DISPENSING CONTAINER. THOMAS J. STEPHENS, Cleveland, Ohio. Filed Jan. 30, 1922. Serial No. 532,645. 5 Claims. (Cl. 221—94.)

1. A dispensing container for liquids, comprising a reservoir with a movable displacement wall, a delivery orifice, and a valve controlling said orifice; a thrust rod transmitting movement from said wall to said valve; and said valve comprising a disk subdivided into portions separable by the thrust of the rod.



1,505,443. LIFTING DEVICE. HAMPTON A. STONE, Beaumont, Tex. Filed Apr. 9, 1923. Serial No. 630,903. 3 Claims. (Cl. 254—134.)

1. A device of the character described, comprising a supporting plate, a pair of uprights secured to said supporting plate and extending in parallel and spaced relation, a lifting member movable between said uprights, said lifting member being elongated and having a hook-shaped projection at its lower end adapted to engage beneath an object to be lifted, said lifting member also having openings arranged in spaced relation longitudinally thereof, a cross member between said guide members, a pin adapted to extend through either of said openings in the lifting member and co-operate with said cross member for adjustably holding the lifting member against downward movement with relation to the uprights, and a second pin

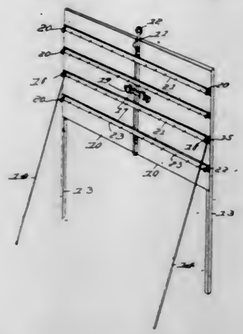


adapted to be positioned in an opening of said lifting member and permit a jack to be placed there beneath and utilized for forcibly elevating said lifting member.

1,505,444. VENEER KNIFE. WILLIAM E. SWANSON, Weehawken, N. J. Filed Nov. 3, 1921. Serial No. 512,445. 3 Claims. (Cl. 30—9.)

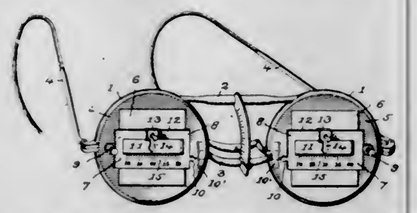
1. An implement as characterized, comprising a blade formed to provide an outwardly curved side cutting edge at one side of the transverse center thereof, a straight end cutting edge disposed in right angular relation to the longitudinal center of said blade and at the outer end of said curved side cutting edge, and a handle portion curved on a line reversed to the curvature of the said side cutting edge, said side cutting edge being toothed throughout its length, hand gripping members secured at the opposite sides of said handle portion, and a finger piece secured on one side of the cutting portion of the blade.

1,505,445. SPRING. LINDSAY H. TIMMONS, Des Moines, Iowa, assignor of one-half to George B. Frost, Des Moines, Iowa. Filed Aug. 3, 1922. Serial No. 579,490. 6 Claims. (Cl. 267—45.)



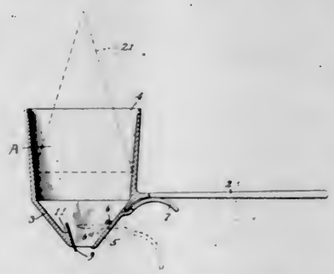
1. In a spring construction, the combination with a frame having front and rear horns and parallel axles carrying some of the springs, of front side springs carried by one axle and pivoted at their forward ends to the front horns, relief springs fixed to the frame at the rear of and overlapping said side springs, a rolling-contact member between the overlapping portions of the side and relief springs and a rear spring assembly carried by the other axle and carrying the rear portion of the frame.

1,505,446. GARMENT-DRIER RACK. ROBERT S. TOWNLEY, Toledo, Ohio. Filed Sept. 19, 1922. Serial No. 589,265. 5 Claims. (Cl. 34—26.)



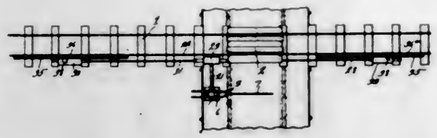
2. A garment drying rack having foldably connected leaves and supports for maintaining the same in an up-

right position, and garment engaging hooks carried by said leaves adjacent to that face which is adapted to be exposed to the radiation from a heating device, said leaves



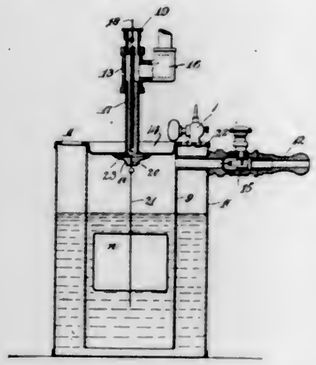
being hingedly connected for folding into parallel relation and being provided with means for maintaining them in their extended position.

1,505,447. PUPILLARY-MEASURING INSTRUMENT. WILLIAM R. UHLEMANN, Chicago, Ill., assignor to Uhlemann Optical Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1922, Serial No. 559,627. Renewed Jan. 21, 1924. 2 Claims. (Cl. 33—200.)



1. In an optician's instrument for measuring pupillary distances, the combination of a pair of holding rings, an intermediate rail fixedly connecting said rings together and carrying a nose bridge or rest, temple bars secured to the outer sides of said rings, an orificed plate associated with each of said rings, and a movable index finger and graduated scale associated with each orificed plate.

1,505,448. ICE SCRAPER. WILLIAM S. VAN SANT, Oakland, Calif. Filed Sept. 5, 1923. Serial No. 660,981. 8 Claims. (Cl. 83—62.)

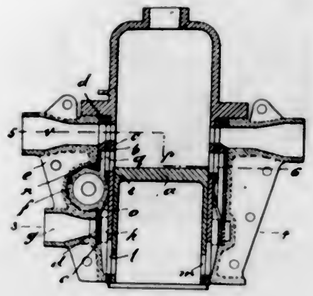


1. A device of the character described comprising a cup shaped mold open at the upper end and having a slotted bottom portion, a scraper disposed in one side of the slot, an ejector plate disposed on the other side of the slot, and a core forming member insertible in the open end of the mold.

1,505,449. AUTOMATIC GRADE-CROSSING SIGNAL. ORVILLE L. VINCENT, Omaha, Nebr. Filed Jan. 15, 1924. Serial No. 686,311. 7 Claims. (Cl. 246—293.)

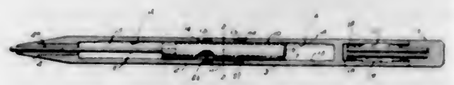
2. A railroad crossing signal comprising a standard disposed adjacent the crossing train actuated depressible members at opposite sides of the crossing, vertically disposed shafts depressed by said depressible members, yieldable connections carried by said shaft, a ratchet wheel to which the shafts are pivoted, gear wheel, ratchet connections between the ratchet wheels and gear wheels, longitudinally movable rack bars, cranks operated by the gear wheels for intermittently reciprocating the rack bars, gear wheels meshing with the rack bars, a ratchet between the gear wheels, dogs carried by the gear wheels and cooperating with the last named ratchet wheel for intermittently rotating the same, a shaft adjacent the crossing on which said ratchet wheel is mounted, said last named shaft being provided with a crank, a pivoted signalling arm and a connecting rod between the crank and signalling arm.

1,505,450. APPARATUS FOR CONTROLLING THE FLOW OR PRESSURE OF FLUIDS. OSBORNE FREDERICK WALKER, London, England. Filed Nov. 8, 1923. Serial No. 673,548. 4 Claims. (Cl. 67—111.)



1. In an apparatus of the character described, a chamber having a gas inlet and a gas outlet, a second chamber communicating at its bottom with the first chamber, a liquid partially filling the chambers, regulable air vent means for said second chamber to control the rate of change of level in the chambers and a float-controlled valve controlling said gas outlet.

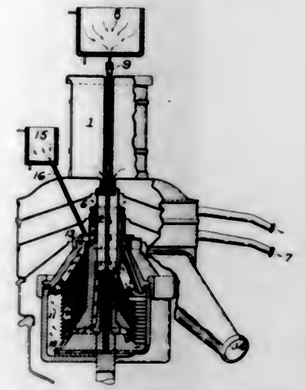
1,505,451. INTERNAL-COMBUSTION ENGINE. ARTHUR WILLIAM WALL, Sheldon, near Birmingham, England, assignor of three-fourths to John White, jr., Boulton Road, Handsworth, Birmingham, England. Filed Aug. 8, 1919. Serial No. 316,193. 6 Claims. (Cl. 123—73.)



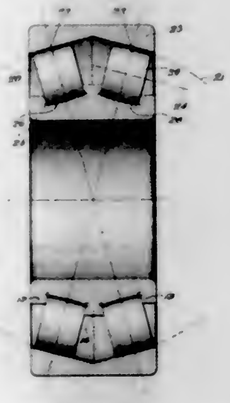
5. An internal combustion engine, having a cylinder provided with a plurality of inlet openings and a plurality of outlet openings, the inlet openings being located at a level different from the outlet openings, the inlet openings being uniformly distributed circumferentially of

the cylinder, the outlet openings being circumferentially and uniformly distributed on the cylinder, the arrangement of said outlet openings being, however, different from that of the inlet openings, a multiple ported sleeve slidalbe on said cylinder and provided with ports adapted to register repeatedly in each cycle of movement with all

of the outlet openings in the cylinder, the passage of gases through said ports and outlet openings when they are in register being repeatedly obstructed by said piston in each cycle of movement and all of the said ports and outlet openings being freed only when the piston is near bottom dead center, and means for imparting movement to said sleeve.



1,505,452. PENCIL. CHARLES E. WEHN, Alameda, and HENRY W. LARSSON, Oakland, Calif. Filed Apr. 21, 1920. Serial No. 375,646. 7 Claims. (Cl. 120—18.)

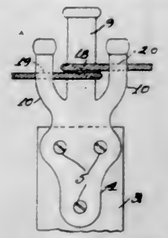


7. A pencil, comprising hollow barrel sections having alining key-ways, a member arranged interiorly of the sections, a lead receiving passage in the outer end of one of the barrel sections, the connecting member having a longitudinal groove extending through the same, a non-rotatable feed member having a flat portion slidable in the groove of the connecting member with said flat portion having threads on one edge and also having a reduced relatively long rod projecting from one end thereof adapted to slide in the lead receiving passage, said threads on the edge of the flat portion of the feed member extending into said alining key-ways of the sections, and a nut embracing the connecting member and filling the space between the inner ends of the barrel sections and adapted to engage the threads of the flat portion of the feed member so that upon rotation of the nut in one direction the feed member may slide so as to cause the rod portion of the feed member to advance the lead in the lead receiving passage.

1,505,453. METHOD OF EXTRACTING WAX FROM WAX-CONTAINING HYDROCARBONS. JAMES W. WEIR, Fillmore, Calif. Filed Jan. 10, 1923. Serial No. 611,784. 5 Claims. (Cl. 233—11.)

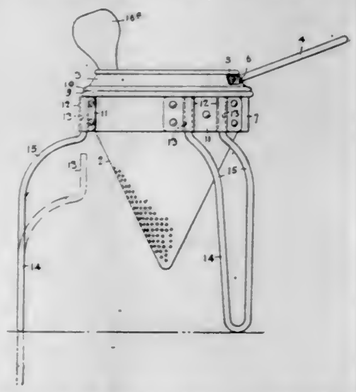
4. The process of extracting wax from wax containing hydrocarbons which consists in separating the wax from the other hydrocarbons by centrifugal force, in a centrifuge machine, thus throwing the wax to the outer periphery of the machine, introducing hot liquid hydrocarbon into the machine and near its outer periphery while the machine is in operation, thus melting the wax with the hot liquid hydrocarbon and separately withdrawing the combined wax and hot hydrocarbon and the other hydrocarbons with which the wax was originally mixed.

1,505,454. ROLLER BEARING. OSCAR RAGNAR WIKANDER, Glen Ridge, N. J., assignor to The Skayef Ball Bearing Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 28, 1921. Serial No. 525,331. 2 Claims. (Cl. 64—39.)



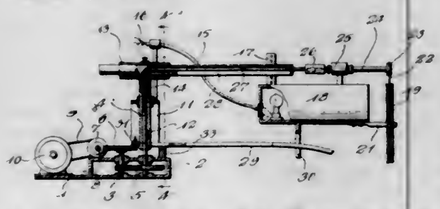
1. In a roller bearing, the combination with an outer member having a hollow conical raceway, of an inner member provided with a concave groove and a row of rollers mounted in said groove, the load carrying surface of each of the said rollers being generated by rotating about its axis a curved line of considerably greater radius of curvature than the radius of curvature of the circular conical surface comprising the roller path on the outer race member.

1,505,455. CLOTHESLINE TIGHTENER. FRED B. WILLIAMS, Highland Park, Ill. Filed Aug. 20, 1921. Serial No. 493,815. 1 Claim. (Cl. 68—12.)



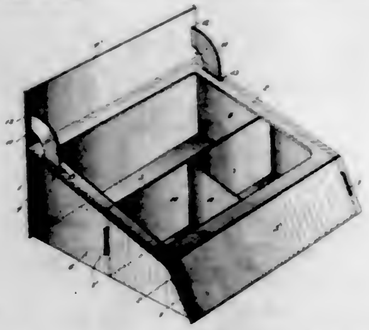
A clothes pole, a fixture secured to the end thereof, said fixture having a main body and three projections extending side by side in the general direction of the length of the pole, the central one of said projections being straight and longer than the others, the outer ones

of said projections being straight throughout a portion of their length but being curved toward the center projection at their junction with the main body of the fix-



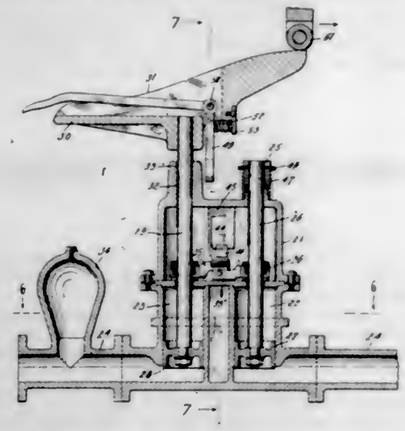
ture, each of said projections having an enlargement at its end whereby a clothes line will not slip over the end of the projection.

1,505,456. FRUIT OR VEGETABLE STRAINER. JOHN H. WILSON, New Kensington, Pa., assignor to The Aluminum Cooking Utensil Co., New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1922. Serial No. 550,093. 1 Claim. (Cl. 146—172.)



In a fruit or vegetable strainer, the combination of an inverted conical-shaped perforated receptacle formed of a flexible metal, and a conical crusher adapted for rolling movement therein, said crusher being bulged intermediate its ends.

1,505,457. CHANGEABLE ILLUMINATOR. WALTER WILSON and CHARLES T. MICHALIC, San Francisco, Calif. Filed May 31, 1923. Serial No. 642,619. 6 Claims. (Cl. 240—10.)

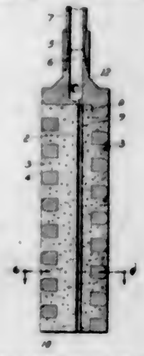


1. A changeable illuminating device comprising a supporting member, means for moving said member alternately in opposite directions, a light ray projector carried by said supporting member and movable bodily therewith, a plurality of differently colored screens associated with said projector, and means operative during movement of said supporting member for successively presenting said screens to the projected rays from said projector.

1,505,458. BOX. HARRY C. WITT, Stoneham, Mass. Filed Apr. 25, 1923. Serial No. 634,455. 4 Claims. (Cl. 206—44.)

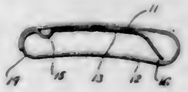
1. A box having a body and cover, the body of the box having sides with hinge-forming straps upturned therefrom and the cover having slots through which the straps are passed whereby the cover is hinged to the body of the box.

1,505,459. AUTOMATIC RAILWAY SIGNAL AND STOP. ARNOLD ZUCKOR, New York, N. Y., assignor of one-twentieth to Rosie Zuckermann, Saratoga Springs, N. Y. Filed Mar 1, 1922. Serial No. 540,131. Renewed Nov. 14, 1923. 4 Claims. (Cl. 246—101.)



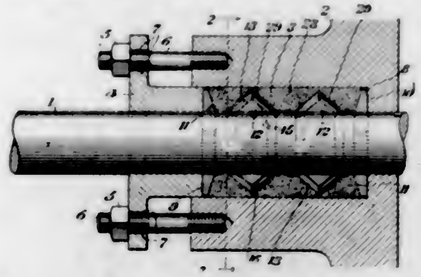
1. In a railroad signal, the combination with a plurality of signal boxes arranged along a track, of a stop slidably arranged in each box extending above the upper surface of the same, a shoe slidably disposed above each box, hydraulic means operatively connecting each shoe with the stop in the box in rear of it, whereby upon lowering a shoe the stop connected therewith is raised, and means disposed in each box for causing the shoe therein to be raised upon raising the stop in the same box, said means permitting any shoe to be lowered without affecting the stop in the same box in either one of its extreme positions.

1,505,460. WELL DRILL. GUSTAV GRIESCHE, Berkeley, Calif. Filed Sept. 26, 1923. Serial No. 664,927. 2 Claims. (Cl. 255—61.)



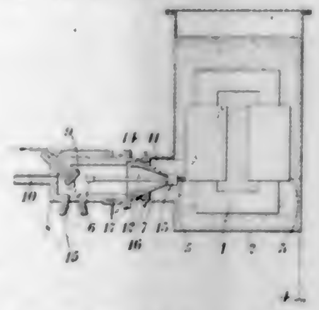
1. A well boring tool comprising a body having discharge ports therethrough and an abrasive cutting core therebetween, said core having an eccentric hole there-

through, and said body provided with a central hole at its top with branches leading therefrom to the eccentric



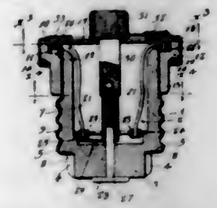
hole and to the discharge ports, for effecting the feed to the cutter and the discharge of the cut material from the tool and well.

1,505,461. LINGERIE CLASP. GASTON A. GUYOT and ARTHUR F. GUYOT, Attleboro, Mass. Filed Oct. 25, 1921. Serial No. 510,394. 2 Claims. (Cl. 24—259.)



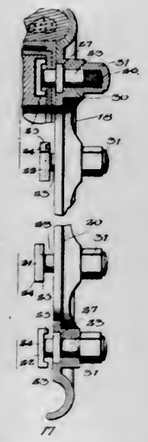
1. A clasp formed of a single strip of resilient metal folded to form two spaced apart side arms and an intermediate cooperating gripping arm, the free end of one side arm being adapted to snap over the folded end of the other side arm and to lie substantially parallel with said intermediate arm and closely adjacent thereto when in clamping position, said intermediate arm being normally spaced from said other arm.

1,505,462. ROD PACKING. HENRY G. HILLMAN, New York, N. Y. Filed Apr. 8, 1922. Serial No. 550,775. 4 Claims. (Cl. 286—25.)



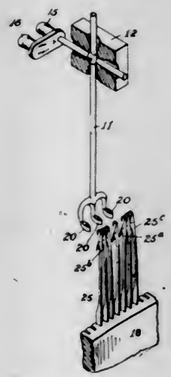
1. In a rod packing, the combination of a stuffing box having a chamber, a rod extending through the chamber, a metal ring of triangular form in transverse section and of substantially less diameter than the chamber surrounding the rod within said chamber and having its inner edge ground to closely embrace the rod, a pair of conoidal metal rings surrounding the rod within the chamber at opposite sides of the first mentioned ring and having their inner faces abutting against the oppositely inclined faces of the first-mentioned ring and their inner edges ground to closely embrace the rod, the outer edges of the two conoidal rings being ground and abutting against each other in a plane perpendicular to the rod, a soft packing material in the stuffing box pressed firmly about the rod and conoidal rings and extending over the joint between the outer edges of the conoidal rings, the inner faces of the conoidal rings and the two oppositely inclined faces of the first-mentioned ring being ground, each of the three rings being divided transversely into a plurality of sections having their ends spaced apart and the three rings being arranged with the spaces between sections of different rings out of register, metal plates bridging the spaces between the sections of the conoidal rings and located at the outer faces only of said rings, and means securing each plate to one section only of the adjacent ring.

1,505,463. RADIOLOGICAL APPARATUS. FERNAND HOLWECK, Paris, France, assignor to Mullard Radio Valve Company Limited, London, England, a British Company. Filed Nov. 18, 1922. Serial No. 601,701. 2 Claims. (Cl. 250—34.)



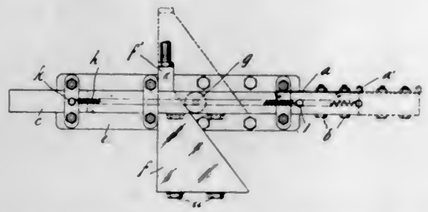
1. An apparatus for radiology, the combination of a high tension transformer, an electrically conducting container wherein the transformer is immersed in a dielectric other than air, an electric connection between one secondary terminal of the transformer and the container, and a vacuum tube mounted on the outside of the container comprising a metallic envelope constructed of separable parts electrically connected to the container and a cathode electrically connected to the other secondary terminal of said transformer through a part of the wall of the tube which is in direct contact with the dielectric in the container.

1,505,464. MULTIPLE FUSE PLUG. JONAH E. HORNER, Los Angeles, Calif., assignor of one-half to William A. Hayt, Los Angeles, Calif. Filed Nov. 3, 1920. Serial No. 421,483. 6 Claims. (Cl. 200—125.)



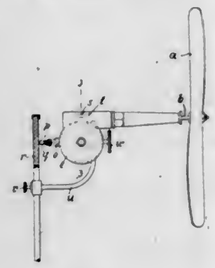
1. In a multiple fuse plug, the combination of a cylindrical body having a fuse chamber therein open at one end and having a head at the other end with a shoulder adjacent the head, a metal sleeve enveloping the body and having threads formed thereon for attachment to an electric socket, a fuse-plate, seated on the said shoulder, a plurality of fuses disposed circumferentially within the fuse chamber with their inner ends insulated from each other and attached to the fuse-plate, and having their outer ends extending to the open end of the body and connected to the said metal sleeve, a cover plate secured over the open end of the body, a spindle rotatably mounted in the cover plate and carrying a metallic contact arm between the head and said fuse-plate, and a contact post mounted in the head and in contact with the contact arm.

1,505,465. WHEEL. HENRY MARTIN HOWELL, Monroe, La., assignor of one-half to John Edward Donghtie, Monroe, La. Filed May 21, 1923. Serial No. 640,400. 5 Claims. (Cl. 301—11.)



1. A locking device for securing the removable tire retaining flange to a demountable rim and for securing the demountable rim on the wheel and comprising locking plates carried by the wheel, demountable rim and flange respectively, the locking plates of the demountable rim and flange having key hole slots and a series of long and short studs carried by the locking plate of the retaining flange and cooperable with the key hole slots, the plates of the wheel and demountable rim also having other slots accommodating the studs, each of said studs including a shank, the locking plate of the retaining flange having a socket in which said shank is fitted and beyond which it projects, coacting means between the shanks and locking plate of the outer tire retaining flange preventing relative rotary movement between the shank and the flange, and a cap nut threaded on the outer end of each shank.

1,505,466. STRIPING MECHANISM FOR CIRCULAR-KNITTING MACHINES. EDWARD JACKSON, Reading, Pa., assignor to The Nolde and Horst Company, Reading, Pa., a Corporation of Pennsylvania. Filed May 16, 1923. Serial No. 639,303. 3 Claims. (Cl. 66—21.)



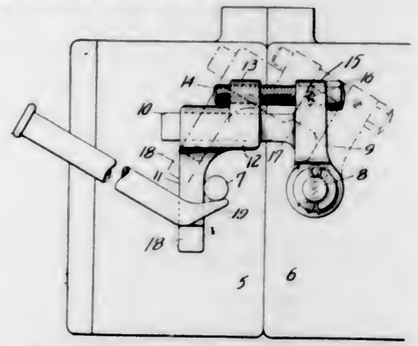
1. A circular knitting machine comprising a thread guide having a plurality of fixedly-spaced thread-carrying fingers, means for imparting a determined needle-engaging swing to said guide, and a needle cylinder having a circular series of equally spaced reciprocating needles certain adjacent ones of which are bent laterally to closely group their thread-engaging ends.

1,505,467. GUARD FOR PRESSES, STAMPS, AND LIKE MACHINES. HERBERT DAVID JACKSON, Walsall, England. Filed Mar. 21, 1923. Serial No. 626,588. 2 Claims. (Cl. 74—105.)

2. A guard for power presses, stamps, and like machines, comprising a reciprocating member, a guard member carried by the said reciprocating member, a base plate, pairs of fixed rollers on the said base plate between which rollers the said reciprocating member is slidably guided, a wedge member of substantially triangular outline adapted to slide in a slot in the reciprocating member and abutting between one pair of fixed rollers and a roller at one end of the slot, a lever pivoted upon the frame of the machine, a horizontal rod connecting the lower end of the said lever to the said wedge member, a roller at the upper end of said lever, a cam which is adapted to engage the said roller and is keyed upon the driving shaft of the machine, and a spring which effects the return movement of the reciprocating member.

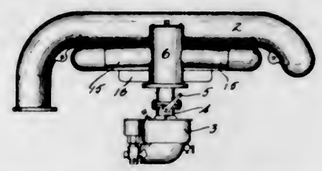
1,505,468. WINDSCREEN WIPER FOR MOTOR CARS AND THE LIKE. LEONARD REGINALD JONES, London, England. Filed Nov. 24, 1923. Serial No. 676,695. 2 Claims. (Cl. 15—253.)

1. In a wind screen wiper, an air vane, a worm rotated by said vane, a wormwheel rotated by said worm, a block carrying said wormwheel, means for attaching said block to a wind screen frame, a casing carrying said worm and vane angularly adjustable on said block, a crank pin on said wormwheel, and a wiper bar oscillated by said crank pin.



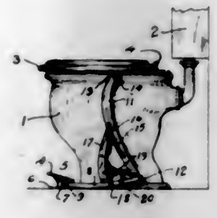
1,505,469. UMBRELLA LOCK. CARL E. KELLER, Pittsburgh, Pa. Filed July 3, 1923. Serial No. 649,194. 5 Claims. (Cl. 135—44.)

2. Means for locking the ribs of an umbrella comprising a collar composed of two discs relatively rotatably mounted to encircle the stick of an umbrella, the inner disc having notches for the reception of the umbrella ribs, the outer disc having under cut notches whereby the notches of the inner disc will be closed when the discs are rotated relative to each other, means for locking said discs against relative rotation when the notches are closed, said discs each comprising half sections hingedly



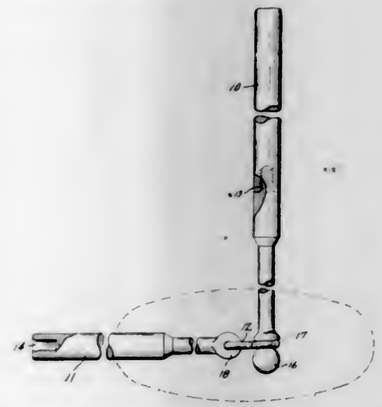
connected together for permitting the engagement of the device with the umbrella stick, and means for holding said discs in closed position.

1,505,470. MOLD LOCK. GUSTAV R. KELM, New York, N. Y., assignor to Walker M. Level Company, New York, N. Y. Filed June 22, 1920. Serial No. 390,862. 9 Claims. (Cl. 22—156.)



1. The combination with a divisible mold, of means for securing the parts of said mold together comprising a shoulder on one of the mold parts, a pivoted hook on the other mold part provided with an extensible jaw for engagement with said shoulder and an actuating ing on the book and arranged to stand to one side of the locking shoulder when the hook is engaged therewith to provide a hold for a hook operating lever inserted between the locking shoulder and said ing.

1,505,471. CHARGE FORMING DEVICE. ROY H. KLUSS and RAY C. FINCH, Spokane, Wash. Filed Apr. 10, 1922. Serial No. 551,314. 1 Claim. (Cl. 123—122.)

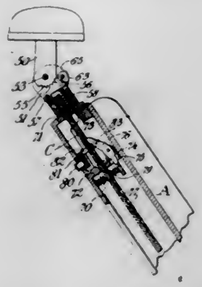


The combination with an internal combustion engine including its gas pipe, carburetor, throttle valve and exhaust manifold, of a cylindrical valve-casing connected with the gas pipe, a main manifold comprising downwardly inclined pipes from said casing connecting said casing and engine, an automatic supply valve comprising a cylinder having a closed bottom and perforated side walls, an exterior auxiliary manifold adjacent to the exhaust manifold and communicating with the casing below said valve, and said auxiliary manifold communicating with the main manifold between the engine and casing.

1,505,472. COVER LIFTING DEVICE. SHICHIGORO KUNO, Sublet, Wyo. Filed Sept. 26, 1921. Serial No. 503,132. 3 Claims. (Cl. 4—251.)

1. In combination, a toilet fixture, a cover hingedly connected thereto, a stationary pivot, a lever mounted on said pivot and adapted to rock thereon, a second lever having one end pivotally connected to the cover and the other end pivotally connected to one end of the first named lever, the other end thereof being provided with a pedal, a third lever pivotally connected to the first named lever and having a sliding connection with the second named lever, and spring means joining said third lever with each of the other two and adapted to modify the action of said levers.

1,505,473. EXERCISER. JOSEPH KLUBNICK, Bridgeport, Conn. Filed May 10, 1923. Serial No. 637,999. 4 Claims. (Cl. 46—69.)



1. An exerciser comprising a handle, an arm made of relatively soft rubber, and a link loosely connected to the arm and handle and adapted to rotate about the axis of the handle.

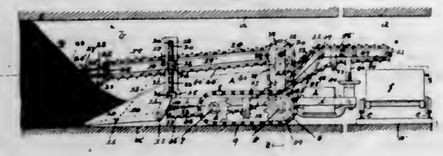
1,505,474. HEADREST FOR BARBER OR LIKE CHAIRS. GIUSEPPE CARMELO LARAIA, New York, N. Y. Original application filed June 28, 1918, Serial No. 242,406. Divided and this application filed July 24, 1920. Serial No. 398,713. 3 Claims. (Cl. 155—177.)

1. In combination, a barber or like chair head rest, a pivotal connection for said head rest, comprising a forked member, a plate pivotally connected to said member, means for limiting the movement of said head rest in one direction comprising a cross-rod on said forked member, means on said forked member engaging a portion of said plate for holding said head rest in its

angular adjusted positions, and a rock-shaft having means thereon for operating said holding means, and a

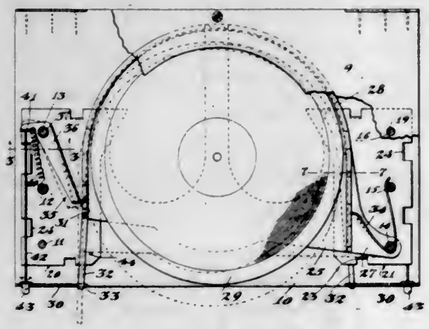
finger-piece thereon for turning said shaft around its longitudinal axis, said rock shaft being carried by said forked member and projecting at one side thereof.

1,505,475. WELL-CASING TOOL. JOSEPH C. LEWIS, Grant, N. Mex. Filed Mar. 12, 1923. Serial No. 624,660. 3 Claims. (Cl. 294—94.)



1. A well casing pulling tool comprising a body having a bore therethrough and laterally directed openings in its sides, a tapered rod movable through the bore and having a stop member on one end, and a gripping member in each laterally directed opening engageable with the tapered rod for movement through the openings.

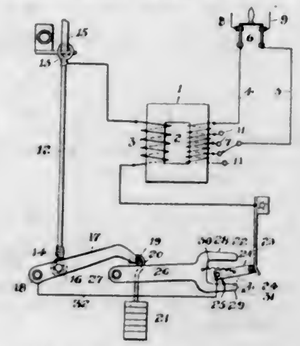
1,505,476. APPARATUS FOR HANDLING COAL AND OTHER MATERIAL. JACOB M. LONDON, Brookville, Pa., assignor of one-half to George M. Crawford, Pittsburgh, Pa. Filed July 28, 1919. Serial No. 313,818. Renewed Mar. 20, 1924. 20 Claims. (Cl. 198—8.)



1. A machine of the class described, comprising a motor, traction chains carried by the machine and operated by said motor for supporting the machine and enabling the traveling of the same along a mine floor, a conveyor operated by said motor for elevating and discharging the coal, a receptacle over said conveyor, a conveyor operated by said motor and adapted to be raised and lowered for moving the loose coal onto said first named conveyor, and a movable door for extending under said coal and for closing the end of said receptacle.

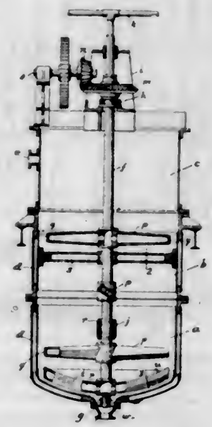
6. A machine of the class described for handling and hauling loose coal in the rooms and entries of mines comprising a frame, means on the frame for propelling the same in the mine, means thereon for gathering coal, a relatively large receptacle formed within the frame and into which the gathering means delivers, means for discharging the contents of said receptacle, and means extending above the gathering means and receptacle for pushing the coal back into the receptacle.

19. A portable loading and transporting machine comprising a movably supported frame, a longitudinally extending endless conveyor in the frame, said conveyor having a substantially horizontally extending portion in the bottom thereof near the front part of the frame, said conveyor being inclined intermediate its ends and having a rearwardly extending portion behind the inclined portion above the horizontal front portion and adjustable vertically with respect to the inclined portion, whereby material may be loaded onto the lower front part of the conveyor and delivered at various elevations at the back without varying the inclination of the supporting frame, and material retaining sides on the supporting frame extending from a point adjacent the forward end of the conveyor back to and partially enclosing the inclined portion, whereby a receiving capacity is provided above the horizontal portion and between the sides.



1,505,477. RECORD HOLDER. RODNEY N. MCCLURE, Sawtelle, Calif. Filed Mar. 27, 1922. Serial No. 547,231. 6 Claims. (Cl. 211—16.)

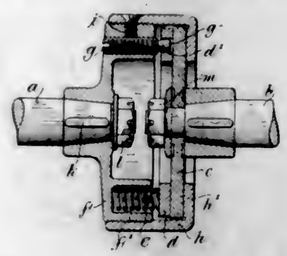
1. In a record-holder, a column, a series of independently separable superimposed plates slidably engaged on said column with adjacent plates spaced apart, and an oscillatory record-carrying shelf interposed between adjacent plates and pivotally connected to the column.



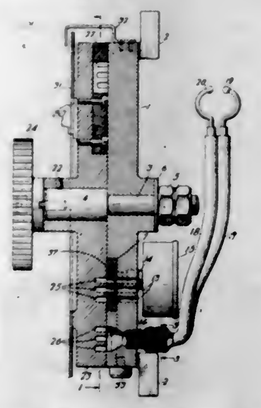
1,505,478. APPARATUS FOR TREATING HOT-WIRE ELEMENTS FOR ELECTRICAL DEVICES. AUGUST MACHA, Cleveland, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 9, 1922. Serial No. 605,948. 3 Claims. (Cl. 219—1.)

1. In an apparatus for straightening or aging hot-wire elements for electrical purposes, means for subjecting the wire to a predetermined stretching strain, means for causing electric current to flow in the wire for heating

the same, and means for interrupting the wire-heating current when the wire has elongated a definite distance.



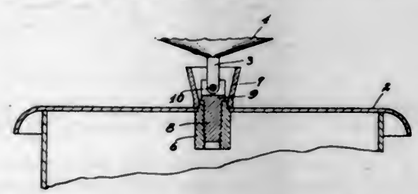
1,505,479. APPARATUS FOR TREATING OILS. HAROLD T. MAITLAND, Sharon Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Apr. 19, 1921. Serial No. 462,650. 5 Claims. (Cl. 259—7.)



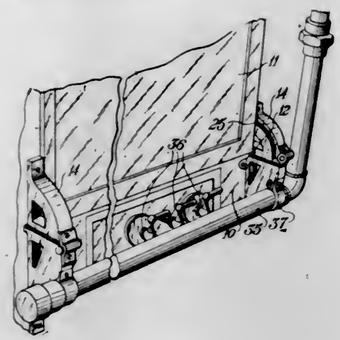
1. A digester and mechanical masticator particularly adapted for the treatment of sludge formed as a precipitate in the usual acid treatment of mineral oil lubricating stock, comprising a steam-jacketed upright vessel, an upright shaft extending axially through the vessel, stirrers secured to and extending laterally of the shaft at different levels, fixed cross-bars extending across the interior of the vessel at different levels, the stirrers acting to mix and agitate the contents of the vessel and the cross-bars cooperating with the stirrers to masticate the contents, there being an open space in the vessel above the stirrers and cross bars, an opening in the lower part of the vessel for the inflow of the treating fluid and an overflow outlet in the upper part of the vessel opening into said open space for carrying off the lighter constituents of the mixture, said constituents being otherwise confined from escape from the lower part of the vessel.

1,505,480. FLEXIBLE FRICTION DRIVE FOR GENERATORS AND THE LIKE. KEITH R. MANVILLE, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1923. Serial No. 613,117. 2 Claims. (Cl. 64—106.)

1. A coupling of the character described including a circular coupling plate carried on one shaft, a flexible disk carried on the other shaft, a coupling cap having a flange constituting a seat for the flexible disk and adapted to be threaded onto the circular coupling plate, the cap and coupling plate constituting an enclosed housing, a presser plate disposed within the housing thus formed to maintain the friction disk on its seat and springs disposed within said housing to co-operate with the presser plate.

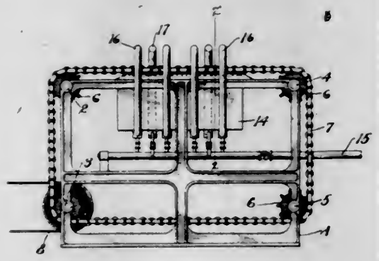


1,505,481. ACOUSTICAL DEVICE. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 28, 1919. Serial No. 313,729. 9 Claims. (Cl. 181—26.)



6. An acoustical device provided with a plurality of independent acoustic paths, each path comprising a plurality of multiple paths and a common path, and means to inversely vary the lengths of the independent paths by varying the lengths of the multiple paths thereof.

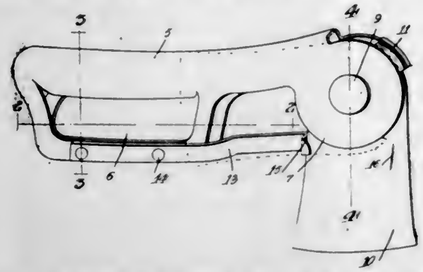
1,505,482. HEAT DEFLECTOR. JAMES B. MORROW, Oakland, Calif. Filed Sept. 20, 1923. Serial No. 663,771. 3 Claims. (Cl. 126—58.)



1. The combination with a heater, having a top, of a deflecting plate, a tilting rod secured to said plate, a hollow fastening member secured to said top, a pin secured within said fastening member, and a bolt extending through said pin and said rod.

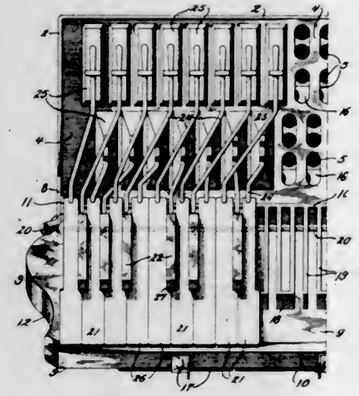
1,505,483. BRACKET FOR DOORS. HENRY A. CHEVOLA, New York, and CHARLES B. MOSSI, Brooklyn, N. Y. Filed May 14, 1921. Serial No. 469,745. 2 Claims. (Cl. 126—191.)

1. The combination with a door of an oven or the like, said door being provided with a hinge lug, of a bracket having an opening for receiving said hinge lug, said bracket comprising a recessed member, a coil spring disposed within said recessed member and coacting with said oven door for closing the same and spring pressed retaining means carried by said bracket for holding the oven door in its fully opened position.



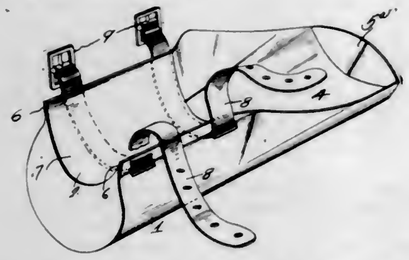
1,505,484. SAND-BLAST CLEANING METHOD AND APPARATUS THEREFOR. HARRY A. MULVANY and HARRY E. KENNEDY, Berkeley, Calif. Filed Aug. 29, 1921. Serial No. 496,406. 3 Claims. (Cl. 51—278.)

1. The method of cleaning the entire surface of objects having a more or less circular periphery which consists in placing and entirely supporting them upon devices having a substantially circular periphery, rotating said devices and thereby rotating the articles and passing them while rotating through the field of a sand blast directed substantially normal to the direction of passage of said devices across the sand blast.



1,505,485. FOLDING AX. JOHN RICHARD PALM, St. Cloud, Minn. Filed Dec. 10, 1923. Serial No. 679,687. 1 Claim. (Cl. 145—2.)

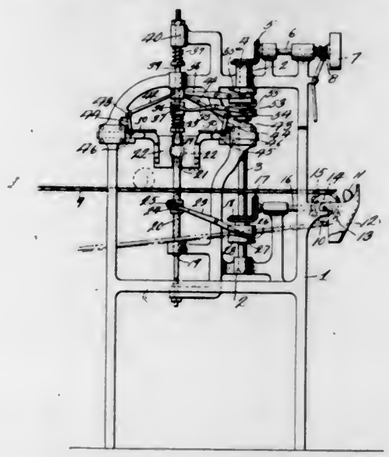
In a tool, a handle portion including a length of sheet metal bent intermediate its side edges to provide overlying portions, a spring arm having an offset portion at its free end, means extending through the spring arm and overlying portions of the handle to secure the spring arm and overlying portions together, inwardly extended flanges forming a part of the handle, a blade pivotally supported between the overlying sections of the handle at a point adjacent to one end thereof, said blade having a shoulder to engage the flanges and restrict movement



thereof, and said offset portion of the spring arm adapted to engage one edge of the blade to restrict movement thereof in the opposite direction.

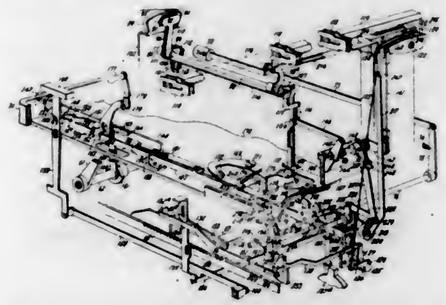
1,505,486. PIANO-KEY MECHANISM FOR ACCORDIONS. JAMES PALMER, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,898. 8 Claims. (Cl. 84—376.)

1. In an accordion having a casing housing the treble playing means and the valves for controlling the same; a one-piece keyboard composed of a plate having side and end flanges and division walls extending from one of the side flanges partway across the plate, the end flanges being secured to the casing; keys pivoted to the division walls, and connections between the keys and the valves.



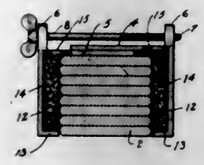
1,505,487. FRUIT-PICKING DEVICE. ORSON D. PARK, Alden, Mich. Filed Mar. 27, 1923. Serial No. 628,012. 1 Claim. (Cl. 224—28.)

A fruit picking device comprising an elongated receptacle in a longitudinally disposed recess of one side of which the arm of an operator is adapted to be received



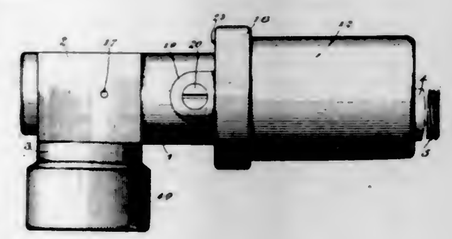
to a point adjacent the wrist of the operator, straps extending through said receptacle in engagement with the inner side of the wall forming the recess whereby said straps will not engage the inner side of the arm and bind the muscles thereof, the outer end of said receptacle merging into a flared scoop shaped member positioned below the hand of the operator, the end of said scoop shaped member being provided with an upwardly extending flange on which stems and branches may be broken, said flange being disposed beneath the plane of the hand and arm of the operator.

1,505,488. PEACH CUTTING AND PITTING MACHINE. IGNAZIO PIERMATTEI, Landisville, N. J. Filed Apr. 24, 1924. Serial No. 708,689. 7 Claims. (Cl. 146—28.)



1. A peach severing device comprising vertically movable cooperating pit gripping members, oppositely disposed horizontally movable severing knives, means for moving said knives towards each other into opposite sides of a peach, and means for spreading said knives when they reach the end of their inward movement and means for restoring the gripping members to normal position.

1,505,489. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, Westfield, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed June 12, 1923. Serial No. 644,841. 33 Claims. (Cl. 235—60.)

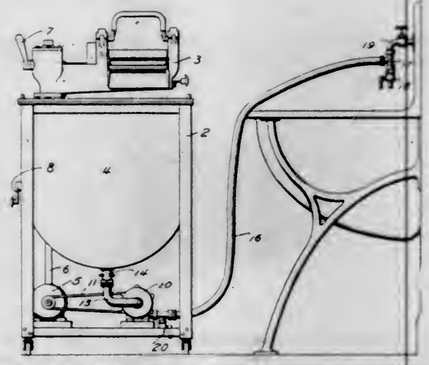


1. In a combined typewriting and computing machine, numeral-keys, a carriage, carriage-controlled means for determining computing zones, carriage-controlled means for locking the numeral-keys when the carriage reaches a computing zone, an addition-key, and means actuable by said addition-key for releasing said numeral-keys.

1,505,490. SPRING LUBRICATOR. DANIEL L. POWERS, Arvada, Colo. Filed Dec. 18, 1922. Serial No. 607,534. 2 Claims. (Cl. 184—1.)

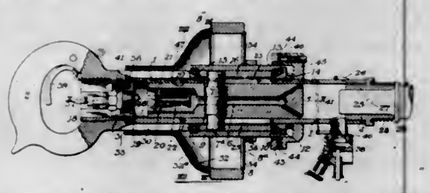
1. A spring lubricator comprising, in combination, two relatively movable members, each having two portions angularly related to each other, one of said portions being concave and adapted to fit against the side of a multiple leaf spring, the other portion of one of said members being flat and adapted to fit against the top of a spring, the corresponding portion of the other member being channel shaped and adapted to receive the flat portion of the other member in adjustable relation, upwardly extending ears at the corners of each member and a clamping bolt passing through said ears, and adapted to perform both the clamping and adjusting functions.

1,505,491. AIR CHUCK. JAMES W. PRICE, Tulsa, Okla., assignor to The Tulsa Invention Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Mar. 22, 1923. Serial No. 626,994. 8 Claims. (Cl. 137—53.)



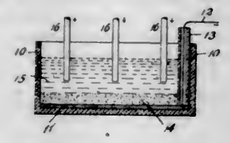
1. A device of the character described comprising a body having a groove and a chamber connected by a slot, means adapted to slide in the groove and having a heel extending through the slot into the chamber, a head forming part of the body having a bore communicable with the chamber, a valve in the chamber, means engaging the valve and the heel being adapted to keep the valve seated, and means operable on the body adapted to actuate said slide means to advance the heel in said slot and chamber and thereby impart varying degrees of pressure to said seating means requiring a preponderance of air pressure in said bore before said valve will unseat.

1,505,492. WASHING MACHINE. CHARLES E. REDDIG, Kew Gardens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,396. 3 Claims. (Cl. 68—37.)



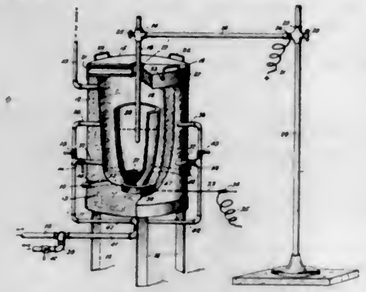
3. In combination, a washing machine, a pump through which water may pass both in and counter to

the pumping direction, a motor, a driving connection between said motor and said pump whereby the pump is



actuated whenever the motor is in operation, and single means for conducting water to and from said pump.

1,505,493. IMPACT TOOL. EDMUND WILLSON ROBERTS, Cincinnati, Ohio, assignor of one-half to C. S. Somervell, Riverton, N. J. Filed Aug. 13, 1920. Serial No. 403,194. 12 Claims. (Cl. 123—7.)

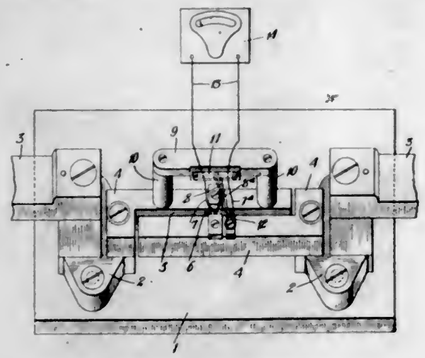


1. The combination in an impact tool, of a cylinder having a longitudinal slot therethrough, a tool-bit operatively connected to one end of said cylinder, a piston longitudinally movable therein and arranged to strike said tool-bit at one end of its stroke, means for imparting striking movement to said piston by an explosive force, a cross-head carried by said piston and having an end projecting through said slot beyond the outer surface of the cylinder, a cam rotatably mounted with respect to said cylinder and encircling the same; said cam cooperating with the projecting end of said cross-head, and a fly-wheel operatively connected with said cam; said cam and cross-head being arranged to convert the rectilineal movement of said piston into rotary movement of said fly-wheel whereby the latter may retract said piston after each power stroke.

1,505,494. PROCESS FOR EXTRACTING METALS. RICHARD RODRIAN, New York, N. Y., assignor, by mesne assignments, to Hans Adelmann, New York, N. Y. Filed Apr. 29, 1922. Serial No. 557,286. 11 Claims. (Cl. 204—15.)

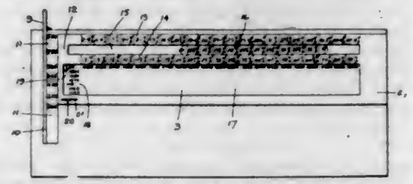
1. The process which consists in electrolyzing a comminuted metal-bearing mass while it is in contact with the cathode, in the presence of an alkaline electrolyte, whereby there is obtained within said electrolyte a solid product containing a metal constituent separating the solid product from the electrolyte, washing such product and drying it, and finally recovering the metal constituent from such product.

1,505,495. SMELTING APPARATUS. RICHARD RODRIAN, New York, N. Y., assignor to Rodrian Electro-Metallurgical Co., Incorporated, a Corporation of Delaware. Original application filed Mar. 3, 1922, Serial No. 540,730. Divided and this application filed May 26, 1922. Serial No. 563,749. 3 Claims. (Cl. 204—19.)



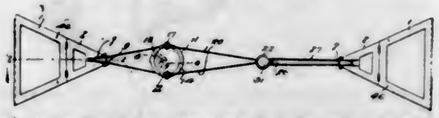
1. A furnace for the reduction of metal comprising a smelting chamber, the inner surface of which is of non-conducting material, means to bring a charge of metal placed within said chamber to a molten condition comprising a plurality of downwardly directed nozzles passing through said inner surface, and means to treat electrolytically the molten metal within said chamber comprising a plate of electrically conducting material set into the bottom of said smelting chamber and an electrode extending downwardly into said chamber substantially in alignment with and spaced from said conducting plate.

1,505,496. PROCESS OF MANUFACTURING ACTIVE CARBON. KARL RHODE, Berlin-Charlottenburg, Germany, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Apr. 12, 1921. Serial No. 460,851. 6 Claims. (Cl. 252—3.)



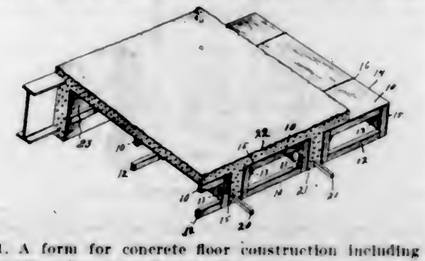
1. Process of manufacturing active carbon, consisting in impregnating a carbonaceous material of fossil origin with alkali and heating the mass to a temperature of approximately 1000° C. with the exclusion of air.

1,505,497. ELECTRICAL MEASURING INSTRUMENT. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Dec. 20, 1920. Serial No. 431,877. 5 Claims. (Cl. 171—95.)



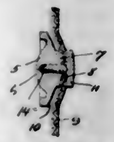
1. In an electrical measuring instrument, a conductor heated by the passage of current therethrough, and two thermo-couples connected in series with each other and having their electromotive forces opposed to each other, the hot joint of one of said couples being in thermal connection with one portion of said conductor and the hot joint of the other of said couples being in thermal connection with another portion of said conductor having a different temperature from the first named portion, and means for causing the distant ends of the outer elements of the couples to have the same temperature as each other.

1,505,498. PRICE CALCULATING MACHINE. BENJAMIN STANLEY ROSS, New Westminster, British Columbia, Canada. Filed June 30, 1923. Serial No. 648,728. 1 Claim. (Cl. 235—87.)



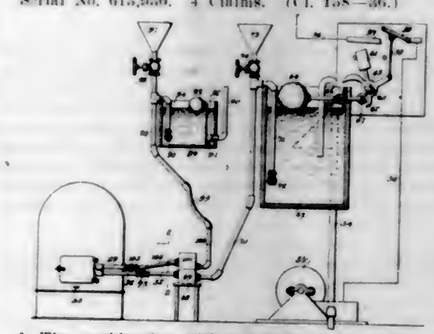
A device of the class described comprising a rotatable chart having a column of base or cost price figures successively increasing in value, a horizontal row of figures to each base figure represening the base figure plus a given percentage increase thereon, an upper and a lower percentage scale spaced apart to define an intervening slot, a percentage scale indicating overhead expenses slidable within the slot the percentages of which are adapted to be read in conjunction with the upper scale to determine desired profit, and means whereby a selling price may be read in a single vertical column immediately below the desired overhead percentage on an article of any given cost price.

1,505,499. MEANS FOR FACILITATING THE COPYING OF DRAWINGS. LEONARD SAARI and WILLIAM JACKSON, Superior, Ariz. Filed Apr. 12, 1923. Serial No. 631,580. 5 Claims. (Cl. 33—23.)



2. A device of the class described, including a pair of frame members adapted to be secured to a suitable support, an elastic connection between said frame members removably and adjustably connected thereto, a marker holder mounted on said elastic connection, and a ring shaped indicator member having an indicating projection thereon extending to the central portion thereof adjustably secured on said connection, said indicator being adapted for movement relative to the frame member for producing a corresponding movement of said pencil holder.

1,505,500. CONCRETE FLOOR CONSTRUCTION. ELWYN E. SEELYE, White Plains, N. Y. Filed Oct. 20, 1920. Serial No. 418,177. 2 Claims. (Cl. 72—66.)



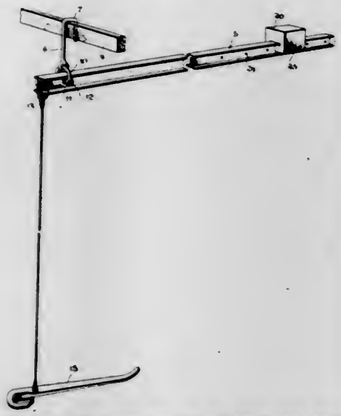
1. A form for concrete floor construction including a plurality of wooden frames, thin wooden top and side walls secured thereto, transverse strips carried by each frame at its lower edge and having its ends projecting beyond said side walls, and a bottom wall of metal lathing secured to said strips.

1,505,501. BUTTON. CARL STEHL, Ionia, Mich. Filed Aug. 11, 1920. Serial No. 402,846. 1 Claim. (Cl. 24—105.)

A separable button, consisting of a head having a threaded bore formed centrally therein, a reduced shank formed on one side of said head, said shank having its end rounded to provide a semi-spherical surface, a retainer member, a threaded stud carried by said retaining member adapted to be received in the threaded bore in said head, the surface of said retainer member adjacent said semi-spherical surface of said shank being concaved and of the same curvature as the semi-spherical surface for binding a portion of the material therebetween to which the button is attached.

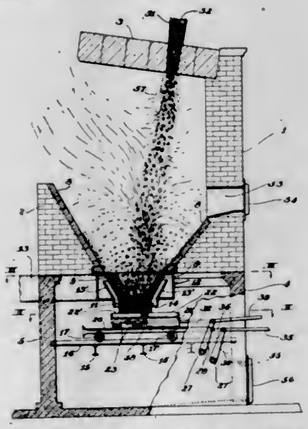
1,505,502. SYSTEM FOR BURNING OIL. GEORGE T. SMALLWOOD, Washington, D. C. Filed Jan. 20, 1923. Serial No. 613,930. 4 Claims. (Cl. 158—36.)

1. The combination with a burner, of means for supplying by gravity a liquid fuel and water to the burner, comprising reservoirs for each, a water supply pipe connected to the water reservoir, a float-controlled valve for the water supply pipe, a siphon for withdrawing water from the water reservoir, said siphon having a short leg opening into the water reservoir and a long leg connected to the burner, a pump for delivering liquid fuel to the fuel reservoir, float-operated pump controlling means associated with the latter reservoir, and a siphon for withdrawing liquid fuel from the fuel reservoir and comprising a short leg opening into the fuel reservoir and a long leg, said long leg being connected to the burner.



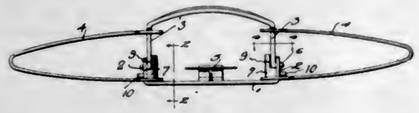
1,505,503. DISPENSING APPARATUS. SCOTT STEWART. Rivesville, W. Va. Filed Aug. 16, 1923. Serial No. 657,797. 5 Claims. (Cl. 211—8.)

1. In a device of the character described, a casing comprising a pair of segmental end walls and a curved bottom, the top of said casing being open, a cylinder



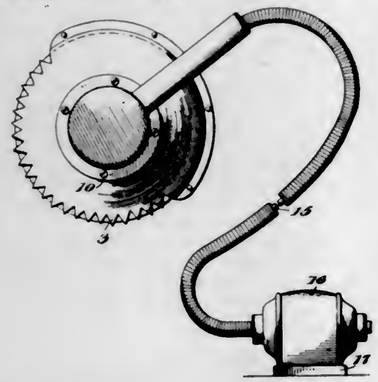
mounted in said casing with the axis of the cylinder arranged at right angles to said end walls, the side wall of said cylinder being provided with a cut-out portion forming an edge adapted to receive materials in the bottom of said casing and carry them upwardly, and a slide normally closing the open portion of said casing.

1,505,504. WRENCH POLE. LORENZO JACOB STONER, Tulsa, Okla. Filed Sept. 1, 1922. Serial No. 585,738. 2 Claims. (Cl. 248—6.)



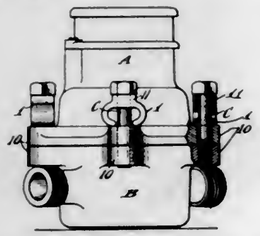
1. A wrench pole for use in oil and gas well operations comprising an I-beam, a wrench supporting member connected to one end of the beam, the other end of the beam being provided with a series of openings, and a balance weight having a T-shaped groove receiving the upper flange and the web of said beam, said weight being provided with a fastening bolt selectively extending through one of said openings whereby to adjustably connect the weight to the beam whereby to balance the wrench.

1,505,505. FURNACE. JOHN F. O. STRATTON, Sewickley, Pa. Filed Sept. 24, 1923. Serial No. 664,376. 12 Claims. (Cl. 110—72.)



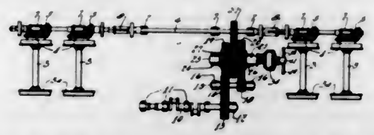
1. A furnace comprising a fire pot having an opening in the bottom thereof, an air pressure compartment therebelow, a bodily movable grate interposed between the said fire pot and compartment, said grate being composed of a plurality of independently movable spaced apart sections, and means for moving said grate sections in unison whereby to vary the position of the space therebetween transversely of the fire pot.

1,505,506. SPRING TRAP-JAW GUARD. FRANK STULTZ, Canon City, Colo. Filed Feb. 26, 1923. Serial No. 621,236. 2 Claims. (Cl. 43—88.)



1. In an animal trap, in combination with a base plate having upwardly bent ends, each of which are provided with apertures, jaws pivotally mounted in said apertures, and blocks mounted on said base plate and secured to said upwardly bent ends each having a notch therein adjacent the bent up end of the base plate to form a pocket for receiving the ends of the jaws for preventing accidental disengagement of said jaws from said bent ends.

1,505,507. SKINNING KNIFE. WILLIAM SUKALLE, Phoenix, Ariz. Filed July 9, 1923. Serial No. 650,372. 2 Claims. (Cl. 17—22.)

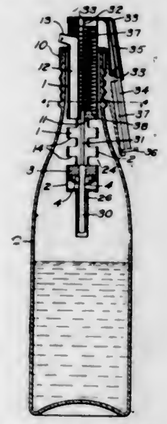


1. In a skinning knife, comprising a pair of spaced concaved disks adapted to be bolted together for a portion of approximately one-half of their circumference, a rotary knife blade positioned between said disks, one of said disks having an opening therein, a housing bolted upon said disk having an opening therein, and means extending from said housing through said opening for operating said rotary knife blade.

1,505,508. WATER METER. LEON TRAGER, Newark, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 21, 1922. Serial No. 608,377. 10 Claims. (Cl. 137—71.)

1. A water meter having a sectional casing and means for securing the casing parts together including a yielding spacer supporting the pressure of said securing means and deformable under excessive pressures tending to separate the casing parts, said spacer being of such resiliency as to be deformed beyond its elastic limit and take a permanent set with the casing parts separated when the meter is frozen.

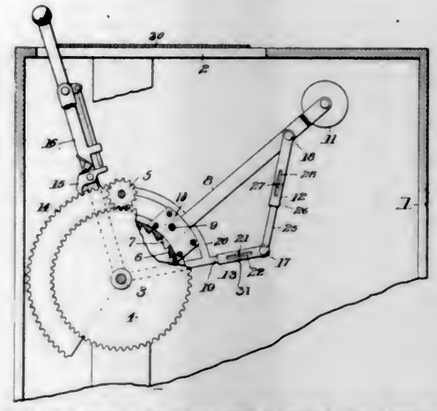
1,505,509. GEARED LOCOMOTIVE. HARRY L. TURNEY, Portland, Oreg. Filed Aug. 11, 1923. Serial No. 656,885. 10 Claims. (Cl. 105—117.)



1. In a geared locomotive, the combination of a frame; an engine mounted on one side of the frame; a longitudinal drive shaft at the opposite side of the frame; a gear connection between the engine and the shaft; and driving axles driven from the shaft.

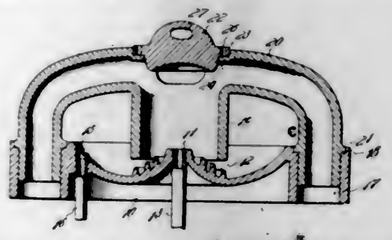
1,505,510. TOOL. MATTHÄUS UHL, Donau, Germany. Filed Apr. 18, 1923. Serial No. 632,831. 3 Claims. (Cl. 294—48.)

1. A pliers comprising pivotally connected members each terminating at one end in a longitudinally projecting bifurcated arm, a transversely positioned pin connecting the spaced parts of each arm, and interchangeable jaws each having a tongue at one end adapted for insertion into the slot of the arm of one plier member, said tongue having an arcuately curved slot to receive said pin, the jaw adapted to be turned on said pin into longitudinal alignment with the arm.



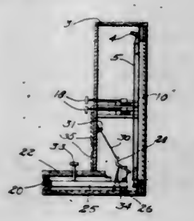
1,505,511. LIQUID DISPENSER. HARRY W. ERICK, Seattle, Wash. Filed May 16, 1922. Serial No. 561,334. 11 Claims. (Cl. 221—98.)

1. A dispensing apparatus including a pair of members having a plurality of axially spaced ports, and relatively axially movable through a short distance to form a closed trap for an individual charge of the material to be dispensed, and a separate ejector movable through such trap through a greater distance to expel the material.



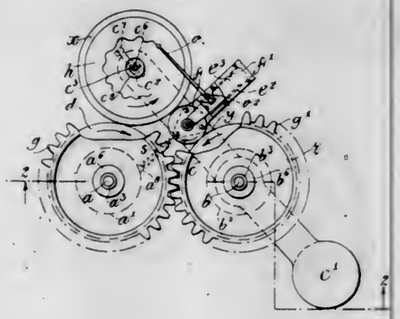
7. In a dispensing apparatus, in combination, a plurality of relatively movable trap-forming members, a separate plunger movable therethrough to eject a charge of material trapped therein, a flexible tension member connected to said plunger, guides for said flexible member leading it back upon itself and then in the opposite direction, and a push button connected to the end of said flexible member, whereby movement of the push button will cause movement of the plunger in the same direction.

1,505,512. MOTOR RESETTER. MORRIS VICTORSOHN, Brooklyn, N. Y. Filed Sept. 19, 1922. Serial No. 589,048. Renewed Jan. 5, 1924. 4 Claims. (Cl. 185—27.)



1. In a motor of the character described, the combination with a swinging weighted arm, of a rotary member coaxial with said arm, means for rotating said member, and an extensible link connecting said weighted arm to said rotary member for the purpose specified.

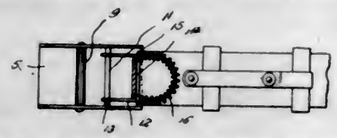
1,505,513. BURNER. RICHARD A. WALKER, Skidmore, Mo. Filed Sept. 14, 1923. Serial No. 662,761. 3 Claims. (Cl. 158—91.)



1. In an oil burner, a base designed to form a fuel receiving bowl, a fuel supply pipe communicating therewith, an overflow pipe leading from said bowl, said base being further formed to provide a plurality of air inlet openings, a top member supported upon the base and including a centrally disposed tubular portion, flues radiating from said portion and terminating beneath the bottom thereof, and adapted to be received by the air inlet openings, said top member having a central opening arranged immediately above the tubular portion, a flange projecting inwardly from the wall of said opening and having a circular series of slots, a cap closing said opening and supported by said flange, said cap having slots adapted to be moved into and out of registration with the slots of said flange to regulate excessive draft, and means for adjusting the top member with relation to the bowl to position the tubular member at different distances above the latter for the purpose specified.

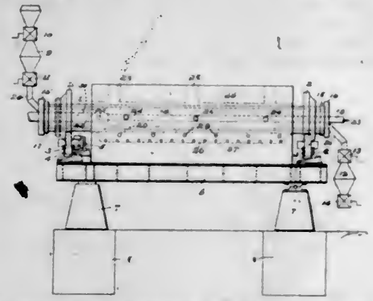
1,505,514. PEDAL ZITHER. JOHN WEISS, Brooklyn, N. Y. Filed Nov. 27, 1922. Serial No. 603,384. 1 Claim. (Cl. 84—324.)

A pedal zither comprising, an upright casing having music wires mounted therein, double hinged doors on said casing when lifted providing an opening, a separate keyboard adapted to be inserted into the opening having a plurality of keys therein, a post adjacent each key, a crank arm fulcrumed in each post, a lever connecting said crank arm and key, a flexible blade on each crank arm, and hammer heads on the ends of the blades to strike the music wires when the bolts are depressed, springs adapted to return the crank arms to normal position, a pair of damper bars slidable in front of the music wires, pads on said bars, said pads on one bar being adapted to dampen all the wires and the pads on the other bar being adapted to dampen half the wires, a stem on each of said bars adapted to manipulate the damper bars, and means for inserting said keyboard into the casing.



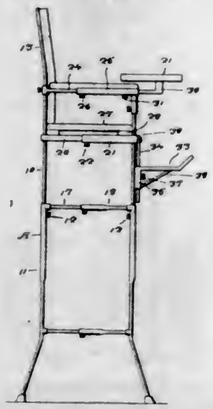
1,505,515. APPARATUS FOR INDICATING DIFFERENCES IN ANGULAR VELOCITY IN ROTATING MEMBERS. GOTTFRIED WIRRER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,360. 6 Claims. (Cl. 234—1.)

1. In an apparatus for indicating differential angular velocity between rotary members in combination with two rotating members whose differential angular velocity is to be indicated, other members rotated synchronously with said members respectively, another member rotated by direct frictional engagement with said second named members and means to indicate differential rotation of the first mentioned members by bodily displacement of the last mentioned member.



1,505,516. HELT BUCKLE. DORSEY M. WIRTH, Bucyrus, Ohio. Filed Aug. 21, 1923. Serial No. 658,481. 1 Claim. (Cl. 24—194.)

A buckle structure comprising a body having means for engaging a strap, a bar disposed transversely of the body, a ball having its ends pivotally connected with the bar, a bar slidably mounted upon the end portions of the



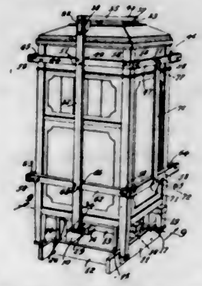
ball, and a spring coiled about the outer portion of the ball and having its ends bearing against the side of the bar which is slidably mounted upon the ball.

1,505,517. PROCESS OF ACTIVATING CARBON. JOHN C. WOODRUFF and THORNE L. WHEELER, New York, N. Y. Filed May 5, 1919. Serial No. 294,799. 6 Claims. (Cl. 252—3.)

1. A process of increasing the adsorptive power of carbon by oxidation, which comprises conveying the carbon through an elongated heated reaction zone, distributing an active oxidizing agent throughout the reaction zone so that all of the carbon therein is simultaneously subjected to the action of the oxidizing agent before the latter is materially contaminated by the end products of the reaction, the carbon being maintained during the reaction at a temperature sufficiently high to ensure rapid activation, by the external application of heated combustion products.

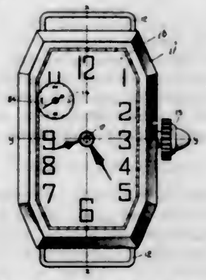
1,505,518. HIGH CHAIR. SAMUEL T. WORKMAN, Jr., Moorestown, N. J. Filed July 12, 1922. Serial No. 574,447. 2 Claims. (Cl. 155—115.)

1. A high chair comprising supporting legs, a seat frame made up of telescopic sections whereby the size of the frame can be varied, braces connecting the front and rear legs of the chair and including telescopic sections



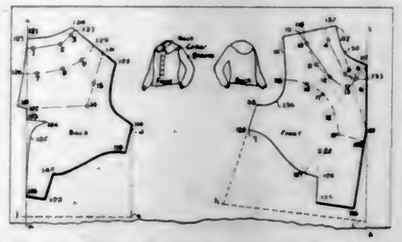
to permit said legs to be moved toward and away from each other simultaneously, with the adjustment of said frame to vary the size of the latter, said rear legs being extended to provide a back rest, and arm rests connecting the front and rear legs and including telescopical sections for the purpose specified.

1,505,519. FORD TRANSMISSION LINING. BENJAMIN IRA YOUNG and HARRY R. HAYWOOD, Petaluma, Calif. Filed June 18, 1923. Serial No. 646,082. 9 Claims. (Cl. 188—259.)



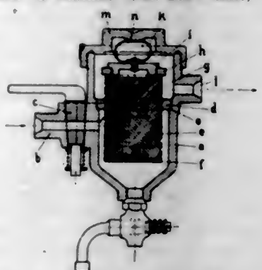
5. A transmission lining consisting of a strip of wood boiled in an aqueous solution of sodium chloride and water-glass, then left to soak for a predetermined time in a bath of lubricating oil, and finally bent to the shape of the band it is to fit before being placed in the latter.

1,505,520. METHOD AND MEANS FOR PACKING ARTICLES FOR SHIPMENT. ERNEST R. ZABRISKIE, Bridgeport, Conn., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed Oct. 19, 1921. Serial No. 508,638. 36 Claims. (Cl. 217—52.)



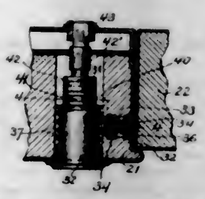
1. In a packing for cabinets or the like, a case, means adapted to be secured to the cabinet for supporting it within and for spacing it from the walls of the case and means secured to the case and slidably engaging the supporting means and adapted to prevent vertical movement thereof.

1,505,521. WATCH. SAMUEL KRESSER, New York, N. Y. Filed June 18, 1924. Serial No. 720,841. 9 Claims. (Cl. 58—127.)



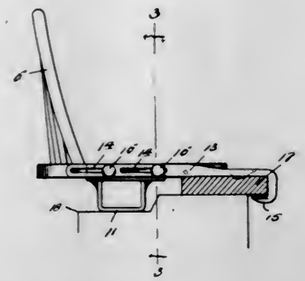
1. A watch dial of a non-circular symmetrical geometric form whose diameters along coordinate axes are unequal, and a seconds unit dial offset from a position on the coordinate axes.

1,505,522. MULTIFOLD-PATTERN MAKER. SARAW LANDA, New York, N. Y. Filed Oct. 7, 1922. Serial No. 593,118. 3 Claims. (Cl. 33—13.)



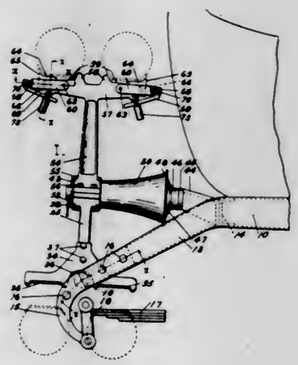
2. In an article of the class described, two pattern charts, each having its boundary edge shaped in the outline of portions of a plurality of garment parts whereby predetermined portions respectively of the boundary edge of one chart may be fitted in abutting relation with a co-operating portion of the edge of the other chart to form successively the outline of the several parts of a garment.

1,505,523. PURIFIER FOR LIQUID FUELS. BRUNO ADLER, Dresden, Germany. Filed Sept. 2, 1922. Serial No. 585,954. 2 Claims. (Cl. 210—165.)



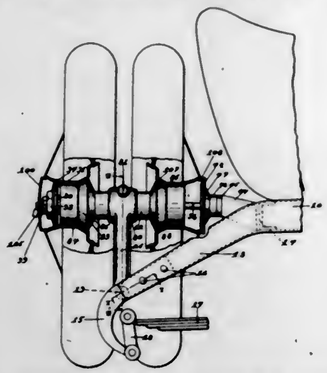
2. A purifier for liquid fuels comprising a casing having an inlet and an outlet, an internal projecting shoulder upon the inner surface of said casing, a strainer of the form of a rotary body in said casing, an intermediary ring upon said strainer tightly fitting into said shoulder and bearing upon the same and dividing the strainer into a lower and upper part, an upper end disk of the strainer, a lower end disk of the strainer, an insertion in the upper end disk and a bowshaped spring upon said insertion designed also to serve as handle the inlet of the casing being arranged on one side of the said intermediary ring and eccentrically to the strainer in a manner that the entering liquid flows tangentially to the strainer, the outlet of the casing being arranged on the other side of the said intermediary ring.

1,505,524. AUTOMOBILE DOOR LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 30, 1922. Serial No. 572,004. 11 Claims. (Cl. 70—46.)



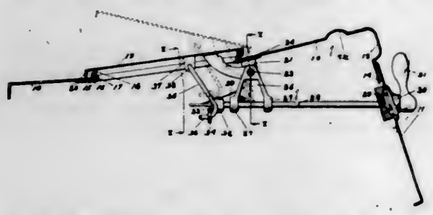
1. In means for securing a cylinder lock to a door independently of the lock casing, the combination with an internally threaded sleeve, means for securing said sleeve in a bore in the door, and a screw in said sleeve and adapted to engage the cylinder lock.

1,505,525. SAFETY SEAT FOR WINDOW CLEANERS. JOSEPH BADAGLIACCA, Paterson, N. J. Filed Jan. 4, 1923. Serial No. 610,583. 1 Claim. (Cl. 304—26.)



A window chair comprising a seat, plate members applied to the under side of the seat and at the opposite side edges thereof and having flanges which are disposed along the side edges of the seat, arm members provided at one end portion with longitudinally disposed slots, set screws passing through these slots and engaging in the flanges of the plate members, the set screws being disposed at the side edges of the seat and in horizontal alinement with the seat, the said arm members being provided with hook extremities adapted to engage around the edge of a window sill, and U-shaped legs permanently carried at the under sides of the plate members and adapted to bear at their intermediate portions upon the sill of the window.

1,505,526. CARRIER FOR SPARE RIMS AND WHEELS. EDWARD H. BELDEN and HARRY E. RHOADS, Toledo, Ohio, assignors, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1917. Serial No. 172,720. 32 Claims. (Cl. 224—29.)

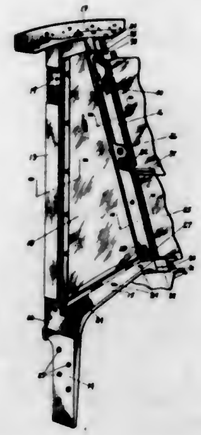


1. The combination with an automobile frame, comprising side bars, having their rear ends extending downwardly, a cross bar and a brace rod extending between the rear ends of said side bars; of a supporting member having a pair of legs with their lower ends journaled on said brace rod, and united at their upper ends; a member secured to said cross bar and having a boss with a threaded opening therein; a disc, secured to said boss; a carrier tube; and a bolt coacting with said supporting member taking into said threaded opening and disposed within said tube, for rigidly connecting said supporting member to said cross bar with said tube in contact with said disk.

1,505,527. CARRIER FOR SPARE WHEELS. EDWARD H. BELDEN and HARRY E. RHOADS, Toledo, Ohio, assignors, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Original application filed June 4, 1917, Serial No. 172,720. Divided and this application filed July 30, 1917. Serial No. 183,497. 14 Claims. (Cl. 224—29.)

1. The combination with an automobile frame, comprising side bars and a cross bar; of a supporting member pivotally connected with said frame; a member secured to said cross bar and having a boss with a threaded opening therein; a yieldable disc secured to said boss and having a peripheral flange adapted to receive one end of a wheel hub; a hub-receiving member carried by said supporting member; and a bolt co-acting with said supporting member and threaded opening and disposed within said hub-receiving member, for rigidly connecting said supporting member to said cross bar, said yieldable disc having a flange arranged substantially perpendicular to said bolt.

1,505,528. COWL VENTILATOR FOR MOTOR VEHICLES. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 30, 1917. Serial No. 204,633. 10 Claims. (Cl. 98—22.)



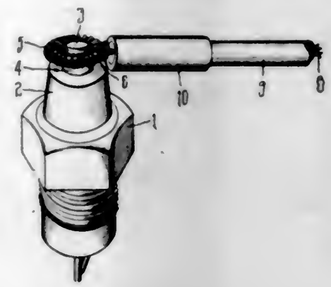
1. In a motor vehicle, the combination of a cowl, provided with a ventilating opening therein; a cover for said opening; brackets secured to the lower face of said cowl and depending therefrom; a hinge pintle carried by said brackets; hinge arms connecting said cover and said pintle; a hanger carried by said pintle; a shaft journaled in said hanger; means for rotating said shaft; and connections between said shaft and said cover, whereby the rotation of said shaft opens and closes said cover.

1,505,529. WINDSHIELD AND TOP SUPPORT. EDWARD H. BELDEN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 25, 1920. Serial No. 412,731. 6 Claims. (Cl. 296—103.)

1. In an automobile, a body having forward door openings, supports mounted upon the body in front of said openings, said supports comprising triangular frames

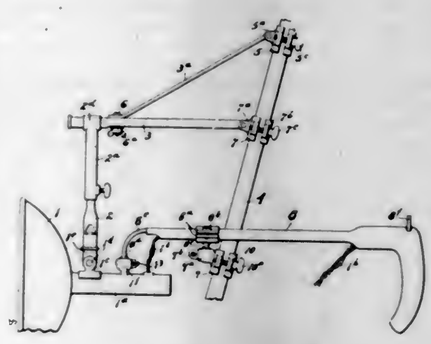
consisting of vertical, horizontal and inclined members, ledges on the tops of said frames adapted to support the longitudinal rails and the forward transverse rail

of an automobile top, all of said members comprising each frame, together with the corresponding ledge, being formed of an integral piece of metal.



1,505,530. VEST OR COAT FOR CARRYING SECURITIES. HUGO BELZ, New York, N. Y. Filed Dec. 5, 1921. Serial No. 520,144. 2 Claims. (Cl. 2—93.)

1. A garment of the class described, the combination of the usual outer and inner layers of fabric, a double layer of flexible metal forming a pocket encircling the body, a single layer of flexible metal supporting said pocket from the shoulders, and a plurality of steel plates co-active with each other for securing and locking said pocket in closed condition.

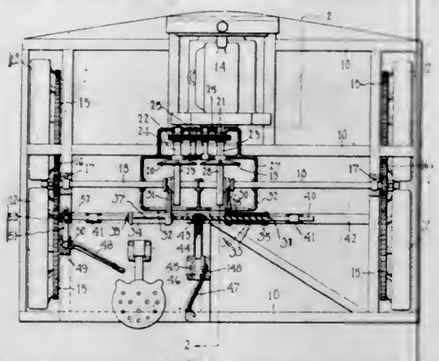


1,505,531. FLEXIBLE TERMINAL FOR IGNITION WIRES. RICHARD W. BENSETT, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 19, 1920. Serial No. 360,022. 2 Claims. (Cl. 173—269.)

1. An electric terminal comprising a conductor, a conducting annulus arranged in conducting relation to said conductor, and a loop of coiled spring wire supported upon said annulus with the latter passing through the coils of the loop and arranged in conducting relation

thereto whereby high tension current may be transmitted from said conductor through said annulus and loop to a terminal with which the loop is engaged.

1,505,532. VEHICLE LAMP MOUNTING. OLIVER PERRY BIGELOW, Cleveland, Ohio. Filed Dec. 22, 1921. Serial No. 524,077. 7 Claims. (Cl. 240—61.)

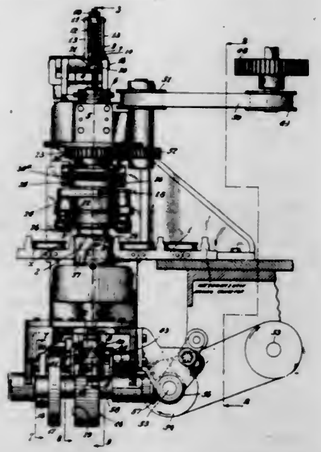


1. In a lamp mounting, including a lamp having a supporting stem, a support, vertical and transverse swivel connections between the latter and said supporting stem of said lamp permitting a universal movement to be imparted to the latter, and an operating handle mounted for universal movement and flexibly connected to said lamp for imparting a universal movement to said lamp with a like movement of said operating handle.

1,505,533. FRICTION-DRIVEN FARM TRACTOR. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 28, 1920. Serial No. 406,677. 12 Claims. (Cl. 180—17.)

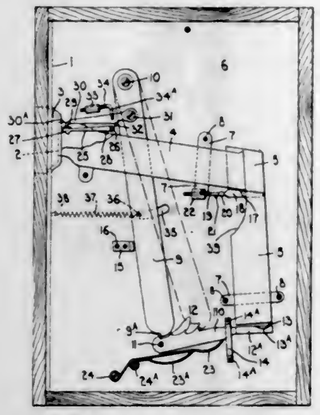
1. In a tractor of the class described and in combination with independently driven driving wheels located upon opposite sides of the tractor, two driving shafts each independent of the other and through which said driving wheels are driven, and an engine whereby the tractor is operated; two rotatable friction discs driven by said engine; two friction wheels one operatively connected with each of said shafts and the peripheries of which friction wheels are in engagement one with each of said discs; a rotatable and longitudinally movable shaft having right and left hand threaded portions; two nuts with

which said threaded portions engage; means through which movement of said nuts is communicated to said



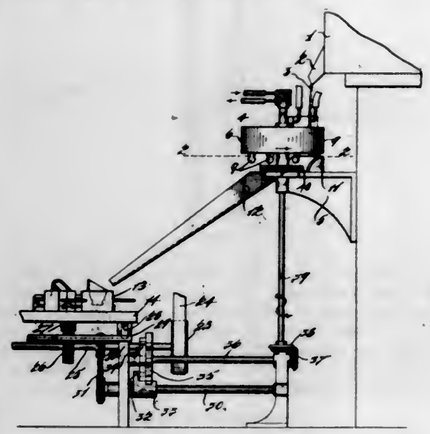
discs; means for imparting rotary motion to said last mentioned shaft; and means for moving said last mentioned shaft longitudinally.

1,505,534. TREATMENT OF TEXTILE FABRICS OR FIBERS. AUGUSTE BODIN, Seclin, France, and JEAN ESPERONT, Brussels, Belgium. Filed Apr. 19, 1920. Serial No. 375,106. 8 Claims. (Cl. 8—2.)



1. A process for freeing textile materials from the dressings with which they are charged, which consists in subjecting the textile material to the action of bacterial enzymes.

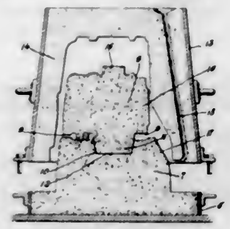
1,505,535. CLINCHING DEVICE. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed May 27, 1922. Serial No. 564,243. 9 Claims. (Cl. 113—23.)



1. A device for partially clinching covers to irregular-shaped containers comprising: lower and upper pressure elements between which the container and cover are held, a supporting element the axis of which is substantially coincident with those of the pressure elements, a clinching tool mounted on the supporting element, means for effecting a relative rotary movement of said pressure elements and said supporting element with respect to each other, and means for effecting an in and out movement, of the clinching tool, of such amplitude as to bring said tool, on its inward movement, into the plane of the greatest dimension only of the container and cover.

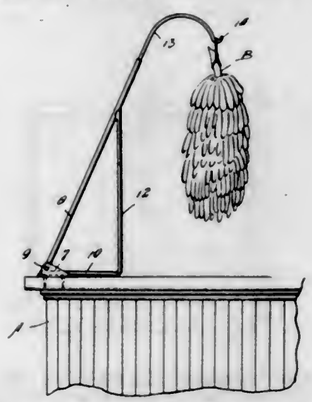
1,505,536. COIN-FREED DELIVERY APPARATUS. HENRY BROOKER, Goodmayes, England. Filed Dec. 27, 1920. Serial No. 433,402. 9 Claims. (Cl. 194—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a coin controlled machine, a pivoted delivery device, coin-actuated means for moving the delivery device forwardly to one end of its stroke step by step upon the forcible insertion of coins into the machine, a catch which prevents the delivery device from moving backward prematurely, means for retracting the catch by coin action when all the necessary coins have been inserted into the machine, and means for moving the delivery device backwardly to its original position at a single stroke when the said catch is retracted.



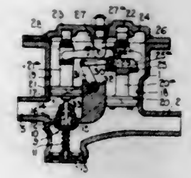
1,505,537. MACHINE FOR FORMING GLASS ARTICLES. HENRY M. BROOKFIELD, New York, N. Y., assignor to The Brookfield Glass Company, a Corporation of New Jersey. Filed June 6, 1917. Serial No. 173,090. 6 Claims. (Cl. 49—5.)

4. In apparatus for forming articles of glass, in combination with means for feeding molten glass in a continuous unconfined stream, of a distributor for dividing said stream into separate masses to be subsequently delivered to molds, said distributor comprising a horizontally rotatable table provided with a series of vertically walled openings therethrough, means for intermittently



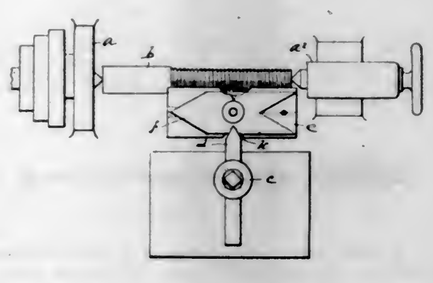
rotating said table to bring said openings successively into line with said stream of molten glass, and a stationary shear member adjacent to the stream of glass and to the upper surface of the table and adapted to cooperate with the upper end of each opening to sever the stream of glass and carry it over the intervening table surface to the succeeding opening as the table makes its intermittent movement of rotation.

1,505,538. MOLD FOR CASTING CLUTCH AND TRANSMISSION GEARING CASINGS. ARTHUR A. BELL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 1, 1922. Serial No. 540,120. 10 Claims. (Cl. 22—133.)



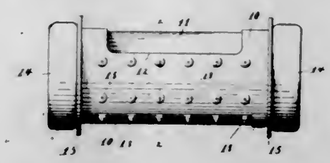
1. A sand mold for use in making a single piece casing having clutch and change speed gearing chambers comprising a lower mold section having an upwardly extending portion shaped to conform with the interior of the clutch chamber of the casing, and which portion is provided with a recess in its upper end; a core supported by and above said portion and having a projection extending downward and into said recess, and which core is spaced apart from the upper end of said upwardly extending portion to provide a web separating the clutch and change speed gear chambers aforesaid from one another and the form of which core corresponds with that of the interior of said change speed gearing chamber; and an upper mold section resting upon said lower section and the interior of which is shaped to correspond with the exterior of the combined clutch and change speed gear casing produced in using said mold, said upwardly extending portion and said core having laterally extending portions terminating in substantial contact with the inner surface of said upper mold section to thereby provide openings in the finished casting.

1,505,539. BANANA RACK. EDGAR W. BURKE, Monument, Kans. Filed Feb. 26, 1923. Serial No. 621,218. 1 Claim. (Cl. 211—15.)



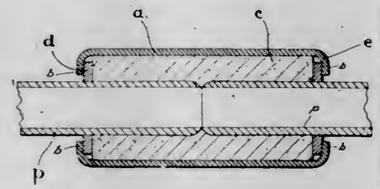
A rack comprising bracket members having plane base surfaces adapted to be mounted upon a support and side portions provided at the side edges of the base portions, leg members pivotally mounted to the side portions of the bracket at points above the base surfaces thereof and between the side portions thereof, said legs having arm portions adapted to engage the base surfaces of the brackets and retain the legs at acute angles with relation to the planes of the base surfaces of the brackets, brace portions connecting the ends of the arms with the intermediate portions of the legs, converging hangers carried at the upper portions of the legs and coming together at a point between the legs and provided with a hook at their point of connection with each other.

1,505,540. RAILWAY BRAKE APPARATUS. ALBERT BULBICK, Eastleigh, England. Filed Mar. 31, 1922. Serial No. 548,348. 3 Claims. (Cl. 303—22.)



1. In railway brake apparatus, a braking regulator comprising a casing having two piston chambers, a valve controlling the passage of air through the casing, pistons slidable in the piston chambers, one piston being adapted to open the said valve and the other piston being provided with a crosshead having a runway, a lever mounted on a stationary fulcrum pivot and operatively connected with the piston that opens the valve, and having one end portion arranged in the said runway, and a movable bearing member arranged between the said end portion of the lever and the runway and having its distance from the said pivot controlled by the load depression of the car-body, and operating to vary the effective brake action in proportion to the load.

1,505,541. CENTER GAUGE. FRED T. BURNS, Detroit, Mich. Filed Mar. 6, 1922. Serial No. 541,516. 2 Claims. (Cl. 33—185.)

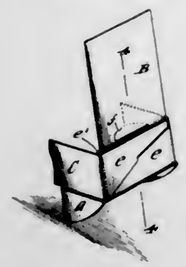


1. In a tool gauge, the combination with a base plate forming a straight edge and having a reading line formed on the surface of the plate, of an indicator pivoted to the base plate having a pointer at one end substantially remote from its pivot point, and a notch in substantial proximity to its pivot point, which notch is adapted to receive the end of the tool, said notch and pointer so relatively disposed that when the pointer registers on the reading line a radius to the pivot perpendicular to the straight edge passes through the apex of the notch.

1,505,542. CASH CARRIER. HAROLD P. CANTON, Union Hill, N. J., assignor to G & G Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,095. 3 Claims. (Cl. 243—34.)

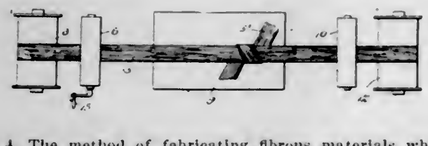
1. A cash carrier designed for pneumatic tube service, the outer periphery of which is provided with a grasping surface disposed intermediate the buffer heads and definitely constructed to indicate the special type of said carrier by the sensation of touch on the part of the person handling the same.

1,505,543. PIPE CONNECTION. GEORGE CONSTANTINESCO, Weybridge, England. Filed Sept. 30, 1922. Serial No. 591,631. 1 Claim. (Cl. 285—193.)



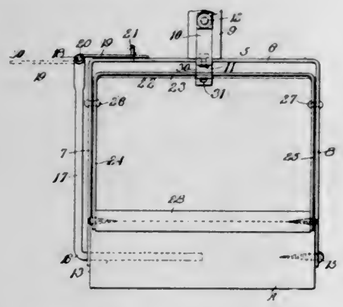
A fitting for connecting smooth ended pipes comprising in combination a rubber sleeve adapted to fit closely to the pipe ends to be connected, a metal sleeve fitting closely on said rubber sleeve, washers fitting tightly on the metal pipes to be connected and of smaller external diameter than the internal diameter of said metal sleeve, the ends of said external sleeve being spun or pressed over to enclose said washers and said rubber sleeve and adapted to hold said washers in place whereby said rubber sleeve is completely enclosed in metal as set forth.

1,505,544. ROTARY TOOTHBRUSH. JAMES ROBERT CRUIKSHANK, Vancouver, British Columbia, Canada. Filed Sept. 11, 1922. Serial No. 587,516. 3 Claims. (Cl. 15—26.)



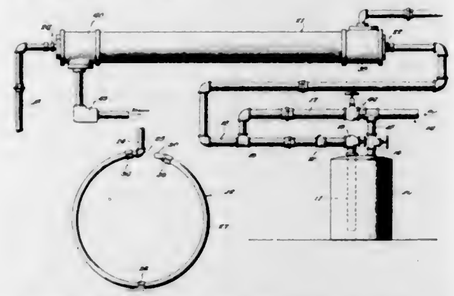
3. A rotary tooth brush including a tubular member provided at one end with a socket, a socketed member arranged in the socket, a cap detachably connected to the outer end of the socket, anti-friction balls between the ends of the socketed member and said cap and socket, a spiral member fixed to the socketed member and extending into the tubular member, said socketed member, balls and spiral member being withdrawable when said cap is disconnected from the socket, a brush connected to the socketed member, and a second tubular member slidably mounted in the first tubular member and provided at its inner end with a nut engaging the threads of the spiral member.

1,505,545. DISPLAY BOX. EDWIN E. DARRAGH, New York, N. Y. Filed Dec. 8, 1922. Serial No. 605,560. 17 Claims. (Cl. 206—44.)



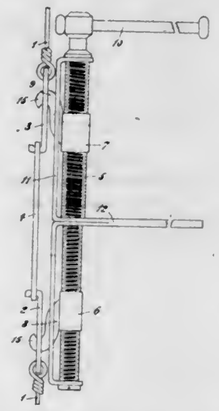
10. A display box having a trough-like easel support provided with two walls forming the sides of the trough and two walls forming the ends of the trough and hinged by one of said trough sides directly to a lower edge of the rear end of the box and adapted alternately to be disposed beneath the bottom of said box or to fold over said box end and the adjacent top portion of the box.

1,505,546. METHOD FOR PRODUCING ARTIFICIAL FABRICS. NINA L. DURYEA, Stockbridge, Mass. Filed Sept. 30, 1921. Serial No. 504,468. 4 Claims. (Cl. 154—2.)



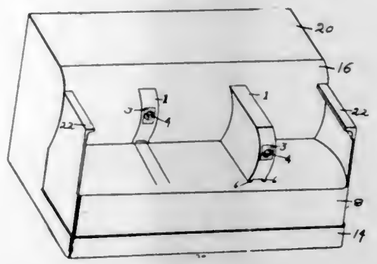
4. The method of fabricating fibrous materials which consists in preparing sheets of fibres; passing one of said sheets longitudinally through impregnating rolls and thereby applying a binder element, and compressing said fibres; wrapping a second sheet of longitudinally disposed fibres diagonally around said impregnated sheet; passing said wrapped sheets through other rolls, whereby said fibres are impregnated with a binding element and compressed into a relatively thin sheet of fabric.

1,505,547. MOP HOLDER AND WRINGER. PAUL EBELING, Boston, Mass. Filed Jan. 21, 1922. Serial No. 530,740. 1 Claim. (Cl. 15—119.)



A mop holder having, in combination, a main frame embodying therein a pair of parallel arms, a handle for said main frame, a crank embodying therein an arm and having a portion bent at right angles to said arm, said right angle portion being rotatably mounted upon said main frame, a handle formed of wire and pivotally attached to said crank, a cylindrical drum rigidly fastened at one end thereof to the right angle portion of said crank and having a mop attached thereto, means mounted at the other end of said drum to rotatably support said end of said drum in said main frame, a U-shaped swinging frame embodying therein a pair of parallel arms pivotally mounted upon the arms of said main frame to swing within the latter, a roller mounted upon said swinging frame and a handle for said swinging frame whereby the latter may be rocked upon said main frame to force said roller into engagement with said mop.

1,505,548. TIRE HEATER. RAYMOND L. FAY, Phillipsburg, N. J. Filed Sept. 5, 1922. Serial No. 586,241. 4 Claims. (Cl. 263—5.)

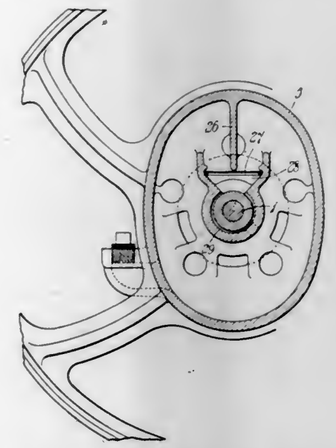


1. An apparatus of the class described comprising open inter-communicating tubular hoops, one of which constitutes a burner and the other of the hoops a superheater, and means for adjusting the diameters of the hoops, a compressed fuel supply, a conduit from said supply to said superheater and a preheater having a steam chamber through which said conduit is led.

1,505,549. STAY-ROPE TIGHTENER WITH TURNBUCKLE THEREFOR. SVEND FÆRCH, Grejsdal Pr. Vejle, Denmark, assignor to himself and Brödr. Brincker, Grejsdal Hammervaerk, Vejle, Denmark, a Firm of Denmark. Filed Nov. 27, 1922. Serial No. 603,988. 8 Claims. (Cl. 24—19.)

1. A stay-rope tightener comprising a pair of hooked members each having an eye at one end and a hook at the other end; and a coupling link provided with a plurality of perforations adapted to engage the hooked members at suitable perforations.

1,505,550. AUTOMOBILE SEAT. THOMAS FREEDLANDER, Baltimore, Md. Filed Feb. 28, 1923. Serial No. 621,724. 2 Claims. (Cl. 155—112.)



1. The combination in a vehicle seat having a cushion base and seat cushion of an arm rest for said seat adapted to be moved forwardly and rearwardly thereon into and out of operative position, said base and cushion having flexible housings therein, extensions on the lower portion of said arm rest fitting in slots in the seat cushion and between said flexible housings whereby said slots may expand and contract upon movement of the arm rest into and out of operative position.

1,505,551. METHOD OF PREPARING VITAMINE-FREE PRODUCTS AND FOODSTUFFS. CASIMIR FUNK and LOUIS FREEDMAN, New York, N. Y., assignors to Herman A. Metz; New York, N. Y. Filed May 25, 1922. Serial No. 563,666. 3 Claims. (Cl. 99—11.)

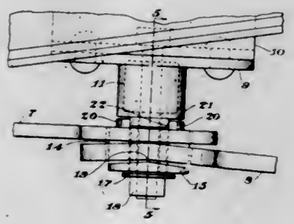
3. Process of preparing vitamine-free casein which comprises, forming a solution of sodium caseinate, treating the solution with hydrogen peroxid and fuller's earth, separating the solution from the fuller's earth, and recovering casein from the solution.

1,505,552. MEANS FOR LUBRICATING ROTARY MEMBERS. HENRY GARNER and JAMES PARKER GARNER, Birmingham, and SYDNEY SMITH, London, England; said Smith assignor to said James Parker Garner and said Henry Garner. Filed July 14, 1921. Serial No. 484,655. 6 Claims. (Cl. 64—26.)

6. A means for lubricating slow speed rotary members mounted on axles, comprising an axle and a rotary member mounted thereon, a chamber moving with the rotary

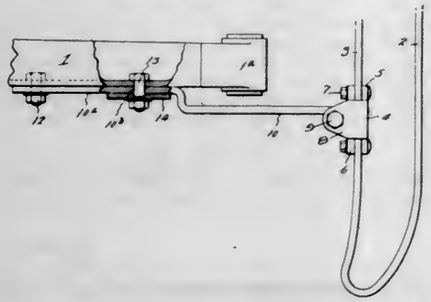
member, a vane rotating with the rotary member and adapted to raise the lubricant at each revolution from the said chamber and to direct it to the hub, said hub having a delivery passage adjacent the delivery end of said vane, a duct receiving lubricant from said passage, said duct extending partly around the circumference of the bearing, whereby the lubricant can select its own point of entry to the bearing surfaces, and a return passage leading to said chamber, and closures to prevent the escape of lubricant between the hub and the axle.

1,505,553. CLASP. THOMAS E. GILMORE, Oakland, Calif. Filed Feb. 26, 1923. Serial No. 621,294. 4 Claims. (Cl. 24—123.)



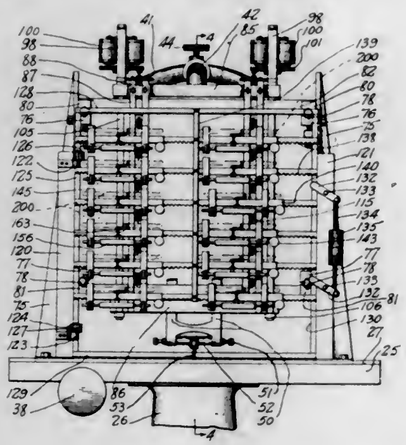
1. A clasp for cables and the like comprising a split sleeve having the intermediate portion of the split extending only a portion of a helical turn, and the end portions of the split extending parallel to the longitudinal axis of the sleeve.

1,505,554. METAL END STRUCTURE FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Oct. 1, 1920. Serial No. 413,987. 12 Claims. (Cl. 105—410.)



1. In a freight car, the combination with the car sides and interior end lining, of end posts of different depths exterior of the lining, and a metal end secured exteriorly to the end posts and to the car sides, the opposite sides of which are at an angle to each other.

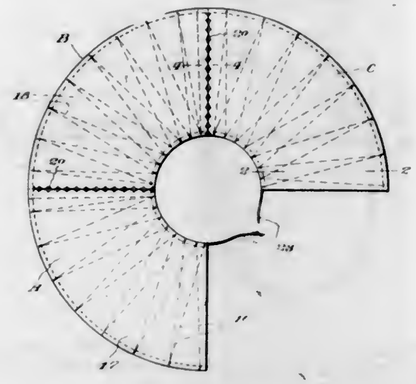
1,505,555. UNCOUPLING DEVICE FOR CAR COUPLERS. GARTH G. GILPIN, Riverside, Ill. Continuation of application Serial No. 458,501, filed Apr. 4, 1921. This application filed Dec. 14, 1922, Serial No. 606,871. Renewed Feb. 9, 1924. 10 Claims. (Cl. 213—164.)



1. A release rigging for railroad car couplers comprising an operating lever, a coupler lock pin lifting lever, a fulcrum for said levers upon the car, and a combined connecting and bearing block which passes through apertures in said levers.

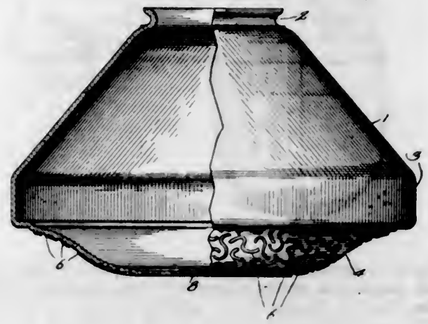
1,505,556. BUMPER. CHRISTIAN GIRL, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 23, 1922. Serial No. 602,681. 2 Claims. (Cl. 293—55.)

1. The combination, with the side member of a vehicle, of a bumper, a supporting arm for said bumper, the said arm having a flat portion adapted to bear against the side member, a bolt extending through apertures in the side member and the arm for securing the latter to the former, and a reinforcing plate mounted on the outer surface of said arm and also having an aperture for said bolt, the said plate forming a bearing for one end of such bolt and extending a short distance from such bolt toward the bumper, whereby the arm and plate will yield under thrusts applied laterally to said arm between said bolt and said bumper.



1,505,557. MULTIPLE ENGRAVING MACHINE. FRANK B. GLOVER, Brooklyn, N. Y. Filed Oct. 1, 1920. Serial No. 414,107. 24 Claims. (Cl. 33—24.)

1. An engraving machine comprising a frame having a plurality of scribers therein, means for actuating the scribers simultaneously, and means for collectively raising said scribers, said means permitting raising the scribers independently.

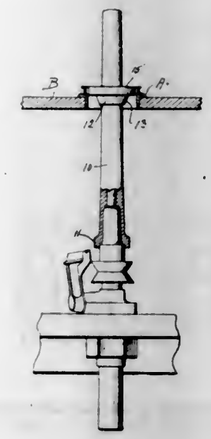


1,505,558. FLOOR MAT. EMIL A. GRABOWSKI, Escanaba, Mich. Filed Jan. 26, 1923. Serial No. 615,179. 5 Claims. (Cl. 20—78.)

1. In a floor mat, a frame composed of upper and lower sections, each made up of closely spaced strips of yieldable material arranged in substantial parallelism and connected together, a comparatively thin pad of uniform

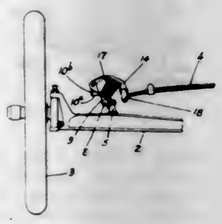
thickness resting on said upper section, and a removable cover stretched tightly over the pad to provide a smooth and plane surface to walk on.

1,505,559. LIGHTING UNIT. FLORENCE L. GRANT, Chicago, Ill., assignor to Inland Glass Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1923. Serial No. 619,504. 2 Claims. (Cl. 240—100.)



1. A one-piece totally enclosed lighting unit having a semi-transparent, trunco-conical upper portion provided with means for attaching the unit to a supporting fixture, an integral and continuous cylindrical portion depending from the lower rim of the conical portion, a converging portion below the cylindrical portion and integral and continuous therewith, said converging portion being of substantially clear rippled glass, and a bottom portion which is approximately horizontal and is integral and continuous with the converging portion.

1,505,560. METHOD OF MANUFACTURING NUTRITIOUS FATS. ADOLF GRÜN, Aussig, Czechoslovakia, assignor of one-half to the Firm Georg Schicht, A.-G., Aussig, Czechoslovakia. Filed Apr. 5, 1921. Serial No. 458,855. 9 Claims. (Cl. 99—13.)

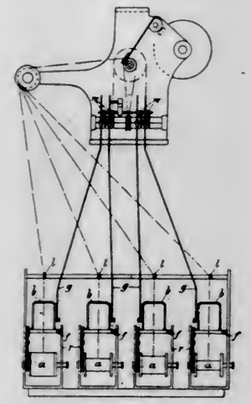


1. The process of producing nutritious fats which consists in heating neutral fats containing triglycerides together with glycerin until mono- and diglycerides are formed, and then converting these mono- and diglycerides into mixed triglycerides by heating with free fatty acids.

1,505,561. ADJUSTABLE PLUG OR SET FOR CENTERING, PLUMBING, OR SETTING SPINDLES. ALBERT M. GUILLET, Charlotte, N. C. Filed Nov. 1, 1922. Serial No. 598,443. 12 Claims. (Cl. 33—180.)

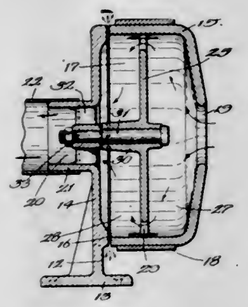
1. A device for plumbing or truing spinning spindles comprising a tubular body adapted to fit upon the spindle and rotate therewith, and a detachable annular bushing adapted to be applied to said body or removed therefrom, the bushing having a diameter slightly less than but approximating the internal diameter of the spinning ring with which the spindle coacts whereby the bushing will permit the vertical traverse of the spinning ring.

1,505,562. SHOCK ABSORBER. GEORGE H. HAYES, Minneapolis, Minn. Filed Mar. 20, 1922. Serial No. 545,143. 10 Claims. (Cl. 267—17.)



1. A shock absorber comprising a member rigidly supported at one end and having an inclined upper surface, a second member having one end pivotally connected with the other end of said rigidly supported member, a compression spring seated upon said inclined surface between said members and a vehicle body spring pivotally connected with the other end of said second member.

1,505,563. JACK FRAME OR SPOOLING MACHINE. GUIDO HORN, Berlin-Weissensee, Germany. Filed Oct. 6, 1923. Serial No. 666,983. 6 Claims. (Cl. 242—36.)

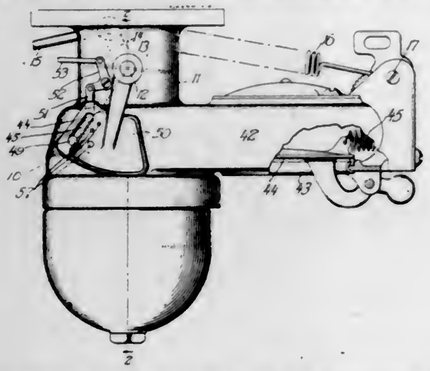


1. In a spooling machine, a thread guide, a delivery spool, a stopping device, a brake acting upon the delivery

spool, said guide controlling said brake in accordance with the tension of the thread and releasing the brake

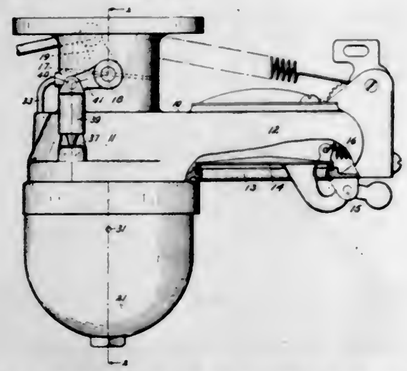
to act upon the delivery spool and actuating the stopping device when the thread runs out or breaks.

1,505,564. AIR-CLEANING DEVICE. GEORGE C. JETT, Milwaukee, Wis., assignor of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed Sept. 24, 1919. Serial No. 326,090. 11 Claims. (Cl. 183—77.)



1. In an air cleaner, a shaft, a hub, and a drum of differential diameters supported from the hub by radial blades, the smaller portion constituting a central air inlet for the larger and being adapted to serve as a pulley whereby the drum may be caused to rotate upon the shaft.

1,505,565. CARBURETOR. CHESTER F. JOHNSON, Detroit, Mich. Filed Nov. 26, 1915. Serial No. 63,468. 11 Claims. (Cl. 261—72.)

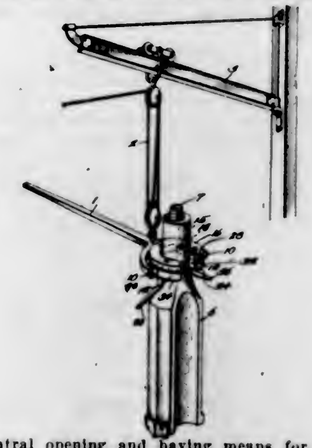


1. In a carburetor, a fuel chamber provided with a port adapted to communicate with the atmosphere, a mixing chamber provided with a port adapted to communicate with the atmosphere, a throttle valve, another valve adapted to control the communication of said ports with he atmosphere, and interconnected means for operating said valves.

6. In a carburetor, the combination with a throttle valve a fuel chamber, a mixing chamber, a fuel nozzle feeding fuel thereto, a primary air intake and an auxiliary air intake also leading to said mixing chamber, said fuel chamber and said mixing chamber each being provided with an air passage adapted to communicate with the

atmosphere, and a valve operable with said throttle valve for connecting said passages together and cutting off their communication with the atmosphere.

1,505,566. CARBURETOR. CHESTER F. JOHNSON, Detroit, Mich. Filed Dec. 21, 1916. Serial No. 138,145. 7 Claims. (Cl. 261—72.)

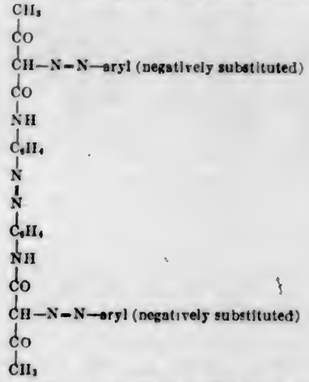


1. In a carburetor for internal combustion engines, a fuel chamber, a mixing chamber, a fuel passage leading from the fuel chamber to the mixing chamber, a throttle valve, and means independent of the suction of the engine and yieldingly connected with said throttle valve for admitting pressure to the surface of the fuel in said chamber, whereby the flow of fuel through said passage is controlled.

6. In a carburetor, a passage through which air flows to an engine, a fuel chamber communicating therewith, a port for admitting air to the fuel chamber, a passage connecting the first named passage to the fuel chamber above the level of the fuel therein, and means acting to normally close the port, said means including a cylinder and piston construction arranged to open the port at will and to thereafter gradually close said port.

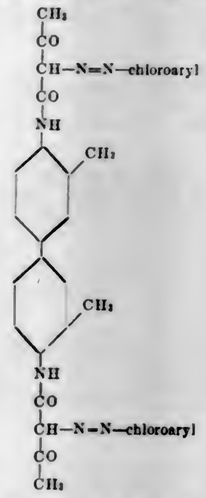
1,505,567. SWIVEL WRENCH. BENJAMIN F. KELLEY, Tulsa, Okla. Filed July 6, 1922. Serial No. 573,165. 5 Claims. (Cl. 81—119.)

1. A swivel wrench for drilling tools having a bifurcated member adapted to be supported from the rigging, a plate supported by said bifurcated member, said plate being non-rotatable in a horizontal plane relatively to said bifurcated member, said plate having a central opening and also an opening in the open side of said bifurcated member for permitting the drilling tool to be inserted and removed laterally, and a second plate rotatably supported upon the first plate, the second plate also having a central opening and having means for engaging the squared portion of the drilling tool for rotating it and having an opening at the side for the lateral insertion and removal of the drilling tool, the second plate also having cavities countersunk in the upper surface on opposite sides of the central opening, said cavities being constructed toward the side opening of the plate.



1,505,568. AZO DYES INSOLUBLE IN WATER AND PROCESS OF MAKING SAME. AUGUST LEOPOLD LASKA and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to the Corporation of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Nov. 23, 1922. Serial No. 602,895. 18 Claims. (Cl. 260—77.)

16. As new articles the azodyestuffs, insoluble in water, which can be obtained by combining a diazo compound chloro substituted and not containing a sulfo or carboxylic group, with diacetoacetyl-ortho-tolidine:

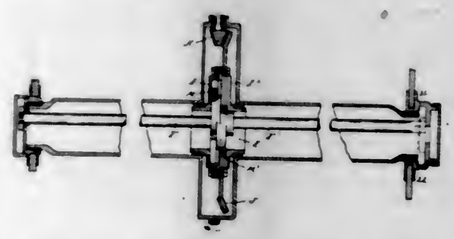


or carboxylic group, with diacetoacetyldiaminazobenzene, which dyestuffs probably have the general formula:

which are, when dry, yellow to brown and Bordeaux red powders, insoluble in water, and soluble in sulfuric acid to a yellow to violet solution, said dyestuffs yielding valuable lakes and when produced on the fiber, fast yellow to brown and Bordeaux red shades.

which dyestuffs probably have the general formula:

which are, when dry, yellow to brown and Bordeaux red powders, insoluble in water, and soluble in sulfuric acid to a yellow to violet solution, said dyestuffs yielding valuable lakes and, when produced on the fiber, fast yellow to brown and Bordeaux red shades.

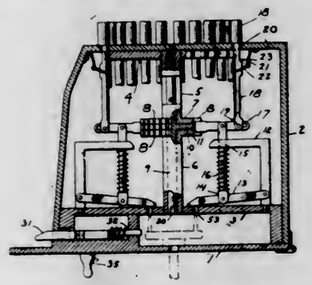


1,505,569. AZO DYES DERIVED FROM ACYLACETYL COMPOUNDS OF DIAMINS AND PROCESS OF MAKING SAME. AUGUST LEOPOLD LASKA and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to the Corporation Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Nov. 23, 1922. Serial No. 602,896. 15 Claims. (Cl. 260—73.)

13. As new articles the azodyestuffs, insoluble in water, which can be obtained by combining a diazo compound negatively substituted and not containing a sulfo

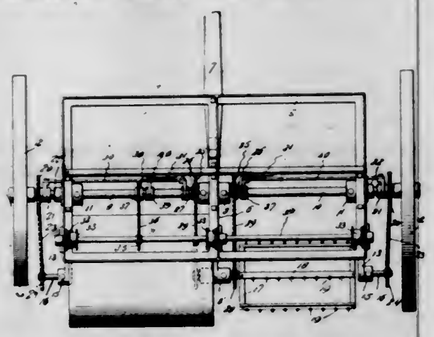
or carboxylic group, with diacetoacetyldiaminazobenzene, which dyestuffs probably have the general formula:

which are, when dry, yellow to brown and Bordeaux red powders, insoluble in water, and soluble in sulfuric acid to a yellow to violet solution, said dyestuffs yielding valuable lakes and when produced on the fiber, fast yellow to brown and Bordeaux red shades.



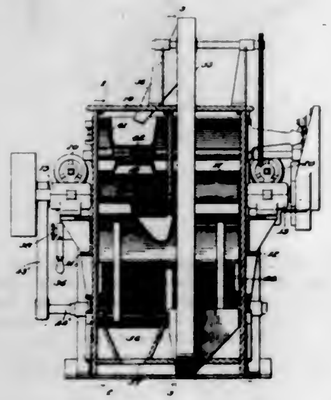
1,505,570. DIFFERENTIAL GEARING. NATHAN P. LEVIN, Detroit, Mich. Filed Nov. 6, 1920. Serial No. 422,191. 6 Claims. (Cl. 74—7.)

1. The combination with a rotary driving member and a pair of rotary driven members, of a differential transmission therebetween comprising a floating member carried by said driving member, means for constraining two spaced points in said floating member to the traversing of axially intersecting perpendicular lines in said driving member, whereby during differentiation said floating member will be rotated about a point midway between said spaced points, and said midway point will be given an orbital movement about the axis of the driving mem-



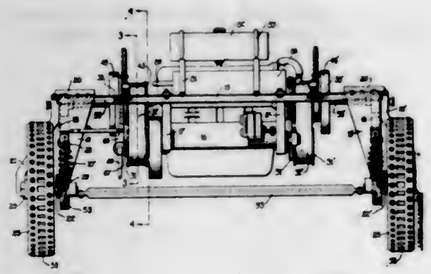
ber, and coupling connections between said floating member and the respective driven member, for communicating respectively said rotary and orbital movements.

1,505,571. ADJUSTABLE-TUMBLER KEY LOCK. JOHN LUOMA, Maynard Borough, Mass. Filed May 19, 1922. Serial No. 562,935. 3 Claims. (Cl. 70—70.)



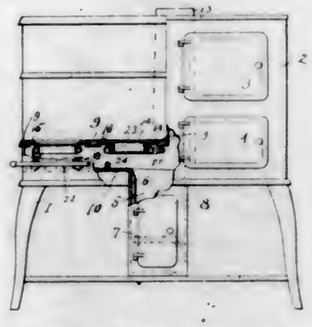
1. A lock, comprising a casing, a bolt movable in said casing, means for shifting said bolt, a spring pressed locking lever adapted to lock said bolt in door-locking position, a hollow shaft adapted to turn in said casing, said hollow shaft having said locking lever and a crank rigidly mounted thereon, a shaft within said hollow shaft having a suitable handle on its outer end and a link lever adapted to engage with said crank, on its inner end, a tumbler shaft arranged to turn in said casing, a radially notched tumbler disc and a second link lever rigidly mounted on said tumbler shaft, permutable means for locking said tumbler disc in place, and a link connecting said link levers. All substantially as described.

1,505,572. SOIL PULVERIZER. THOMAS W. MCDONALD, River Rouge, Mich. Filed July 11, 1923. Serial No. 650,786. 1 Claim. (Cl. 97—40.)



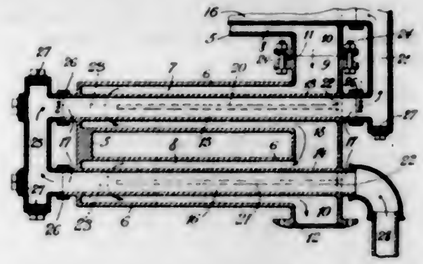
A soil pulverizer comprising a frame, aligned axle sections journalled thereon for independent rotation, a ground engaging wheel mounted upon each axle section, arms pivotally connected with the frame and the axle section at points below the said axle section, bearings carried at the free ends of the arms, soil engaging elements having shafts journalled in the last mentioned bearing, sprocket wheels fixed at the opposite end portions of the shafts of the soil engaging elements, sprocket wheels fixed at the inner end portions of the axle sections and aligned with the sprocket wheels at the inner ends of the shafts of the soil engaging elements, chains trained around said aligned sprocket wheels, sprocket wheels slidably mounted at the outer portion of the axle shaft, sprocket chains trained around the last mentioned sprocket wheels and sprocket wheels at the outer end portions of the shafts of the soil engaging elements, the sprocket wheels upon the axle sections having clutch hubs, clutch members mounted upon the axle sections, lever mechanisms mounted upon the frame and operatively connected with the clutch members and clutch hook.

1,505,573. ROLLER MILL. MARK J. MAYHEW, Owensboro, Ky., assignor to Anglo-American Mill Company, Owensboro, Ky., a Corporation of Delaware. Filed Nov. 27, 1922. Serial No. 603,556. 8 Claims. (Cl. 83—12.)



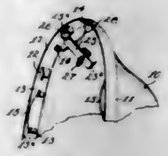
1. In a composite mill, the combination of a pair of shafts having a pair of break rolls and a pair of reduction rolls mounted thereon, a quadruple scalper beneath said rolls, means on said scalper for grading the stock and selectively conducting it to suitable outlets, and means for conveying the stock from the break rolls to the reduction rolls.

1,505,574. FARM TRACTOR. JOHN M. MEYERS, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 6, 1919. Serial No. 336,156. 9 Claims. (Cl. 180—17.)



1. In a tractor, a driving wheel having a rim which contacts with the ground and supports the load upon the wheel, and which rim is provided with a series of spaced driving elements arranged circumferentially thereof; a driving shaft having an extending collar or flange; a two-part driving pinion the teeth of which engage the driving elements aforesaid to thereby drive the wheel; a ring adapted to lie within recesses provided in the parts of said driving pinion when they are assembled to form a complete pinion; and means for securing said ring and pinion parts together and to the flange aforesaid upon said driving shaft.

1,505,575. BURNER CONSTRUCTION. THEODORE J. MIGCHELBRINK, Cleveland, Ohio, assignor to The Co-Operative Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 11, 1920. Serial No. 388,377. 6 Claims. (Cl. 126—36.)

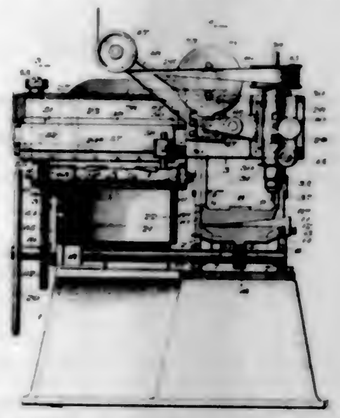


1. The combination with a top plate of a range, which top plate has an opening therein, of a burner comprising an endless tubular body corresponding in form with the said opening, means for supporting said burner directly beneath said plate and close thereto, said burner body having holes therein which are positioned to direct a flame toward the center of the opening in the said plate.

1,505,576. HEAT-EXCHANGE DEVICE. RANDOLF A. MIKALSEN, Brooklyn, N. Y. Filed June 29, 1921. Serial No. 481,278. 1 Claim. (Cl. 257—247.)

In an apparatus of the character described a unit having a plurality of parallel outer passages spaced a distance apart, a communicating transverse passage between the same at one end thereof, an inlet leading to one of said outer passages at the one end thereof, an outlet leading from another of said outer passages at the one end thereof, said inlet and said outlet being in alinement with the said transverse passage, open ended inner passages located axially within said outer passages, which latter and the said inner passages are non-communicating, partition plates for dividing said outer passages in upper and lower chambers within the space between the inner and outer passages, and extending from the one end of said outer passages to within a short distance of the opposite ends of said outer passages providing a space at said opposite ends around and on both sides of the said inner passages whereby to establish communication between the upper and the lower chambers within each of the said outer passages, apertured connecting flanges on the said inlet and outlet for connecting the said unit to adjacent similar units, a connection for connecting the open ends of adjacent inner passages within the unit and for joining adjacent inner passages in adjacent units, means for joining said connections to the said inner passages as aforesaid, all of the said passages and plates being cast in one piece to form the said unit.

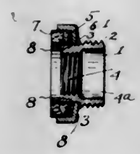
1,505,577. AUTOMOBILE LAMP. CLAUD E. ALLEN, Cleveland, Ohio, assignor to The Guide Motor Lamp Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,106. 2 Claims. (Cl. 240—41.)



1. A lamp body having an axial circumferential edge, a reflector having a radial flange at its outer edge, means carried by the lamp body for limiting the inward movement of the reflector, and springs attached to the axial edge of the lamp body and adapted to engage the flange of the reflector, a glass held in contact with said reflector, a ring engaging the outer face of the glass and the exterior of the lamp body, and a latch arranged upon the interior of the lamp body at one side, and a screw working through the lamp body and adapted to actuate said latch to hold the ring in place.

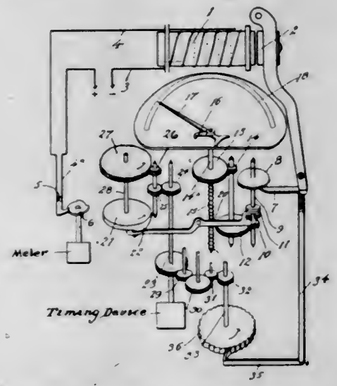
1,505,578. RAZOR. CHARLES HARRA, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,635. 2 Claims. (Cl. 219—21.)

1. A razor blade provided with a stem and having material at its back extending laterally beyond the stem, said material having a bore extending substantially parallel to the cutting edge of the blade in a plane beyond the plane of the stem, a resistance conductor and an insulator therefor within said bore, whereby the cutting edge may be maintained at a sterilization temperature.



1,505,579. MOLD-CUTTING MECHANISM. ARTHUR L. BREITENSTEIN, Akron, Ohio. Filed June 15, 1922. Serial No. 568,377. 20 Claims. (Cl. 90—13.7.)

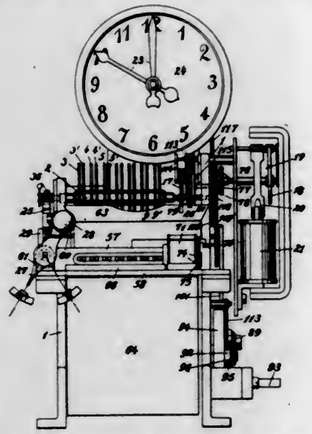
1. Mechanism for engraving annular objects comprising, a rotatable support for the object, a rotatable element having a pattern thereon, means operable to effect a differential rotation of the support and the element, a tool carriage having a tool thereon said carriage being



operable to traverse the object, and means adapted to control the operation of the carriage in accordance with the pattern upon said element.

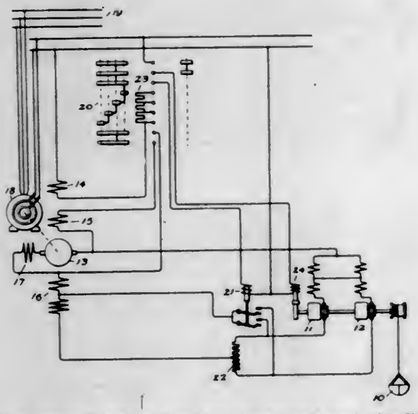
1,505,580. NUT. ADELBERT E. BRONSON, Cleveland, Ohio. Filed Oct. 23, 1922. Serial No. 596,248. 6 Claims. (Cl. 85—32.)

1. A rim nut comprising a hollow cylindrical member having a portion of the outside surface provided with screw threads and having screw threads upon the inner surface, a cup-shaped member having a central opening through which a portion of the cylindrical member extends, and means for securing the cup-shaped member to the cylindrical member.



1,505,581. ELECTRIC METERING DEVICE. GEORGE CARLTON BROWN, Cincinnati, Ohio, assignor to General Electric Company, a Corporation of New York. Filed May 22, 1922. Serial No. 562,631. 6 Claims. (Cl. 171—34.)

1. In combination with a registering device, electric-driven means for operating the registering device, a time device co-operative therewith to act upon the registering device, and means adapted to inhibit the driving connection between the electric-driven means and the registering device upon a stopping of the time device.

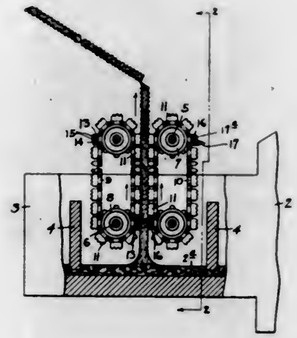


1,505,582. TIME RECORDER. RICHARD BÜGLER, Charlottenburg, and HERMANN VOIGT, Siemensstadt, near Berlin, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Sept. 1, 1921. Serial No. 497,676. 8 Claims. (Cl. 234—43.)

1. Apparatus for checking time, by marking cards having columns of divisions and spaces, each column corresponding to a definite time valve, and all the markings of a row of time values representing in symbolic manner the time to be marked, said apparatus comprising a clockwork, a rotatable controller having projections and recesses arranged on its circumference and being driven by said clockwork, a plurality of pairs of marking devices, a plurality of blocks adapted to be set by said controller, and working against the marking devices, an operating device working against said blocks, and means adapted to suitably shift the marking devices into different positions with respect to said blocks to move only

one of the marking devices of each pair by the operating device, so that each of the markings is produced in a certain place of the corresponding space of the card thus producing either a symbolic marking of a time value or a dummy marking.

1,505,583. ELECTRIC CONTROL SYSTEM. CHARLES F. BURGESON, Minneapolis, Minn., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1923. Serial No. 652,529. 4 Claims. (Cl. 172—239.)

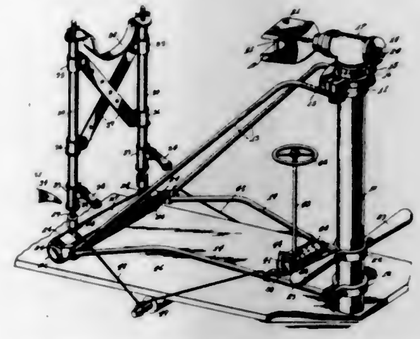


2. A control system for electric shovels and the like, comprising a generator having a series field, a motor connected to be energized from the said generator, a controller, and connections whereby a portion of the said series field is shunted when the controller is operated to cause the motor to run in the hoisting direction and the shunt about the said portion of the generator series field is opened for lowering.

1,505,584. METHOD OF DRAWING SHEET GLASS. HUDSON S. CAMPBELL, Clarksburg, W. Va. Filed Feb. 12, 1919. Serial No. 276,691. 2 Claims. (Cl. 49—83.1.)

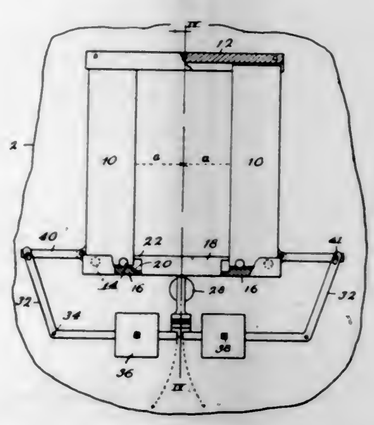
2. The method of forming sheets of glass consisting in drawing the sheet continuously from a bath of molten

glass, severing the glass, gripping the succeeding sheet simultaneously with the severing just below the point of



severing, and gripping the side edges of the sheet at intervals to keep the sheet taut, all while in a plastic condition.

1,505,585. SPINDLE OF COTTON AND THE LIKE SPINNING MACHINES. FREDERICK H. CLOUGH, Hillmorton, near Rugby, England. Filed June 12, 1922. Serial No. 567,722. 6 Claims. (Cl. 18—55.)

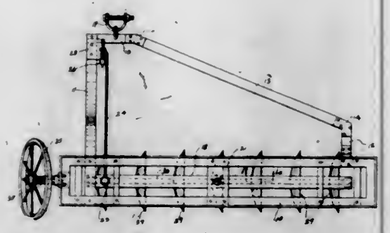


1. In a spinning or like machine, a spindle, a bearing at each end of the spindle, a loose sleeve mounted on the spindle between the said bearings, and a member rotated in substantial synchronism with the spindle and mounted on the spindle between the said bearings for longitudinal movement with the spindle for frictionally driving the said sleeve.

1,505,586. ROCK-DRILL SUPPORT. HARVEY J. CORLEY, Thompson Falls, Mont. Filed Apr. 3, 1923. Serial No. 629,725. 7 Claims. (Cl. 255—51.)

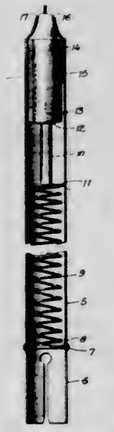
1. A supporting device comprising a base, a vertically adjustable upright on one end of the base, and a support on the other end of the base constructed and arranged for transverse and vertical adjustment and for swinging movement.

1,505,587. BURGLAR-GUARD SYSTEM. WILLIAM J. COWAN, Kansas City, Kans. Filed July 25, 1922. Serial No. 577,431. 6 Claims. (Cl. 20—1.01.)



1. In combination, a wall having an opening therein, a pair of oppositely disposed members for closing said opening, rail sections spaced apart and upon which said members are arranged to travel, a movable rail section intermediate said spaced rail sections and adapted to move to the level of the latter to form a continuous track upon which the members may move to closed position, electrically controlled means for normally holding said movable rail section in the path of the open members, and means for closing the shutters when the movable section is released by said electrically controlled means and moves to the level of the spaced rail sections.

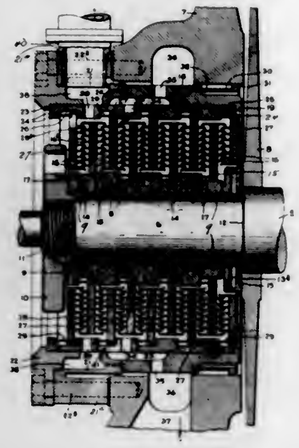
1,505,588. DISK HARROW. JAMES M. CROSBY, Momence, Ill. Filed Oct. 18, 1920. Serial No. 417,692. 6 Claims. (Cl. 55—30.)



1. An implement of the class described comprising a triangular frame; a shaft revolubly mounted in trans-

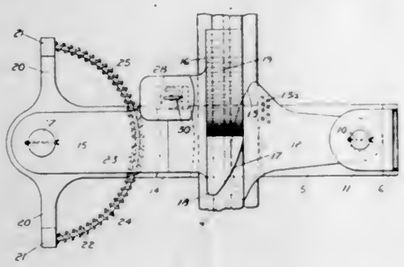
verse position below said frame and extending across same; disks on said shaft; and a supporting wheel rev-

olubly mounted in inclined position at one side of said frame for resisting the lateral thrust of said disks, substantially as described.



1,505,589. CANDLE HOLDER. JOSEPH DE NICOLA, and JOHN VALENTI, New York, N. Y. Filed Oct. 9, 1923. Serial No. 667,537. 2 Claims. (Cl. 67—23.)

1. In a candle holder, the combination of a tube having a plurality of longitudinal slots at its lower end and adapted to make it resilient, a bottom above the slots, a reduced upper and removable end to the tube having an opening for the wick of a candle, a follower comprising discs united by a bar and having a spur, and a coil spring between the bottom and the follower and adapted to force the candle against the upper end.

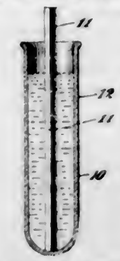


1,505,590. SHAFT PACKING FOR ELASTIC-FLUID TURBINES AND THE LIKE. JOHN H. DORAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 4, 1920, Serial No. 401,185. Renewed July 19, 1923. 9 Claims. (Cl. 286—10.)

1. In a packing, a casing, a rotating member, an axially-extending cylindrical shell which surrounds the rotating member and stands in radially spaced relation to the casing and the member, radially-yielding means connecting the shell to the casing whereby the shell can expand and contract in a radial direction, non-rotating packing means located in the space between the rotating member and the shell, radially-yielding means connecting such packing means to the shell, rotating package means

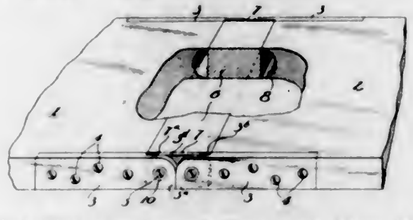
in packing relation to said non-rotating packing means, and radially-yielding means connecting said rotating packing means to said shaft.

1,505,591. BLOCK FOR CAR WHEELS. THOMAS H. EDELBLUTE, Pittsburgh, Pa. Filed June 6, 1923. Serial No. 643,782. 9 Claims. (Cl. 104—252.)



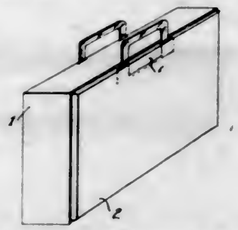
3. A wheel blocking device comprising a base plate, means on the base plate for attaching it to a rail, a wheel engaging member carried on the base plate having two wheel engaging surfaces, said wheel engaging member being supported for movement into and out of wheel engaging position, one wheel engaging surface being shaped to provide a wheel obstructing block, the other surface being shaped to cooperate with a wheel to enable a wheel to force the said member out of wheel engaging position, and means for yieldably urging said member to wheel engaging position.

1,505,592. FROZEN CONFECTIONERY. FRANK W. EPPERSON, Oakland, Calif. Original application filed June 11, 1924, Serial No. 719,295. Divided and this application filed July 19, 1924. Serial No. 726,950. 7 Claims. (Cl. 107—54.)



1. The process which consists in subjecting a quiescent volume containing potable liquid, flavoring matter and sugar and of substantial height relative to its mass dimensions, to intense refrigeration, whereby a frozen mass

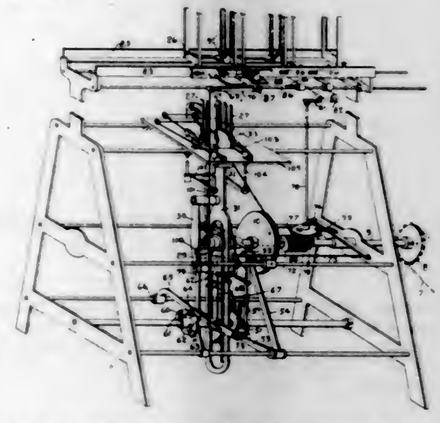
is formed homogeneous from end to end of character such that the flavoring matter and sugar may be sucked therefrom to leave a tasteless mass of snow or ice.



3. The process of making a frozen confection which consists in immersing a stick into syrup in a vessel and subjecting the vessel to intense refrigeration, whereby the liquid is frozen intimately and homogeneously about and along the stick.

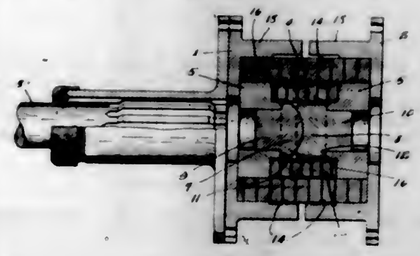
1,505,593. FOLDING HINGE. ARTHUR L. FRYER, Glendale, Calif. Filed May 31, 1923. Serial No. 642,653. 4 Claims. (Cl. 16—165.)

1. A hinge structure comprising hinge leaves having tangential, abutting end edges merging into rounder corner edges, pivots for the contiguous leaf ends arranged in parallelism and so disposed that the tangential edges of the hinge leaves will abut when the leaves are moved into alignment in a common plane, and an intermediate link mortised into the contiguous ends of the leaves, said leaves being adapted for attachment to opposite, parallel edges of foldable members, and a folding, intermediate block adjacent the contiguous ends of the hinges and to which said links are attached by said pivots.



1,505,594. HANDLE FOR PAPER BOXES. RAOUL J. GRUENBERG, San Francisco, Calif. Filed Nov. 11, 1922. Serial No. 600,397. 3 Claims. (Cl. 229—52.)

1. A handle for paper boxes, comprising a longitudinally extending gummed member having a gripping portion connected therewith, and a slotted box through which said gripping portion extends, the handle being glued to the inside of the box, and the top of the box having a depending tab connected therewith and glued to the handle in the plane of the box side.



3. A handle for paper boxes, comprising a longitudinally extending member with a D-shaped gripping portion secured thereto, a box slotted to permit said gripping portion of the handle to pass therethrough and a tab as long as the opening in the handle adapted to bend over the longitudinal member which latter is secured permanently to the inside of the box and to said flap whereby the slot in the box is closed.

1,505,595. STACKING AND COUNTING MACHINE. ADIN W. HILSINGER, Orange, N. J., assignor to Henry Brady, Inc., a Corporation of New Jersey. Filed June 18, 1921. Serial No. 478,538. 25 Claims. (Cl. 93—93.)

1. In an attachment of the class described having a stacker, means for feeding containers beneath the stacker, means for successively shifting said containers vertically within said stacker, means for automatically shifting said stackers successively as a predetermined number of containers are stacked therein, and said means for feeding said containers comprising parallel moving friction engaging means.

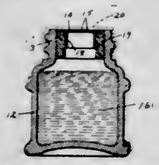
1,505,596. CUSHION SHAFT COUPLING OR UNIVERSAL JOINT. MAXWELL ROY KARGE, Phoenix, N. Y., assignor, by mesne assignments, to Charles J. Dockop, Buffalo, N. Y. Filed June 23, 1920. Serial No. 391,069. 6 Claims. (Cl. 64—96.)

1. A flexible coupling comprising opposing sections formed with central bores; a coiled torsion spring having its ends fixed to the sections and ball and socket members having shanks fitting the bores, substantially as and for the purpose described.

1,505,597. MUSICAL WIND INSTRUMENT. LOUIS R. MANN, Madison, Wis., assignor of one-half to Donald I. Bohn, Schenectady, N. Y. Filed Mar. 25, 1922. Serial No. 546,768. 14 Claims. (Cl. 84—385.)

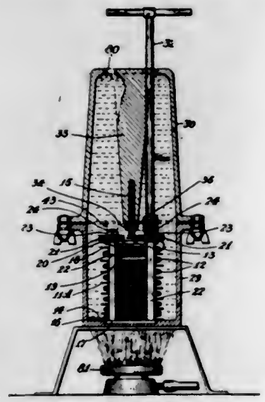
1. A musical instrument of the character described comprising a body portion open along one side thereof.

a mouth piece thereon, and means for varying the effective length of said instrument comprising a flexible closure



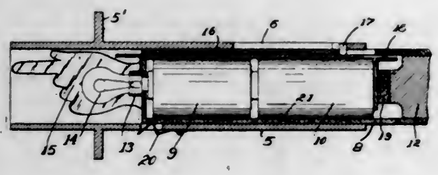
member secured to said body portion at one end thereof and free at the other end thereof.

1,505,598. WHEEL. GEORGE A. MOCK, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Nov. 1, 1920, Serial No. 421,031. Renewed May 18, 1922. Serial No. 562,039. 7 Claims. (Cl. 301—63.)



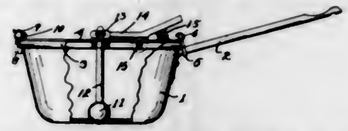
1. A disk wheel comprising a flanged hub, a single centrally cupped disk removably fitted over the hub and having the outside seat of the cup resting against the hub flange, a cap also fitted over the hub and having a peripheral edge resting against the disk cup, and means for securing the hub, disk and cap together.

1,505,599. LIQUID CONTAINER AND DISPENSER. LEWIS C. MORSE, Gloucester, Mass., assignor to Russia Cement Company, Gloucester, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1924. Serial No. 684,440. 2 Claims. (Cl. 91—67.4.)



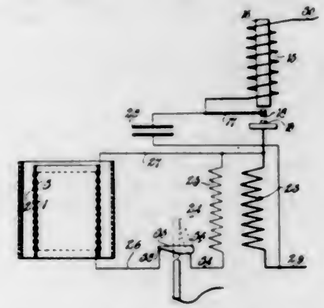
1. A liquid container and dispenser comprising a receptacle, a retaining head of sheet material, provided with a plurality of relatively small orifices, and with an inwardly projecting flange, and a compressible packing surrounding said flange and conforming to the internal surface of the receptacle mouth, to receive the head and its flange, the outer end of said packing and the outer surface of said head being substantially flush with each other and collectively constituting a face adapted to spread liquid extruded through said perforations, and a seat for a closing cap engaged with the receptacle.

1,505,600. PROCESS AND APPARATUS FOR THE MANUFACTURE OF ELECTRICAL CONDENSERS. GREENLEAF WHITTIER PACKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed June 8, 1920. Serial No. 387,500. 9 Claims. (Cl. 250—41.)



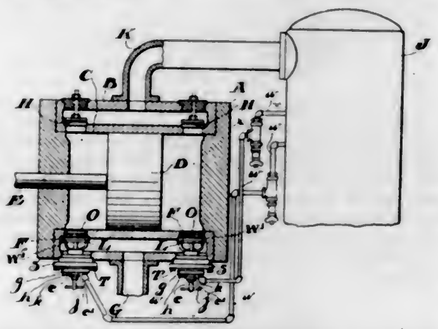
1. The herein-described method of making a condenser which consists in submerging a stack in a bath of fluid insulating material in a casing and then, while in said bath, applying permanent pressure to the stack to drive out insulating material from between the sheets and bring the sheets thereof into intimate relations, forming in said casing a permanent filler of such insulating material around the stack without exposing the stack to atmosphere after its submerging.

1,505,601. AUTOMOBILE SIGNAL. HENRY PODOLSKY, San Francisco, Calif. Filed Sept. 22, 1919. Serial No. 325,288. 1 Claim. (Cl. 177—329.)



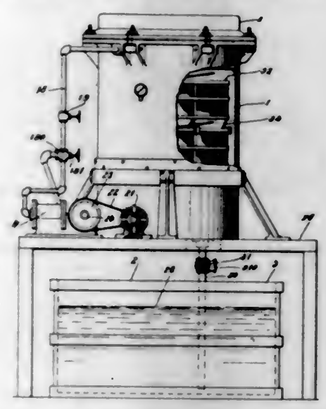
A signal lamp for automobiles comprising a tube having means to attach it to an automobile body, a second tube within the first tube having a shorter slot than the first tube, a signal at one end of the latter tube, a latch to hold the second tube extended or retracted as desired, batteries carried within the second tube, a lamp carried by said second tube, a slidable switch within the second tube, an operating knob on the switch projecting through the slots in the first tube and second tube to close said switch when the signal is extended, and a handle connected to the second tube and projecting from the first tube for the operation of the signal.

1,505,602. DOUGH DROPPER. HENRY PODOLSKY, San Francisco, Calif. Filed Jan. 24, 1922. Serial No. 531,368. 1 Claim. (Cl. 107—52.)



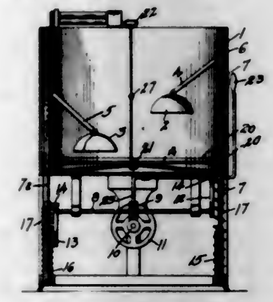
In a dough dropper a handled receptacle, a cross bar having a link at one end to pass over the handle and having a hook at the other end to secure the cross bar to the receptacle, a valve carried by the cross bar to close an opining in the bottom of the receptacle, and a lever for raising the valve from time to time.

1,505,603. OZONE APPARATUS. JOHN ROBERT QUAIN, Westminster, London, England. Filed Dec. 27, 1922. Serial No. 609,309. 12 Claims. (Cl. 204—32.)



1. An ozone apparatus comprising in combination, a pair of electrodes, a solid dielectric disposed between said electrodes and presenting vertical surfaces with which said electrodes make contact at spaced intervals and a vertical conduit surrounding said electrodes and dielectric.

1,505,604. COMPRESSOR UNLOADER. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 6, 1923. Serial No. 678,792. 4 Claims. (Cl. 230—24.)

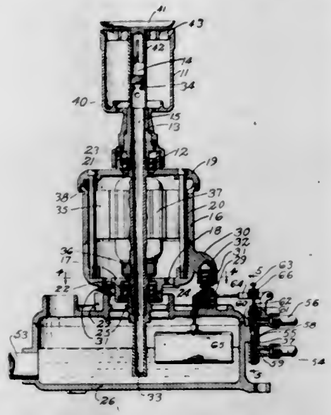


1. A compressor unloader comprising in combination with a compressor cylinder and plate valve mechanism in the wall of said cylinder, a cover adapted to be secured to the compressor cylinder casing, a cylinder in said cover having means for holding the valve mechanism in place in the compressor cylinder, a piston in said last mentioned cylinder having a threaded end portion, a collar on said threaded end portion provided with fingers adapted to bear against the plate valve, opposed lugs on one end of the piston, a plate secured to the cover, a stem extending through said plate and provided with means for engaging said lugs, and means for rotating said stem, whereby rotation of the stem in one direction causes the fingers to bear against and unseat the plate valve.

1,505,605. METHOD OF SALTING PEANUTS. HUNTINGTON D. SAWKINS, Baltimore, Md. Filed Apr. 7, 1924. Serial No. 704,748. 4 Claims. (Cl. 99—15.)

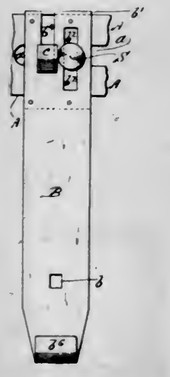
1. The method of salting peanuts in the shell which consists in submerging them in brine, removing the brine and drying by alternately subjecting them to air pressure and releasing the air, producing the effect of an air blast.

1,505,606. WASHING MACHINE. PETER F. SCHNEIDER, RAYMOND J. SCHNEIDER, and WILLIAM F. BLAKE, Detroit, Mich. Filed Oct. 31, 1919. Serial No. 334,728. 7 Claims. (Cl. 68—19.)



1. In a washing machine, a receptacle substantially cylindrical in form, a pair of rods one on each side of the tub extending upward through the bottom thereof, a vacuum cup supported on each rod within the tub, guideways in the tub for the said rods, and power operated means beneath the tub for reciprocating the rods in alternate relation.

1,505,607. APPARATUS FOR ATOMIZING FUEL OILS, ETC. OSCAR C. SCHROEDER, Chicago, Ill. Filed Dec. 23, 1921. Serial No. 524,558. 13 Claims. (Cl. 158—77.)



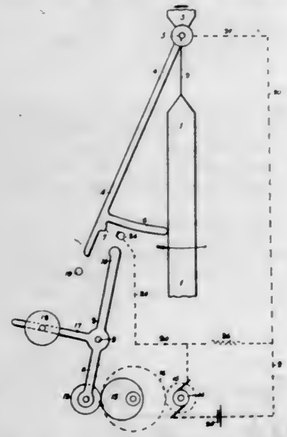
13. In a liquid fuel burner, the combination with a liquid holder, of a hollow shaft extending downwardly

into the holder having a relatively small axially-extending concentric orifice in its bottom and a larger dis-

charge area at its top, an atomizer element on the top of the shaft rotating therewith, and means for rotating the shaft.

1,505,608. LICENSE-PLATE HOLDER. ROY M. SEELY, Middletown, N. Y. Filed Feb. 25, 1924. Serial No. 695,124. 4 Claims. (Cl. 40—125.)

2. As an article of manufacture, a license plate holder of the character designated, comprising a bracket plate formed at its lower extremity with a stirrup for engagement with the lower edge of a license plate, and a slidably mounted spring actuated latch plate for engagement with the upper edge of said license plate, together with a supplementary shoulder plate and means for securing said bracket plate and supplementary shoulder plate rigidly to a support affixed to a vehicle, substantially in the manner and for the purpose set forth.

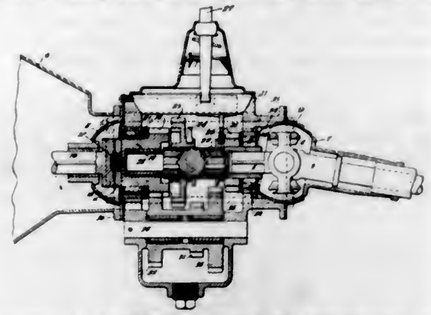


1,505,609. SECTIONAL BILLIARD CUE. CHARLES E. SEEMAN and LOUIS V. BARACH, Pittsburgh, Pa. Filed June 16, 1922. Serial No. 568,710. 6 Claims. (Cl. 46—9.)

1. A billiard cue comprising a hollow but member having an open lower end and further permanently closed at a point removed from its upper end, a hollow shaft member permanently closed at a point removed from its lower end, means for detachably connecting the upper end of the butt member to the lower end of the shaft member, a rigid apertured buffer arresting disk mounted

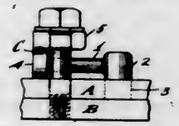
against the lower open end of the butt member, a resilient buffer positioned against said disk and means for coupling the buffer with the butt section.

1,505,610. CLOCK, CHRONOGRAPH, AND THE LIKE. ALEXANDER STEUART, Edinburgh, Scotland. Filed June 22, 1923. Serial No. 647,044. 2 Claims. (Cl. 58—29.)



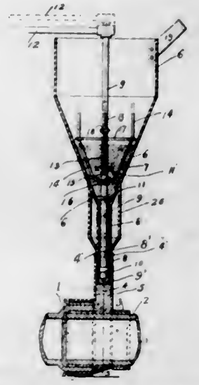
1. An electric clock, comprising a clock mechanism, an electric motor having a continuously rotatable member operatively connected to said mechanism, an electric circuit for supplying current to said motor and including a movable contact and a fixed contact adapted to control the speed of the motor, an arm carrying said movable contact and operated by the clock mechanism to open said contacts, and an oscillatory member adapted to receive its impulse from said arm and through it to control the closing of said contact.

1,505,611. TRANSMISSION. CARL E. SWENSON, Rockford, Ill., assignor to Mechanics Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 8, 1923. Serial No. 679,463. 4 Claims. (Cl. 74—58.)



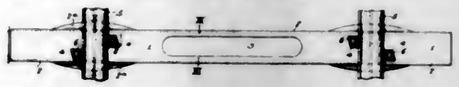
1. In a motor vehicle, in combination, a primary transmission casing, a propeller shaft, a supplemental change speed transmission, a casing for said supplemental change

speed transmission, said supplemental transmission and casing being interposed between the primary transmission casing and the propeller shaft, means attached to said primary casing and extending to the outer end of said



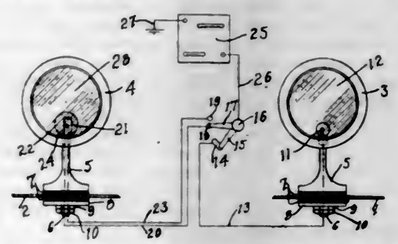
supplemental casing for connecting the supplemental casing to the primary casing and putting the supplemental casing under compression, said means being adapted to carry substantially all tension stresses.

1,505,612. DEFORMABLE SPACER. LEON TRAGER, Newark, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Dec. 21, 1922. Serial No. 608,377. Divided and this application filed Dec. 21, 1922, Serial No. 608,379. Renewed June 25, 1924. 6 Claims. (Cl. 137—71.)



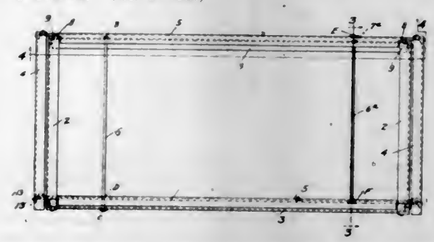
1. The combination with a sectional casing and the means for securing the casing parts together, of a yielding spacer supporting the pressure of said securing means and torsionally deformable under excessive pressures tending to separate the casing parts, said spacer being of such resiliency as to be torsionally deformed beyond its elastic limit and take a permanent set with the casing parts separated on excessive pressure within said casing.

1,505,613. DEVICE FOR INSERTING CEMENT INTO PIPE JOINTS. LEROY A. WESTON, Adams, Mass. Filed July 16, 1923. Serial No. 651,994. 6 Claims. (Cl. 25—127.)



1. A device for the purpose described, comprising a receptacle to receive the joint forming material, a discharge member therefor; a plunger rod, a washer loosely mounted on the rod for normally closing the discharge member, a piston on the rod and normally located in the discharge member for imparting impact or pressure blows to the material in said member, and means for agitating the material in the receptacle.

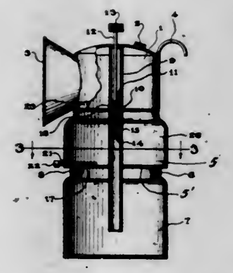
1,505,614. RAIL FASTENING. GEORGE W. WHITEMAN, Philadelphia, Pa. Filed Oct. 1, 1923. Serial No. 665,744. 8 Claims. (Cl. 238—61.)



1. In combination with a metallic tie having a rectangular aperture formed in its rail-supporting portion, a bolt having a portion to fit said aperture, an adjustable rail-engaging member overlying said bolt; the portion of the latter fitting the rectangular aperture in the tie projecting above the web of the same and engaging parallel walls formed on the under side of said rail-engaging member and the latter being provided with an elongated aperture whereby it is capable of movement with respect to the rectangular shank of the bolt and in line therewith, and means for confining said rail-engaging member in various positions with respect to said bolt.

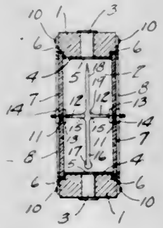
1,505,615. SAFETY DRIVING LIGHT. CHARLES R. YATES, Culver, Ind. Filed Oct. 31, 1923. Serial No. 671,849. 2 Claims. (Cl. 240—7.)

1. The combination with a vehicle and the front fenders thereof, of an illuminating unit mounted on each of said fenders, one of said units projecting light of a distinctive color to serve as an indicating or warning signal and the other thereof projecting light to illuminate the surface traveled over.



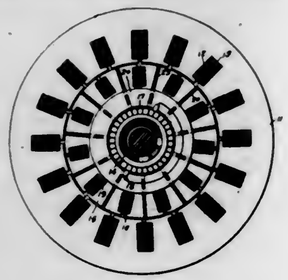
1,505,616. COUCH BED. JOSIAH M. ANDERSON, Minneapolis, Minn. Filed Mar. 28, 1921. Serial No. 456,414. 6 Claims. (Cl. 5—18.)

1. A couch bed comprising main and auxiliary sections each having side rails composed of angle bars and end rails connecting the opposite side rails of said sections respectively, supporting legs for said sections, said auxiliary section fitting between the end rails of said main section, the side rails of said main section having their horizontal flanges provided with notches at the ends thereof to re-



ceive the legs of said auxiliary section when the couch is closed, the abutting flanges of the rails of said main and auxiliary sections sliding one upon the other to allow one rail to nest with the adjacent one, whereby the bed when closed is substantially one-half its width when open.

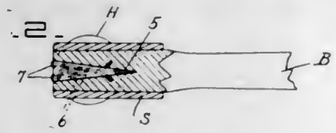
1,505,617. MINER'S CARBIDE LAMP. ARCHIE ATKINS, Glen Ferris, W. Va. Filed Nov. 1, 1922. Serial No. 598,449. 1 Claim. (Cl. 48—4.)



A carbide lamp comprising a body having a gas chamber, a water chamber and a carbide chamber, said chambers being superimposed with relation to each other, a tube extending from the top wall of the gas chamber and passing transversely through the gas chamber and the water chamber and having its lower end portion received in the carbide chamber with its lower end open and spaced from the bottom of the said chamber, said tube being provided at its side and at a point above the bottom of the gas chamber with an opening, a piston slidably mounted in the tube and provided with openings passing therethrough, a spring housed within the tube and confined at one end upon a support and bearing at its opposite end against the piston and serving to normally hold the piston in a closed position over the opening in the side of the tube, and a rod connected with the piston and passing through the top of the gas chamber, said rod adapted to serve as means for depressing the piston against the tension of the spring and for removing the piston from over the opening in the side of the tube.

1,505,618. PENDULUM LEVEL. ROSWELL C. BAIRD, Cumberland, Wis. Filed Nov. 16, 1923. Serial No. 675,065. 1 Claim. (Cl. 33—215.)

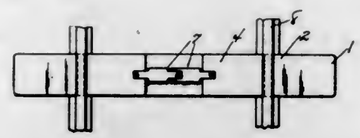
A device of the kind described, comprising a bevel stock having a round, medial, transverse housing aperture with sight slots opening thereinto from top and bottom of the stock; a cylindrical indicator housing mounted within the said aperture, the said housing having sight slots registering with the sight slots of the stock; a disc crystal mounted at each end of the said housing, the said crystals having shaft holes formed centrally therethrough; calibrated collars mounted over the edges of each of said crystals and secured to the stock; supporting shafts mounted through the shaft holes of the crystals, the said shafts being threaded at the outer ends passing through the crystals and each having a ball formed on its inner end; adjustment nuts on the threaded ends of the supporting shafts, one inside and one outside each crystal; and an indicator arm weighted at one end and pointed at the other pivoted between the ball-like inner ends of the supporting shafts, the said arm having medial and oppositely disposed sockets adapted to pivotally engage the said ball-like ends of the shafts.



1,505,619. ALTERNATING-CURRENT MOTOR. SVEN R. BERGMAN, Nahant, Mass., and ALFRED F. WELCH, Fort Wayne, Ind., assignors to General Electric Company, a Corporation of New York. Filed Aug. 8, 1921. Serial No. 490,482. 5 Claims. (Cl. 172—277.)

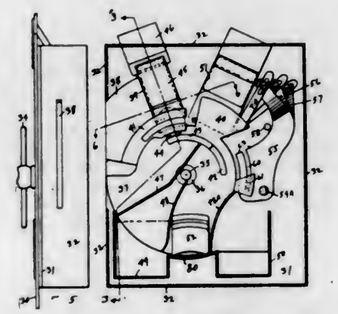
4. A single phase motor comprising a primary member and a secondary member, a commutated winding carried by the secondary member and a squirrel cage winding also carried by the secondary member, said squirrel cage winding bars extending above and below said commutated winding and being of such form that during the starting period, eddy currents materially increase their apparent resistance.

5. A single phase motor comprising a primary member and a secondary member, a winding having definite coils carried by said member, and a squirrel cage winding also carried by the secondary member, said squirrel cage winding having L-shaped conductors, the vertical arm of the L being radial and comparatively narrow.



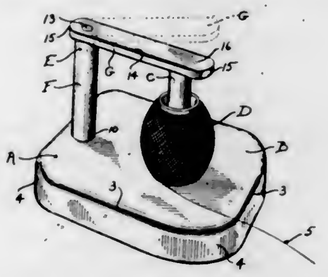
1,505,620. WEDGE FOR TOOL HANDLES. SYLVESTER J. BORTZ, Muskegon, Mich. Filed July 24, 1923. Serial No. 653,599. 1 Claim. (Cl. 306—33.)

The combination with a tool having a removable handle, of a wedge having a substantially rectangular outer surface with passages extending from opposite corners thereof toward one another and terminating in alignment in the transverse medial plane on opposite sides of the tapering portion of the wedge and fastening elements guided by the passages with their inner extremities protruding into the handle.



1,505,621. RAILROAD TIE. ARTHUR T. BOUCH, McGees Mills, Pa. Filed Oct. 15, 1923. Serial No. 668,750. 3 Claims. (Cl. 238—331.)

1. A railroad tie of the class described including a body, fixed jaws on the body, tenons rising from the body, slidable jaws provided with mortises for receiving the tenons, one slidable jaw associated with each fixed jaw, links disposed between the slidable jaws whereby they may be moved in operative or inoperative association

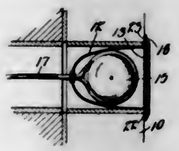


with the fixed jaws, said tenons being trapezoidal in cross section and said mortises shaped to conform therewith.

1,505,622. RADIAL LOCK. EARL S. BURDICK, Milwaukie, Oreg. Filed Oct. 29, 1921. Serial No. 511,329. 8 Claims. (Cl. 194—4.)

4. An adjustable combination lock having a rotatable bolt carrying disk, a lug projecting from said disk, a plurality of slotted tumbler arms pivoted beside said disk and adapted to receive said lug within their slots when properly positioned, and a key adapted to be carried by said rotatable bolt disk and to engage the various tumblers and actuate same in a manner that said slots will register with said lug.

1,505,623. HOLDER FOR CROCHET THREAD. FRANK LEROY BURTON, Burnside, Conn. Filed June 20, 1923. Serial No. 646,603. 2 Claims. (Cl. 242—141.)

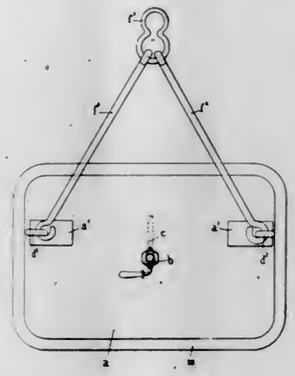


1. A holder for thread comprising a base, a post mounted upon said base for rotatably carrying a ball of thread, a standard mounted upon said base, and an arm pivotally mounted thereon and extending at right angles thereto for frictionally engaging said post to prevent accidental displacement of the ball of thread.

1,505,624. BAILER BOTTOM. RAPHAEL R. CANDEE, McKittrick, Calif. Filed Aug. 7, 1922. Serial No. 580,369. 11 Claims. (Cl. 166—19.)

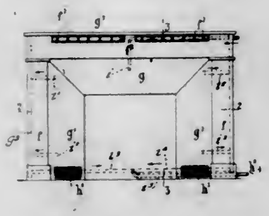
1. A deep well bailer comprising a bailer body having a ported lower end portion, a ported swiveled bottom section connected to said lower end portion, and a valve seat having a peripheral rim about which the lower end of the bailer body telescopes and is adapted for some longitudinal movement before uncovering the said rim as the bottom section is turned to register the ports.

1,505,625. ILLUMINATED HOUSE NUMBER. CHARLES E. DEARTH, Memphis, Tenn. Filed May 21, 1923. Serial No. 640,517. 2 Claims. (Cl. 40—132.)



1. A sign adapted to be used as brick in a wall, said sign comprising a casing having a portion of its body approximately the dimensions of a brick, the front of said casing having outwardly extending guides, the rear faces of said guides being adapted to seat against the outer face of the wall, a glass held in said guides, indicia on said glass, a lamp in the casing and a removable open border plate covering the guides on the casing, substantially as set forth.

1,505,626. SUCTION DEVICE FOR LIFTING AND TRANSPORTING ARTICLES HAVING ANY KIND OF SURFACE. GEORGES HENRI LÉON DEBAECKER, Sas-de-Gand, Netherlands, assignor to Société dite Manufactures des Glaces & Produits Chimiques de St. Gobain, Chauny & Cirey, Paris, France, a Corporation of France. Filed Dec. 11, 1923. Serial No. 680,005. 7 Claims. (Cl. 294—65.)

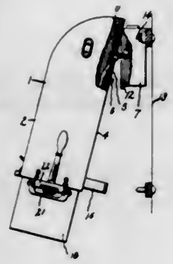


1. A suction device for lifting and transporting articles with any kind of surface, comprising a carrier and backing plate, a continuous sheet of flexible material, adapted to adhere under a vacuum to the surface of said article, fastened to said plate, a hoisting apparatus, means for securing the carrier and backing plate to the same, a piping connected to the suction device through the carrier

plate, and means upon said piping for controlling the communication of the suction device with the atmosphere and with a vacuum producing means, the carrier and

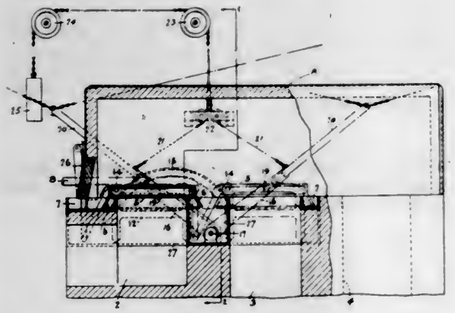
backing plate being made of a flexible material adapted to conform to and be applied exactly upon the surface of the article to be lifted and transported.

1,505,627. FIREPLACE FOR DOMESTIC HEATING. LÉON GONZAGUE DE BELLESCIZE, Paris, France. Filed May 31, 1923. Serial No. 642,684. 4 Claims. (Cl. 126—120.)



1. A fire place for domestic heating, comprising a fire place body, a fire place casing adapted to form the outer casing of a hot air radiator, hollow metal panels provided in the walls of said casing, and means for circulating a heating fluid from the boiler of a central heating arrangement in said hollow metal panels.

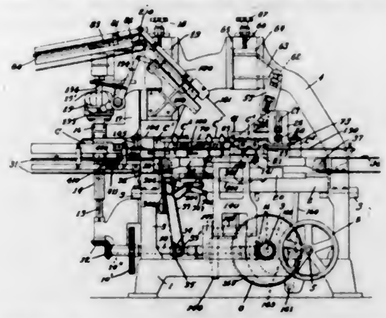
1,505,628. STREET INDICATOR. AUGUSTA DULL, Los Angeles, Calif. Filed July 18, 1923. Serial No. 652,279. 15 Claims. (Cl. 40—53.)



1. A street or station indicator comprising, in combination, a pair of winding reels, parallel spindles to which the reels are detachably connected, an intermittently operative motor, a pair of meshed gears one of which is engaged and driven by said motor, and clutch means for selectively operatively connecting the spindles to the gears.

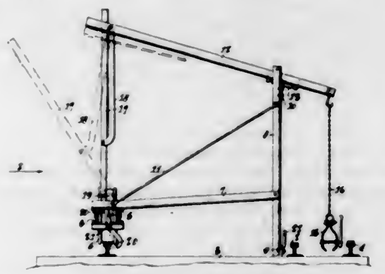
1,505,629. MOUNTING FOR CASINGS OF ELECTRICAL APPARATUS. PARKER DUNNING, Bloomfield, N. J., assignor to General Electric Company, a Corporation of New York. Original application filed Nov. 17, 1919, Serial No. 338,571. Divided and this application filed Mar. 31, 1922. Serial No. 548,501. 5 Claims. (Cl. 247—1.)

1. The combination with a casing for electrical apparatus having switch mechanism supported therein at the lower end thereof, of electrical conductors for connection with the said switch mechanism, and a fixed conduit outlet box having an open front, the said casing having an opening therein at the upper end of the back thereof and supported by the said outlet box with the said opening of the casing and the open front of the outlet box registering so as to form a continuous closed passage for the said conductors.



1,505,630. REVERSING-VALVE MECHANISM. NICHOLAS F. EGLER, Chicago, Ill. Filed June 1, 1923. Serial No. 642,780. 4 Claims. (Cl. 137—151.)

1. In valve reversing mechanism for furnaces, the combination of a hood covering three distinct flues, a single valve covering a single flue, and means for shifting said valve from the gas or air flue to the stack flue, and vice-versa.

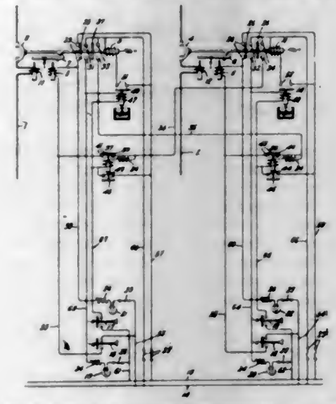


1,505,631. CAN-CAPPING MACHINE. SAMUEL B. FIELD, Holbrook, Mass., assignor, by mesne assignments, to State Street Trust Company, trustee, a Corporation of Massachusetts. Filed May 29, 1920. Serial No. 385,245. 39 Claims. (Cl. 113—27.)

1. In combination, a can passageway, a pair of can dies movable towards and from each other to grip and release a can disposed therebetween, a pair of oppositely disposed cap dies mounted independently of said can dies and movable towards each other to close about and positively clamp a cap therebetween and movable away from each other to open and discharge said cap onto a can

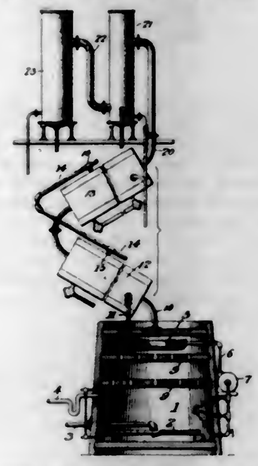
held between said can dies, and operative connections between said can dies and said cap dies for causing the cap dies to follow the movement of the can dies.

1,505,632. RAIL LIFTER AND REPLACER. JAMES FINLEY, Vancouver, British Columbia, Canada. Filed Dec. 29, 1921. Serial No. 523,732. 6 Claims. (Cl. 212—11.)



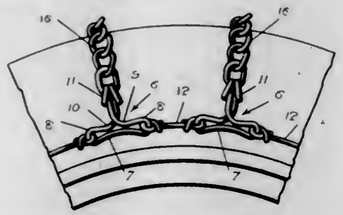
1. A rail lifting and relaying device, comprising a wheeled frame mounted to run on one line of track and including a portion projected toward but falling short of the other line of track, said projected portion having means to support it on the ties, a lever pivoted to said projecting portion of the frame and itself projected over said other line of track, means suspended from the projected end of said lever for lifting and lowering a rail connected to it, and means for gripping the frame to the track on which it is mounted and means for pulling down said lever to lift the rail and actuate said gripping means.

3. A rail lifting and relaying device, comprising a frame mounted to run on the rail of one line of track, said frame including a portion projected toward the other line, means connected to the frame for supporting the projected portion, a lever pivotally mounted on the projected portion of the frame and extended toward the wheel mounted side, a rail securing means flexibly connected to the end of the lever adjacent the pivot, a hand lever pivotally mounted to extend above the wheels of the frame, and means for connecting the longer end of the first named lever to the hand lever intermediate its ends.



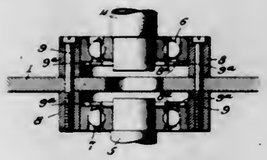
1,505,633. CIRCUIT-CONTROL SYSTEM. ALFRED C. FINNEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 2, 1923. Serial No. 616,457. 8 Claims. (Cl. 175—294.)

8. A circuit control system of the class described comprising a plurality of conductors, a plurality of electric switches arranged one in each of a plurality of said conductors and adapted to be operated to control the circuits thereof, an opening coil associated with each of said switches and arranged when energized to effect the opening thereof, a normally open interlocking circuit for each of said opening coils, auxiliary switching means associated with each of said switches and arranged upon the opening of one of said switches to complete the interlocking circuit of the opening coil of another of said switches to effect the opening thereof, means for closing



each of said switches, means comprising a plurality of control switches for controlling said closing means whereby each of said switches may be closed independently, and relay means for controlling said interlocking circuits arranged to be controlled by said control switches to render the opening coil of one of said switches inoperative to open the same until the closing of another of said switches.

1,505,634. DISTILLING APPARATUS. JOHN PRESTON FOSTER, Paia, Maui, Hawaii. Filed Nov. 20, 1922. Serial No. 602,087. 8 Claims. (Cl. 195—12.)

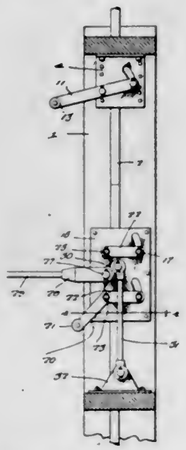


2. In a distilling apparatus, the combination of a distilling column and a heater for the liquid to be distilled comprising a closed tank provided with a heating means and having a vapor outlet at its upper part communicating with the distilling column and the latter having a liquid outlet at its lower end communicating with the upper part of the tank, means in the upper part of the tank for subdividing the entering liquid from the column, and a distributor in the upper part of the tank for spreading the subdivided fluid and rising vapors and to commingle the same.

1,505,635. TIRE CHAIN. MATHEW J. FRAMBACH, Hartley, Iowa. Filed Sept. 13, 1923. Serial No. 662,475. 3 Claims. (Cl. 152—14.)

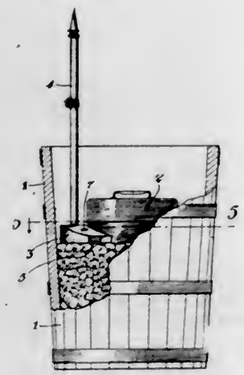
3. A chain link to bear at one side against a tire and having an intermediate portion, loops at the ends of said portion for the engagement of other links, arms extending from said loops and having bends crossing one another adjacent to said intermediate portion, said arms being disposed side by side beyond the point of crossing and extending away from said intermediate portion, and hooks at the terminals of said arms to be disposed side by side, said hooks being located at the side of the link opposite to the firstnamed side, said intermediate portion, loops and one of the arms beng flush with the firstnamed side of the link to bear against the tire, and the other arm being offset with a gentle curvature between the hooks and corresponding loop away from the firstnamed side of the link across the aforesaid arm.

1,505,636. ANTIFRICTION BEARING FOR MULTIGRAPHS. DELBERT OSCAR FREEMAN, Scranton, Pa. Filed May 6, 1921. Serial No. 467,392. 6 Claims. (Cl. 64—36.)



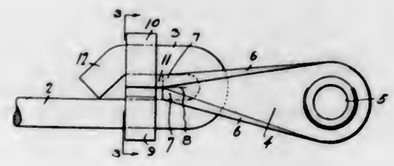
1. In a multigraph, the combination with a plate or casting forming a fixed part of the multigraph, and a shaft for sustaining a rotatable drum or cylinder, of a cylindrical housing with an interior ledge spaced from each face thereof, an anti-friction bearing located within the housing and bearing against the ledge, and means for securing the housing to the face of the plate or casting around the end of the shaft with the latter received within the said bearing, the plate or casting closing the inner face of the housing and cooperating therewith to form an oil receptacle between the plate or casting and the ledge.

1,505,637. LOCK STRUCTURE. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 15, 1922. Serial No. 581,968. 5 Claims. (Cl. 70—46.)



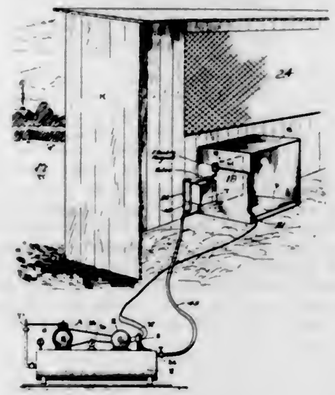
1. A shell for a cylinder lock structure having weakened portions providing a normally integral removable section, whereby adjustment of the length of the shell may be effected.

1,505,638. SLIDING FORM JACK. GEORGE O. H. GLASS, Dewey, Okla. Filed Feb. 16, 1924. Serial No. 693,306. 1 Claim. (Cl. 254—31.)



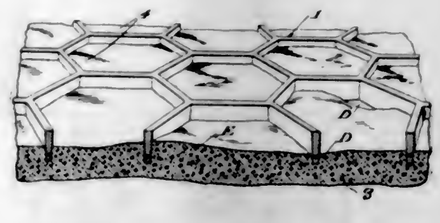
A sliding form jack comprising a yoke, a rod slidably mounted therein, a casing applied to the yoke and having movable and fixed jaws which receive the rod between them, a lever mechanism for moving the movable jaws in said casing, a second casing mounted upon the intermediate portion of the rod and located within the yoke, movable and fixed jaws located in the second mentioned casing, a lever mechanism for moving the movable jaw in the second mentioned casing, a second lever fulcrumed upon the second mentioned casing, rods pivotally connected with the working end of the last mentioned lever, foot pieces pivotally connected with the rods, and means connecting the said foot pieces with the lower portion of the said yoke.

1,505,639. ICE PACKER. CHARLES H. GREENAWALT, Lima, Ohio. Filed Sept. 13, 1922. Serial No. 588,095. 1 Claim. (Cl. 81—3.)



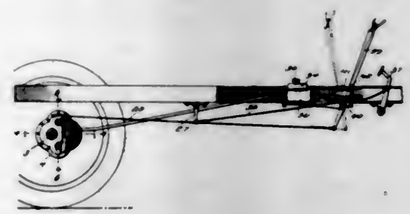
A hand implement for packing ice between an ice cream container and its tub, said implement comprising a head and a handle portion attached thereto, said head having an aperture extending therethrough for the passage of water, the head constructed to extend part way around the ice cream container, the inner edge of the head being curved to conform substantially to the curvature of the ice cream container, the ends of the head being flattened, and there being a relatively small clearance between the head and the walls of the tub and ice cream container, whereby it is impossible to rotate the packer sufficiently to bring the corners thereof into contact with either the tub or the container.

1,505,640. BRAKE-ROD JAW. SOREN HANSSON, Butler, Pa., assignor of one-half to Harry T. Anderson, Butler, Pa. Filed July 24, 1923. Serial No. 653,580. 7 Claims. (Cl. 188—209.)



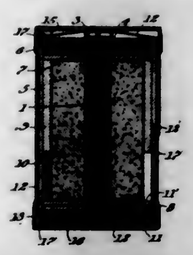
5. A brake-rod jaw comprising a U-shaped member having openings formed in its arms and having outwardly extending flanges formed at its edges, said flanges tapering from points adjacent to said openings toward the closed end of said member, and the said flanges engaging each other at the closed end of said member, and a strap member integral with said U-shaped member and having its central portion joined to one of said flanges at the closed end of said U-shaped member.

1,505,641. POULTRY-SPRAYING APPARATUS. ELWOOD DAYTON HENDRICKSON, Seattle, Wash. Filed Feb. 14, 1922. Serial No. 536,557. 2 Claims. (Cl. 119—159.)



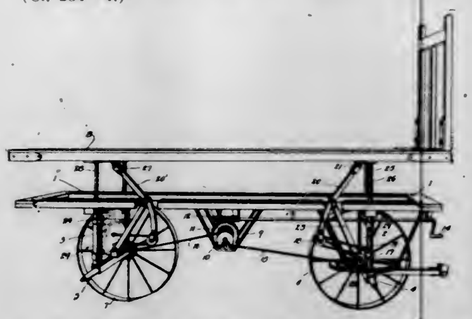
1. In an apparatus of the character described, a pair of opposing spray nozzles, one being disposed upon each side wall of a passageway, a tiltable platform forming the bottom or floor of said passageway, a pair of contact members disposed beneath the platform, a bridging member for said contacts carried by the platform and adapted to connect the same when said platform is tilted in a predetermined direction, an electrical circuit adapted to be closed with the connecting of said contacts, and means connected with said electrical circuit adapted to force a liquid through said nozzles when said circuit is closed.

1,505,642. MONOLITHIC FLOOR. FRANK HENRY, Los Angeles, Calif. Filed Jan. 11, 1923. Serial No. 611,965. 1 Claim. (Cl. 94—6.)



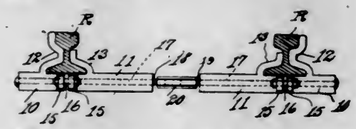
A monolithic product comprising a grid performed of plastic material, and a plastic filling within the interstices of said grid, said grid being provided with reinforcing elements embedded therein.

1,505,643. LIQUID BRAKE FOR AUTOMOBILES. NORMAN G. HOVLID, Longmont, Colo. Filed June 6, 1922. Serial No. 566,139. 5 Claims. (Cl. 188—92.)



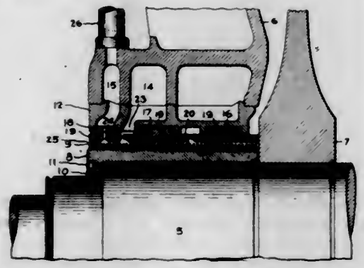
1. In a brake mechanism for automobiles, an epicyclic rotor fastened to the rear axle of the automobile to rotate therewith, a reciprocatory pump, means for manually operating the said pump, and a conduit connecting the pump to the rotor, whereby the rotor may be caused to retard or stop the rear axle through the epicycle rotor.

1,505,644. ELECTRIC BATTERY. ALTON KARL HUNTLEY, Clyde, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 12, 1920. Serial No. 358,205. 19 Claims. (Cl. 204—38.)



12. An electric battery of the kind described, comprising a hollow zinc electrode and a casing capable of longitudinal adjustment to render the cell active, a longitudinally perforated carbon electrode adapted to serve as an air vent during said adjustment, said carbon electrode having means adapted to prevent inadvertent closing of the end of the perforated carbon electrode.

1,505,645. TRUCK. DAVID F. ISAACS, Coffeyville, Kans. Filed Jan. 28, 1924. Serial No. 688,928. 3 Claims. (Cl. 254—4.)

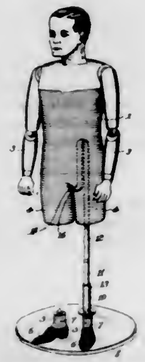


1. A truck comprising a base frame and a supplemental frame, means for guiding the supplemental frame with respect to the base frame, toggle levers carried by the base frame, toggle levers carried by the supplemental frame and pivoted to those on the base frame, an idler on each toggle lever carried by the supplemental frame, a winding drum carried by the base frame and cables fastening to the base frame and to the drum, said cables passing around the idlers so upon rotation of the drum the toggles will be operated.

1,505,646. RAILROAD TIE. EDWARD H. JACOX, Bassett, Nebr. Filed Mar. 27, 1923. Serial No. 628,133. 1 Claim. (Cl. 238—31.)

A railroad tie consisting of a pair of outer blocks and a pair of inner blocks, rail engaging means on each block, opposed lugs on the sides of the inner and outer blocks adapted to be disposed under the rails supported on the blocks, bolts passing through said lugs to hold the rail engaging means on the blocks into clamp relation with the rails, rods extending through said blocks and terminating in spaced relation to each other at their inner ends, the inner ends of said rods being threaded right and left handed respectively, and a turn buckle connecting said threaded ends.

1,505,647. PACKING FOR ELASTIC-FLUID TURBINES AND THE LIKE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 5, 1920. Serial No. 422,009. 7 Claims. (Cl. 286—10.)

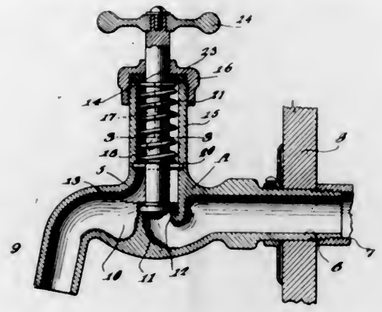


1. A packing comprising concentric, relatively rotating elements having packing teeth characterized by the fact that the teeth of one of the elements extend at an angle against the direction of flow of leakage fluid, and that the ends of the teeth of the said last-mentioned element have flat surfaces extending axially and at an angle to the lateral faces of such teeth against which the ends of the teeth of the other element pack.

1,505,648. PRODUCTION OF CALCIUM ARSENATE FREE FROM WATER-SOLUBLE ARSENIC. JAMES GRAHAM LAMB, Denver, Colo., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1921. Serial No. 441,684. 1 Claim. (Cl. 23—13.)

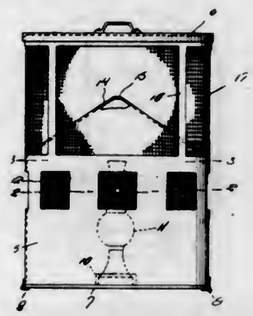
In the art of producing calcium arsenate entirely free from soluble arsenic the process which consists in forming an alkaline solution of a normal salt of arsenic entirely free from acid arsenates and adding calcium hydroxide in the form of a suspension to transfer all of the arsenic acid of the neutral salt into an insoluble arsenate.

1,505,649. DISPLAY DEVICE. BENO LEVY, New York, N. Y. Filed Jan. 29, 1924. Serial No. 689,285. 1 Claim. (Cl. 211—13.)



A display device comprising a body portion with its upper part having the general outlines of a person's body and its lower part the upper portion of two legs, a base, an upright post fastened to one side of the base and extending upwardly to slightly above the waistline of the body portion of the device thence downwardly to the crotch and fastened at its end to said body to support the same, loose shoe display freely movable to different positions of the base whereby trousers to be displayed on said body may readily be placed on the same for display by passing the waist band up between the upwardly and downwardly extending portions of the upright post and the legs of the trousers over the severed legs of the body and the shoe display devices on the base.

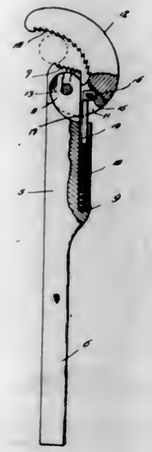
1,505,650. VALVE. EARNEST R. W. LEWIS, Ponoka, Alberta, Canada. Filed Oct. 27, 1920, Serial No. 419,922. Renewed July 12, 1924. 2 Claims. (Cl. 251—132.)



2. In a faucet, a body having a discharge outlet and an inlet way, a chamber interposed between said inlet and said outlet way, a vertically disposed barrel formed on the body and communicating with the chamber, a valve seat formed in the chamber directly below said barrel, a valve arranged to fit on said seat, a stem carried by the valve and extending through the barrel, a cap carried by said barrel and arranged to rotatably and slidably receive said stem, the barrel having oppositely disposed spiral ways formed therein terminating above said valve seat, and vertically disposed grooves communicating with the upper ends of said spiral ways

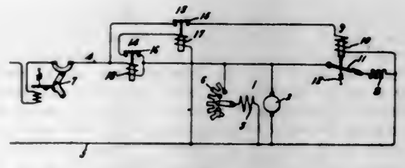
and opening out through the upper end of said barrel, the lower end walls of said vertically disposed grooves forming rest shoulders, a pin extending diametrically through said stem having its terminals fitted in said ways, an expansion spring coiled around said stem en-

gaging the pin and the cap for normally holding the pin at the lower ends of said spiral ways and the valve on its seat, the pin being adapted to rest upon said resting shoulders when the valve is entirely off of the seat.



1,505,651. INSECT TRAP. FRED LOESCHEN, Estherville, Iowa. Filed Dec. 10, 1923. Serial No. 679,701. 2 Claims. (Cl. 43—113.)

1. In an insect trap of the character described, an upright casing having a bottom wall provided with central lamp retaining means, said casing being provided with numerous openings through which light may shine from the lamp, inwardly extending funnel shaped entrance members secured over said openings, a centrally apertured conical partition within the casing above the last named openings and the lamp for dividing the casing into an upper trap chamber and a lower light chamber, and a reflecting plate upon the top of the casing directly above said opening in the partition.

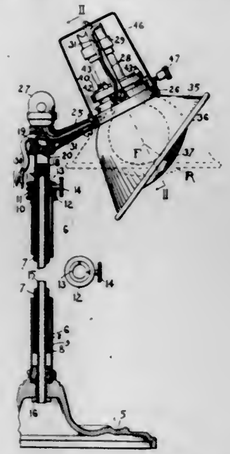


1,505,652. PIPE WRENCH. ARCHIE M. MCCORD, Greenville, S. C. Filed Aug. 23, 1923. Serial No. 658,859. 1 Claim. (Cl. 81—99.)

A pipe wrench comprising a handle provided at its outer end with a rigid jaw, inward and on opposite sides of which are recesses, a substantially arcuate movable jaw having its inner end bifurcated, the furcations being received in said recesses and pivotally connected to said handle, said handle being provided on one longitudinal edge adjacent said jaws with a socket opening toward the latter, an expansion spring located in said socket, a pin slidably mounted in the socket and projectable beyond the outer end thereof, said pin being provided on its outer end with a laterally disposed head, provided with an elongated slot, said slotted head being disposed in the furcations of the aforesaid movable jaw, and

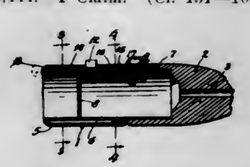
pivot pins passing through the furcations and the slots in said head, whereby to provide a loose pivotal connection between the pin and movable jaw.

1,505,653. ELECTRICAL BRAKING CONTROL. ROBERT H. MCLAIN, Tenafly, N. J., assignor to General Electric Company, a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,772. 4 Claims. (Cl. 172—179.)



2. In a system of electrical braking, the combination with a dynamo electric machine adapted to receive current from a source of supply to operate as a motor to drive an active load and to be driven by the load to operate as a regentrative braking generator to return current to the source, of a dynamic braking circuit for said machine, electro-responsive means for controlling said circuit, and connections whereby the energization of said means is controlled in response to a predetermined decrease of regenerated current and a predetermined increase of generated voltage of said machine, to close said circuit and dynamically brake the load.

1,505,654. READING LAMP. NORMAN MACBETH, Pelham, N. Y. Filed Jan. 5, 1923. Serial No. 610,852. 4 Claims. (Cl. 240—81.)

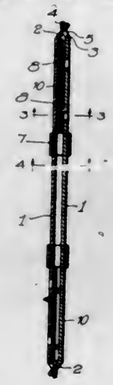


1. The combination with a supporting ring, of a source of light carried thereby, a reflector with an opening for the passage of light which incloses the source of light, a neck for the reflector, a bearing ring, means for adjusting the bearing ring with respect to the re-

flector whereby the supporting ring is engaged between the bearing ring and the reflector, the bearing ring and

reflector being free to turn with respect to the supporting ring about an axis which is inclined to the axis of the reflector.

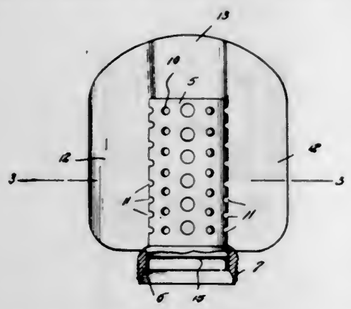
1,505,655. CIGAR OR CIGARETTE HOLDER. RUDOLPH J. MAREK, Lodgepole, Nebr. Filed Feb. 8, 1921. Serial No. 443,444. 1 Claim. (Cl. 131—10.)



In a cigar or cigarette holder, a tubular body having an inner and an outer wall defining an annular chamber, the outer wall being provided with a longitudinal slot and the web connecting the forward ends of the walls having a notch in alinement with said slot, an ejector comprising a head located within the body, a shank extending from the head longitudinally within the body and back upon itself through the notch between the walls, a finger-piece carried by the last-mentioned portion of the shank and projecting through the longitudinal slot in the outer wall, and a retractile spring housed in the annular chamber and connected to the end of the shank and the rear end wall of the chamber to yieldably hold the ejector retracted.

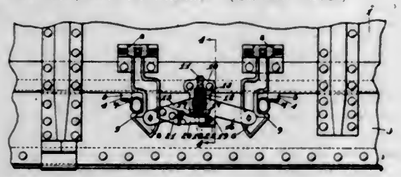
1,505,656. PRIMARY BATTERY. MARTIN L. MARTUS, Woodbury, Conn. Filed Feb. 19, 1924. Serial No. 693,896. 22 Claims. (Cl. 204—38.)

7. An electrolyte for battery use adapted to undergo visible change through the electrolytic action of the battery giving a different color.



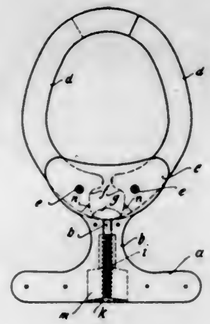
1,505,657. SAFETY-RAZOR HOLDER. GEORGE H. MAURER, Jacksonville, Fla. Filed Apr. 24, 1924. Serial No. 708,688. 1 Claim. (Cl. 30—25.)

A razor blade holder comprising two members, each member consisting of an elongated plate, a perforated flange depending from one end thereof and a tongue projecting laterally from the other end of the plate, locking tongues depending from the underface near one end of the plate, the end portion of the plate carrying the tongue being concaved, notches in the side edges of the plate and bands adapted to be seated in said notches to hold the two members together, said depending tongues being



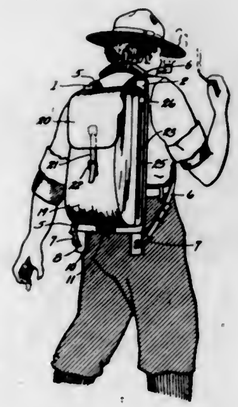
adapted to enter spaced openings in a razor blade and thereby holding said blade in operative position between said members.

1,505,658. RADIATOR-COOLING ATTACHMENT. LOYAL A. MICHAELS, Ottumwa, Iowa. Filed May 10, 1923. Serial No. 637,932. 3 Claims. (Cl. 257—25.)



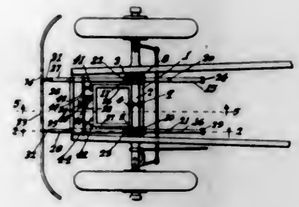
1. In a radiator cap of the class described, a cylindrical portion and a skirt portion, a partition within the cylindrical portion for dividing the same into front and rear chambers, said front chamber being provided with openings for permitting the entrance of air into the cap, means for directing the air into said openings when the car is in motion, said means comprising a pair of laterally directed fins upon opposite sides of said cylindrical portion.

1,505,659. DOOR RELEASING AND LOCKING MECHANISM. FRANK E. MILLER, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 12, 1923. Serial No. 680,156. 16 Claims. (Cl. 105—308.)



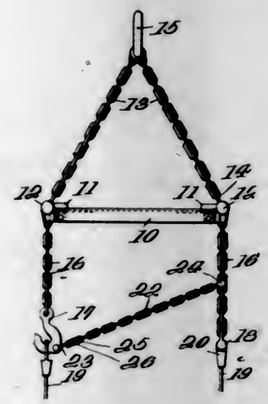
12. In a dump car, a discharge door, members movable into and out of supporting positions with said door, links connected with said members and with each other for operating said members, and means on said links located below the connection between said links adapted to cooperate to lock said members in their supporting positions with said door.

1,505,660. HANDCUFF. CHRISTIAN MORASCH, Bad Neuenahr, Germany. Filed Apr. 13, 1922. Serial No. 552,085. 1 Claim. (Cl. 70—24.)



A device of the class described composed of a handle, a slidable shaft therein, a case, nipper arms pivoted therein with their portions in the case beyond their pivots formed with curved portions, a head rigid with the inner end of said shaft confined between the said curved portions and engageable therewith, and a spring in said case acting on said shaft, the inner ends of said arms being cut away to permit of full opening of the arms.

1,505,661. PACK. LLOYD F. NELSON, Bremerton, Wash. Filed July 31, 1922. Serial No. 578,623. 4 Claims. (Cl. 224—8.)

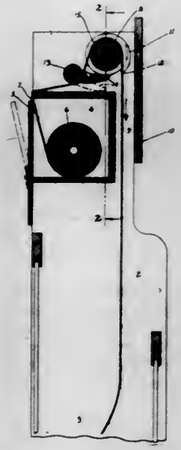


1. A pack of the character described, comprising a rack with supporting means secured thereto, a strip of flexible material enclosing the rack to form a ventilated air space and a sack detachably mounted on the rack outside of the said air space.

1,505,662. AUTO BUMPER. GEORGE B. O'CONNOR, Los Angeles, Calif. Filed Jan. 24, 1924. Serial No. 688,166. 4 Claims. (Cl. 293—55.)

4. An extensible fender for vehicles comprising parallel supporting bars rigidly connected and having transversely alined slots, a fender bar yieldingly mounted upon the supporting bars, means for mounting the supporting bars upon a vehicle to slide the fender to or from the vehicle, a locking bar to engage in the slots, and means for locking the locking bar.

1,505,663. CRANE SLING. CHARLES OLIVER, Toledo, Ohio, and JESSE C. COOK, Jeffersonville, Ind., assignors to American Creosoting Company, Louisville, Ky., a Corporation of Indiana. Filed Sept. 10, 1923. Serial No. 661,907. 10 Claims. (Cl. 294—74.)



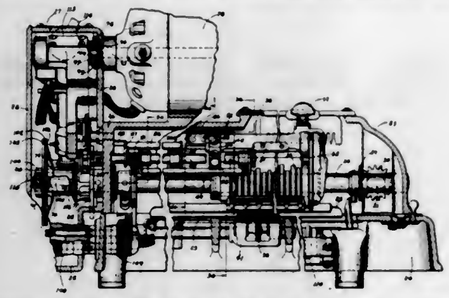
1. In a crane sling, the combination of a frame, cable connected to the frame for passing beneath the load, hooks on the frame engaging the cables for supporting the load, and means for automatically causing the hooks to be actuated for releasing the cables upon depositing the load on a supporting surface.

1,505,664. TOWEL CABINET. GOTTFRID OLSON, Minneapolis, Minn., assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Oct. 14, 1921. Serial No. 507,598. 2 Claims. (Cl. 45—32).

2. A towel cabinet comprising a casing, a feed roll journalled in said cabinet and having a friction surface over which a web of toweling may pass, a cam fixed to one end of said feed roll and having a shoulder, a guide roll for the toweling web and having said web pass thereunder in frictional engagement therewith whereby movement of

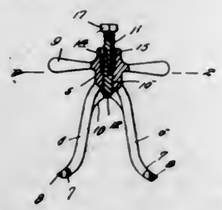
the toweling web in delivery tends to rotate the guide roll, and a finger on said guide roll alined with said cam and

having the end engageable by the shoulder of the cam upon the finger being raised by rotation of the guide roll upon delivery movement of the toweling web.



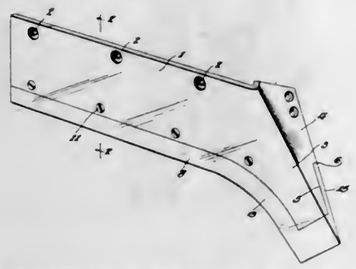
1,505,665. AUTOMATIC GAMBREL. FRANK J. FAICE, Smithfield, Ohio. Filed July 20, 1921. Serial No. 486,055. 1 Claim. (Cl. 294—79.)

A device of the class described comprising a pair of arms of unequal lengths, the shorter of said arms being formed of a single strip of metal looped and bent upon itself intermediate its ends, the bent portions being clamped together for approximately half the distance thereof, the remaining length of the arm having the strands spaced apart to provide a bifurcated inner end, the longer arm being pivoted adjacent its inner end between the ends of the furcations of the first mentioned arm to provide an inner extension portion for reception between said furcations, the extreme free end of said extension being offset to provide a shoulder, a stop pin extending laterally through the bifurcated portion of said first mentioned arm adapted to receive said shoulder in contact therewith to limit the movement of said arms with respect to one another in one direction, the inner opposed edges of said arms adjacent their outer ends being provided with engaging notches, and a flexible connection having its ends loosely engaged with said arms intermediate the ends thereof.



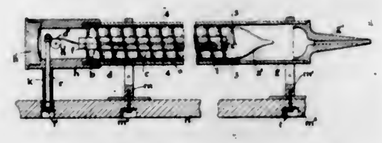
1,505,666. PRINTING APPARATUS. WALTER B. PAYNE, Rochester, N. Y., assignor to Todd Protectograph Co., Inc., Rochester, N. Y. Filed May 23, 1922. Serial No. 563,153. 21 Claims. (Cl. 197—6.2.)

1. The combination with a plurality of type forms and platen having relative selective movement to bring the type forms individually to position for co-operation with the platen and said type forms having a rotary printing movement, and a single manually operable means for effecting said selective movement, of power driven means comprising a rotary part, a rotatable part connected with said type forms, and mechanism controlled by said



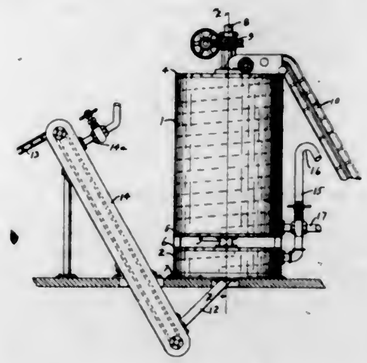
selective means and provided with a device for intermittently connecting said parts to rotate said type forms and effect a printing operation.

1,505,667. THREAD CLEARER. EMIL C. PLOENSE, Bloomington, Ill. Filed Dec. 18, 1923. Serial No. 681,374. 1 Claim. (Cl. 10—1.)



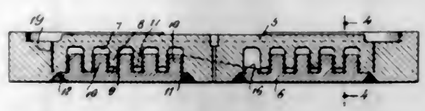
In a thread clearer of the character described, a body provided with a plurality of legs that project from one end thereof, said legs having laterally directed free ends formed to fit and engage within the threads to be cleared, means carried by said body for facilitating application of rotary motion thereto, an adjusting screw threaded axially through the body and having its inner end projecting between the inner ends of the legs, and cam lugs upon the adjacent sides of the inner end portions of said legs engageable by the inner end of said adjusting screw for expanding the legs.

1,505,668. PLOWPOINT. CHARLES R. PRIGEL, Home City, Kans., assignor of one-fourth to Henry Schimmels and one-fourth to W. Roy Lewis, both of Home City, Kans. Filed Aug. 23, 1922. Serial No. 583,801. 1 Claim. (Cl. 97—125).



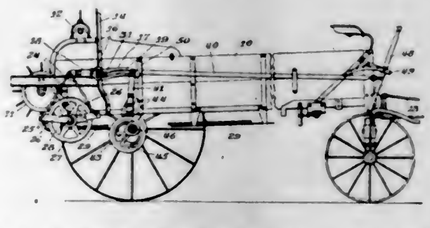
The improvement in plows herein set forth consisting of a share provided with a channel along its lower front edge in its rear side and provided at its point end with a downwardly projecting landside attaching lug having its forward lower edge recessed thereby presenting a transverse shoulder in rear of the lower forward extremity of the said lug, and a cutter having a longitudinally extending rabbet at its upper rear edge in its front side to interlockingly engage with the rabbet at the lower front edge of the share, said rabbet extending across the point of the cutter to define a transverse shoulder on the upper front side thereof to abut the extremity of the point end of the share and having a rearwardly extending tongue projecting from the base of said shoulder to fit within the recess at the lower forward end of the landside lug and having its upper extremity abutting the transverse shoulder at the upper end of said recess, and fastening devices inserted through the rabbeted portions in the share and the cutter and through the said tongue into the recessed portion of the landside lug.

1,505,669. APPARATUS FOR THE PRODUCTION OF OZONE. JOHN ROBERT QUAIN, London, England. Filed Dec. 8, 1919. Serial No. 343,370. 9 Claims. (Cl. 204—32.)



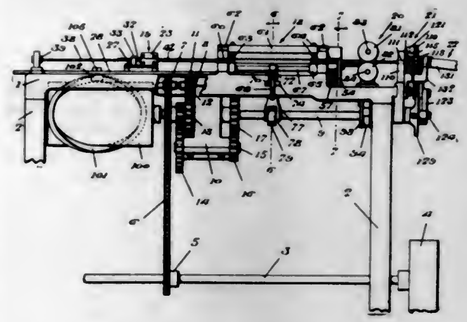
1. Apparatus for the production of ozone by means of high-tension electrical energy comprising spaced-apart electrodes and a dielectric body composed of silica interposed between said electrodes with which at least one of said electrodes is in contact to act directly upon the air to be ozonized.

1,505,670. COOKER. ALBERT REYNOLDS, San Jose, Calif., assignor to Anderson-Barngrover Company, San Jose, Calif., a Corporation of California. Filed Dec. 29, 1919. Serial No. 348,006. Renewed Feb. 14, 1923. 14 Claims. (Cl. 126—272.)



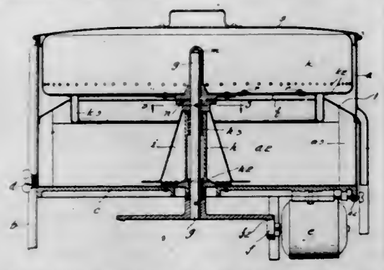
1. A cooker including a vertically positioned cooking chamber, an inclined helical track passing therethrough, a cooling chamber, an inclined helical track passing therethrough and receiving cans from said first mentioned track, enclosed means exterior to the cooling chamber for removing cans discharged from said cooling chamber and means for maintaining a given height of liquid in said chambers and enclosed means to submerge a portion of said track and removing means.

1,505,671. METHOD OF HEATING AND COOLING PLASTIC MATERIAL AND APPARATUS THEREFOR. ANNESLEY DELOS SMITH, Mount Vernon, N. Y. Filed Feb. 20, 1924. Serial No. 694,171. 10 Claims. (Cl. 18—5.3.)



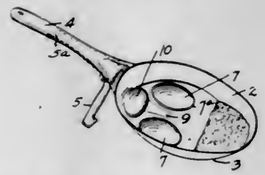
1. The method of uniformly heating and cooling plastic materials in molding under pressure, which comprises introducing the heating and cooling media at the central region of the area to be treated and permitting the media to expand in substantially radial directions therefrom.

1,505,672. RATCHET FEED FOR SPREADERS. ERNEST C. SMITH, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 6, 1921. Serial No. 467,361. 9 Claims. (Cl. 74—54.)



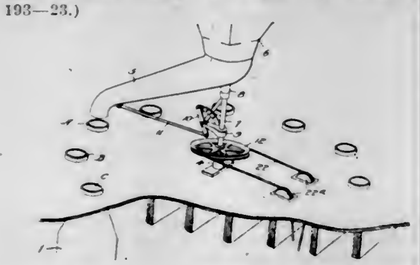
1. In a drive mechanism, a breakable rocker arm, a driving element shiftably connected to said rocker arm, and means actuated by shifting said driving elementfor breaking said rocker arm.

1,505,673. WIRE-TWISTING MACHINE. GARY B. SMITH, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 356,852. 24 Claims. (Cl. 153—64.)



1. A wire twisting machine embodying a set of rolls for gripping twisted wire between them and rotating such wire, a twist-forming device movable toward and away from said rolls, means for moving said device toward said rolls, and means operable with said means for shifting one of said rolls to release the twisted wire between them when said device is moved toward the rolls and then shifting said roll to grip the wire between the rolls.

1,505,674. WASHING MACHINE. CHARLES F. STAPLES, Detroit, Mich. Filed May 26, 1921. Serial No. 472,658. 3 Claims. (Cl. 68—18.)



1. In a washing machine, a vat, a drive shaft extending upwardly through the bottom thereof, a washing element carried by the shaft disposed in the lower portion of the vat, a perforated drying basket disposed in the upper portion of the vat and engaging with the drive shaft above the washing element to be rotated with the shaft, and a drainage collector associated with the vat intermediate the drying basket and washing element to catch the discharge from the basket and prevent it from falling into that portion of the vat occupied by the washing element.

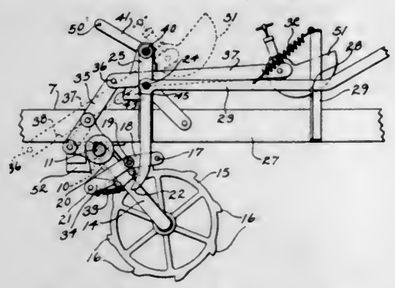
1,505,675. COOKING UTENSIL. CHARLES STERN, San Francisco, Calif. Filed Dec. 7, 1921. Serial No. 520,510. 3 Claims. (Cl. 53—75.)

1. A frying pan having a plurality of substantially separate depressions for separately containing substances of food to be cooked; said depressions being arranged all substantially to one side of a diameter of the bottom of the pan so as to provide a serviceable undepressed cooking area of the bottom of the pan, certain of the depressions having their rims at an elevation above the normal bottom of the pan to prevent inflow of liquids into the depressions.

1,505,676. INDICATING SYSTEM FOR GRAIN ELEVATORS. GEORGE STROHMAIER, Elgin, N. Dak. Filed Mar. 1, 1924. Serial No. 696,373. 2 Claims. (Cl. 193—23.)

1. In a grain elevator having a feeding spout selectively feeding a plurality of bins, means including a handwheel for moving said spout to the selected bin, and means for presenting a specimen of the contents of the bin to an indicator during the movement of said handwheel.

1,505,677. HEMMING DEVICE. EMILIE SULLIVAN, Los Angeles, Calif. Filed May 23, 1921. Serial No. 471,907. 1 Claim. (Cl. 223—54.)

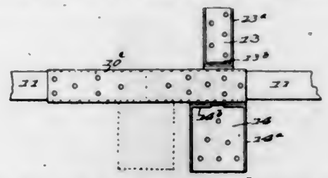


Clamping means for holding a fabric to be hemmed comprising a one-piece stamping of metal adapted to have a central portion cut out and to be folded so that it forms two holding strips integrally and resiliently connected by loops, one of the strips having means for engaging the fabric curved away from the central plane between the two strips.

1,505,678. SCISSORS SHARPENER. FRANK B. SWISHER, New York, N. Y., assignor to Ellis M. Potter, New York, N. Y. Filed Oct. 21, 1922. Serial No. 598,089. 2 Claims. (Cl. 76—82.)

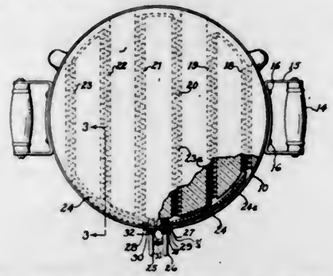
1. In a sharpener of the character described the combination of a cylindrical sharpening rod and a pair of spherical supports on the ends of the rod.

1,505,679. POWER LIFT FOR GROUNDWORKING IMPLEMENTS. HARRY W. THAYER, Los Angeles, Calif., assignor to The Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 16, 1922. Serial No. 536,943. 3 Claims. (Cl. 97—73.)



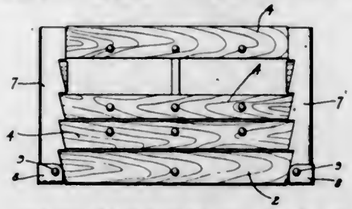
1. In an implement, the combination of a frame, a crank axle supporting the frame, ground wheels journaled on the axle, means to connect the crank at will to one of the wheels to turn the crank, a member to throw the connecting means into operation, means operating when the crank is turned to a predetermined position to throw the connecting means out of operation, means to hold the crank in the predetermined position, and means to release the crank-holding means to permit the crank to be turned in the reverse direction, said means including a shiftably mounted slide, a pivoted lever, and a link pivotally connected to the slide and to the lever.

1,505,680. STRUCTURAL SLEEVE FOR FOUNDATION SILLS. ROBERT WALKER, Dover, N. J. Filed Aug. 29, 1921. Serial No. 496,440. 1 Claim. (Cl. 20—94.)



A steel structural joint comprising a parallelopiped sleeve which is open from end to end, a chair member applied to the side of the sleeve and formed from a sheet of metal having a bottom portion and side flanges which

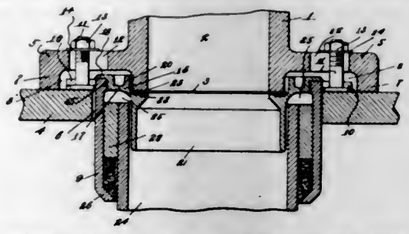
are spaced from each other above the bottom portion, said bottom portion and side flanges being provided with



inturned and overlapping inner end flanges, and securing devices passing through the overlapping flanges and securing the chair member to the sleeve.

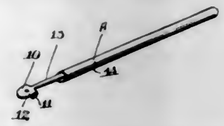
1,505,681. ELECTRIC GRIDDLE. MAURICE L. WARNER, Amherst, Mass. Filed Mar. 1, 1924. Serial No. 696,129. 2 Claims. (Cl. 219—37.)

1. In an electrically heated griddle, a casing, a combined heating and cooking unit in said casing, said unit comprising an integral flat disc having a series of parallel perforations extending therethrough between its top and bottom surfaces, a resistance wire passing through said perforations, and means for connecting said wire with a source of current.



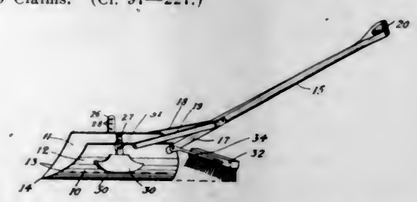
1,505,682. MILK CRATE. CHARLES A. WOOLSEY, Minneapolis, Minn. Filed Oct. 21, 1922. Serial No. 596,081. Renewed Dec. 26, 1923. 7 Claims. (Cl. 217—69.)

1. A container having side and end slats at the bottom, and protecting corner plates, said end slats abutting the side slats at the corners and both slats at the corners having recessed lower edges, metallic bands secured to the lower edges of said lower slats and offset to fit said recesses, said corner plates having ears folded inwardly within said recesses, and a lacing means passing through said ears and said bands, and said slats and securing them together.



1,505,683. OUTLET CONNECTION FOR PLUMBING FIXTURES. DE WITT H. WYATT and WILLIAM C. GROENIGER, Columbus, Ohio, assignors to The Groeniger Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 23, 1920. Serial No. 391,146. 9 Claims. (Cl. 285—34.)

1. An outlet connection for closet bowls, comprising a bowl wherein is embodied an outlet portion which is terminated to lie evenly with the supporting base upon which the bowl is mounted, a collar projecting from said outlet portion and formed to have its lower surface terminated on the same plane as the lower end of the outlet portion, a seating structure for said outlet connection, including a metallic ring concentrically disposed with respect to the major axis of the outlet portion and

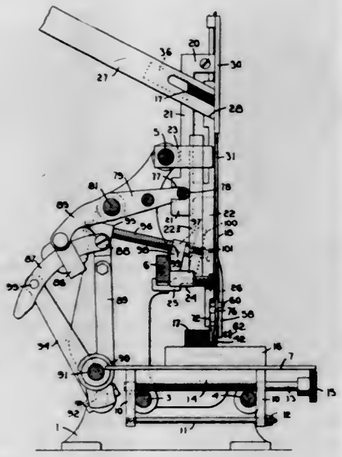


positioned beneath the latter, a supporting head for said ring situated within said collar and disposed for seating co-operation upon the supporting base, a seat formed internally of said ring for the reception of the lower end of the outlet portion, means whereby a connection is established between the supporting head and collar, and an outlet pipe leading from said ring.

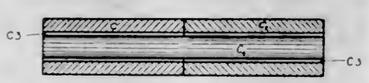
1,505,684. DENTAL INSTRUMENT. FRANCIS ASKEY AINSWORTH, St. John, New Brunswick, Canada. Filed Oct. 13, 1923. Serial No. 668,389. 2 Claims. (Cl. 32—10.)

1. A dental filling holder and compressor to be used in connection with celluloid strip as a facing form, comprising a concave holder, a flange formed integral with the lower end of the holder designed to hold the celluloid around the incisal edge of the tooth, a shank extending from the holder, and a handle detachably engaging the shank.

1,505,685. LAWN TRIMMER. CLARENCE ALLEN, Mason City, Iowa. Filed Apr. 9, 1921. Serial No. 459,884. 9 Claims. (Cl. 97—227.)



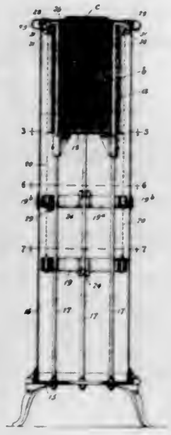
5. A lawn trimmer comprising a cutting member, a handle secured thereto, a support pivotally attached to said cutting member, a brush mounted upon said support, said support being arranged to swing upon its point of pivot as the device is operated to cause the brush to follow along the surface upon which it rests.



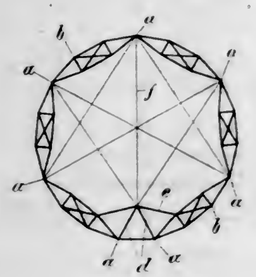
1,505,686. MACHINE FOR AFFIXING AND ASSEMBLING UNITS UPON A BASE. CARL G. ANDERSON, Boston, Mass., assignor to John E. Swanson, Boston, Mass. Filed Apr. 3, 1920. Serial No. 371,157. 13 Claims. (Cl. 1—1.)

1. A machine for affixing a series of abutting units to a base, comprising means for supporting said base, means for delivering a unit to be affixed in proximity to an

affixed unit, driving means and means for forcing the delivered unit against an affixed unit and acting by continued movement to advance said base and to position the delivered unit beneath said driving means and means for actuating said driving means.



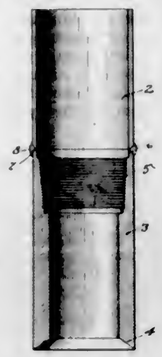
1,505,687. CONTROL MEMBER FOR DIFFERENTIALS. CIPRIANO ANDRADE, Jr., New York, N. Y. Original application filed Mar. 15, 1923, Serial No. 625,333. Divided and this application filed July 27, 1923. Serial No. 654,166. 7 Claims. (Cl. 74—7.)



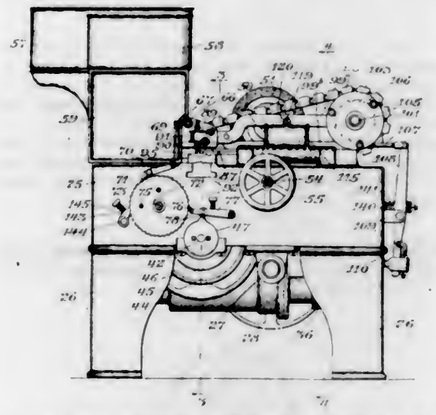
1. In a differential; a first locking roller having a longitudinal open space; a second locking roller having a longitudinal open space; and a third independent element adapted to enter both of said open spaces longitudinally, said independent element having a diameter less than the diameter of one of said longitudinal open spaces.

1,505,688. HOLDER FOR STACKS OF SHEETS. CHARLES ARELT, Brooklyn, N. Y., assignor, by mesne assignments, to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 5, 1922. Serial No. 579,870. 7 Claims. (Cl. 211—29.)

1. The combination of a container, an aperture cover movably mounted thereon, a support within said container for a stack of sheets, mechanism whereby said support is lifted to exert a pressure on said stack from below to cause the topmost napkins to bulge through the aperture of said cover, controlling means arranged to engage said lifting mechanism and lock the same against a lifting movement when the cover is in one position on said container and means on said cover movable therewith to another position on said container to engage said controlling means and adjust the same to an inoperative position to release said lifting mechanism.



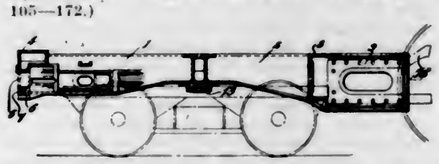
1,505,689. RIGID FRAME FOR AIRSHIPS. KARL ARNSTEIN, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin G. m. b. H., Friedrichshafen, Germany. Filed Sept. 3, 1921. Serial No. 498,487. 5 Claims. (Cl. 244—3.)



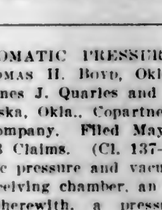
1. Rigid airship structure comprising longitudinal girders and transverse polygonal frames interconnected by said longitudinal girders, groups of more than two adjacent corners of each frame being stayed to form a substantially symmetrical panel truss having its end points in common with adjacent trusses, and diagonal bracing members interconnecting such common end points.

1,505,690. WELL-CASING SHOE. LAWRENCE F. BAASH, Whittier, Calif. Filed Apr. 18, 1922. Serial No. 554,727. 2 Claims. (Cl. 166—9.)

1. A well casing shoe comprising a cylindrical upper section having a cylindrical bore and a beveled edge on one end, and a lower shoe section of higher grade material and which is internally machined and having its upper end beveled; the beveled ends of the sections being abutted and a welded joint connecting the sections.



1,505,691. CHAIN ASSEMBLING AND RIVETING MACHINE. GUSTAF BARKSTROM, Cicero, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 6, 1921. Serial No. 467,498. 29 Claims. (Cl. 59—7.)



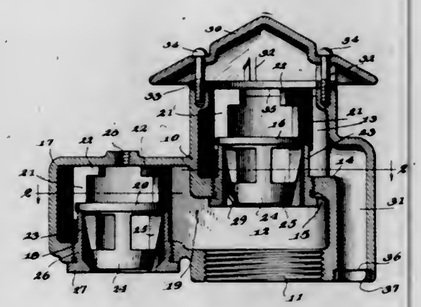
1. In a chain riveting machine, the combination of an abrasive element, a heading tool, means for assembling links and case hardened pins, and conveying mechanism for moving the pins successively past the abrasive element and heading tool whereby one end of the pins will first have the case removed and then be headed.

1,505,692. TENDER FRAME. HARRY R. BARTELL, St. Louis, Mo., assignor to Cast Steel Tender Frame Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 3, 1923. Serial No. 629,674. 6 Claims. (Cl. 105—172.)

3. A tender underframe casting including integrally formed longitudinal sills, end sills, a single intermediate cross member forming a bolster, a drawbar pocket with carry iron supports at one end of the longitudinal sills and below the plane of said bolster, and an extension at the other end of the longitudinal sills below said plane for attachment to a locomotive frame.

1,505,693. BY-PASS VALVE FOR STORAGE-BATTERY VENTS. RAYMOND C. BENNER, Bayside, and HARRY F. FRENCH, Flushing, N. Y., assignors to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Oct. 12, 1922. Serial No. 594,043. 4 Claims. (Cl. 204—29.)

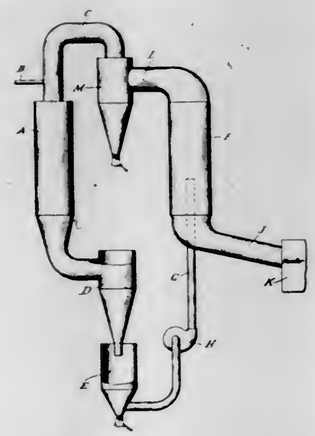
4. An electric battery comprising a casing, a cover therefor having a vent, an absorbent beneath the cover and adapted to fix material entrained by gases passing to the vent, a perforation beneath said absorbent, and means normally closing said perforation but capable of actuation to uncover the same and permit the escape of gases therethrough.



1,505,694. PROCESS OF RUBBERIZING FABRIC. EDMUND W. BENTEL, Akron, Ohio, assignor of three-fifths to Frank T. Lahey and one-fifth to George J. Harter, both of Akron, Ohio. Filed Aug. 19, 1922. Serial No. 582,874. 4 Claims. (Cl. 91—68.)

3. A process of rubberizing fabric, comprising coating fabric on one side with rubber in a plastic condition, and subjecting the coated surface of the fabric to pressure and the uncoated surface to suction to cause the rubber to penetrate the interstices of the fabric.

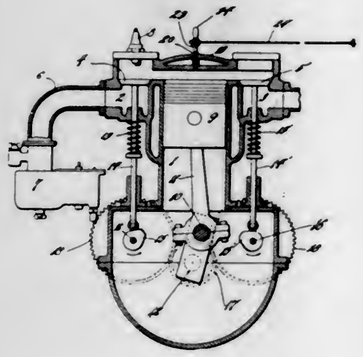
1,505,695. AUTOMATIC PRESSURE AND VACUUM DEVICE. THOMAS H. BOYD, Oklahoma City, Okla., assignor to James J. Quarles and William H. Aaron, both of Pawhuska, Okla., Copartners, trading as Gas-Tite Device Company. Filed May 12, 1923. Serial No. 638,576. 3 Claims. (Cl. 137—53.)



1. An automatic pressure and vacuum device comprising a pressure-receiving chamber, an air intake chamber communicating therewith, a pressure-exhaust-chamber above the receiving chamber open at its upper end, valve means in the intake chamber operable to admit air into

the receiving chamber, valve means in the exhaust chamber operable to permit escape of excess pressure from the receiving chamber, a wire gauze spanning the upper open end of the exhaust chamber, and a dirt-and-moisture

excluding cover having a supporting ring engageable with said chamber for supporting the cover in raised position thereover, said ring also serving as a retainer for the said gauze.

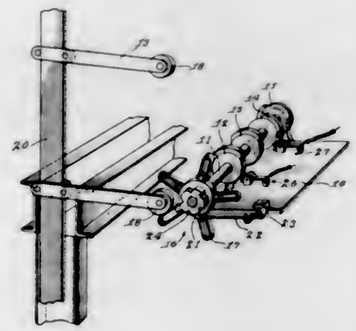


1,505,696. MANUFACTURE OF DEXTRINE. RICHARD G. BRINDLE, Chicago, Ill., assignor to Corn Products Refining Company, a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 353,958. 11 Claims. (Cl. 127—1.)

3. Method of manufacturing dextrine and allied products which consists in spraying an acidified starch liquor in a drying atmosphere, separating the substantially dried acidified starch from the bulk of the drying gas and vapor then suspending the separated acidified starch particles in a gas and causing them while thus suspended to pass through a zone of temperature sufficient to produce dextrinization.

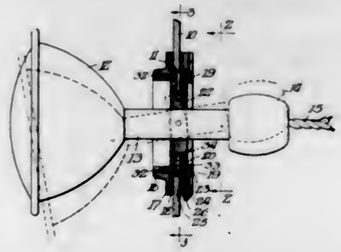
1,505,697. CHARGE-FORMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. BENJAMIN L. CAMPBELL, St. Louis, Mo., assignor of one-half to Frank G. O'Haver, Webster Groves, Mo. Filed Oct. 7, 1921. Serial No. 506,155. 4 Claims. (Cl. 123—75.)

1. A four cycle internal combustion engine provided with a cylinder, a piston in said cylinder, said cylinder having a main inlet port for the admission of the combustible charge, a main inlet valve adapted to open and close said main inlet port, an exhaust port, a valve adapted to open and close said exhaust port, an auxiliary air inlet port being formed through a portion of the cylinder to provide for the admission of air to the interior of the cylinder, an auxiliary air valve adapted to close said air inlet, valve operating means whereby said main inlet valve is held in a closed position during the beginning of the suction stroke of the piston so as to create a partial vacuum in the cylinder, said auxiliary



air valve being adapted to be actuated to permit the passage of air through said auxiliary port during the beginning only of the suction stroke of the piston and while said intake and exhaust valves are closed, and means whereby said auxiliary air valve is closed in response to the opening movement of the main inlet valve, the last mentioned means being yieldable to permit opening of the auxiliary air valve in response to said partial vacuum.

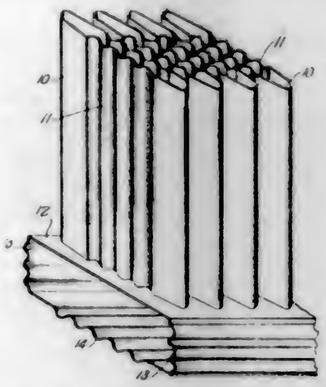
1,505,698. VANITY CASE. OSWALD J. CATHCART, Newburgh, N. Y. Filed Oct. 2, 1922. Serial No. 591,712. 4 Claims. (Cl. 132—83.)



1. A vanity case comprising a main body member and a main cover member therefor, a rouge compartment of smaller diameter than said main members, located within the said main members, and having its mouth within the space between said main members, one of said main members being provided with a powder compartment within the same but exterior to the rouge compartment, a puff in said rouge compartment, a separate cover for the rouge compartment of smaller diameter than the main cover member, located in the space between the main members, a puff for the powder compartment of larger area than the rouge puff, located in the space between the main members, and a mirror carried by the main cover member within the same.

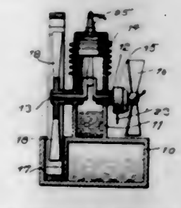
1,505,699. ELEVATOR CONTROL. JOHN F. CLANCY and ADOLPH A. GAZDA, Chicago, Ill., assignors to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,492. 8 Claims. (Cl. 187—35.)

5. In a device of the class described, a head, a plurality of radially projecting arms carried by said head, and a plurality of pivoted rollers mounted in a spaced series adapted successively to engage said radially projecting arms and rotate said head in both directions selectively.



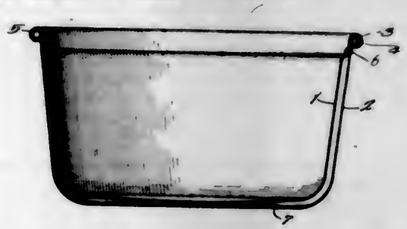
1,505,700. MOUNTING FOR SPOTLIGHTS. THOMAS C. COOPER, Chicago, Ill. Filed Oct. 28, 1922. Serial No. 597,466. 2 Claims. (Cl. 240—61.)

1. A mounting for a motor vehicle spotlight comprising a collar, and inner and outer rings within said collar, diametrically opposite pivot pins fixed to said collar and engaging said outer ring, diametrically opposite pivot pins fixed to said inner ring and engaging said outer ring, said first pins extending at right angles to the second, grooves in said outer ring extending from its outer periphery inwardly in the vicinity of each of said pins, and means associated with the walls of said grooves for regulating the frictional engagement between said pins and said outer ring.



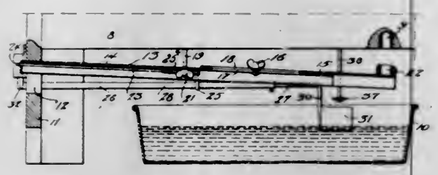
1,505,701. RADIATOR CONSTRUCTION. ABRAHAM B. COX, Cherry Valley, N. Y. Filed June 26, 1920. Serial No. 391,901. 6 Claims. (Cl. 257—130.)

1. The herein described construction of radiators and the like, comprising headers with corrugated walls spaced apart, and a series of separate independent tubes connecting the headers, the tubes having generally flat-



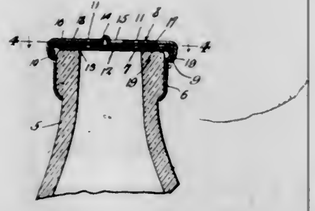
tened sides and being arranged with their flattened sides adjacent.

1,505,702. PORTABLE LIGHTING PLANT. ALVIS L. CURTIS, Wauneta, Nebr. Filed Feb. 5, 1921. Serial No. 442,879. Renewed Jan. 22, 1924. Serial No. 581,846. 2 Claims. (Cl. 290—1.)



1. In a device of the type described, a hollow base, an engine base extending upwardly from and formed integrally with the hollow base, an engine supported upon said engine base and embodying a crank shaft, the ends of the crank shaft projecting beyond the bearings of the engine base, a segmental recess formed in said hollow base beneath one end of said crank shaft, a coil ring secured within said recess and radially extending magnets secured to said shaft and rotating within said coil ring.

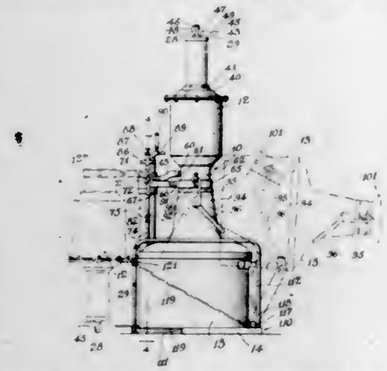
1,505,703. HEATING UTENSIL. ALEXANDER WARD DARLEY, Laramie, Wyo. Filed Mar. 22, 1923. Serial No. 626,865. 3 Claims. (Cl. 53—8.)



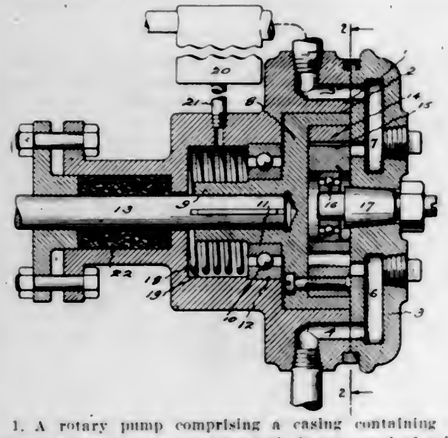
1. A heating vessel including two portions having a space therebetween sealed fluid tight, and a heat transmitting gas in said space, said portions being arranged to contact over a certain area, when cold, and to separate at their place of contact when the vessel is heated.

1,505,704. DRIP-WATER INDICATOR AND CUT-OFF DEVICE. JOHN VINCENT DE WALD, Philadelphia, Pa. Filed Aug. 10, 1920. Serial No. 402,571. 10 Claims. (Cl. 137—6.)

5. The combination with a refrigerator having a water drain pipe and a removable receptacle under said drain pipe, of a pivotally mounted lever having a portion movable into closing engagement with said drain pipe; a float for engagement with the drain water in said receptacle; means operatively connected to said float and adapted to swing said lever into a position to close said drain pipe; and means for registration with a part of said latter connected means and located outside of said refrigerator whereby the amount of water within said receptacle can be ascertained; substantially as described.



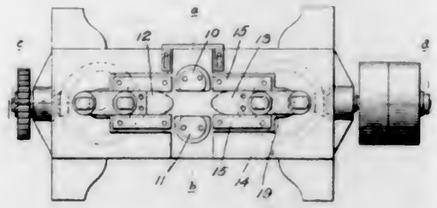
1,505,705. SHAKER-BOTTLE CLOSURE. JOHN L. DUNNOCK, Baltimore, Md. Filed Mar. 6, 1923. Serial No. 623,083. 2 Claims. (Cl. 221—62.)



2. The combination with a container, of a closure cap fitted over the mouth thereof and having discharge perforations, a cover cap fitted over the closure cap and provided with discharge perforations registering with the perforations of the latter, a movable valve plate mounted between the caps and completely enclosed by the cover cap, said valve plate having perforations adapted to be brought into and out of registry with the perforations of the caps, the top of the closure cap having a pair of indentations, and the valve plate having a lug adapted to enter one of said indentations when the perforations are in registry, and the other indentation when the perforations are out of registry, the top of the closure cap also having a guide indentation and the valve plate having a lug seating in said indentation, and a finger piece on the valve plate for operating the same, the top of the cover cap having a slot through which the finger piece protrudes.

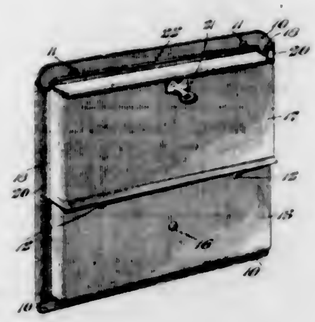
1,505,706. MULTIPLE-UNIT GAS-GENERATING SYSTEM. WILLIAM W. HARRIS, Newport, N. J. Filed Feb. 11, 1922. Serial No. 535,842. 11 Claims. (Cl. 48—38.)

1. In an acetylene supply system, the combination of a plurality of generating units, each of said units including carbid feeding means automatically responsive to changes in the pressure of the gas accumulated within said units and means for adjusting said carbid feeding passage means respectively, a common service outlet means for pivotally mounting said carbid feeding means respectively to said common service outlet, means for interconnecting said units with said common service outlet and means coacting with said adjusting means respectively for locking the respective carbid feeding means in closed position.



1,505,707. ROTARY PUMP. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1923. Serial No. 670,453. 18 Claims. (Cl. 230—30.)

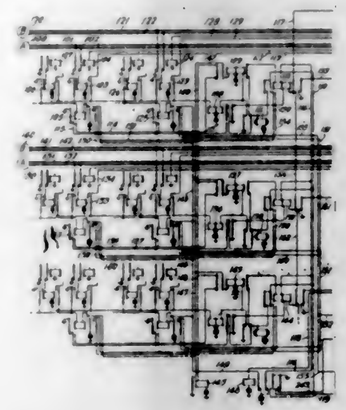
1. A rotary pump comprising a casing containing a pumping chamber, a ported head closing one end of said chamber, said head having an intake to and discharge from the chamber, a rotor having one side closed and the other side open, rotatable in and having an axial movement in said chamber so the open side will bear against the inner face of the head, means located in and actuated by the rotor for pumping fluid, a spring for initially forcing the rotor and pumping means axially toward the head, and means for conducting pressure accumulated by the pump to the back of the rotor for supplementing the tension of said spring and forcing the rotor against the head according to the accumulated pressure.



1,505,708. MACHINE FOR MAKING WIRE REELS. JOHN A. HOLMQUIST, Woodlawn, Pa. Original application filed Dec. 30, 1922, Serial No. 609,842. Patent No. 1,501,343. Divided and this application filed Oct. 29, 1923. Serial No. 671,411. 3 Claims. (Cl. 140—71.)

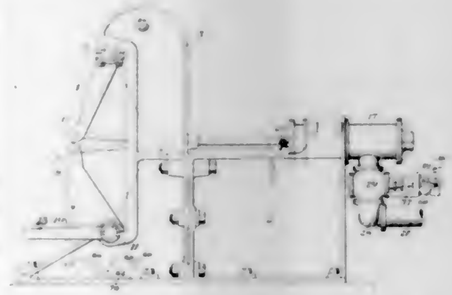
1. In a machine for forming reels out of wire, a machine unit consisting of four blocks, two standing opposite one another in stationary positions and adapted to bring to position an endless hoop of wire applied to them, and two being oppositely reciprocatory between

the stationary blocks in parallel planes angled with respect to the plane of a loop resting on the stationary blocks, thereby shaping an applied loop to three-eyed formation.



1,505,709. COVER FOR RADIATORS. FRANK C. HUEBER, Philadelphia, Pa. Filed Feb. 5, 1923. Serial No. 616,939. 1 Claim. (Cl. 257—132.)

In a device of the character stated, a frame arranged to be rigidly secured to the front of an automobile radiator and having an opening substantially the size of the radiator opening, fastening means for said frame directly engaging the front of said radiator, a closure fixed to said frame and closing a portion of said opening, said closure being shaped to form an inner receptacle, an insulating material secured in said receptacle and abutting said radiator, a movable cover arranged to close the remaining portion of said opening, said cover being shaped to telescope with said closure to uncover a portion of said opening, and means for supporting said cover in closed position.

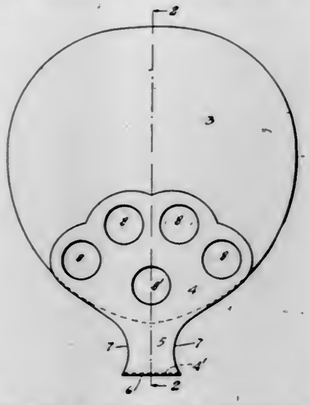


1,505,710. TELEPHONE SYSTEM. FRANK S. IRVINE, Huntington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 27, 1921. Serial No. 480,552. 12 Claims. (Cl. 179—18.)

1. In a telephone system, a number of groups of lines, one of said groups including a first line and a second line and another of said groups including a third line, a plurality of automatic switches serving said lines, means responsive to the initiation of a call on any of said lines for operating one of said switches to extend such line, means operative when a switch is being taken for use to extend said first line for rendering said second line ineffective to operate a switch provided a call exists on said third line, and means for

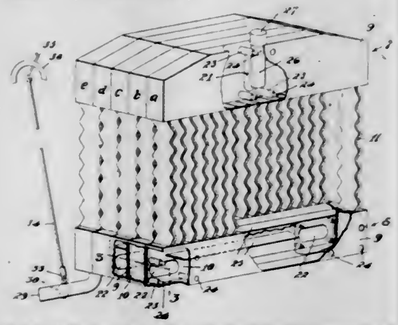
rendering said second line effective to cause the operation of a switch as soon as the switch taken for use by said third line commences to operate.

1,505,711. FLYING SHEARS. LANE JOHNSON, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1923. Serial No. 666,925. 16 Claims. (Cl. 164—49.)



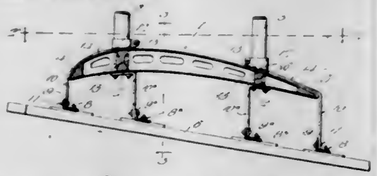
1. In a shear, a pair of pivotally mounted knife levers, cooperating knives carried by said levers, means for swinging said levers about their pivotal axes to effect reciprocation of said knives in the direction of travel of the material and in the opposite direction, and means for simultaneously producing a relative movement of said axes towards and from each other transversely of the path of travel of the material to effect first a shearing of the material and then a sufficient separation of the knives to avoid interference between the same and the material during the rearward movement of the knives, substantially as described.

1,505,712. FAN. EZRA KAPLAN, Chicago, Ill. Filed Aug. 29, 1923. Serial No. 659,928. 2 Claims. (Cl. 230—33.)



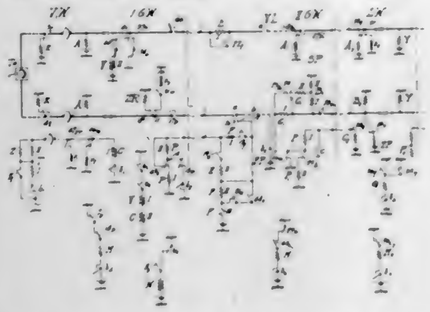
1. A fan member made of a thin sheet of material reinforced at one edge by another sheet of material folded upon itself to embrace the opposite sides of one edge of said fan sheet, the folded edge of said re-inforcing sheet being extended beyond said fan sheet and formed into a

handle portion, the inner portions of said re-inforcing sheet being extended well onto the body of said fan



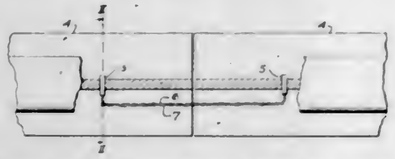
sheet, there being a plurality of perforations extending through the inner portions of said re-inforcing sheets, substantially as described.

1,505,713. RADIATOR. GEORGE A. KILEY, Los Angeles, Calif. Filed June 25, 1919. Serial No. 306,615. 1 Claim. (Cl. 257—130.)



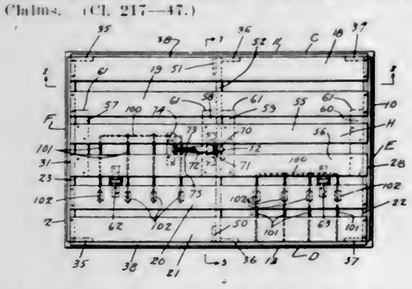
In a radiator, a series of detachably connected units each of which embodies a pair of spaced superposed chambers and a series of zig-zag flexible tubes connecting said chambers, the adjacent zig-zag tubes on a unit being parallel to each other with the series of tubes on one unit arranged with their inclined portions extending diagonally to the inclined portions of the tubes on the adjacent unit, the adjacent upper chambers being in communication intermediate their ends and the adjacent lower chambers being in communication adjacent to one of their ends.

1,505,714. ADVERTISING SIGN. PETER LA GRASSA, New York, N. Y., assignor to Night Aero Advertising Corporation, New York, N. Y., a Corporation of New Jersey. Filed Mar. 11, 1924. Serial No. 698,515. 11 Claims. (Cl. 40—127.)



1. The combination with an aircraft having a transverse supporting plane, and struts rising therefrom, of means for supporting a sign under said plane, including hangers secured to said struts.

1,505,715. TELEPHONE SYSTEM. MAX LANGER, Hermsdorf, near Berlin, Germany, assignor to Automatic Electric Company, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,385. 8 Claims. (Cl. 179—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

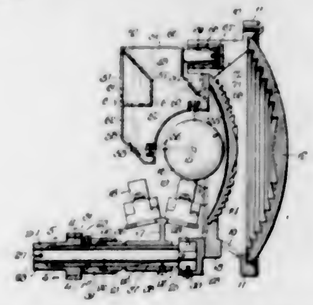


1. In a telephone system, means including a train of automatic progressively movable switches for connecting a calling and a called line, means in the final switch for connecting a source of current to one of the talking conductors when the conversation is over with, said means being responsive only to the replacement of the receiver on the called line, a measured service device for the calling line, a controlling relay for said device, and means responsive only to the replacement of the receiver on the calling line for connecting said controlling relay to said talking conductor to render such relay responsive to said current source.

1,505,716. RAIL BOND. FREDERICK C. LAVARACK, Montclair, N. J. Filed Apr. 4, 1922. Serial No. 549,437. 1 Claim. (Cl. 173—283.)

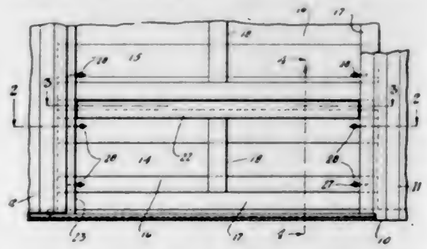
A bond for the abutting ends of two rails, each provided with an orifice, comprising channel pins, fitting within said orifices, and having diametrically opposite grooves, a pair of bonding wires having their ends seated in said grooves and twisted together throughout the remainder of their length to form a rigid reinforced bonding member, the twisted portions adjacent the ends causing the separated end portions to draw toward each other into the bottom of the grooves.

1,505,717. CRATE. JOHN A. LENNARTSON, St. Paul, Minn. Filed Sept. 29, 1921. Serial No. 504,054. 14 Claims. (Cl. 217—47.)



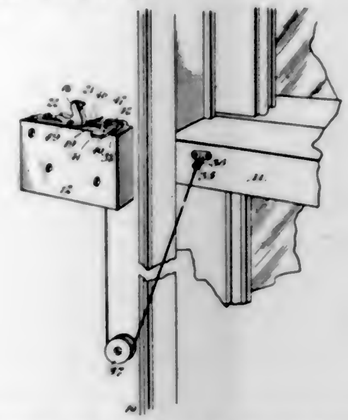
1. A collapsible crate comprising a top, a base, end walls hingedly connected to said top, side walls hingedly connected to said top, all of said walls being adapted to be folded beneath said top and positioned between said top and base when the crate is in collapsible position and means for connecting some of said walls to said base.

1,505,718. PRODUCTION OF ARSENATES FROM SPEISS. CLARENCE P. LINVILLE, Elizabeth, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1921. Serial No. 462,383. 6 Claims. (Cl. 75—18.)



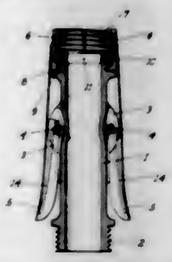
1. In the art of treating nickel speiss, the process which consists in air roasting the speiss in the presence of sodium carbonate supplied in an amount in excess of the amount necessary to convert the arsenic present into an arsenate, and dissolving the roast with water to obtain a solution of tri-sodium arsenate and to obtain the other metals in a residue substantially free of arsenic.

1,505,719. ADJUSTABLE ELECTRIC LAMP SUPPORT. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, a Corporation of Illinois. Original application filed Apr. 28, 1921, Serial No. 465,143. Divided and this application filed Jan. 16, 1922. Serial No. 529,434. 7 Claims. (Cl. 240—44.)



1. In a device for adjusting the position of a lamp, a rotatable shaft; two like eccentrics one on each end thereof; a tube rotatable on said shaft; a lamp bracket carried by the tube; means to move the tube and lamp bracket axially of the axis of the tube; means to lock the tube and shaft together to prevent relative rotation; and means to lock the shaft and tube to a fixed part of the structure.

1,505,720. FREIGHT CAR. JAMES T. MCNALLY, Chicago, Ill. Filed Dec. 30, 1922. Serial No. 609,898. 5 Claims. (Cl. 20—30.)

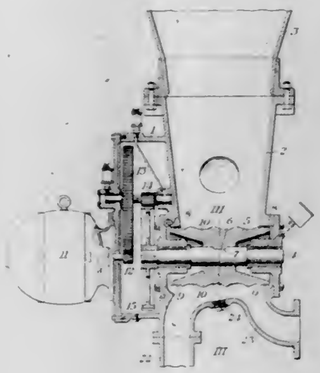


1. A structure of the class described including a closure member having its side edge portions abutting the inner faces of the jambs of a door opening, eyelets carried by the closure member and extending in a plane parallel with the adjacent side thereof, and fastening members having open hook shaped end portions for hooked engagement with the eyelets and provided with acute angled extended portions adapted to be driven into the jambs of the door opening.

1,505,721. BURGLAR ALARM. JOHN MANUEL, Buffalo, N. Y. Filed Dec. 23, 1921. Serial No. 524,362. 1 Claim. (Cl. 116—87.)

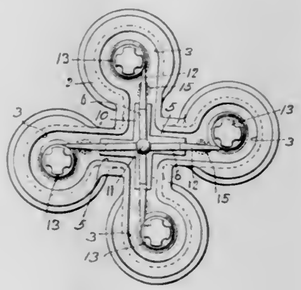
A burglar alarm adapted to be interposed between two relatively movable members of a building comprising a casing adapted to be mounted on one of said window members, a barrel arranged on said casing and having a seat adapted to receive a cartridge, a hammer pivoted on the casing and having a firing pit adapted to strike the cartridge, a spring adapted to move the hammer forwardly, a sear adapted to hold said hammer in its retracted or cocked position and provided with a trigger, a bracket mounted on the casing, a guide rod passing through said bracket and trigger and having a collar or abutment engaging said bracket, a spring surrounding said guide rod and interposed between said abutment and trigger, and a connection between said trigger and the other window member.

1,505,722. HOSE COUPLING. JOHN A. MERZ, Stockton, Calif. Filed Jan. 2, 1923. Serial No. 610,164. 1 Claim. (Cl. 285—150.)



A coupling comprising the combination of a tubular body member, pivoted jaw member arranged to close around and beyond the end of the tubular body member to engage a fluid outlet, the tubular body having longitudinal slots cut in its end to receive gasket retaining elements and maintain them clear of the jaws as the latter move to closed position.

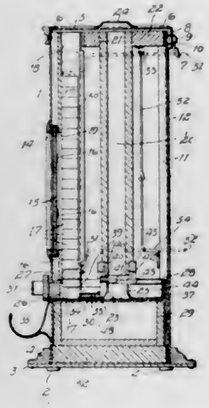
1,505,723. ROTARY FEED MEMBER. HENRY MUELLER, Pittsburgh, Pa., assignor to United Engineering & Foundry Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Jan. 26, 1923, Serial No. 614,561. Divided and this application filed Mar. 18, 1924. Serial No. 700,125. 5 Claims. (Cl. 83—44.)



1. In apparatus for feeding pulverized fuel, a rotatable feeding member, means for supplying fuel to said member, and bearings for the end portions of said members.

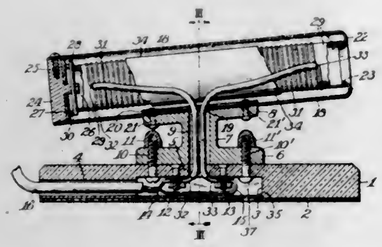
said bearings engaging said end portions throughout a portion only of the peripheral surfaces of the latter, said end portions each being formed with a circumferential groove therein, said grooves being adapted to receive pul

verized fuel working in between the end portions of the member and the bearings and to discharge such fuel at the discharge side of the member, substantially as described.



1,505,724. METHOD OF MOLDING. WILLIAM H. NICHOLS, Wilkinsburg, Pa. Filed Nov. 1, 1922. Serial No. 598,360. 7 Claims. (Cl. 22—199.)

1. The method of making a mold that comprises placing a pattern in a flask, laying a separate elongated pattern member upon said first-named pattern, filling said flask with sand, inverting said flask, removing said first-named pattern, and withdrawing said elongated pattern member by first moving said elongated pattern member lengthwise horizontally, and then lifting said member through the space left by said first-named pattern.

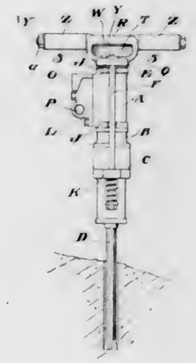


1,505,725. VENDING MACHINE. NICHOLAS OBRADOVITS, St. Louis, Mo. Filed Mar. 16, 1922. Serial No. 544,067. 2 Claims. (Cl. 194—58.)

1. In a vending-machine, the combination of a casing; a vertical package-chute and a vertical coin chute mounted parallel in said casing; a coin-receptacle in the lower portion of the casing; a delivery-slide having a coin-pocket and mounted beneath the lower ends of said package and coin chutes; a flexible lock-bar extending transversely of said delivery-slide and normally locking same and preventing its delivery-movement until said lock-bar is fixed upwardly by a coin that is located in said coin-pocket; and a horizontal coin-supporting bar carried by

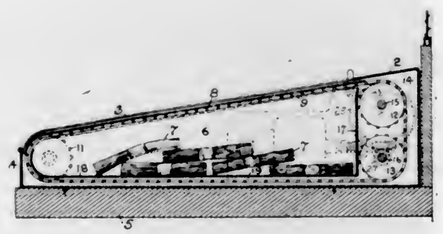
said delivery-slide in the rear of said coin-pocket, to support the additional coins in said coin-chute when said delivery-slide is pulled out to make a delivery.

1,505,726. ELECTRICAL CURLING-IRON HEATER. AUGUST HENRY OPPERMAN, Indianapolis, Ind. Filed Sept. 16, 1922. Serial No. 588,546. 6 Claims. (Cl. 219—24.)



1. An electrical heater including a casing having a curved head on one end thereof and an annular collar extending from the head, a head removably secured in the opposite end of the casing, a hollow core having one end elastically embracing the collar and seated on a portion of the curved head, the opposite end of the core being flared and elastically supported on the removable head, and a heater coil on the core.

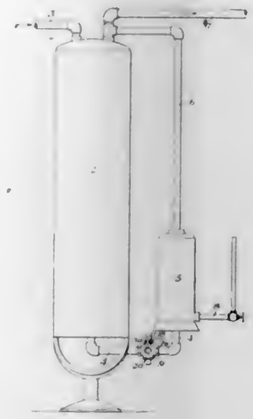
1,505,727. HANDLE FOR PERCUSSIVE TOOLS. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 13, 1921. Serial No. 477,189. 1 Claim. (Cl. 121—36.)



A handle for percussive tools, comprising in combination a cylinder, a back head and a hollow grip integral with said back head, said grip being completely closed at both ends and at one side by solid walls, the opposite side being open for the insertion of the fingers of an operator, and a strengthening rib extending longitudinally along the inside of the crown of the grip from end to

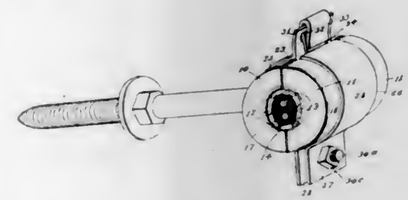
end, said grip being adapted to prevent the insertion of a turning implement through the handle from side to side, a removable handle bar extending longitudinally

through the grip, a portion of said handle bar lying beside the said rib within the grip and providing a convenient hand hold for the operator.



1,505,728. APPARATUS FOR PREVENTING THEFT. MATHEW RAYFORD, Philadelphia, Pa. Filed July 13, 1923. Serial No. 651,214. 8 Claims. (Cl. 109—1.)

1. In a protective device of the character stated, the combination of a cabinet in which the money or valuables may be placed, a movable closure for said cabinet, an electric motor and connecting means for moving the closure from open to closed position, a source of electric energy, circuits leading from the source of energy to the motor, a manually controlled switch in the circuit for putting the motor into operation, and means for arresting the movement of the closure when it has been brought to its closed position.

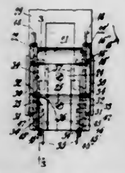


1,505,729. WATER-HEATING APPARATUS. FREDERICK W. ROBERTSHAW, Pittsburgh, Pa. Filed Nov. 23, 1921. Serial No. 517,223. 14 Claims. (Cl. 126—362.)

13. In water treating apparatus, a tank, a heater, circulating connections therebetween, and a three-way valve in one of said connections, said valve having a constantly open relief opening formed therein and extending

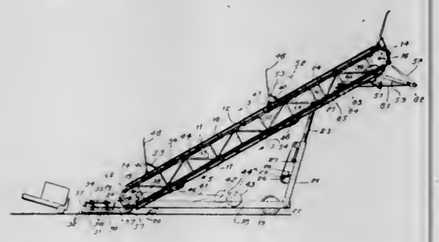
therethrough, said opening permitting a flow from the tank to the heater in the normal direction irrespective of the position of the valve, substantially as described.

1,505,730. INSULATOR AND SUPPORT THEREFOR. HERBERT O. ROCKWELL, New Britain, Conn., assignor to Brady Electric & Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 3, 1922. Serial No. 549,347. 6 Claims. (Cl. (173—314.)



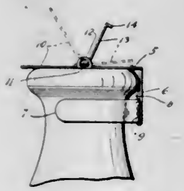
1. A self-draining and ventilating insulator for holding an insulated wire or cable, comprising in combination, a pair of interfitting complementary sections adapted to enclose said wire or cable, each of said sections being provided with a plurality of wire engaging longitudinal ribs on its inner surface to grip the insulated wire or cable and adapted to permit drainage and ventilation thereof, said sections being adapted to be held together by a clamp.

1,505,731. CLOTH FOLDER FOR SEWING MACHINES. RALPH M. SHARAF, New York, N. Y., assignor to R. M. Sharaf Machine Co., Boston, Mass., a Corporation of Massachusetts. Filed May 9, 1918. Serial No. 233,471. 4 Claims. (Cl. 112—123.)



1. In a two-needle zig-zag sewing machine a presser foot having laterally elongated openings through which the needles are adapted to reciprocate, first at one end of such openings and then at the other, and provided with folders located close to said openings at the forward side thereof, said folders having operating ends which project downwardly from the presser foot and have outer faces oblique relatively to the line of feed, the oblique

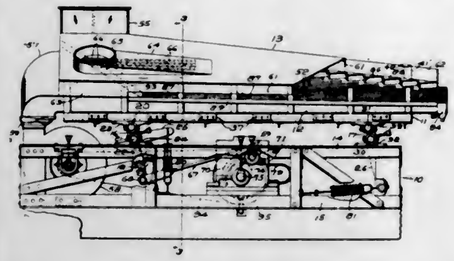
faces of the two folders converging forwardly, and the rear ends of said surfaces being substantially in longitudinal alignment with the inner positions of the re-



spective needles, and cutting devices located forwardly of said folders, and having their lines of action between the lines of action of the folders.

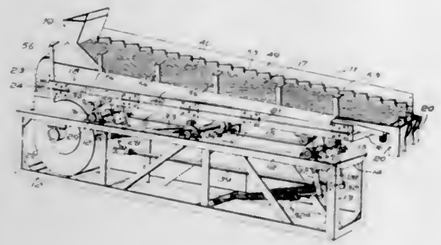
1,505,732. CONVEYER. FRED L. SIMON, Baltimore, Md. Filed July 24, 1923. Serial No. 653,588. 12 Claims. (Cl. 198—157.)

10. In a conveyer, the combination with means for supporting articles at a slight distance from a floor, a boom, and a conveying element on said boom, of carrying fingers pivotally mounted on said element, means for introducing said fingers endwise between said floor and article, means for moving said fingers bodily with said element in order to transport said article, means for moving said fingers into position to be introduced between said floor and article, means for locking said fingers in said position and means for unlocking said fingers.



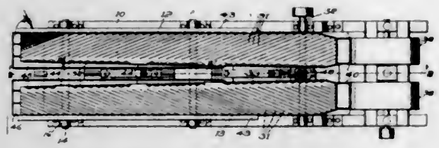
1,505,733. BOTTLE CLOSURE. JOHN F. SLAPKA, Chicago, Ill. Filed June 14, 1923. Serial No. 645,439. 6 Claims. (Cl. 215—63.)

1. A bottle closure comprising a cover plate to rest on top of the bottle mouth; a spring clamp below said plate to embrace the bottle neck below a bead thereon, said clamp and plate converging toward each other; and a swinging lid on said cover plate, substantially as described.



1,505,734. TABLE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 12, 1922. Serial No. 551,935. 12 Claims. (Cl. 83—54.)

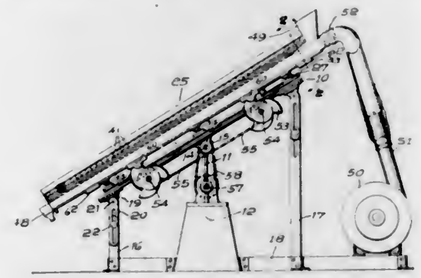
3. A concentrator, comprising a deck having spaced transversely extending channel bars adapted to support the material supporting surface of the deck, a composite deck surface upon said bars and formed of a multiplicity of apertured surface channels trough-shaped in cross-section and secured side by side upon the channel bars to form a material supporting deck surface which will remain free from local vibrations during the operation of the



deck, and spaced partitions, extending longitudinally of the deck below the channel bars to support these bars and adapted to form longitudinally extending air chambers below the deck surface.

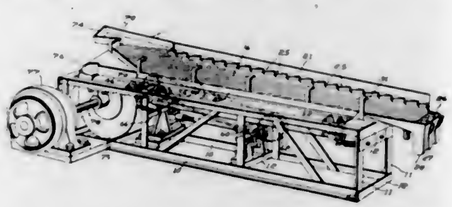
1,505,735. TABLE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 12, 1922. Serial No. 551,936. 15 Claims. (Cl. 83—54.)

1. A concentrator comprising, in combination, a deck supported at a transverse inclination and having a deck surface constructed to form a series of waves extending in a transversely inclined direction across the deck, riffles extending over the wavy surface of the deck across the waves and in an inclined direction from one side of the deck to the other, means for delivering the materials to be treated to the deck surface, and means for moving the deck to impart movement to the materials along the inclined riffles so that they will be directed by the riffles over the waves and toward the upper side of the deck.



1,505,736. TABLE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed May 2, 1922. Serial No. 557,947. 13 Claims. (Cl. 83—88.)

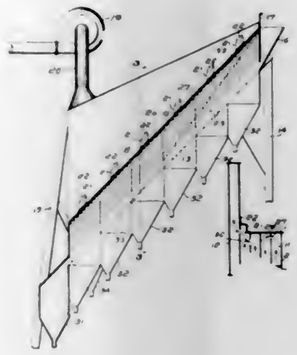
1. A concentrator table comprising in combination, a supporting frame, a pair of separate long narrow decks independently mounted upon said frame in spaced substantially parallel relation, means for supporting the decks at a transverse inclination, each deck having a stepped concentrate wall extending along its upper side and riffles extending diagonally across the deck to direct the heavier materials against the concentrate wall for retreatment, and means for vibrating the deck to promote



travel of materials lengthwise of the deck, the supporting frame and decks constituting a concentrator table having the capacity of a concentrator table provided with a single wide deck while affording substantially twice the number of riffles for directing materials against concentrate walls as a single deck.

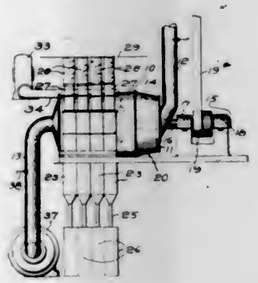
1,505,737. TABLE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed May 19, 1922. Serial No. 562,124. 13 Claims. (Cl. 83—54.)

1. A concentrator table comprising in combination, a deck frame supported at a longitudinal inclination, a pair of decks supported by the frame at a longitudinal inclination to promote travel of materials lengthwise of the decks, means for supporting the decks for movement transversely upon the frame to bump against each other to move the materials laterally, and riffles for directing the heavier materials diagonally across the decks.



1,505,738. TABLE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed May 25, 1922. Serial No. 563,564. 16 Claims. (Cl. 83—54.)

14. A deck for a concentrator table having a composite deck surface formed of a multiplicity of individual trough-shaped surface-channels each consisting of a perforated bottom and spaced upstanding sides, said surface-channels being secured side by side so that their bottoms form the composite deck surface and the abutting upstanding sides form riffles that are integral with the perforated deck surface, a concentrate wall at one side of the deck and against which the materials are directed by the riffles, and the surface-channels being bent at intervals along their length with zigzag effect to produce zigzag riffles which cause the materials traveling along the riffles to pile up at the bends in the riffles.

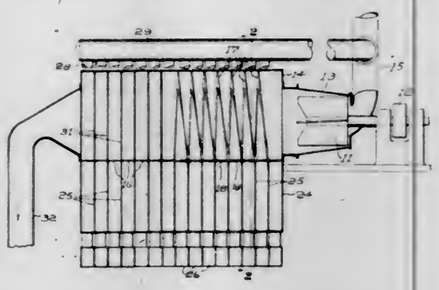


1,505,739. PNEUMATIC SIZER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 8, 1922. Serial No. 550,872. 11 Claims. (Cl. 83—54.)

1. A pneumatic sizer comprising in combination, an apertured surface arranged to have materials passed thereover, a casing having a separating chamber extending upwardly from the surface, means for delivering materials to be separated to the surface, means for producing air currents passing upwardly through the apertures of the surface into the chamber, averaging partitions arranged within said chamber transversely of the surface and extending downwardly toward the surface to direct

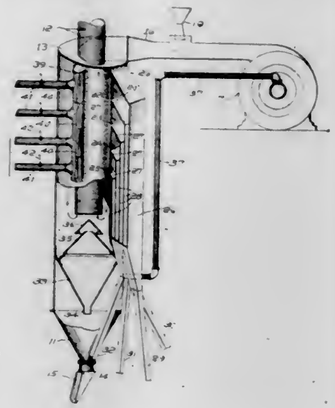
the air entering the apertures upwardly between the adjacent partitions, and collecting chamber communication with the separating chamber.

1,505,740. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 11, 1922. Serial No. 551,595. 5 Claims. (Cl. 83—54.)



1. A concentrator comprising, in combination, a drum having a discharge slot extending longitudinally of a wall thereof, means for delivering air carrying the materials to be treated into the drum to travel lengthwise thereof with a whirling movement that the heavier particles may be thrown outwardly by centrifugal force toward the walls of the drum and pass outwardly through the slot, receptacles arranged along said slot to receive the materials discharged through different portions thereof, and means for discharging from the receptacles the air that enters said slots, comprising upwardly extending conduits provided with porous covers for arresting the particles within the air.

1,505,741. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed June 30, 1922. Serial No. 572,046. 7 Claims. (Cl. 83—54.)



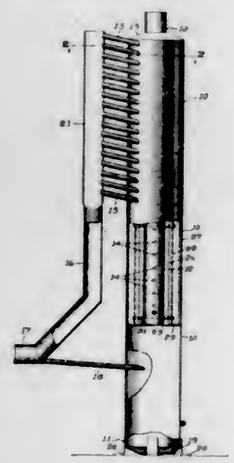
1. A concentrator comprising in combination, a substantially cylindrical casing having a relatively wide discharge slot extending longitudinally of a side wall thereof, a fan at one end of said casing for forcing air bearing the materials to be treated centrally through the casing with a longitudinal whirling movement that

throws the heavier particles outwardly by centrifugal force through said slot, and an air nozzle for directing

jet of air inwardly through said slot and in a direction to deflect the lighter materials approaching the slot inwardly away from the slot.

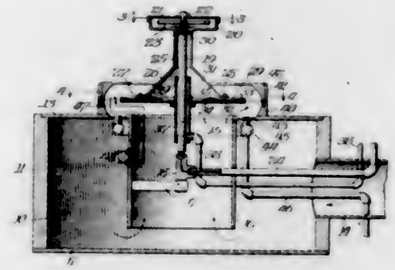
1,505,742. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 11, 1922. Serial No. 551,596. 16 Claims. (Cl. 83—54.)

1. A concentrator comprising, in combination, an upright drum having a material discharge slot extending a substantial distance lengthwise of a side wall thereof, a tube mounted centrally within the drum and extending through an end thereof for conducting from the drum air from which the heavier particles have been removed, means for delivering air bearing the materials to be treated into the drum at an end thereof with a whirling movement around said tube and lengthwise of the drum to throw outwardly by centrifugal force the heavier particles so that they will travel around the drum adjacent the wall thereof and escape from the drum through said slot in the direction in which the particles are whirling, a lip at said slot and extending in a direction to direct the whirling materials through the slot, and means for forcing an additional supply of air into the drum through a side wall thereof and in the form of a jet to deflect from said slot the lighter materials that may approach the slot.



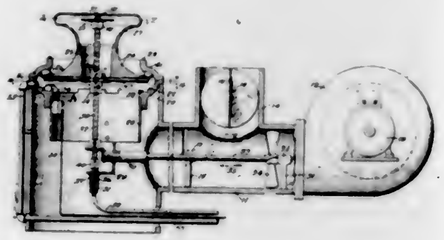
1,505,743. SEPARATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,975. 8 Claims. (Cl. 183—79.)

1. A separator for removing liquid from a gaseous fluid, comprising in combination, a drum having an annular chamber therein, means for passing the gaseous fluid to be treated through the annular chamber, and an apertured screen within the annular chamber and having lips extending from one side thereof to space the



screen from a wall and having lips extending from the opposite side into the path of the fluid to arrest the liquid within the fluid.

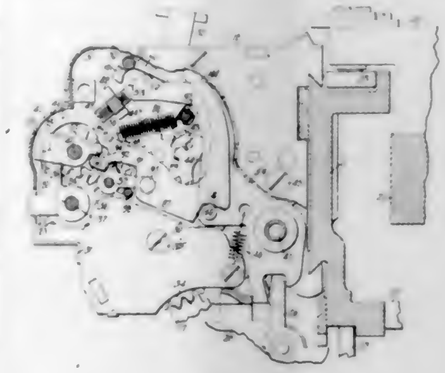
1,505,744. SEPARATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Oct. 27, 1922. Serial No. 597,377. 9 Claims. (Cl. 183—83.)



1. A separator for removing liquid from a gaseous fluid, comprising in combination, a container, a tube extending longitudinally within said container and having apertures for the passage of fluid from the container into the tube, a perforated plate surrounding the tube in spaced relation thereto and having a smooth outer surface and inwardly extending lips, means for delivering the gaseous fluid to be treated into the container with a whirling movement about the perforated plate so that the fluid may whirl freely in the space between the perforated plate and container and upon passing through the perforations toward the tube will deposit liquid upon said lips.

1,505,745. OIL BURNER. CARL E. STROMQUIST, Chicago, Ill., assignor to Frank A. Lundquist, Chicago, Ill. Filed Mar. 31, 1922. Serial No. 548,295. 12 Claims. (Cl. 158—64.)

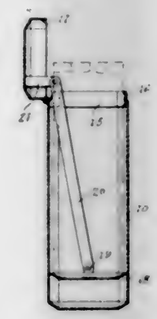
1. In a device of the class described, a pair of disks supported adjacent to each other so that their faces at the edges will be separated by a small space, washers between said disks near their edges and serving to determine the size of the space therebetween, means for conveying a gas into the space between the disks and discharging it in a thin sheet thru said small space at the edges, and means for conveying a current of air past the edges of said disks in a direction perpendicular to the flow of gas from between the disks.



1,505,746. OIL BURNER. CARL E. STROMQUIST, Chicago, Ill., assignor to Frank A. Lundquist, Chicago, Ill. Filed July 3, 1922. Serial No. 572,494. 8 Claims. (Cl. 158—77.)

2. In an apparatus of the class described, an annular chamber, a disk located in said chamber, means for causing a current of air to flow thru said chamber and around the edges of said disk, a gas generator, means for conveying gas and unvaporized oil from the generator to and over said disk to the current of air, and devices by which the current of air causes said disk to rotate.

1,505,747. COMPUTING MACHINE. ROBERT H. STROTHER, Montclair, N. J., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1924. Serial No. 690,308. 19 Claims. (Cl. 235—59.)

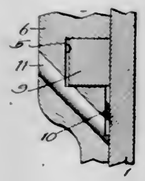


1. In a computing machine, the combination with registering mechanism, of clearance proof mechanism including a signal to indicate not clear, a feeler, a floating lever, and means for operating and controlling said

lever, said lever acting to operate said feeler if the register is clear but if the register is not clear taking a fulcrum on said feeler and thereby operating said signal

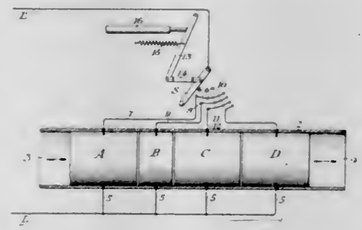
---

1,505,748. CIGARETTE CASE. LOUIS TAMIS, New York, N. Y., assignor to Schanfein & Tamis, New York, N. Y., a Firm composed of Bernard Schanfein and Louis Tamis. Filed Mar. 26, 1924. Serial No. 701,885. 1 Claim. (Cl. 206—41.)



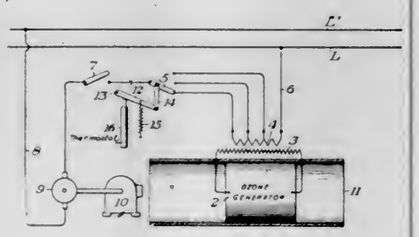
A container comprising a body with bevelled corners, a cover hingedly secured to said body, arms rigidly carried by said cover, a tray contained within said receptacle and located adjacent the bottom wall thereof, links pivotally connected to said tray and to said arms, said links adapted to contact with the bevelled edges of the body of the receptacle and bring the cover to a gradual stop as it approaches its open position, resilient means tending to move said cover to its open position, and a fastener carried by said cover and the body of the receptacle and holding said lid in a closed position.

1,505,749. RECIPROCATING MECHANISM. DANIEL C. TEETOR, Indianapolis, Ind. Filed Aug. 23, 1922. Serial No. 583,728. 1 Claim. (Cl. 74—108.)



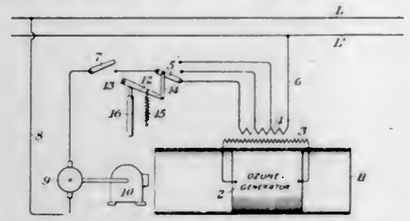
The combination with a cylinder; of a hollow piston therein formed with a piston ring receiving groove; and a piston ring in said groove, said groove having an ex-

terior circumferentially extending extension upon one side of the piston ring, said piston having a passage formed therethrough that has communication with said groove independently of the groove extension and with the groove



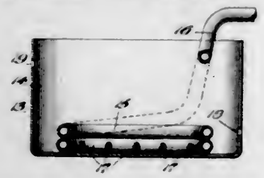
extension independently of the groove to establish communication between its interior and the piston ring receiving groove and also between said piston interior and the aforesaid groove extension.

1,505,750. OPERATION OF OZONE MACHINES. JAMES TODD, Sewickley, Pa., assignor to Alexander C. Tener, trustee, Pittsburgh, Pa. Filed June 10, 1922, Serial No. 567,483. Renewed May 29, 1924. 6 Claims. (Cl. 204—32.)



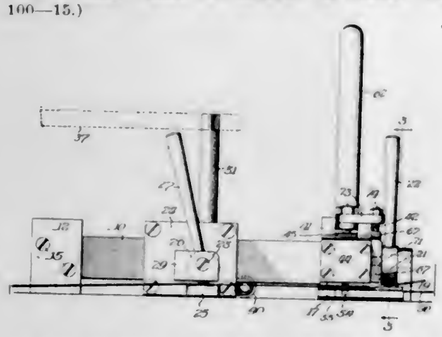
1. In the manufacture of so-called ozonized air, the step consisting of varying the effective electrode area of an ozonizer according to the temperature of the atmosphere, substantially as described.

1,505,751. MANUFACTURE OF OZONIZED AIR. JAMES TODD, Sewickley, Pa., assignor to Alexander C. Tener, trustee. Filed June 10, 1922, Serial No. 567,484. Renewed Feb. 23, 1923. 7 Claims. (Cl. 204—32.)



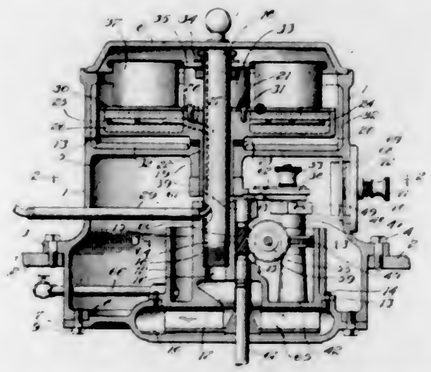
1. In the manufacture of so-called ozonized air, the step consisting of varying the effective voltage delivered to an ozonizer according to the temperature of the atmosphere, substantially as described.

1,505,752. MANUFACTURE OF OZONIZED AIR. JAMES TODD, Sewickley, Pa., assignor to Alexander C. Tener, trustee for James Todd, jr. Filed Aug. 25, 1923. Serial No. 659,419. 13 Claims. (Cl. 204—32.)



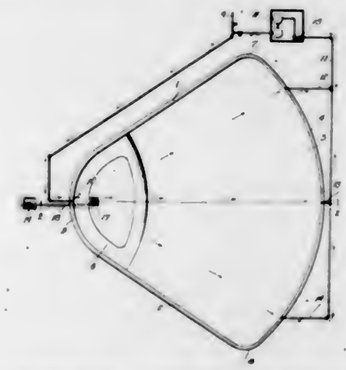
1. In the manufacture of so-called ozonized air, the step consisting of varying the effective voltage delivered to an ozonizer according to the temperature of the atmosphere, substantially as described.

1,505,753. OIL BURNER FOR HEATERS. PETER TOTI, Philadelphia, Pa. Filed Dec. 11, 1923. Serial No. 679,922. 2 Claims. (Cl. 158—63.)



1. The combination with a heating plant including a furnace having a grate, of an oil burner comprising an elongated, imperforate wall open top receptacle adapted to seat on said grate, a gravity oil feed pipe extending through the wall of said furnace and down in said receptacle, said pipe terminating in a pair of convolutions conforming to the wall of the receptacle with the lower convolution resting on the bottom of said receptacle, said lower convolution having a plurality of inwardly and upwardly extending oil discharge outlets, and a pair of air inlets located respectively at opposite ends of said receptacle, one of said inlets being in close proximity to the bottom of the receptacle and the other in close proximity to the top edge thereof, whereby complete combustion is promoted and smoke and noise eliminated.

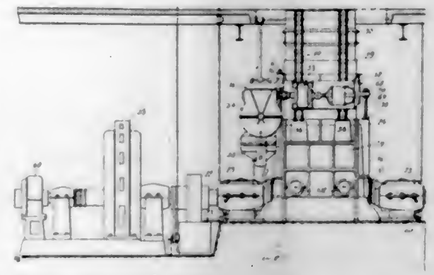
1,505,754. STRAP-ACTUATING APPLIANCE. SAMUEL J. TURNER, deceased, late of Chicago, Ill., by Otto Rabe and The Northern Trust Company, executors, assignors of one-half to said Otto Rabe, Wilmette, Ill. Filed Jan. 19, 1920. Serial No. 352,510. 12 Claims. (Cl. 100—15.)



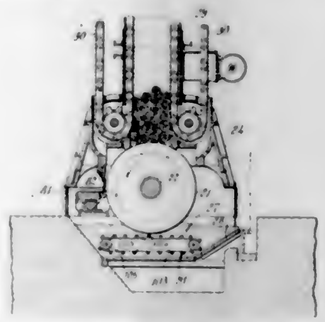
1. In an appliance of the character described, the combination of means to tighten a strap around the body to be confined thereby, means to lock overlapped parts of the tightened strap together, means to sever the used section of the strap from its stock supply, and operating means common to said locking and severing means, substantially as described.

1,505,755. APPARATUS FOR DETERMINING THE MOISTURE CONTENT OF BUTTER AND THE LIKE. THEODORE L. VALERIUS, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1921. Serial No. 517,195. 7 Claims. (Cl. 23—8.)

1. In apparatus of the class described the combination of a casing having a vacuum chamber, a movable hot plate mounted in said chamber, means for heating the hot plate, and mechanism for causing said hot plate to vibrate.



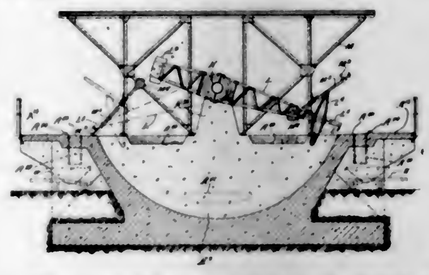
1,505,756. BATHING POOL. ELMER C. L. WAGNER, Kansas City, Mo. Filed June 3, 1924. Serial No. 717,471. 4 Claims. (Cl. 4—172.)



1. A swimming pool comprising a fan-shaped structure having its greatest depth at the narrow portion of the pool.

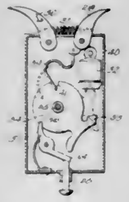
1,505,757. APPARATUS FOR GRINDING WOOD PULP. JOHN J. WARREN, Brownville, N. Y. Filed Oct. 14, 1922. Serial No. 594,501. 34 Claims. (Cl. 83—75.)

1. A wood pulp grinder of the magazine type comprising the combination of a grindstone, a magazine of substantial height in comparison with the diameter of the grindstone, mounted above the grindstone, endless feed chains designed to move in a plane parallel to the plane of rotation of the grindstone along substantially the entire length of the magazine, means carried by the chains to positively grip the wood along its sides and continuously force it against the grindstone, and driving sprockets for the chains situated so closely adjacent the grindstone that the wood cannot arch or jam in the lower end of the magazine.



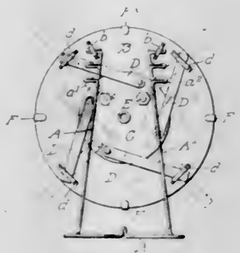
1,505,758. METHOD OF AND APPARATUS FOR CONTROLLING THE PULP IN THE PIT OF A WOOD-PULP GRINDER. JOHN JAMES WARREN, Brownville, N. Y. Filed Mar. 4, 1924. Serial No. 696,782. 9 Claims. (Cl. 83—75.)

1. In a wood-pulp grinder, the combination of a grindstone, a pit beneath the grindstone for receiving the ground pulp, and means in the pit for agitating the pulp and keeping it of substantially uniform consistency.



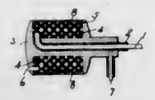
1,505,759. APPARATUS FOR AND METHOD OF DECANTATION. LOUIS WILPUTTE, New Rochelle, N. Y., assignor of two-thirds to Allec A. Wilputte, New Rochelle, N. Y. Filed Oct. 24, 1918. Serial No. 259,492. 6 Claims. (Cl. 196—1.)

1. The combination with a settling tank divided into a series of communicating compartments arranged side by side and having curved bottom walls, and an inlet



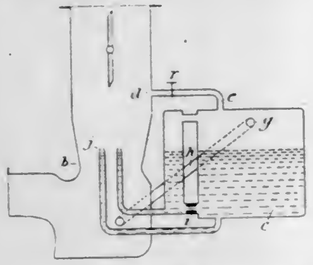
connection opening to the tank at one end and an outlet connection from the tank at the opposite end of the series of compartments, of a shaft journaled above the tank and cleaning devices carried by the shaft, one for each of said compartments and each caused to sweep along the bottom wall of the corresponding compartment by the rotation of said shaft.

1,505,760. BURGLAR ALARM. ARTHUR P. ABBOTT, Dexter, Me. Filed Jan. 11, 1924. Serial No. 685,662. 2 Claims. (Cl. 116—77.)



1. A burglar alarm adapted to be mounted in the side way of the lower sash of a window frame, comprising a body, a pair of pivotally mounted spurs carried by said body adapted to be forced into the window frame and into the upper sash, spring means for holding said spurs in operative position a sounding device carried by the body, and a reciprocating member for releasing said sounding device, said reciprocating member pointing downwardly toward the upper bar of the lower sash whereby when the upper sash is moved downwardly, the entire device will be forced downwardly and the reciprocating member will engage with the lower sash and when the lower sash is raised upwardly the same will move said reciprocating member for releasing said sounding device.

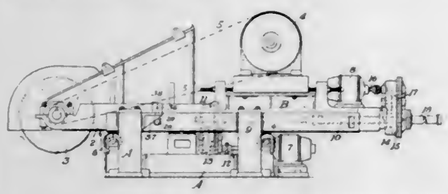
1,505,761. SIGN HOLDER AND DISPLAY RACK. JOHN Q. ADAMS, Columbus, Ohio. Filed Nov. 10, 1923. Serial No. 674,091. 8 Claims. (Cl. 211—24.)



3. In combination, a sign holder comprising a supporting base having upright arms spaced apart and having means thereon for connection with a sign board mounted on the free ends of said uprights, said sign board carrying a centrally disposed revoluble disk-like device having a plurality of slide bars pivoted thereto at their inner ends and extending through eye pieces or clips carried by the sign board, and having their outer ends adapted to contact with a tire surrounding the sign board, and means for securing said rotatable device in different positions.

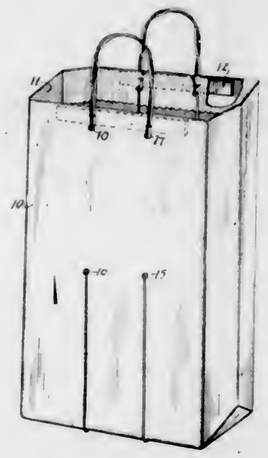
1,505,762. IGNITION DEVICE. JOHN HALL BARNARD, Brooklyn, N. Y. Filed Sept. 10, 1921. Serial No. 499,681. 12 Claims. (Cl. 219—38.)

1. A resistance element composed of two concentrically disposed materials, of which at least one affords a relatively high value for the product of the respective coefficients of specific gravity and specific heat.



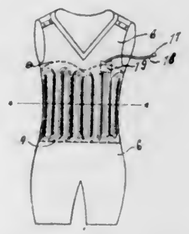
1,505,763. CARBURETOR. FRANÇOIS BAVEREY, Lyon, France, assignor to Societe du Carburateur Zenith, Lyon, France. Filed Oct. 23, 1917. Serial No. 198,176. 7 Claims. (Cl. 261—72.)

1. A carburetor, comprising a carbureting passage, fuel supply means in said passage, a throttle valve therein, a constant level fuel chamber, a sunken jet for supplying fuel from the chamber to one of said supply means in the carbureting passage, a connection from the top of the constant level chamber to the carbureting passage at a point between the fuel supply means and the throttle valve, a connection from the top of the constant level chamber to the atmosphere through the carbureting passage, and means for regulating the connection between the top of the constant level chamber and the carbureting passage, substantially as described.



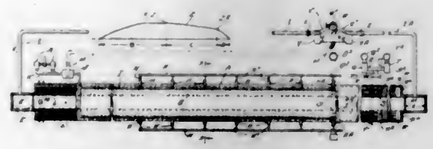
4. A carburetor having a float chamber, a carbureting passage, a fuel jet, means to communicate to the float chamber a pressure corresponding to that of the air intake of the carburetor, means to communicate the same pressure to the fuel jet and means to communicate a different pressure to the float chamber to modify the pressure condition maintained by said first recited pressure communicating means, substantially as described.

1,505,764. TOOL CONTROL. FLORENCE C. BIGGERT, Jr., Crafton, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,631. 13 Claims. (Cl. 29—69.)



1. In mechanism of the character described, a movable tool-actuating member, means for moving said member in one direction to advance the tool and in the opposite direction to retract the same, and means automatically operated upon unintentional movement of said member in either direction for causing said first mentioned means to move said member in the opposite direction, substantially as described.

1,505,765. BAG. RALPH BROWNSON, Hastings, Minn. Filed Dec. 10, 1923. Serial No. 679,611. 4 Claims. (Cl. 229—54.)

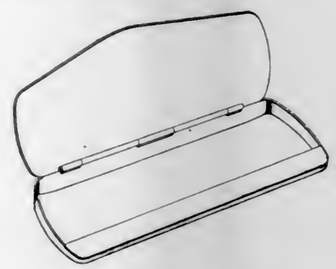


1. In combination with a bag, bracing means connected to the upper portion of the bag, parallel cords extending through openings in the walls of the bag and around the bottom thereof, handles formed by looping the upper portion of the cords on each side of the bag in opposite directions to be coextensive, a bent portion in each end of each cord supported by the bracing means, and means for fastening the cords to the bracing member and to the bag at each point of crossing of the bracing member by the cords.

1,505,766. BATHING SUIT. JAMES M. COMBS, Akron, Ohio. Filed May 23, 1921. Serial No. 471,730. 4 Claims. (Cl. 9—20.)

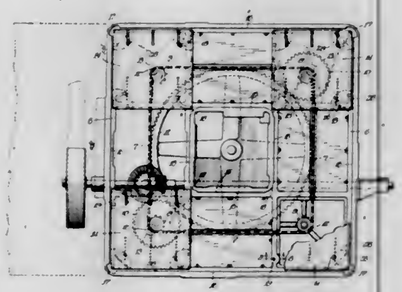
1. In a garment of the class described, a waist portion having an outer and an inner wall, a seam joining said walls at the upper extremity of said waist portion, a seam joining said walls at the lower extremity thereof, said walls further joined by a circumferentially extending series of vertical seams which alternately terminate in spaced relation from opposite extremities of said waist portion, to form a continuous pocket and an inflatable tube in said pocket.

1,505,767. TUNNEL KILN AND METHOD OF OPERATING SAME. PHILIP D'H. DRESSLER, Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed July 9, 1920, Serial No. 394,985. Renewed Sept. 12, 1923. 9 Claims. (Cl. 25—142.)



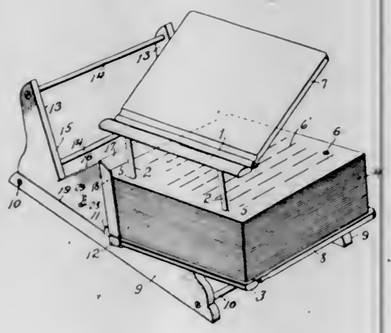
1. In a continuous tunnel kiln, the combination with the kiln chamber, of means for supplying heat to a heating up and high temperature zone of the kiln chamber and means for regulating the temperature in another zone of the kiln chamber comprising conduits extending along said last mentioned zone, and means for passing either a heating medium or a cooling medium through said conduits.

1,505,768. TUNNEL KILN AND METHOD OF OPERATING SAME. PHILIP D'HUC DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed July 26, 1923. Serial No. 653,892. 18 Claims. (Cl. 263—28.)



1. The method of operating a tunnel kiln which consists in maintaining a high temperature zone, an initial cooling zone and a slow cooling or low temperature soaking zone in the order stated between the entrance and exit ends of the kiln by exerting a cooling effect on the rapid cooling zone portion of the kiln and supplying heat to the kiln chamber in each of the other of said zones.

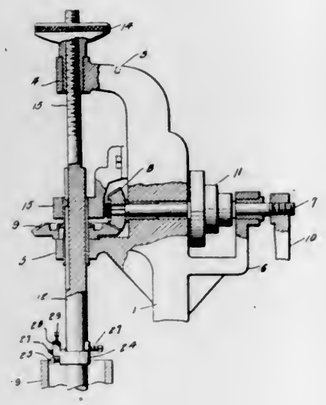
1,505,769. EYEGLASS CASE AND PROCESS OF MAKING THE SAME. RICHARD M. DUGDALE, Jamaica Plain, Mass., assignor to Farrington Manufacturing Company, Jamaica Plain, Mass., a Corporation of Maine. Filed Mar. 10, 1924. Serial No. 698,061. 11 Clauses. (Cl. 206—5.)



1. A receptacle comprising a hollow body of rigid, ductile sheet material having a base and an integral curved rim wall and an integral lip extending across a curved portion of the rim wall over a part of the chamber of the body.

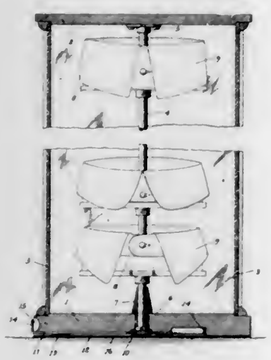
1,505,770. GUIDE MECHANISM. SAMUEL ELDER, Washington, D. C., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1923. Serial No. 659,494. 10 Claims. (Cl. 101—139.)

1. A movable member, guide grooves formed in said member, supporting means for said member, means adapted to move said member through a closed path, and guide members carried by the supporting means adapted to coact with the guide grooves in said movable member to guide it during change of direction of movement.



1,505,771. POSTING MECHANISM. CHARLES R. FARGO and PAUL O. UNGER, Kansas City, Mo., assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 21, 1920. Serial No. 360,503. 7 Claims. (Cl. 129—12.)

1. In a posting mechanism, a support for a clamping member of a binder, and leaf-registering means arranged to engage two adjacent edges of each of a plurality of loose leaves carried on said member, said support having means for properly positioning said clamping member, said registering means being movable to and from the registering position in a direction parallel with the central vertical longitudinal plane of said clamping member.

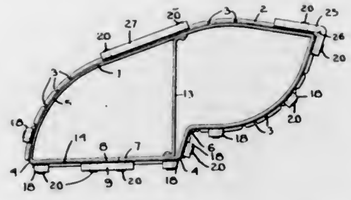


1,505,772. CYLINDER-BORING MACHINE. ROBERT C. FARTHING, Paducah, Ky. Filed Aug. 23, 1923. Serial No. 658,993. 3 Claims. (Cl. 77—58.)

1. A boring tool of the character specified including a boring shaft, a tool holder including a sleeve mounted upon the boring shaft, and a set screw mounted in the sleeve and passing through the shaft for securing the

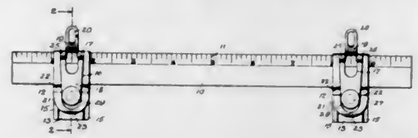
tool holder to the shaft and also operating to adjust the tool.

1,505,773. COLLAR-DISPLAY CASE. JOHN J. FINK and OTTO ZSCHUNKE, Lodi, Calif. Filed Feb. 20, 1923. Serial No. 620,164. 4 Claims. (Cl. 211—21.)



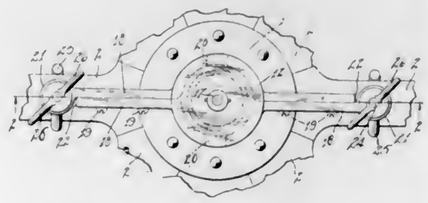
1. A display device for merchandise including a fixed base, a vertical shaft turnably mounted thereon, merchandise supporting members mounted on the shaft, a pinion on the shaft, a rack slidably mounted in the base and engaging the pinion, one end of the rack projecting beyond the base, and a finger grip on the rack at said outer end.

1,505,774. CUTTING DIE AND PROCESS OF MAKING THE SAME. WILLIAM H. J. FITZGERALD, Braintree, Mass. Filed Apr. 3, 1923. Serial No. 629,733. 13 Claims. (Cl. 164—29.)



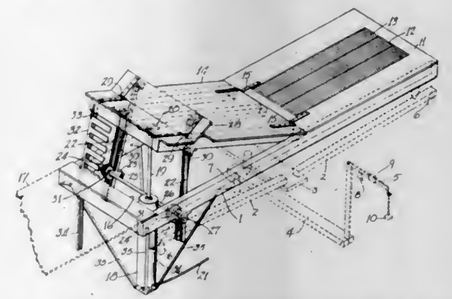
1. A cutting die comprising a body of thin metal bent to cause one of its walls to conform to the contour of

the pattern to be cut, having an integral rib extending longitudinally of said body and recessed at the bent por-



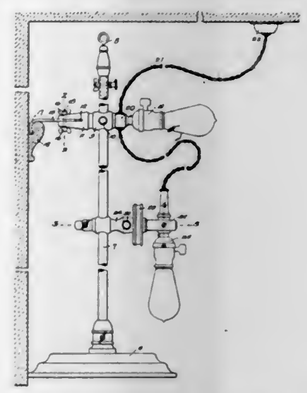
tions of said body to prevent lateral and torsional strains upon said body and means for securing the ends of said body together.

1,505,775. PUNCH. GEORGE PHILIP GAIL, Baltimore, Md., assignor to The Gail Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 15, 1922. Serial No. 607,168. 6 Claims. (Cl. 81—119.)



1. A punching device comprising a base having an apertured end, a leaf having a longitudinal slot connected to the non-apertured end of the base and overlying the same in a substantially parallel plane thereto, a resilient arm connected to said nonapertured end of the base, normally projecting upwardly at an inclination thereto and movable through the slot in said leaf, a punch plug carried by the free end of said arm adapted upon depression of the arm, to cooperate with the aperture for perforating a sheet inserted between the leaf and the base, the said leaf constituting a stripper member adapted to strip the sheet from the punch plug upon upward movement of the arm therethrough.

1,505,776. LUBRICATING DEVICE. GEORGE H. GLADE, Jr., Chicago, Ill. Filed Mar. 8, 1923. Serial No. 623,764. 2 Claims. (Cl. 64—27.)

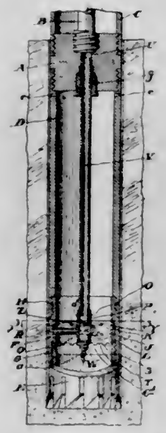


1. The combination with a wheel hub having an open outer end, of a cup-shaped member, a gasket disposed on the peripheral outer edge of said cup-shaped member, a cross piece pivotally connected intermediate its length to said cup-shaped member, a pair of clamping members disposed at each end of said cross piece arranged for clamping the vehicle wheel adjacent the hub, whereby said cup-shaped member may be drawn into close contact with said hub, and the gasket thereon may seal the connection between said cup-shaped member and the open outer end of said hub, and means for introducing lubricant under pressure to said cup-shaped member.

1,505,777. WAGON AND TRUCK DUMP. WILLIAM GEORGE HANCOCK and LEONARD T. STROMSWOLD, Minot, N. Dak., assignors to Magic Grain Dump Company, Minot, N. Dak., a Corporation. Filed Feb. 16, 1922. Serial No. 537,019. 4 Claims. (Cl. 214—49.)

1. A device of the type described comprising a frame having a swingable platform and a guard connected to the free end of said platform, guide members carried by said frame and being adapted to receive and to guide the free end of said guard, said guard being adapted to extend between said swingable platform and said frame when said platform is in raised position.

1,505,778. LIGHTING FIXTURE. ALFRED HANSEN, Globe, Ariz. Filed Sept. 20, 1923. Serial No. 663,836. 2 Claims. (Cl. 240—53.)

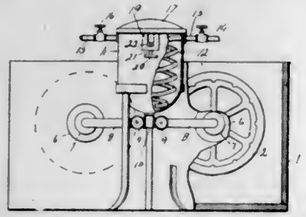


1. In a portable lamp fixture, a base for supporting the fixture on a table or other support and capable of engagement with a wall, a standard extending from said base, a lamp carrying bracket adjustable longitudinally of said standard and having a bifurcated head at one end, a moulding engaging clamp adjustably mounted in the bifurcated end of said head and having moulding engaging portions at its free extremity, and means extending transversely through said head and said clamp for securing the latter in adjusted positions in said head.

1,505,779. SOIL-SAMPLING TOOL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 14, 1923. Serial No. 662,749. 4 Claims. (Cl. 255—68.)

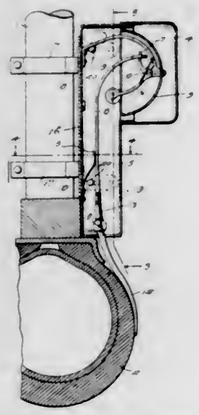
1. A soil coring tool comprising in combination, a core barrel, a water tube therein, a cutting bit adapted to cut a core of material and an intermediate removable conveyor secured between said core barrel and bit, said con-

veyor, being rotatable with the core barrel and adapted to break up the core of drilled material; permit ingress of the broken material to the core barrel, and prevent egress



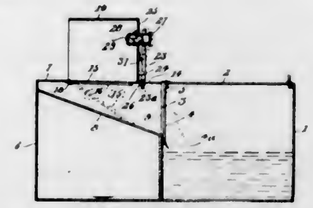
therefrom during the drilling, and passages in said conveyor adapted to conduct liquid from the water tube to the exterior of the core barrel.

1,505,780. SOIL-SAMPLING TOOL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 14, 1923. Serial No. 662,750. 1 Claim. (Cl. 255—68.)



A soil coring tool comprising an outer rotatable core barrel, a relatively non-rotatable inner core barrel, a bit adapted to cut a core of material and a removable intermediate secton between said outer core barrel and bit, said section being interchangeable with the bit for attachment to the outer core barrel, a conveyor located in said removable section adapted to enclose the bottom of said inner core barrel, said conveyor comprising a spiral blade disposed about the longitudinal axis of the tool and rotatable with the outer core barrel and bit and having a cutter for breaking up the core of material as the drilling progresses, said blade commencing at said cutter and terminating at a point substantially above the point of commencement, whereby a radial entrance opening is formed between said points, a closure for said opening comprising a shutter hingedly secured to the upper end of the spiral blade substantially at the end thereof and adapted to meet the lower end of the blade substantially at the point of commencement of the spiral and rearwardly of the cutter, said shutter being disposed at an angle to the longitudinal axis when seated over said entrance opening, and a screw projecting downwardly from said conveyor for maintaining intimate contact between the cutter and the core during rotation of the drill, said shutter being adapted to permit entrance of the drilled material into the casing during rotation of the outer core barrel and to prevent passage of the material out of the inner core barrel when rotation ceases.

1,505,781. DYEING APPARATUS. LUCIEN P. HART, Philadelphia, Pa. Filed June 6, 1919. Serial No. 302,200. 6 Claims. (Cl. 8—17.)

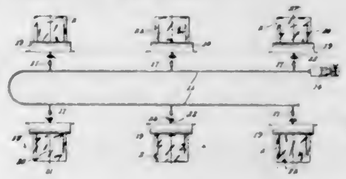


1. A dyeing apparatus comprising in combination, a tank to contain a dye liquor, a hollow perforated shaft journalled in said tank, an imperforate open ended cylinder on said shaft to revolve therewith and house the perforated portion thereof, and means for introducing dyeing material under steam pressure to the perforated shaft.

1,505,782. TIRE-DEFLATION ALARM. LYNDON F. HARTSELL, Cameron, N. C. Filed Sept. 27, 1923. Serial No. 665,170. 2 Claims. (Cl. 116—34.)

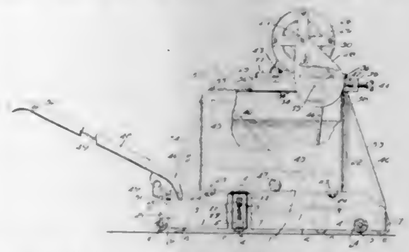
2. In a tire alarm, a bell, a hammer therefor, a bracket mounting the bell and to which the hammer is pivoted, a spring fastened to the bracket and hammer normally exerting a force upon the hammer to hold it clear of the bell and to bring it in contact with the bell when moved from a given position to a point beyond the pivot of the hammer, said hammer having an arm, a lever engaging said arm, a tire-operable arm, said lever and last mentioned arm having a common axis, a spring extending across the joint formed between the lever and last mentioned arm and secured to one of said parts and being in engagement with the other of said parts, and a return spring engaging the lever.

1,505,783. RAT TRAP. OWEN HARTY, Dante, S. Dak. Filed Oct. 11, 1923. Serial No. 667,993. 1 Claim. (Cl. 43—70.)



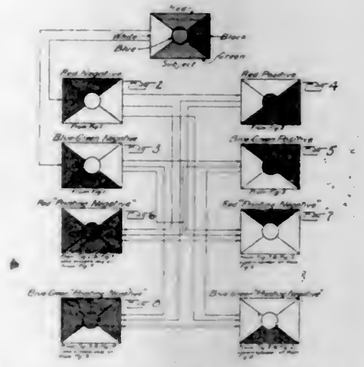
In a trap of the class described, a pair of communicating casings, one containing water and having a non-return entrance thereto, an entrance hood on the other casing, a trap door interposed between the hood and casing supporting the same, a latch rod pivoted to the entrance hood and engaging the trap door for holding the same in a locked elevated position, said latch rod being mounted exteriorly of the hood, and a tubular member carried by the upper end of the rod and slidably extending into the hood for supporting bait within the hood.

1,505,784. LOW-AIR-PRESSURE DETECTOR AND SIGNAL IN TIRES. LEO F. HEERWAGEN, Fayetteville, Ark. Filed Sept. 20, 1923. Serial No. 663,746. 1 Claim. (Cl. 116—34.)



The combination with a pneumatic tire, of a resilient body inserted between the tube and the casing, being of substantially elongated form and of maximum thickness at the center, gradually tapering, and of reduced thickness toward the edge portion, and an integral flange of substantially thin wide form, extending from the edge portion of the body to provide a securing flange adapted to be held between the tube and casing for holding the body in place in the tire.

1,505,785. SHIP STABILIZER. JOHN JIENGIEL, Scranton, Pa., assignor of one-half to Wincenty Jasuta, Minooka, Pa. Filed Sept. 20, 1923. Serial No. 663,816. 2 Claims. (Cl. 114—123.)

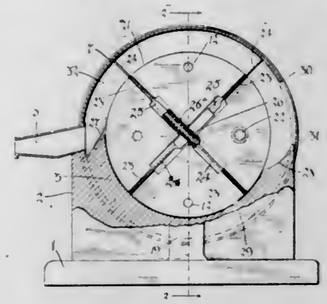


1. In a ship's stabilizer, a plurality of inflatable members hingedly mounted at each side of the ship, each member being formed of a waterproof casing having cords connecting the inner and outer ends to limit stretching upon inflation, a cable and drum associated with each member for retracting the same to inoperative position, a unitary air supply for the several members, means for retaining the inflated members horizontally positioned when projected for stabilizing operation, the hinged mounting for the inflatable member including a metallic reinforcing strip within the inner end of the member, bent ends carried by the strip, brackets carried by the ship, and a pivot rod extending through the bent ends of the strip and the brackets.

1,505,786. MOP. JOHN M. KAISER, HERBERT L. GRAY, and JOHN C. KAISER, Rock Island, Ill. Filed May 28, 1920. Serial No. 384,925. 1 Claim. (Cl. 15—99.)

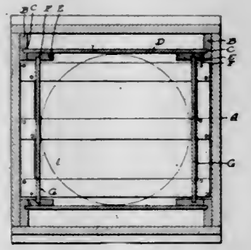
A mopping device comprising a frame, frame supporting rollers yieldingly carried by said frame, the ends of each supporting roller adapted to move independently of the movement of the other end of the roller, whereby said rollers are adapted to move toward or away from the frame so as to contact with the supporting surface irrespective of the contour of the surface, a mopping member arranged to travel over said rollers to contact with the supporting surface, and another supporting roller adapted to move angularly with respect to the other rollers whereby said roller is adapted to take up the slack in said mopping member and to aid in supporting said frame.

1,505,787. COLOR PHOTOGRAPHY. WILLIAM V. D. KELLEY, Jersey City, N. J. Filed Oct. 2, 1923. Serial No. 666,070. 6 Claims. (Cl. 95—2.)



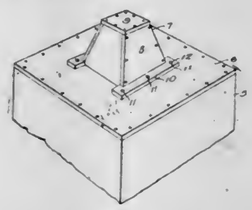
1. A transparent carrier coated with gelatine having a reduced silver image and a dye-impressed color representation of the red in the original subject.

1,505,788. ROTARY ENGINE. JONAS AUGUST LARSON and ERIC JOHNSON, Chicago, Ill. Filed Apr. 10, 1922. Serial No. 551,221. 1 Claim. (Cl. 121—57.)



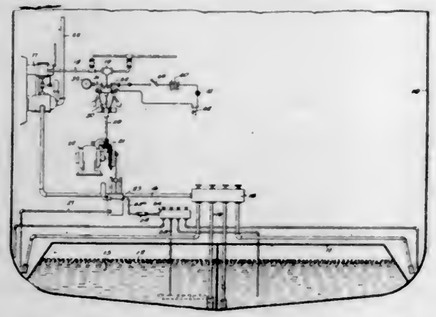
A device of the character described comprising a rotor having a circular body portion and a concentric groove in the peripheral wall thereof, said rotor having a marginal groove on each of the sidewalls of the concentric groove adjacent the peripheral wall of the rotor, a plurality of spring pressed blades radially disposed in said rotor and arranged to be moved outwardly and transverse to the concentric groove, a stator arranged to par-

tially enter the concentric groove in said rotor and having an arcuate surface contacting said rotor for a portion of its circumference at the base surface of said concentric groove, an arcuate shoe supported by said stator



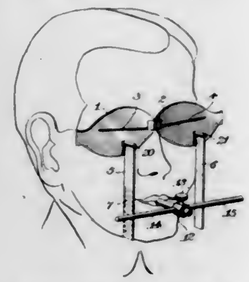
and having its longitudinal edges disposed within the marginal grooves in said rotor, and a nozzle projected through said shoe, whereby steam or the like may be admitted to the concentric groove in said rotor to drive said rotor.

1,505,789. CARBOY. CHARLES LEFKOWITZ, Newark, N. J. Filed July 3, 1923. Serial No. 649,337. 5 Claims. (Cl. 217—54.)



1. In a carboy, a hollow body, members in the body provided with grooves, lateral supporting members disposed in the grooves and having members with grooves, and additional lateral supporting members extending at angles to the first-mentioned lateral supporting members disposed in the last-mentioned grooves.

1,505,790. CARBOY BONNET. CHARLES LEFKOWITZ, Newark, N. J. Filed Oct. 10, 1923. Serial No. 667,719. 4 Claims. (Cl. 217—52.)

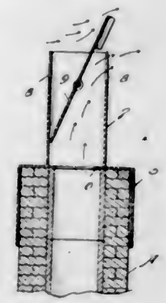


1. In a bonnet for carboys, a hollow body having four upwardly converging sides, each side being disposed at angles to adjacent sides, a top secured to the upper portions of the sides, and two parallel strips secured to opposite sides of the hollow body, respectively, by means of which the bonnet may be secured to a carboy.

1,505,791. APPARATUS FOR SEPARATING LIQUIDS OF DIFFERENT SPECIFIC GRAVITIES AND INDICATING MEANS THEREFOR. CHARLES SIGFRID LENZ and GEORGE EDWARD JUPP, New York, N. Y., assignors, by mesne assignments, to American Marine Device Corporation, New York, N. Y., a Corporation of New York. Filed May 9, 1923. Serial No. 637,734. 10 Claims. (Cl. 103—25.)

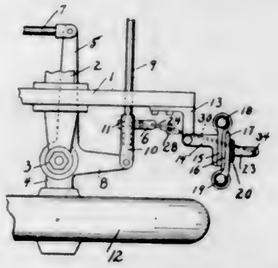
1. An apparatus for separating liquids of different specific gravities, which includes a tank containing said liquids, means for pumping one of said liquids from said tank, a valve controlling the flow of fluid, and means operated by the change in rate of pumping to close said valve when the pump begins to pump the other liquid.

1,505,792. DENTAL DEVICE. LOUIS O. LUDLUM, St. Louis, Mich. Filed June 3, 1924. Serial No. 717,622. 4 Claims. (Cl. 32—1.)



1. A dental device, which comprises a pair of slitted plates to be disposed in front of the eyes to determine the line of vision, and a gage dependent from each of said plates on opposite sides of the nose, extending down as far as the line of the mouth.

1,505,793. AUTOMOBILE SIGNAL. ROBERT LYONS, New York, N. Y. Filed Oct. 10, 1922. Serial No. 593,624. 1 Claim. (Cl. 40—132.)

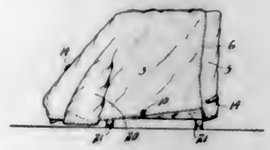


A device of the character stated, comprising an oblong casing having openings at its edges at one end, inwardly projecting flanges throughout both longitudinal edges and one curved end of said casing, bars secured to the upper and lower faces of the casing and co-operating with the flanges to form guides, plates and sheets of colored glass supported in said guides and movable through the openings in the ends of the casing, said plates having direction indicating openings therein, covers for the openings in the ends of the casing, flanges on said covers registering with the flanges of the casing, perforated tongues on the covers projecting over the end of the casing, a bar located against the inner face of the end of the casing, and securing devices through the tongues and the end of the casing and secured in the bar.

1,505,794. AIR-DRAFT ATTACHMENT FOR CHIMNEYS. WILLIAM B. MCCARTY, Lavelle, Pa. Filed Mar. 20, 1923. Serial No. 626,257. 1 Claim. (Cl. 98—5.)

A chimney attachment comprising a hood having a vertically disposed hollow neck mounted upon its top and at the center thereof, the neck being provided at its upper end and at opposite sides with recesses leading in from the upper end of the neck, a rod disposed transversely across the interior of the neck and spaced below the lower edges of the recesses and parallel with the side walls of the neck provided with the recesses, a damper plate having intermediate curved portions bowed in opposite directions and disposed around the sides of the rod and loosely mounted thereon, the lower portion of the plate being received, within the lower portion of the neck, and the upper portion of the plates extending above the upper edges of the neck, that portion of the plate which projects above the neck being provided at its opposite end with curved extensions disposed in opposite directions from the plate, said extensions being spaced above the upper edges of the neck and disposed toward the side walls of the neck having the recesses, and the center of gravity of the plate being disposed above the rod.

1,505,795. CONNECTION FOR DIRIGIBLE LIGHTS. JOSHUA B. NICHOLSON, Washington, D. C. Filed Oct. 16, 1923. Serial No. 668,824. 1 Claim. (Cl. 240—62.)

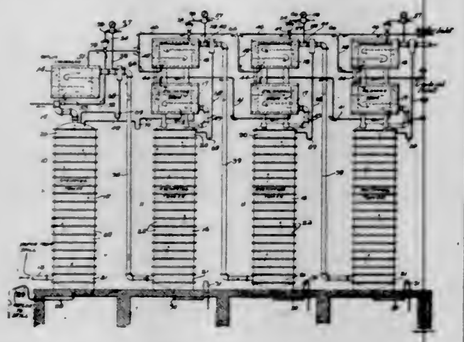


A connection for dirigible head lights comprising a Z shaped bracket having one end rigidly attached to the tie rod of an automobile and the other end provided with a bearing hole adapted to receive the depending end of a rod, and having interposed between a washer on the depending end and the bracket a spring to absorb the shock due to bumps and holes in the road and means for preventing said depending end from becoming disengaged, a similar rod having its forward end upturned and adapted to fit into a bearing hole contained in the forwardly extending arm of the lamp bracket and having interposed between a washer on the upturned end and the underside of said forwardly extending arm a similar spring to absorb the shock due to bumps and holes in the road, and means for preventing said upturned end from becoming disengaged, and a turnbuckle interposed between the two rods and adapted to be screwed onto each rod to provide the necessary tension on said connecting rod.

1,505,796. STORAGE-BATTERY CASE. PAUL E. NORRIS, Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1922. Serial No. 606,603. 6 Claims. (Cl. 16—125.)

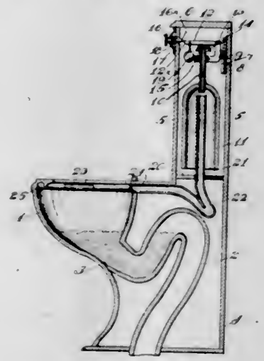
1. In combination, a storage battery case, a handle inserted in a wall of said case, and a recess in said wall surrounding said handle and communicating with the interior of said case but not with the interior thereof.

1,505,797. TYPEWRITER COVER AND CARRYING DEVICE. MARIE OLSTAD, Pelican Rapids, Minn. Filed Oct. 1, 1923. Serial No. 665,787. 12 Claims. (Cl. 150—52.)



1. A typewriter cover of flexible material comprising a pocket and flaps, said cover being adapted to extend over the top and sides of a typewriter with said pocket and flaps in one position, but being invertible to form a cover entirely surrounding said typewriter with the pocket and flaps in another position.

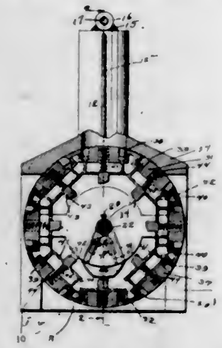
1,505,798. APPARATUS FOR CONDENSING AND FRACTIONATING HYDROCARBONS. ERNEST OWEN, New York, N. Y. Filed Dec. 14, 1920. Serial No. 430,617. 5 Claims. (Cl. 196—99.)



1. In an apparatus of the character described, a distilling apparatus and a plurality of fractionating condensing units, arranged in series, the first unit communicating with the vapor space in the distilling apparatus, each unit comprising a heat exchanger and a water cooled condenser in communication with each other, with devices for drawing off condensate from each of said units; the arrangement being such that the vapors pass through each successive heat exchanger and water-cooled con-

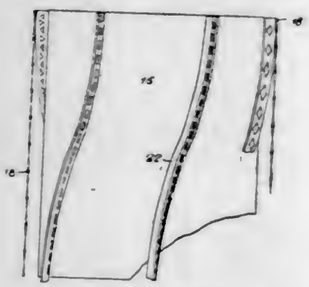
denser in series, while the charging oil to the distilling apparatus flows in a countercurrent direction through each successive heat exchanger in heat absorbing rela-

tion to the vapors passing therethrough, the character of the condensate from each unit being governed by the flow of the cooling water through its respective condenser.



1,505,799. WATER CLOSET. JOHN J. PARKINSON, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,907. 2 Claims. (Cl. 4—43.)

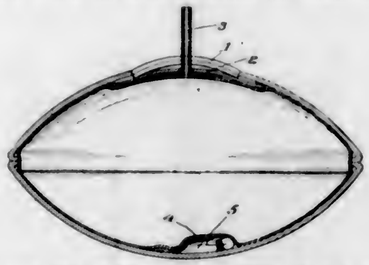
1. The combination of a bowl and tank for holding water, a discharge pipe having a portion arranged to extend through the bottom of the tank and being provided with a goose-neck water trap, said discharge pipe communicating with said bowl, a bracket secured to the wall of the tank, a pipe carried by the bracket, an inverted cup-shaped member carried by the pipe and arranged to receive the end of said discharge pipe, said cup-shaped member being spaced from the discharge pipe, a lever pivotally mounted on said bracket, a valve carried by the lever and arranged to fit over the end of the pipe to close the latter, and means for operating the lever at will, said last named means comprising a spring pressed push rod having a beveled end arranged to engage the end of the lever to lift the latter.



1,505,800. DOUGHNUT MOLDER OR FORMER. CARLYLE E. PEAVEY, Minneapolis, Minn. Filed Apr. 3, 1922. Serial No. 549,107. 6 Claims. (Cl. 107—15.)

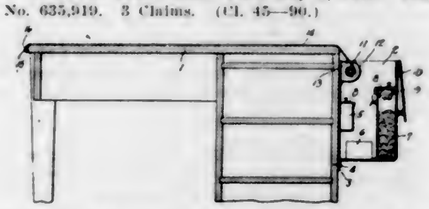
1. In a doughnut forming machine, a dough magazine having a discharge opening, a rotating member having a plurality of die cups or grooves arranged to successively register with said opening, means for discharging the contents from said cups, and means for removing dough from said member, comprising a cutter arranged to slide diagonally across said cups, and means for reciprocating said cutter.

4. In a doughnut forming machine, a dough magazine having an open discharge end, means for moving dough in the magazine toward said discharge end, a series of dough forming dies each having an annular groove for receiving dough, means for moving said dough forming dies successively to position where the grooves therein register with the discharge end of said magazine, annular plungers in said grooves, means for normally holding said plungers in their retracted position, a cut off device adjacent to said magazine, means for actuating said plungers for forcing the formed doughnut out of said grooves, means for removing the doughnuts from the faces of the plungers, said last means comprising a wire, means actuated by the movement of said doughnut forming dies for moving said wire to a certain position of its movement, means for imparting quick movement to said wire when said last means is rendered inoperative, and means for rendering said wire moving means inoperative when the wire has been moved to a certain position of its movement.



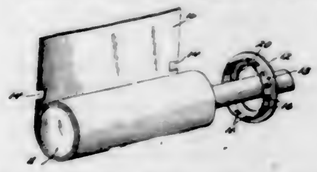
1,505,801. REENFORCED-CONCRETE PIPE. EARL L. PETERSON, Corona, N. Y., assignor to United Concrete Pipe Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1920. Serial No. 403,205. 4 Claims. (Cl. 72—54.)

1. In a reenforced concrete conduit, a metal pipe embedded in cement, ribs thereon extending diagonally to the axis of the pipe, and adapted to form an anchor for the concrete, and means for securing said ribs directly to said metal pipe.



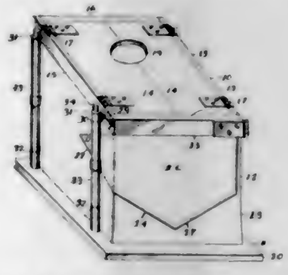
1,505,802. FOOTBALL. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed May 18, 1923. Serial No. 639,842. 5 Claims. (Cl. 46—4.)

3. In combination with the outer casing of a football having an opening for the insertion of the inflatable member, and a flap to close said opening, an inflatable member having a filling tube to pass through an opening in the flap, and means carried by the opposite side of the bail, and within the same, to balance the weight of said



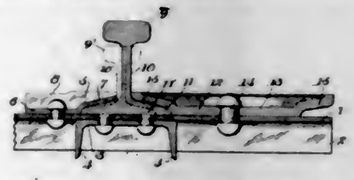
filling tube, said balancing means consisting of a second filling tube and a thickened portion surrounding the same and at a point on said inflatable member, opposite that at which the first filling tube is located, substantially as described.

1,505,803. DESK ATTACHMENT. NATHALIE OLGA PYLICK, Cleveland, Ohio. Filed May 1, 1923. Serial No. 635,919. 3 Claims. (Cl. 45—90.)



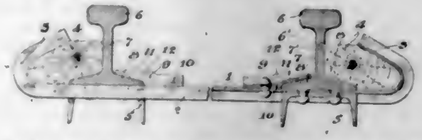
2. In an attachment of the character described comprising an open top receptacle adapted for removable attachment to one side end of a desk, a cover for said receptacle hingedly connected to side of the same remote from the attaching side, a clay compartment within said receptacle, a cover for said compartment carrying moistening means on its inner face whereby to keep the clay moist when not in use, a casing transversely disposed mounted in said receptacle adjacent its upper end at the side next to the desk end, said casing having a longitudinal slot therein, a roller mounted in said casing, a desk cover wound upon the roller and movable through the slot over the adjacent end of the desk and across the top of the desk, and cooperating separable fastening means carried on the opposite end of the desk and the free end of the flexible cover whereby to retain the cover on the desk top, and to detach the same.

1,505,804. PROCESS OF MAKING CONTAINERS. WILLIAM H. ROSE, Jersey City, N. J. Filed Feb. 20, 1923. Srial No. 620,281. 3 Claims. (Cl. 229—5.7.)



1. The process of making a container from a continuous strip of paper material and simultaneously attaching a head thereto, which consists in rolling a portion of the strip of paper material into the form of a tube, applying to such tube a previously formed head having a curved flange adapted to surround the end of the tube, said flange and the marginal portion of said strip being constructed to permit said flange being slipped over the end of said tube, and then rolling the rest of said strip of paper around said tube and said flange of the head.

1,505,805. CABINET. SEM ROSENTHALL, Montreal, Quebec, Canada. Filed Dec. 1, 1922. Serial No. 604,332. 1 Claim. (Cl. 4—164.)

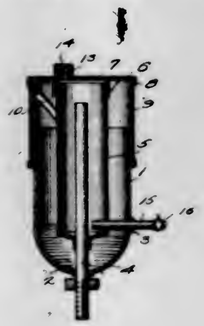


A cabinet of the character described comprising a base, a socketed member rising from the base from adjacent each corner thereof, a substantially U-shaped frame, foldable material depending from the frame, a frame associated with the base and receiving the lower end of the foldable material, closure members hingedly secured to the U-shaped frame and being provided with substantially semi-circular openings cooperatively associated with each other to form a central opening when the closure members are in operative position, resting means secured to the U-shaped frame for the closure members, a closure member for the U-shaped frame and being hingedly secured to one of the arms thereof, a flap depending from the U-shaped closure member and means received in the sockets of the base for supporting the U-shaped frame at a downward inclination.

1,505,806. METAL MINE TIE. JUSTUS J. ROSS, Huntington, W. Va. Filed Mar. 19, 1924. Serial No. 700,351. 3 Claims. (Cl. 238—106.)

1. A metallic cross tie, a fixed clamping lug for engaging one side of the rail flange, a rotatable cam wedge of segmental shape for engaging the other side of the rail flange, said cam wedge provided with a cam edge for engaging the edge of the rail flange of various sizes of rails, and provided with another cam edge for engaging the rail web of various sizes of rails.

1,505,807. METAL MINE TIE. JUSTUS J. ROSS, Huntington, W. Va. Filed Mar. 19, 1924. Serial No. 700,352. 4 Claims. (Cl. 238—10.)

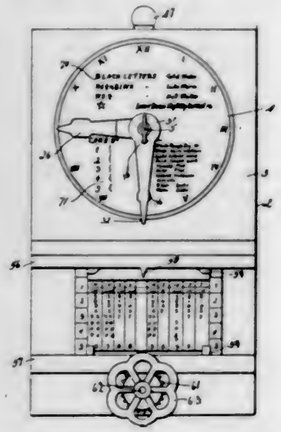


1. A cross tie and rail clamping lugs mounted thereon, said lugs being fixedly secured to the tie, and said lugs adapted to clamp rails of various sizes without substantially altering the gauge of the track.

1,505,808. METAL MINE TIE. JUSTUS J. ROSS, Huntington, W. Va. Filed Mar. 19, 1924. Serial No. 700,353. 3 Claims. (Cl. 238—61.)

1. A metal cross tie, the body of said tie having the cross-sectional shape of channel iron, anchoring means attached to the bottom of the tie, said anchoring means having the cross-sectional shape of channel iron.

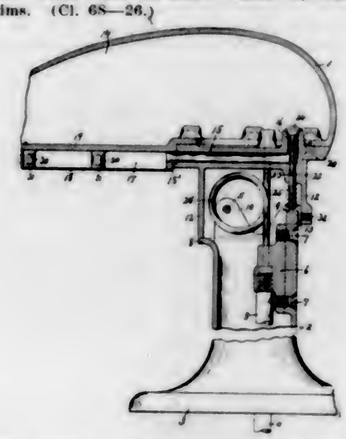
1,505,809. GASIFIER. JULIUS S. SCHMIDT, Bechard, Saskatchewan, Canada. Filed Dec. 8, 1923. Serial No. 679,497. 3 Claims. (Cl. 48—102.)



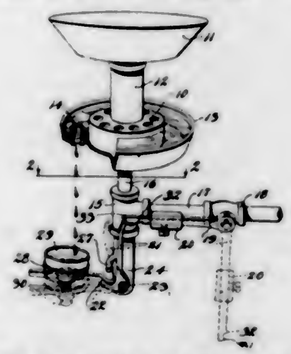
1. A gasifier of the class described including a tube, a shell of cup-shaped formation disposed about the tube, a container disposed about the tube within the shell terminating above the shell at one end and at its other end a distance from the bottom of the shell, said container also terminating above the upper end of the tube, a cap disposed on the upper end of the container and including an extension disposed over the open end of the shell, a cylindrical member movable over the shell for closing the space between its upper end and the extension of the cap, said member being provided with curved slots, pins projecting from the shell through said slots whereby the cylindrical member may be rotated for raising and lowering so as to close or open the space between the cap and the upper edge of the shell.

1,505,810. LIFTING APPARATUS. OTTO H. SCHUH, Wheatland, Wyo. Filed Feb. 15, 1923. Serial No. 619,288. 1 Claim. (Cl. 187—19.)

Lifting apparatus comprising a cylindrical support, means provided at the ends of the support for holding the same in an upright position, an open center frame receiving the suport and provided with an arcuate end which is disposed concentric with the axis of the support, rollers having concaved peripheries and carried at the arcuate end of the frame and engaging the periphery of the support at spaced intervals, two of the said rollers being located diametrically opposite each other and one of them at each end of the arcuate portion of the frame, another of the said rollers being located upon the arcuate portion of the frame and at a point midway between the first mentioned rollers, a set of rack teeth disposed longitudinally of the support and located thereon diametrically opposite the last mentioned roller, said rack teeth standing out from the periphery of the support, a gear wheel journaled upon the frame and meshing with the rack teeth, and means mounted upon the frame for rotating the gear wheel.



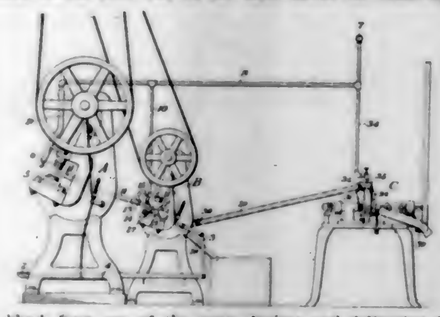
1,505,811. LAUNDRY TIMER. GEORGE W. SETTLE, Cape May, and OSCAR RISLEY, Wildwood, N. J. Filed Apr. 6, 1923. Serial No. 630,346. 6 Claims. (Cl. 161—6.)



1. A timer for washing machines and the like comprising a plate having a clock dial delineated thereon, a revoluble and slidable shaft passing through said plate in the region of the dial, means for transmitting motion to said shaft so as to make one complete revolution per hour, a timing hand adjustably and removably mounted on said shaft, and adjustable hand concentric with the timing hand, means carried by the adjustable hand to hold the timing hand and its shaft in an outward position, said timing hand having an opening for registration with said means when the two hands are in alignment, means to move the timing hand and its shaft inward and a signal adapted to be placed in operative condition upon inward movement of the timing hand and its shaft.

1,505,812. PUFF IRON. CHARLES E. SKELTON, Syracuse, N. Y. Filed June 15, 1922. Serial No. 568,410. 7 Claims. (Cl. 68—26.)

1. The combination of a support, a puff iron movably mounted upon the support and provided with a steam heated chamber and a steam distributing chamber having a steam exit in one side and connected by a passage with the steam heated chamber, a steam conduit opening into the steam heated chamber, a normally closed valve in said passage and means actuated by the movement of the puff iron from one position to another position for opening the valve.

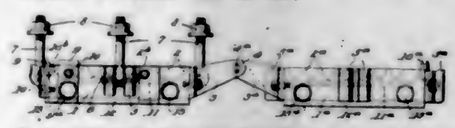


1,505,813. CUT-OFF FOR OIL BURNERS. ARTHUR G. SLOCUM, Ensign, Kans. Filed Mar. 23, 1923. Serial No. 627,141. 3 Claims. (Cl. 158—36.)

1. An oil burner provided with an overflow pan, a feed pipe to said burner, a rotary controlling valve in said pipe, a tensioned lever carried by the stem of said valve and projected beneath said pan, a support dependent from said burner, an angular trip lever pivoted upon said support and having an arm beneath the free end of said valve lever, a horizontal arm extended beneath the overflow pan, and a receptacle supported upon said horizontal arm to receive the overflow and thereby actuate said lever to release the feed valve for closing movement.

1,505,814. SHEET-METAL-PRESS SYSTEM. PAUL J. SMITH, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 6, 1921. Serial No. 520,268. 10 Claims. (Cl. 113—50.)

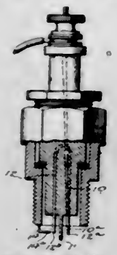
1. A press system having at least two press devices provided with a common control for stopping and starting, and a channel arranged to lead the blanks from one machine to the next, and an air blast device for removing a blank from one of the press devices and delivering it to said channel substantially as described.



1,505,815. DETACHABLE SHOE HEEL. JOSEPH STAMBERGER, Buffalo, N. Y. Filed Nov. 8, 1922. Serial No. 599,711. 2 Claims. (Cl. 36—42.)

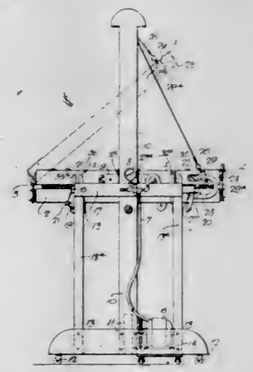
1. In a detachable shoe heel, a permanent heel portion and a detachable heel section, and interlocking connections between the same, said connections including a fixed plate carried by the permanent heel portion, guide fingers struck out therefrom, a substantially T-shaped sliding latch plate mounted on the fixed plate and guided by said fingers, the fixed plate and ends of the latch plate having registering openings therein, and latch prongs carried by the detachable heel section adapted to be positioned in the registering openings and having side grooves to receive the rear walls of the openings in the latch plate, the forward end of the sliding latch plate being return bent, and a coil spring interposed between the return bent portion of the latch plate and the fixed plate for holding the latch plate in engagement with the prongs carried by the detachable heel section.

1,505,816. MOLD FOR VULCANIZING HOLLOW ARTICLES. CHARLES W. STEELE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 17, 1922. Serial No. 575,531. 3 Claims. (Cl. 18—38.)



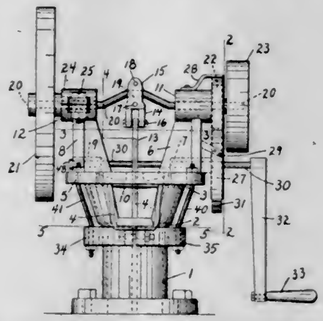
3. A mold of the character described, comprising a pair of complementary mold sections of rolled steel having mating cavities machined therein, one of said mold sections having its surface machined away to provide annular lands around the mold cavities thereof.

1,505,817. SPARK PLUG. CARL S. SWANSON, New York, N. Y. Filed Nov. 11, 1922. Serial No. 600,375. 3 Claims. (Cl. 123—169.)



1. In a spark plug having a jacket, a core of insulating material, and a center electrode partially embedded in said core, the combination of a single dependent, reduced insulating baffle at the lower end of the core, and a single substantially U-shaped floating electrode element having the free termini of the legs thereof protruded be-

low the bottom of the core with one located on one side of said baffle and one on the other; said baffle being a

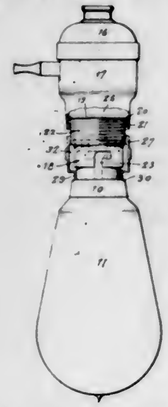


plane wall arranged substantially diametrally across the bottom of the core and said center electrode is a substantially straight rod arranged eccentrically of the core axis.

1,505,818. VACUUM PRINTING FRAME. EMANUEL W. SWEIGARD, Los Angeles, Calif., assignor to Sweigard Ideal Co., Philadelphia, Pa., a Corporation of Delaware. Filed July 13, 1922. Serial No. 574,672. 16 Claims. (Cl. 95—76.)

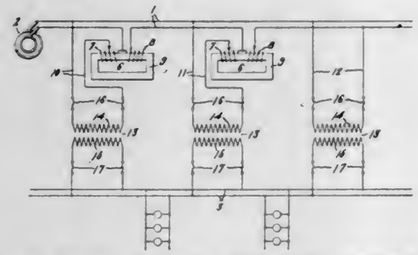
1. In apparatus of the character described, the combination with a support, of a frame comprising separable glass and blanket-carrying sections pivotally mounted upon the support and adapted for reversal to bring either of said sections to the top, and means providing for elevation of the upper end of said sections above the lower in both reverse and obverse positions of the frame.

1,505,819. DEVICE FOR ATTACHMENT TO PUMPS. SAHLIAH A. TABET, Boynton, Fla. Filed Oct. 20, 1923. Serial No. 669,871. 3 Claims. (Cl. 74—14.)



1. In a pump attachment, the combination of a frame comprising a base, a collar below the base adapted to be clamped around the body of the pump and attached to the base by means of bolts, vertical uprights attached to the base, bearings at the extreme ends of the uprights, a shaft journalled in said bearings having a crank formed therein midway between the bearings and provided with a pitman for attachment to the pump rod and means for rotating the shaft.

1,505,820. COMPOSITION OF MATTER. BRICE P. THOMAS and RICHARD E. RUTLEDGE, Hope, Ark. Filed Jan. 31, 1920. Serial No. 355,422. 1 Claim. (Cl. 87—17.)

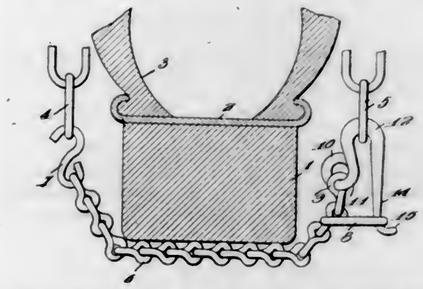


A film cement comprising a minor portion of celluloid and a major portion composed of commingled acetic acid, ether and collodion.

1,505,821. LAMP HOLDER. GEORGE B. THOMAS, Bridgeport, Conn., assignor to Bryant Electric Company, a Corporation of Connecticut. Filed Apr. 27, 1918. Serial No. 231,113. 4 Claims. (Cl. 173—356.)

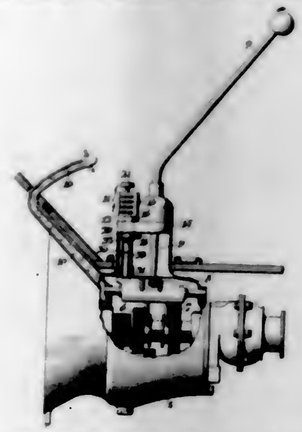
1. A lamp socket having a casing element slotted to afford a bayonet joint connection with a cooperating lamp and having a threaded area, in combination with a screw ring threaded on said area and movable into engagement with a shouldered lamp base after the establishment of said bayonet joint connection to hold the lamp against vibration with relation to the socket, said ring surrounding the bayonet joint but being spaced from said casing element at the bayonet joint to clear one of the bayonet joint members and permit the rotation of the ring around said joint, but constricted at its outer end to afford an end engagement with the lamp base.

1,505,822. SYSTEM OF ELECTRIC DISTRIBUTION. EDWARD D. TREANOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 24, 1923. Serial No. 641,238. 5 Claims. (Cl. 171—97.)



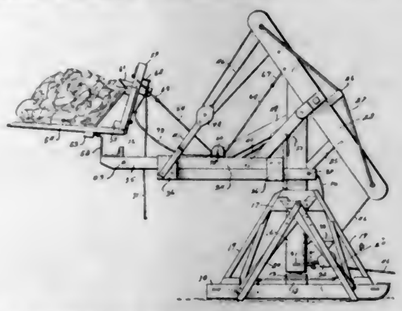
1. A system of electric distribution comprising a source of alternating current, an alternating current supply circuit connected to said source, a plurality of parallel feeders connected to different points of said alternating current supply circuit and feeding into a common circuit, and a plurality of balancing transformers, each transformer being associated with a different one of said feeders and comprising two differential windings, one of said windings being so connected that the current therethrough varies with the current flowing through the feeder with which the transformer is associated, and the other one of said windings being so connected that the current therethrough is proportional to the current supplied to the distribution circuit through the feeders connected to the supply circuit at points farther away from the source than the point where the feeder associated with the transformer is connected, said windings being so arranged that the flux in each transformer is zero when there is a predetermined division of current between said feeders.

1,505,823. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. JOHN TROCHTA, Lengne City, Tex. Filed Nov. 23, 1922. Serial No. 602,839. 2 Claims. (Cl. 240—61.)



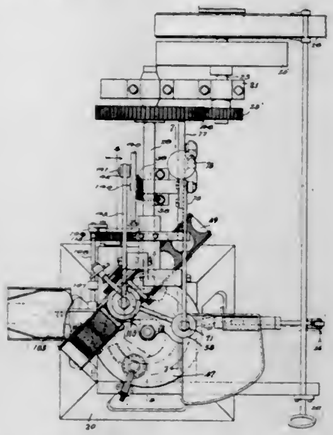
1. In a dirigible headlight for automobiles, a cross bar supported transversely of the forward end of the automobile, a headlight rotatably supported adjacent each end of the cross bar, a post journaled through the cross bar for supporting each headlight, tension means associated with each post for normally forcing the headlight in one direction, a lever secured to the lower end of each post, one of said levers projecting rearwardly from one post and the other lever projecting forwardly from the other post whereby simultaneous movement of the levers to one side will cause rotation of the posts in opposite directions, cooperating means carried by said levers and cross bar for limiting rotary movement in one direction of the post supporting the headlight, a flexible connector between said levers, a foot lever supported in the floor board of the automobile, a flexible connector between the foot lever and one of the levers associated with a headlight for simultaneously operating the two levers associated with the headlight, and a guide pin for the flexible connectors carried by each post supporting lever.

1,505,824. DEVICE FOR APPLYING ANTISKID CHAINS TO AUTOMOBILE TIRES. NELSON JAMES TRUMBULL, Whitewater, Colo. Filed June 23, 1923. Serial No. 647,346. 1 Claim. (Cl. 152—14.)



In a device of the class described, an anti-skidding member, a chain comprising links, and connected at one end to one side portion of the anti-skidding member, a U-shaped latch engaged through the opposite side portion of the anti-skidding member and including a long arm and a short arm, the short arm being pivotally assembled with one link of the chain, the long arm having a finger, and a ring mounted pivotally and releasably between adjoining links of the chain, the ring receiving the long arm, and the finger constituting a retainer for the ring, the ring being of such a diameter that the first specified end of the chain may be threaded through the ring, thereby enabling the ring to be moved along the chain to its place of pivotal mounting between said adjoining links.

1,505,825. LOCKING DEVICE. CHARLES LINCOLN TURNER, Jersey City, N. J. Filed June 30, 1923. Serial No. 648,703. 6 Claims. (Cl. 70—53.)

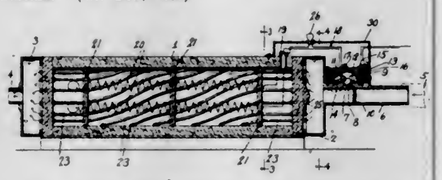


1. A locking device of the character described comprising a frame member having a series of transverse clefts and a tubular attaching extension, a passage through said clefts at right angles thereto and provided with radial keyways, a pin provided with a corresponding series of key bits traversing said passage, a related coaxial series of serrated locking elements positioned in the transverse clefts and rotatable about the pin in one direction from a zero datum, a series of co-operative clicks and a spring influenced bolt member slidable in the tubular extension for projection in one direction by the aforesaid pin into locking position, and automatic retraction therefrom when the pin is released.

1,505,826. HAYSTACKER. CORNELIUS J. VAN OORT, Hotchkiss, Colo. Filed July 30, 1923. Serial No. 654,629. 6 Claims. (Cl. 214—141.)

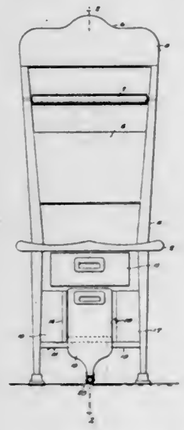
1. In stacking apparatus and in combination, a standard, an extensible hoist arm pivoted at one end to the standard, means for elevating the free end of the hoist arm, and a plurality of elements selectively positionable to engage the hoist arm and extend the same during such elevation, each of said elements being of different length.

1,505,827. TABLET-MAKING MACHINE. EDUARDO VILLASENOR and ALBERTO VILLASENOR, Merida, Mexico. Filed Apr. 25, 1923. Serial No. 634,528. 6 Claims. (Cl. 107—17.)



1. In a tablet forming machine of the character described, a turntable having a plurality of depressions acting as molds, means for feeding paper disks into said molds as they pass a certain point, means for feeding material to be formed into tablets as the molds pass a second point, means slightly entering said molds as they pass a third point for forming a design thereon, a plunger for compressing the material entering the molds, said plunger acting immediately after the material has entered the molds, and means for ejecting the finished tablet after it has received said impression.

3. In a machine of the character described, a rotating platform provided with a plurality of spaced depressions acting as molds, means for rotating said platform and means for supplying said molds one at a time with paper disks, said means comprising a stationary cutting member, a reciprocating cutting member, an ejector carried by the reciprocating cutting member, means for feeding a strip of paper across the stationary cutting member, and means for operating the reciprocating cutting members.

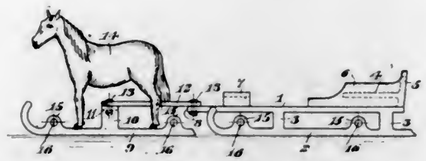


6. In a machine of the character described, a rotatable turntable provided with a plurality of equally spaced depressions acting as molds, means for feeding material into said depressions as they pass a given point, means for compressing said material immediately after it enters the molds and means for imprinting a design on the compressed material as it reaches a second point, said means including a printing member, means carried by the turntable for swinging said printing member into and out of printing position, and a stationary cam for actuating said means as said means moves with the turntable.

1,505,828. HEATER. ROBERT C. WALBERG, New Preston, Conn. Filed May 22, 1922. Serial No. 562,790. 2 Claims. (Cl. 219—39.)

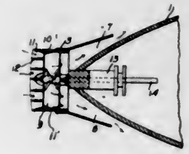
1. A device of the class described comprising an insulated casing, a plurality of spirally arranged tubes arranged adjacent the inner walls thereof and having their ends passing through the ends of the casing, heating coils in the casing, an electric circuit connected with the coils, caps connected with the ends of the casing, a discharge pipe connected with one cap, an inlet pipe arranged in the other cap, a gate connected with the inlet pipe and actuated by the water passing into the pipe, a spherical member seated in the inlet pipe for rotatable movement and having the gate secured thereto, a brush carried by said member diametrically opposite the gate, a contact plate arranged to be engaged by the brush when the gate is moved by the water passing through the inlet pipe and means for connecting said contact plate and brush with the circuit as and for the purpose specified.

1,505,829. DRESSING CHAIR. HARRY WALTER WARNECKE, New York, N. Y. Filed June 14, 1923. Serial No. 645,436. 2 Claims. (Cl. 155—41.)



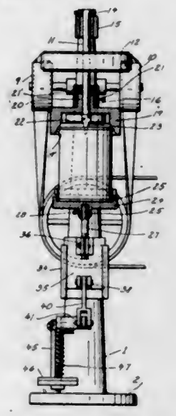
1. A dressing chair, comprising a back, a seat plate, a plurality of legs for supporting the seat plate, a drawer arranged immediately beneath the seat plate, means for slidingly supporting said drawer, a pair of platforms arranged beneath said drawer, said platforms being spaced apart and positioned so that their adjacent edges will form runways, a drawer slidingly mounted on said runways, a traveling leg connected to said last mentioned drawer and movable therewith, and an adjustable foot rest carried by said traveling leg, said traveling leg and associated parts being movable toward and from the front part of the chair.

1,505,830. FLEXIBLE CAN CONVEYER. LAWRENCE W. WATERS, Kingsburg, Calif. Filed Feb. 9, 1923. Serial No. 618,079. 4 Claims. (Cl. 193—25.)



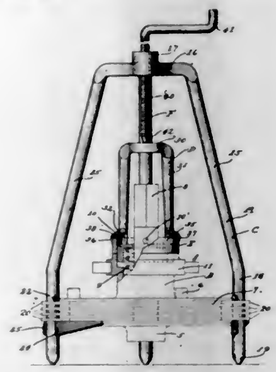
1. In a device of the character described, a substantially U-shaped end piece, flexible side pieces rigidly attached to said end piece, and extending in parallel alignment therefrom, plates spaced between said side pieces and spaced from said end piece and from each other, a second end piece adapted to telescope the free ends of said side pieces and flexible means connecting said end pieces and said spaced plates.

1,505,831. TOY. JAAKKO WEHKAOJA, Royalston, Mass. Filed July 21, 1923. Serial No. 652,948. 2 Claims. (Cl. 46—45.)



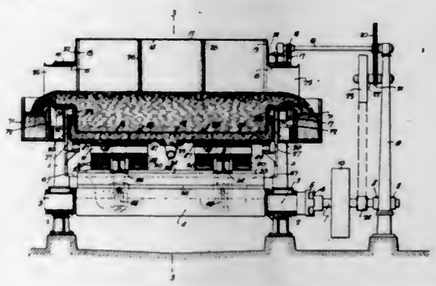
1. A toy representation of a horse drawn sled comprising a front and rear pair of sled runners, each runner having thereon means to provide an axle box, a body supported by and formed integral with one of said pair of runners, a passenger seat thereon, a driver's seat thereon, a representation of a horse on said front pair of runners, and a link connection between the front pair of runners and said body.

1,505,832. PROPULSION SYSTEM. GEORGE R. WEISZ, Brooklyn, N. Y., assignor of eight-tenths to Amelie Weisz, Brooklyn, N. Y. Filed Oct. 12, 1921, Serial No. 507,205. Renewed Jan. 15, 1924. 2 Claims. (Cl. 115—42.)



1. In a propelling structure for vessels a propeller positioned in front of the vessel exteriorly thereof, a hood surrounding said propeller, said hood being stationary, and a tapering casing extending from said hood rearwardly, said casing being divided into two parts and extending on each side of the vessel so as to present a pair of gill structures through which the water from the propeller is discharged.

1,505,833. CAN OPENER. ROBERT L. WELLS, Chicago, Ill. Filed June 16, 1921. Serial No. 477,947. 18 Claims. (Cl. 30—3.)



1. In a can opening machine, in combination, a stationary chuck with bevelled means for centering and holding a can in position; means carrying a knife support and knife mounted in said chuck for continuous rotation; and means for supporting and moving a can into holding engagement with said chuck and into cutting engagement with said knife.

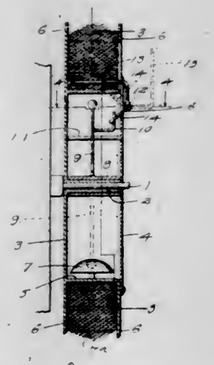
1,505,834. CLUTCH DISMEMBERING AND ASSEMBLING TOOL. HENRY WESTENDORF, Halbur, Iowa. Filed Mar. 13, 1922. Serial No. 543,406. 9 Claims. (Cl. 29—88.2.)

1. A clutch dismembering and assembling tool comprising a frame, means formed on the frame for engaging the discs of a clutch, means associated with the frame for engaging the collar of a clutch spring, and means for permitting adjustment of the collar engaging means.

1,505,835. ROTARY SCREEN. JOSEPH A. WHITE, Philadelphia, Pa., assignor to Moore & White Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1921. Serial No. 437,741. 10 Claims. (Cl. 92—36.)

1. The combination of a rotary screen; bearings therefor; end frames carrying the bearings; a vat in which the screen is mounted; yielding supports for the vat; pivots located between the vat and the supports; a cam for imparting a vertical and rocking movement to the vat to cause the material to be forced through the screen; and means for allowing the material to be discharged from the screen.

1,505,836. SCREEN BOX. JOSEPH A. WHITE, Philadelphia, Pa., assignor to The Moore & White Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,685. 4 Claims. (Cl. 92—32.)

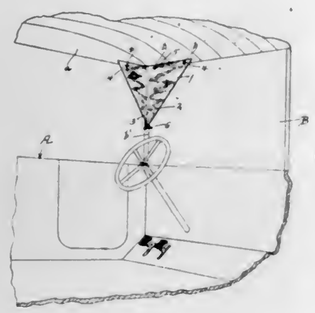


1. The combination in a screen box, of a casing; a curved screen separating the casing into upper and lower

compartments; a diaphragm closing the bottom of the lower compartment; means for imparting movement to

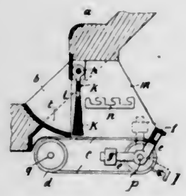
the diaphragm; a shaft; and a rotary scraper, on the shaft, having a blade arranged in close proximity to the curved surface of the screen.

1,505,837. ALARM FOR MOVING-PICTURE REELS. RASSIE E. WICKER, Cameron, N. C. Filed Oct. 25, 1923. Serial No. 670,787. 3 Claims. (Cl. 116—67.)



2. An alarm for moving picture reels, comprising a bell positioned within and secured to the drum of the reel for movement therewith, a hammer pivoted to the hub of the reel for movement with respect to the drum in the plane of rotation thereof, means adapted to prevent the pivotal movement of the hammer in one direction with respect to the drum, and a detent carried by the reel and normally held in restraint by the film wound thereon and engaging the hammer to prevent pivotal movement thereof in the reverse direction with respect to the drum and releasable when the film is unwound to a predetermined extent from the reel to free the hammer for pivotal movement in said reverse direction to sound the alarm.

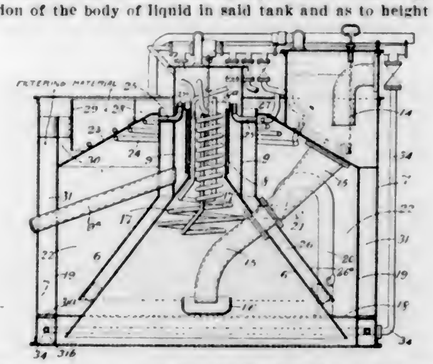
1,505,838. KEY TAG. HOMER H. WITHROW, Brooks, W. Va. Filed Aug. 14, 1923. Serial No. 657,385. 1 Claim. (Cl. 40—10.)



A key tag comprising a plate provided at its side surface with a countersunk channel all of the edges of which are spaced from the adjacent and corresponding edges of the plate, a transparent sheet disposed over the plate and the channel, a relatively rigid frame binding the edge portions only of the sheet and plate together, and having its edges disposed beyond the edges of the channel, and an eyelet rivet passing transversely through the plate and sheet and disposed beyond the end of the channel.

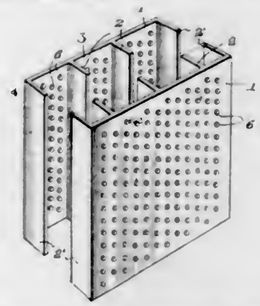
1,505,839. GLAREPROOF VISION SHIELD. JOHN C. WOOD, Clinton, Iowa. Filed Aug. 23, 1922. Serial No. 583,880. 1 Claim. (Cl. 296—97.)

In combination with an automobile, a triangularly shaped piece of flexible material having its base secured to the side and front of the automobile top, said piece of material being provided with a rib extending from the base to the apex thereof and disposed substantially parallel with and adjacent to the end bar of the windshield of the automobile, the apex of said piece of material being secured to said end bar.



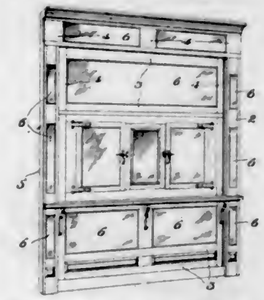
1,505,840. CLOSING AND DISCHARGING DEVICE FOR LARGE RECEPTACLES, SUCH AS BUNKERS AND THE LIKE. FRITZ ZÖBLIN, Strassburg, France. Filed Sept. 3, 1921. Serial No. 498,357. 6 Claims. (Cl. 198—58.)

1. In combination with a receptacle having a discharge outlet, an endless conveying member adapted to maintain the said outlet closed, a power device for driving the said outlet conveyor, one side of the said outlet extending to a position immediately above the said conveying member whereby material is made to move from the receptacle onto the conveying member without any abrupt drop, and a pivotally mounted material-retaining member for preventing material from dropping off the endless conveying member.



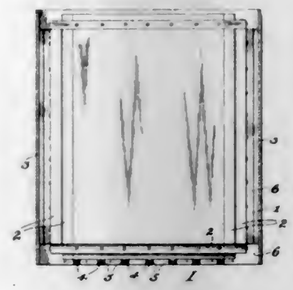
1,505,841. METHOD OF AND MEANS FOR SEPARATING LIQUIDS OF DIFFERENT SPECIFIC GRAVITY. HAROLD MONTAGUE ALEXANDER, Bexley Heath, England. Filed June 26, 1924. Serial No. 722,571. 11 Claims. (Cl. 210—61.)

4. An apparatus for the separation of liquids of different specific gravity comprising a tank for holding a body of liquid undergoing separation, means for introducing into said body a mixture of the liquids to be separated at points located as to distance from the vertical axis of said tank substantially at the radius of gyration of the body of liquid in said tank and as to height in



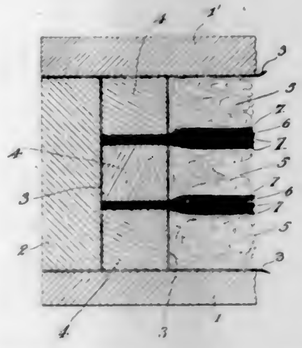
said tank substantially at the center of gravity of radial sections of said body of liquid, and means for conveying off separately the constituents from said body of liquid.

1,505,842. SEPARATOR. CLYDE L. ANDERSON, Butte, Mont. Filed Aug. 31, 1920. Serial No. 407,113. 1 Claim. (Cl. 204—29.)



A battery plate separator comprising side plates provided with openings, vertically arranged strips carried by each side plate and connecting the plates in spaced relation, the end strip of each plate being arranged in contacting engagement and the intermediate strips being arranged alternatively and forming vertical chambers as and for the purpose specified.

1,505,843. REFRIGERATOR HAVING A SHOW FRONT WITH INTERCHANGEABLE PANELS. LEN ALBERT BANTA, Clearfield, Pa. Filed Jan. 27, 1923. Serial No. 615,328. 2 Claims. (Cl. 40—126.)

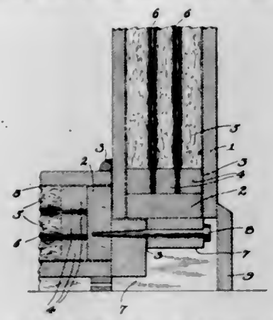


1. In a refrigerator the combination of a housing, a false front having translucent panels and secured in spaced relation to the housing adjacent its side and bottom edges and illuminating means intermediate the housing and the false front.

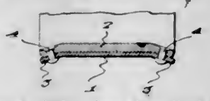
1,505,844. CHIMNEY-VENTILATED SHELL FOR REFRIGERATORS. LEN ALBERT BANTA, Clearfield, Pa. Filed Jan. 27, 1923. Serial No. 615,329. 2 Claims. (Cl. 20—4.)

1. A refrigerator having a bottom, an enclosed air space below and coextensive with the bottom and a vertical flue coextensive in height with the refrigerator and communicating with said space at its bottom and having its top open to the atmosphere.

1,505,845. INSULATION STRUCTURE FOR REFRIGERATORS. LEN ALBERT BANTA, Clearfield, Pa. Filed Jan. 27, 1923. Serial No. 615,330. 2 Claims. (Cl. 20—4.)



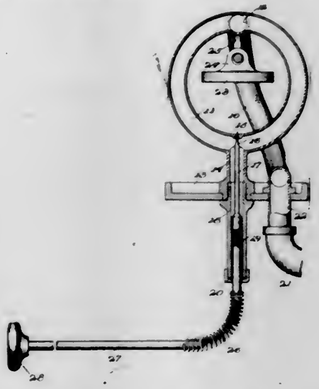
1. An improved housing structure for refrigerators comprising a panel having an outer face and an inner face, said faces lined with waterproof material and secured by marginal walls abutting against said lined faces, waterproof lining for the inner face of said marginal walls and a plurality of tiers of heat insulating and waterproofing material between said faces and within the marginal walls, each tier of heat insulating material being surrounded by marginal waterproof covered strips and said tiers of heat insulating material and their marginal strips being separated by sheets of waterproofing material.



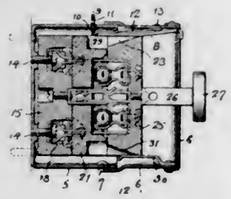
1,505,846. REFRIGERATOR INTERLOCKING SHELL STRUCTURE. LEN ALBERT BANTA, Clearfield, Pa. Filed Jan. 27, 1923. Serial No. 615,331. 1 Claim. (Cl. 20—4.)

In a refrigerator a plurality of composite panels, each of said panels comprising inner and outer faces spaced by double marginal walls the inner of said marginal walls comprising a plurality of tiers corresponding with layers of non-heat-conducting material, said layers, tiers, faces and marginal walls being separated throughout with

moisture proof material and said panels being secured together by cleats on the outer marginal walls and positioned so that a part of the inner face of one panel overlies a part of a marginal wall of another with waterproof material interposed between the adjacent parts thereof.

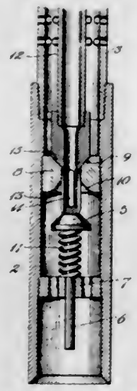


1,505,847. BRAKE BAND. CHARLIE BARKER and GEORGE H. BARKER, Terre Haute, Ind. Filed July 13, 1922. Serial No. 574,723. 2 Claims. (Cl. 188—249.)



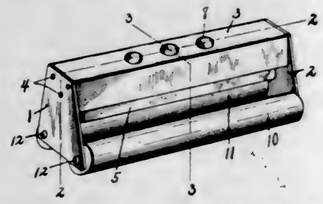
2. A brake band of the class described having its edges bent at an angle to provide flanges, a brake lining having portions extending over said flanges and rivets passing through the flanges and the lining.

1,505,848. VAPOR OIL BURNER. JACOB BARTEL, Hillsboro, Kans. Filed Dec. 29, 1923. Serial No. 683,454. 1 Claim. (Cl. 158—53.)



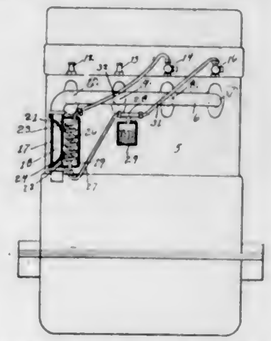
A vapor oil burner including vapor and generating rings of hollow form disposed at approximately right angles and connected in communicating relation at their upper central portions, a fuel oil supply including a pipe and an upright connected to the lower laterally deflected portion of the generating ring, a starting pan through one side of which said upright extends, a hollow upright rising centrally from said pan, said vapor ring having its lower central portion connected in communicating relation to the upper end of the latter upright and having a burner opening opposite the axis of said upright, an internally threaded tube depending below the pan from said central upright, a needle valve within said burner opening having a stem depending through the said upright and said tube and provided with threads engaging the threads of the tube, and means engaging the lower end of said stem for rotating the same and adjusting the needle valve including a control rod having a handle at one end and a universally movable connection at its other end with the said valve stem.

1,505,849. ELECTRIC SWITCH. CLARENCE A. BATES, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 29, 1921. Serial No. 518,632. 5 Claims. (Cl. 200—50.)



1. An electric switch comprising a metallic casing, having a fixed body member and an openable cover, an insulating switch base mounted within the casing, a movable switch block arranged within the casing cover, in combination with a lock element carried by the cover and automatically operated by the actuation of said movable switch block and serving to lock the casing cover in closed position when said movable block is in circuit-closing position.

1,505,850. VALVE MECHANISM FOR WELLS. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Feb. 19, 1923. Serial No. 620,110. 9 Claims. (Cl. 166—20.)

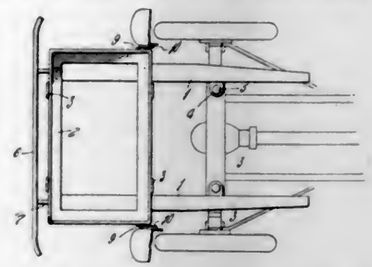


1. In an apparatus for wells, a wash pipe, a back pressure valve, and means attached to said wash pipe for engaging and opening the back pressure valve.

1,505,851. COMBINED ROLLING PIN AND SIFTER. AVID BLOOM, Syracuse, N. Y. Filed Nov. 24, 1923. Serial No. 676,765. 2 Claims. (Cl. 107—50.)

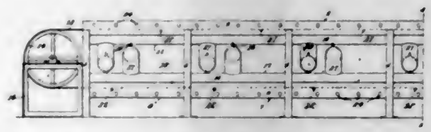
1. In an article of the class described, a pair of spaced end frames, a cross bar arranged between and secured to the end frames, a receptacle secured to and beneath the cross bar and provided with a plurality of perforations in its lower surface, and a pair of spaced rollers rotatably mounted in the end frames below said receptacle.

1,505,852. STEAM CLEANER FOR MOTORS. ELZIE E. BOLES, Santa Ana, Calif. Filed Nov. 17, 1923. Serial No. 675,376. 3 Claims. (Cl. 123—198.)



1. In a device of the character described, the combination with a motor, a casting adapted to be secured to the exhaust manifold of said motor, said casting having a chamber formed therein, a coil mounted in said chamber, means for conducting vapor to said coil, and means for discharging said vapor into one of the cylinders of said motor.

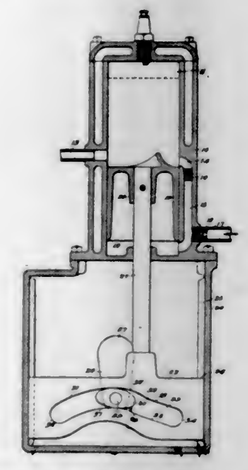
1,505,853. ELECTRICAL GOVERNING APPARATUS. FRANK K. BRAINARD, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 9, 1920. Serial No. 415,931. 25 Claims. (Cl. 290—40.)



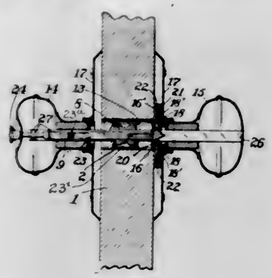
1. A governing apparatus comprising an electric motor tending to maintain its speed substantially constant in spite of variations in a characteristic of the current supplied to the motor, a device responsive to variations from normal in the electrical power supplied to said motor, and a controlling element actuatable by said device.

1,505,854. ATTACHMENT FOR MOTOR VEHICLES. WILLIAM HERMON BRANSCUM, Highland, Calif. Filed Jan. 28, 1924. Serial No. 689,134. 2 Claims. (Cl. 293—55.)

1. An attachment for a motor vehicle comprising a pair of beams, means for attaching the same to the rear part of a vehicle and a trunk supporting frame supported by the beams, said frame being formed of angle irons, the vertical flanges of which are provided with strap receiving loops and said vertical flanges forming a space to receive the bottom part of a trunk.

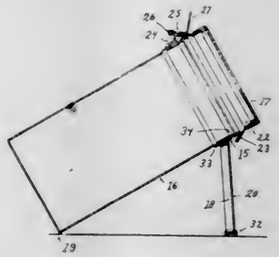


1,505,855. DRYING MACHINE. PETER BREUER, Milwaukee, Wis. Filed Jan. 6, 1923. Serial No. 611,138. 12 Claims. (Cl. 34—2.)



3. In a drying machine of the type described, a frame structure, separate drying chambers supported on the frame structure, an endless metallic perforated belt having the spaced runs thereof passing through the separate drying chambers and supply and exhaust means for a drying medium associated with the drying chambers.

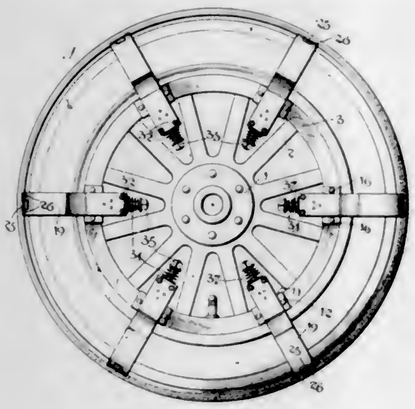
1,505,856. EXPLOSIVE MOTOR. HENRY BRIGGS, Hasbrouck Heights, N. J. Filed Feb. 13, 1922. Serial No. 536,080. 12 Claims. (Cl. 123—78.)



1. In a motor, a cylinder, a piston, a crank shaft, a connecting rod, and a cam-slotted block forming the connection between the connecting rod and the crank shaft, the cam slot in said block being so formed as to permit of rest of the piston during movement of the crank shaft.

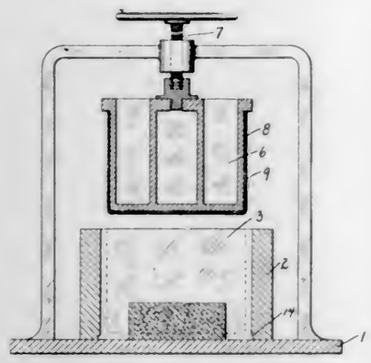
1,505,857. DOOR LOCK. IRA DONOVAN BRILL, Marlinton, W. Va. Filed July 6, 1921. Serial No. 482,779. 4 Claims. (Cl. 70—91.)

1. A lock for a door comprising a spindle, a locking bolt, a spindle to pass through the door, a connection between the spindle and the locking bolt for retracting it, locking means to prevent rotation of the spindle, and a slotted controlling rod extending from the said locking means to the inside of the door, said controlling rod being movable longitudinally of the spindle, in one position setting the spindle locking means to prevent rotation of the spindle, in a second position releasing the same, and means operated by the controlling rod when set in a third position for locking the bolt independent of the spindle lock, substantially as described.



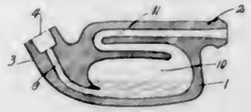
1,505,858. DISPLAY AND VENDING APPARATUS. EDWARD BRUNHOFF, Cincinnati, Ohio, assignor to The Brunhoff Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 17, 1922. Serial No. 582,505. 5 Claims. (Cl. 220—32.)

1. A display and vending apparatus comprising in combination with a sheet-metal original package, a sheet metal member adapted to telescopically, detachably engage the mouth of said original package in place of its original sheet metal lid, a supporting member carried by said sheet metal member and adapted to support said original package and sheet metal member in an inclined position and a lid hinged to the edge of said sheet metal member adapted to open and close the mouth of said original package.



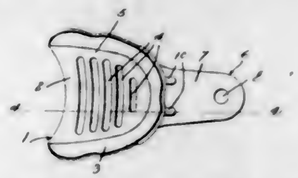
1,505,859. ARMOR OR PROTECTOR FOR PNEUMATIC TIRES. CHARLES K. BULGARIDES, Tacoma, Wash. Filed Dec. 6, 1923. Serial No. 678,940. 7 Claims. (Cl. 152—17.)

5. In an armor or protector for pneumatic tires, a plurality of coupling devices for the protecting member of the armor, each of said devices including a yoke-shaped support adapted to be secured to the felly of the wheel and provided with stops and having its securing means providing guides, a pair of hinged arms positioned between said guides and with one of said arms adapted to be secured to said projecting member, a pair of coupling members for detachably connecting the inner ends of said arms together, a post positioned against said stop and extending between said coupling members and provided with an abutment, a coiled spring interposed between said



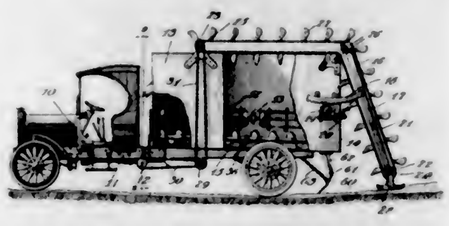
abutment and said coupling members, and a locking element carried by one of said arms and engaging with said post for locking it in position.

1,505,860. METHOD OF AND APPARATUS FOR FORMING HOLLOW ARTICLES FROM PLASTIC MATERIAL. FREDERICK BYFORD, Keyser, W. Va. Filed Feb. 12, 1924. Serial No. 692,321. 7 Claims. (Cl. 25—27.)



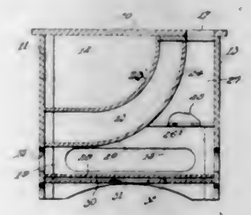
1. In apparatus for forming hollow articles from clay by pressing, the combination of a mold having its inner surface adapted to shape the exterior of the article, and a plunger adapted to enter the mold and to force clay contained therein into the space between its exterior and the inner surface of the mold, and to shape the interior of the article a shell of rigid sheet material fitting and enclosing the exterior of the plunger adapted to permit the plunger to be withdrawn from it so as leave the shell within and supporting the walls of the molded articles, and an envelope of flexible material fitting and enclosing the exterior surface of the shell adapted to permit the shell to be withdrawn so as to leave the envelope within and against the inner surface of the walls of the molded article.

1,505,861. SMOKER'S PIPE. JAMES CARAFILIDIS, Sabraton, W. Va. Filed Oct. 30, 1920. Serial No. 420,706. 1 Claim. (Cl. 131—12.)



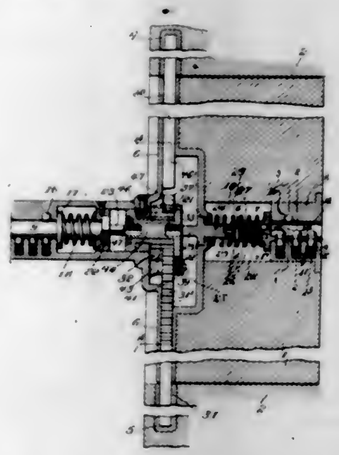
In a device of the character described, a body of substantially elongated rectangular shape provided at one end with a neck and at the other end with a bit, the body being hollowed out to provide a relatively large elongated chamber, said neck being adapted for reception of a bowl and communicating with the chamber at the forward end thereof, said body being further provided with an outlet passage of elongated U shape above the chamber, said passage communicating at one end with the chamber at the rear thereof and at its other end with the bit.

1,505,862. COMPRESSION TRAY. HOUSTON M. CARROLL, Sr., San Antonio, Tex. Filed June 9, 1923. Serial No. 644,485. 1 Claim. (Cl. 32—6.)



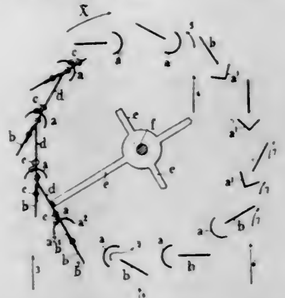
A dental impression tray comprising a base and a marginal flange projecting therefrom, the base being provided with openings which terminate short of the place of juncture between the base and the flange, to leave an imperforate portion in the base adjacent to the flange, the openings being so shaped, located, and of such a size, as to leave enough material in the base to form an adequate support for the impression material when the same is compressed against the relatively hard palatine arch, and so shaped, located, and of such a size, as to permit the impression material to retire through the openings, and to permit the liquid in the impression material to drain through the openings, before the liquid can flow upon said imperforate portion of the base and soften that part of the impression material which is engaged by the relatively soft alveolar ridge.

1,505,863. APPARATUS FOR REMOVING SNOW OR THE LIKE. PIERRE GASPARD CHAYER, Limoilou, Quebec, Canada, assignor of one-half to Albert Lapointe, Limoilou, Quebec, Canada. Filed Mar. 19, 1921. Serial No. 453,684. 1 Claim. (Cl. 37—5.)



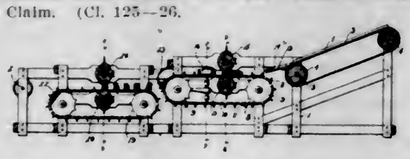
A machine of the character described in combination with a truck, a body mounted thereon, a conveyor carried by said body at the rear end thereof for conveying snow or the like thereto, means for operating said conveyor, agitating drums mounted longitudinally of the body at the opposite sides thereof for rotation, screw elements mounted between and below the agitating means, means for driving the agitating means and the screw elements, and means for supporting the lower end of the conveyor.

1,505,864. SOUND AMPLIFYING AND DISTRIBUTING DEVICE. NATHANIEL A CLARK, Davenport, Iowa. Filed July 28, 1922. Serial No. 578,175. 1 Claim. (Cl. 274—2.)



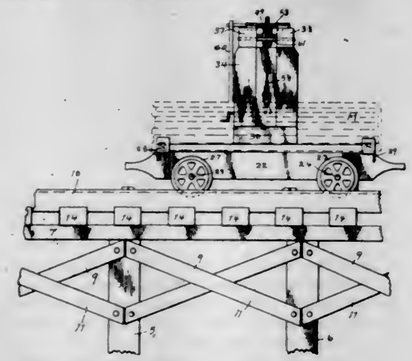
In a device of the class described, a box including a top, and side walls having openings near the bottom thereof, a sound board extending in the form of a curve from one side wall at a point above the opening therein, and having one edge spaced from the opposite wall, means forming a throat portion in the space thus provided, and a sound board below the curved sound board and below the openings in the side walls, and constituting the lower wall of an amplifying and distributing chamber having communication with the throat portion.

1,505,865. DOOR LOCK. MARIO COSTA, New York, N. Y. Filed Oct. 17, 1923. Serial No. 669,160. 7 Claims. (Cl. 70—47.)



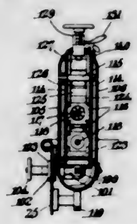
1. A means for locking a door in its casing, angularly disposed bolts slidable into keepers in the casing and each of said bolts having an inner racked surface, a toothed wheel engaging said racks, spring influenced swingable means engaging the inner ends of the bolts when the latter are thrown, means associated with the wheel and freely movable to a determined point thereon and engageable with the swingable holding means to release the same to permit of the turning of the wheel to slide the bolts, and means for turning said wheel.

1,505,866. WIND ENGINE. LÉON JULES COSTES, Paris, France. Filed Oct. 6, 1921. Serial No. 505,825. 2 Claims. (Cl. 170—36.)



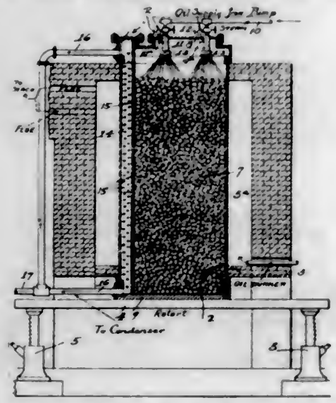
1. In a wind motor, a vane including a gutter, and a flat blade, the blade having its forward edge slightly spaced from the gutter and being disposed rearwardly of the gutter in the direction of rotation of the vane.

1,505,867. BRICK-CLEANING MACHINE. ADRIEN COTÉ, Franklin, Mass. Filed Oct. 4, 1923. Serial No. 666,639. 1 Claim. (Cl. 125—26.



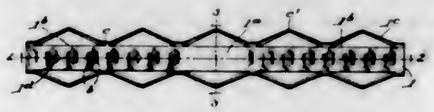
An apparatus of the class described comprising a supporting framework, an inclined feed conveyor supported thereby, a second conveyor supported thereby having brick engaging projections thereon, a bridge for causing the bricks to pass from the first conveyor to the second conveyor, two sets of grinding rolls associated with the second conveyor for cleaning the tops and bottoms and ends of bricks, a third conveyor having brick engaging projections thereon arranged below the plane of the second conveyor so that the bricks passing from one conveyor in the same vertical plane to the other will then and grinding rolls associated with the third conveyor for cleaning the side edges of the bricks.

1,505,868. RETIMBERING CRANE. JOSEPH DEL COZZO, Scotia, Calif. Filed Dec. 8, 1922. Serial No. 605,689. 1 Claim. (Cl. 212—11.)



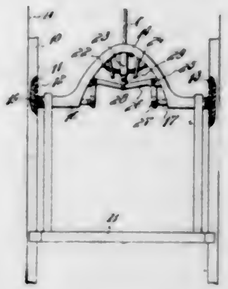
In a device of the character described the combination with a hand car, of a supporting structure mounted on said hand car, parallel spaced boom members mounted above and secured to said supporting structure, said boom members extending beyond the outer margin of said hand car, hoisting means secured on said supporting structure and consisting of a drum, means for rotating said drum, two sets of spaced sheaves mounted between said booms at a point within the outer margin of said hand car, a movable plate secured on said boom at a point beyond the outer margin of said car, sheaves mounted on said plate, a cable having one end secured to said drum and extending up and over one of the sheaves positioned between said boom, thence over another of said sheaves spaced from said first mentioned sheave, over another of said sheaves in axial alignment with said first mentioned sheave, thence over another of said sheaves, in axial alignment with said second mentioned sheave, thence over one of said sheaves on said movable plate, thence downwardly through a sheave suspended below said booms and over the other of said sheaves mounted on said plate and secured between the ends of said booms.

1,505,869. WRINGER MECHANISM. JOSEPH CROSSLEY, Trenton, N. J. Filed Dec. 9, 1920. Serial No. 429,478. 10 Claims. (Cl. 68—32.)



10. In a device of the class described, a tub, a shaft arranged within said tub near and parallel with one wall thereof, the said shaft being capable of moving toward or away from said wall, a casing enclosing and supported by said shaft and capable of sliding longitudinally thereof and of swinging pivotally upon the said shaft, a portion of said casing being at all times interposed between said shaft and said tub wall, means for moving the said shaft toward said wall whereby to bring the said portion against the wall, and wringer mechanism within said casing and operatively connected with said shaft.

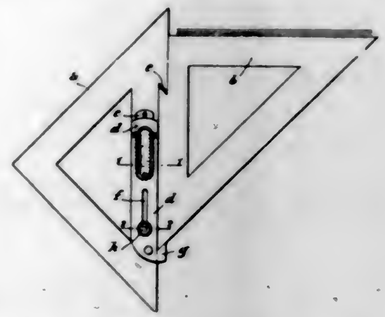
1,505,870. PROCESS OF TREATING HYDROCARBON OILS. HARRY H. CULMER, Chicago, Ill. Filed Apr. 4, 1919. Serial No. 287,445. 4 Claims. (Cl. 196—50.)



1. A method of lowering the viscosity of hydrocarbon oil consisting in spraying the oil upon a bed of incandescent coke contained in closed externally heated retorts, maintaining the coke at temperatures regulated to prevent the formation of any substantial quantity of incondensable gases, withdrawing the treated oil and products of distillation from the coke body by passing it from the hotter to the cooler portions.

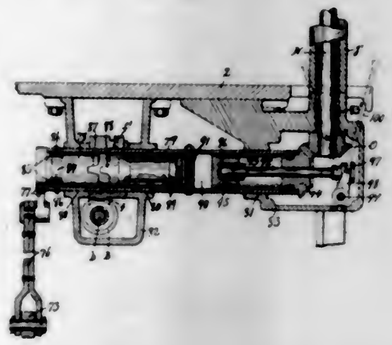
1,505,871. WALL TIE. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, Warren, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 627,798. 7 Claims. (Cl. 72—103.)

1. As an article of manufacture, a wall tie formed from a single piece of metal having an intermediate corrugated portion and marginal expanded metal portions.



1,505,872. SAFETY CATCH FOR ELEVATORS. ALVA DEERWESTER, Butler, Mo. Filed July 6, 1923. Serial No. 649,935. 2 Claims. (Cl. 187—84.)

1. A safety device for elevators comprising the combination with an elevator of a frame at the top thereof, said frame being of arch shape and including oppositely extending tubular guides, outwardly spring pressed plungers slidable within said guides, angle levers pivoted at their angles at the inside of the arch portion and having depending arms having slot and pin connection with the inner ends of the plungers, the top of the arch having an opening, the hoisting cable extending through said opening, a leaf spring within the arch and engaging thereagainst, retaining guide brackets of loop like formation on the arch portion straddling the spring, a head carried by the lower end of the cable and located within said arch portion, said spring extending through and being rigidly carried by said head, and a link pivotally connected with the head and with the inner ends of said angle levers.

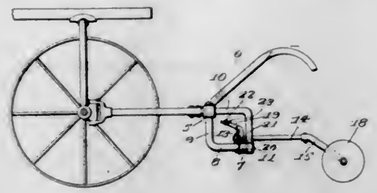


1,505,873. DEVICE FOR DRAWING PARALLEL LINES. GIUSEPPE D'ERAMO, Rome, Italy. Filed Apr. 6, 1923. Serial No. 630,312. 1 Claim. (Cl. 33—110.)

A device for accurate drawing parallel lines at an equal given distance with micrometric approximation consisting in the combination of two squares of any suitable material disposed with the cathetus of square =*b*= slidable along the hypothenuse of square =*a*=, a graduated guide on the hypothenuse of the square =*a*=, a longitudinally slotted slide mounted on the guide and having a guiding line and nonius subdivisions thereon, said slide being provided at one end with a projection extending into the path of the other square and limiting the movement of the latter, and a thumb screw passing through the slot and securing the slide to the square,

the squares being provided with abutments =*c*= fixing the relative position when coinciding with the zero of a nonius on the slide =*d*=, the graduations of guide and slide being in millimeters and in inches.

1,505,874. DRIVE MECHANISM FOR COMBINED WASHERS AND WRINGERS. JOHN N. DERSCHUG, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Original application filed Jan. 31, 1920, Serial No. 355,515. Divided and this application filed Oct. 25, 1921. Serial No. 510,297. 7 Claims. (Cl. 74—7.)

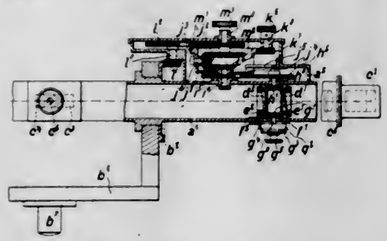


1. In a machine of the character described, two parallel upright shafts, a tubular horizontal shaft, means for rotating the tubular shaft, a clutch section loosely journaled in the tubular shaft to allow said tubular shaft to rotate independently thereof, means movable within said tubular shaft for causing the clutch section to rotate therewith, means driven by the tubular shaft for rotating one of the upright shafts, and means driven by the clutch section when driven by the tubular shaft for reciprocating the other upright shaft endwise.

1,505,875. CULTIVATOR ATTACHMENT. ALON E. EARLEY, Seminole, Okla. Filed Mar. 1, 1922. Serial No. 540,259. 2 Claims. (Cl. 97—54.)

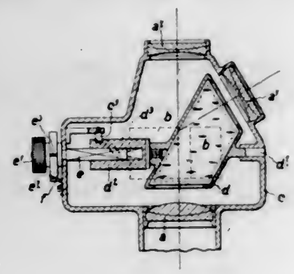
1. In a cultivator attachment, the combination with the shovel bar, of a supporting beam maintained by and spaced parallel from said shovel bar, a sleeve carried by said supporting beam, a sector on said sleeve having a

central aperture, a disc beam engaged and maintained in said aperture, an arm rigidly secured to said disc beam



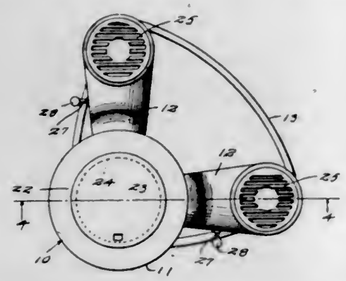
and overlying the sector, a latch carried by said arm and engaged with the teeth of said sector, and a disc bar carried by said disc beam.

1,505,876. SHADE AND CURTAIN BRACKET. JOHN T. EDGAR, Cambridge, Ohio. Filed Apr. 1, 1922. Serial No. 548,662. 2 Claims. (Cl. 156—23).



1. A device of the character described comprising bracket members adapted for disposition against the face of a window casing at the top thereof, and provided with means for penetrating engagement with the top and outer edge of the casing, the bracket member including a cylindrical portion formed with a slot, the cylindrical portion being formed integrally upon the casing engaging portion and being of considerable length, forwardly extending curtain pole supporting elements carried by the brackets and overlying said cylindrical portion, blocks slidable within the brackets and carrying arms projecting through the slots for supporting a shade roller, and spring members within the cylinder portions having one end secured and their other ends connected with the blocks whereby to urge them always toward each other.

1,505,877. TELEMETER. OTTO EPPENSTEIN, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,106. 4 Claims. (Cl. 88—2.7.)

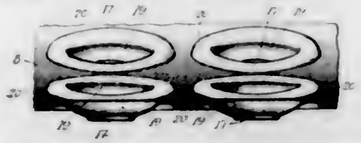


1. The combination of a bearing body with a telemeter rotatably supported on this body, the telemeter comprising a deflecting device, adapted to alter the relative position of two images of the object to be measured which are presented to the observer, a range scale and an index fitted to the telemeter relatively to one another, a differential gear fitted to the telemeter and comprising two crown wheels and a planet pinion, a gearing interposed between the said bearing body and one of the two crown wheels and adapted to convert a rotation of the telemeter relatively to the bearing body into a rotation of this crown wheel proportional to the logarithm of the sine of the angle of rotation of the telemeter reckoned from the horizontal direction of sight of the telemeter, another gearing interposed between the said deflecting device and the other crown wheel and adapted to convert the relative movement of the range scale and the index into a rotation of the latter crown wheel proportional to the logarithm of the range indicated in each case on the range scale, and an actuating mechanism, adapted to rotate the said planet pinion about the common axis of the crown wheels.

1,505,878. TELESCOPE. HEINRICH ERFLE, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 26, 1922. Serial No. 584,562. 3 Claims. (Cl. 88—33.)

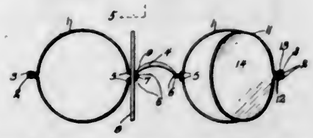
1. In a telescope a prism system, containing two lateral boundary surfaces parallel to each other and a number of reflecting surfaces inclined to these boundary surfaces, the said prism system being rotatable so as to occupy two positions, in the one of which the telescope axis being divided by the reflection on the said reflecting surfaces into two parts embracing an angle and in the other one of which the prism system's lateral boundary surfaces being perpendicular to one of these two parts of the telescope axis so as to be traversed by the rays passing through the telescope, and the said telescope further containing a changing device adapted to bring the said prism system from the one position into the other.

1,505,879. MULTIPLE HEATING ATTACHMENT. LULA C. EUSTICE, Rockford, Ill. Filed Apr. 16, 1923. Serial No. 632,407. 2 Claims. (Cl. 126—216.)



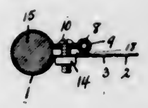
1. A heating attachment having a frame consisting of arcuate portions of substantially similar lengths, a heating drum adjacent one corner of the frame, flues extending from the drum and having their outlets adjacent the other corners of the frame, a leg supporting the heating drum extending from substantially one corner of the frame, and legs longer than said first leg supporting the flues and extending from the other corners of the frame.

1,505,880. PAVEMENT COMPOSITION. ANDREW MILLER FAIRLIE, Atlanta, Ga., assignor to Tennessee Copper & Chemical Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,278. 4 Claims. (Cl. 106—31.)



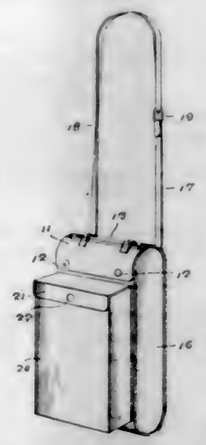
4. A plastic composition comprising an asphaltic cement thoroughly incorporated with a finely pulverized slag containing a small percentage of copper, such latter acting to harden and toughen the product.

1,505,881. WASHING MACHINE. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 7, 1921, Serial No. 505,977. Divided and this application filed Oct. 6, 1923. Serial No. 666,966. 3 Claims. (Cl. 68—18.)



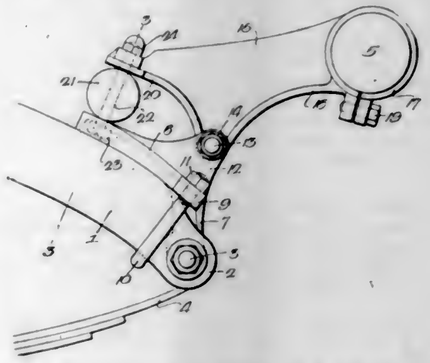
1. In a cylinder for washing machines, a metal wall having numerous outwardly extending conical depressions projecting beyond the periphery of the wall and each provided with a hole in its apex of substantially smaller diameter than that of the base of the cone to provide water pockets, the sides of the depressions being outwardly curved, the metal bounding each hole and integral with the wall being rolled outwardly back upon itself to form a smooth, unbroken rounded edge around the hole.

1,505,882. DRIVING GLASSES. JOSEPH E. GEIGER, New Kensington, Pa. Filed Sept. 26, 1921. Serial No. 503,338. 5 Claims. (Cl. 2—14.)



1. Driving toggles including frames and lens sections hinged to said frames for horizontal swinging movement with respect thereto, corresponding sides of the respective lens sections being hinged to corresponding sides of the respective frames.

1,505,883. ADJUSTABLE TUBING CLIP. FREDERICK H. GLEASON, Auburn, N. Y., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed July 18, 1923. Serial No. 652,371. 7 Claims. (Cl. 24—243.)

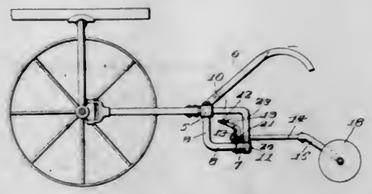


2. A tubing clip comprising a bendable strip of metal having one end portion return bent upon the body of the strip, and connected to the body by a transverse substantially cylindrical portion, said return bent portion formed with an opening and said strip formed with an opening registering with the opening in the return bent portion, and said strip formed near its opposite end with a plurality of openings arranged at different distances from the end of the strip and lines extending transversely of the strip between the last-named openings.

1,505,884. CASE. FRANK C. GOLDQUIST, Galesburg, Ill. Filed Dec. 1, 1922. Serial No. 604,338. Renewed June 20, 1924. 2 Claims. (Cl. 190—52.)

1. The combination with a camera case including a film compartment, of a container adapted to fit within said compartment, said container comprising a casing shaped to receive a plurality of rolls of film arranged in parallelism, said casing being provided at each end with an opening for the passage of the rolls and means for yieldingly holding the rolls in position.

1,505,885. BUMPER. GEORGE HAINLEN, Philadelphia, Pa. Filed Feb. 27, 1924. Serial No. 695,543. 4 Claims. (Cl. 293—55.)

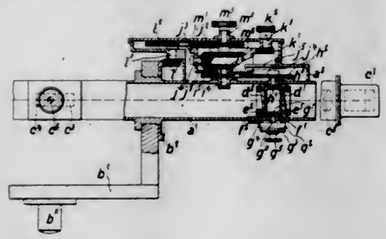


1. The combination in a bumper, of a bearing plate having an extension on one side perforated for the passage of a spring bolt and having a bearing on its upper surface; a two-armed bracket pivotally mounted on the bearing; a bumper bar carried by one arm, the other arm extending beyond the pivot; and a yielding member located between the rear arm of the bracket and the bearing plate.

1,505,886. INSECT DESTROYER. JESSIE G. HALEY, Wellston, Okla. Filed Feb. 28, 1923. Serial No. 621,898. 5 Claims. (Cl. 43—138.)

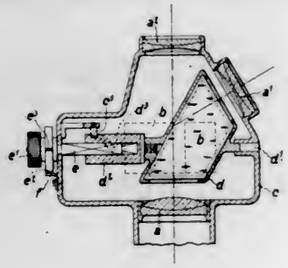
4. A machine of the class described comprising a hollow body, supporting wheels therefor, a brush supported within the body and extending therebelow for contact with the surface over which the machine traverses, means

central aperture, a disc beam engaged and maintained in said aperture, an arm rigidly secured to said disc beam



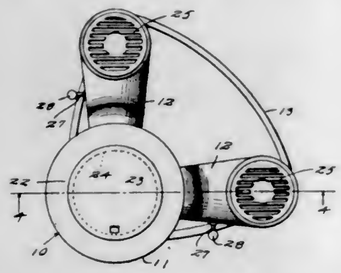
and overlying the sector, a latch carried by said arm and engaged with the teeth of said sector, and a disc bar carried by said disc beam.

1,505,876. SHADE AND CURTAIN BRACKET. JOHN T. EDGAR, Cambridge, Ohio. Filed Apr. 1, 1922. Serial No. 548,662. 2 Claims. (Cl. 156—23).



1. A device of the character described comprising bracket members adapted for disposition against the face of a window casing at the top thereof, and provided with means for penetrating engagement with the top and outer edge of the casing, the bracket member including a cylindrical portion formed with a slot, the cylindrical portion being formed integrally upon the casing engaging portion and being of considerable length, forwardly extending curtain pole supporting elements carried by the brackets and overlying said cylindrical portion, blocks slidable within the brackets and carrying arms projecting through the slots for supporting a shade roller, and spring members within the cylinder portions having one end secured and their other ends connected with the blocks whereby to urge them always toward each other.

1,505,877. TELEMETER., OTTO EPPENSTEIN, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,106. 4 Claims. (Cl. 88—2.7.)

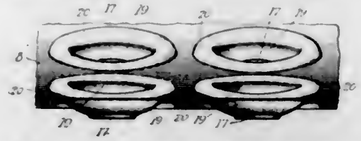


1. The combination of a bearing body with a telemeter rotatably supported on this body, the telemeter comprising a deflecting device, adapted to alter the relative position of two images of the object to be measured which are presented to the observer, a range scale and an index fitted to the telemeter relatively to one another, a differential gear fitted to the telemeter and comprising two crown wheels and a planet pinion, a gearing interposed between the said bearing body and one of the two crown wheels and adapted to convert a rotation of the telemeter relatively to the bearing body into a rotation of this crown wheel proportional to the logarithm of the sine of the angle of rotation of the telemeter reckoned from the horizontal direction of sight of the telemeter, another gearing interposed between the said deflecting device and the other crown wheel and adapted to convert the relative movement of the range scale and the index into a rotation of the latter crown wheel proportional to the logarithm of the range indicated in each case on the range scale, and an actuating mechanism, adapted to rotate the said planet pinion about the common axis of the crown wheels.

1,505,878. TELESCOPE. HEINRICH ERFLE, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 26, 1922. Serial No. 584,562. 3 Claims. (Cl. 88—33.)

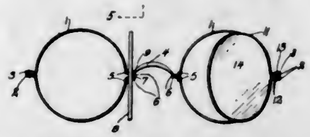
1. In a telescope a prism system, containing two lateral boundary surfaces parallel to each other and a number of reflecting surfaces inclined to these boundary surfaces, the said prism system being rotatable so as to occupy two positions, in the one of which the telescope axis being divided by the reflection on the said reflecting surfaces into two parts embracing an angle and in the other one of which the prism system's lateral boundary surfaces being perpendicular to one of these two parts of the telescope axis so as to be traversed by the rays passing through the telescope, and the said telescope further containing a changing device adapted to bring the said prism system from the one position into the other.

1,505,879. MULTIPLE HEATING ATTACHMENT. LULA C. EUSTICE, Rockford, Ill. Filed Apr. 16, 1923. Serial No. 632,407. 2 Claims. (Cl. 126—216.)



1. A heating attachment having a frame consisting of arcuate portions of substantially similar lengths, a heating drum adjacent one corner of the frame, flues extending from the drum and having their outlets adjacent the other corners of the frame, a leg supporting the heating drum extending from substantially one corner of the frame, and legs longer than said first leg supporting the flues and extending from the other corners of the frame.

1,505,880. PAVEMENT COMPOSITION. ANDREW MILLER FAIRLIE, Atlanta, Ga., assignor to Tennessee Copper & Chemical Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,278. 4 Claims. (Cl. 106—31.)

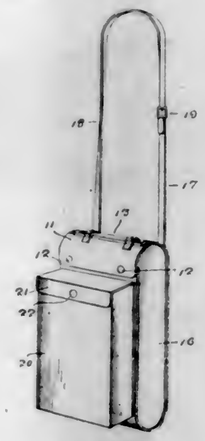


4. A plastic composition comprising an asphaltic cement thoroughly incorporated with a finely pulverized slag containing a small percentage of copper, such latter acting to harden and toughen the product.

1,505,881. WASHING MACHINE. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 7, 1921, Serial No. 505,977. Divided and this application filed Oct. 6, 1923. Serial No. 666,966. 3 Claims. (Cl. 68—18.)

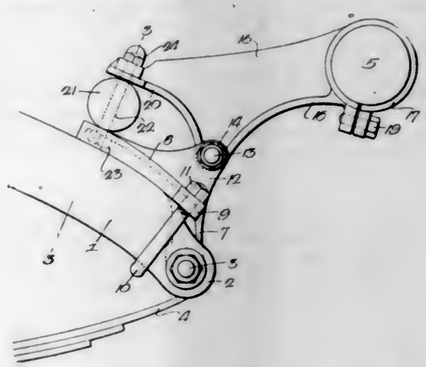
1. In a cylinder for washing machines, a metal wall having numerous outwardly extending conical depressions projecting beyond the periphery of the wall and each provided with a hole in its apex of substantially smaller diameter than that of the base of the cone to provide water pockets, the sides of the depressions being outwardly curved, the metal bounding each hole and integral with the wall being rolled outwardly back upon itself to form a smooth, unbroken rounded edge around the hole.

1,505,882. DRIVING GLASSES. JOSEPH E. GEIGER, New Kensington, Pa. Filed Sept. 26, 1921. Serial No. 503,338. 5 Claims. (Cl. 2—14.)



1. Driving toggles including frames and lens sections hinged to said frames for horizontal swinging movement with respect thereto, corresponding sides of the respective lens sections being hinged to corresponding sides of the respective frames.

1,505,883. ADJUSTABLE TUBING CLIP. FREDERICK H. GLEASON, Auburn, N. Y., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed July 18, 1923. Serial No. 652,371. 7 Claims. (Cl. 24—243.)

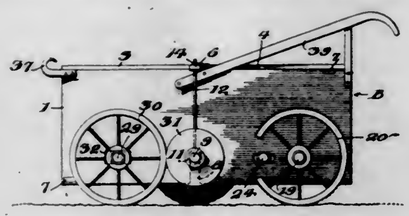


2. A tubing clip comprising a bendable strip of metal having one end portion return bent upon the body of the strip, and connected to the body by a transverse substantially cylindrical portion, said return bent portion formed with an opening and said strip formed with an opening registering with the opening in the return bent portion, and said strip formed near its opposite end with a plurality of openings arranged at different distances from the end of the strip and lines extending transversely of the strip between the last-named openings.

1,505,884. CASE. FRANK C. GOLDQUIST, Galesburg, Ill. Filed Dec. 1, 1922. Serial No. 604,338. Renewed June 20, 1924. 2 Claims. (Cl. 190—52.)

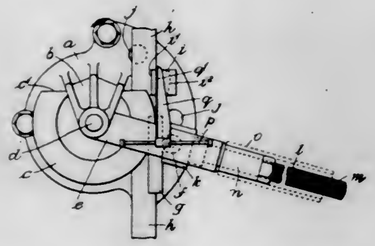
1. The combination with a camera case including a film compartment, of a container adapted to fit within said compartment, said container comprising a casing shaped to receive a plurality of rolls of film arranged in parallelism, said casing being provided at each end with an opening for the passage of the rolls and means for yieldingly holding the rolls in position.

1,505,885. BUMPER. GEORGE HAINLEN, Philadelphia, Pa. Filed Feb. 27, 1924. Serial No. 695,543. 4 Claims. (Cl. 293—55.)



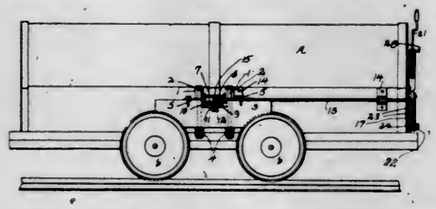
1. The combination in a bumper, of a bearing plate having an extension on one side perforated for the passage of a spring bolt and having a bearing on its upper surface; a two-armed bracket pivotally mounted on the bearing; a bumper bar carried by one arm, the other arm extending beyond the pivot; and a yielding member located between the rear arm of the bracket and the bearing plate.

1,505,886. INSECT DESTROYER. JESSIE G. HALEY, Wellston, Okla. Filed Feb. 28, 1923. Serial No. 621,898. 5 Claims. (Cl. 43—138.)



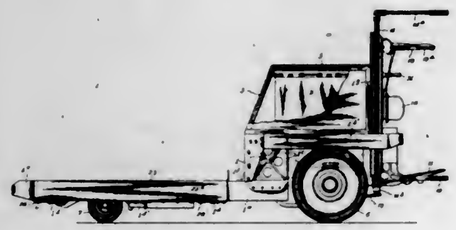
4. A machine of the class described comprising a hollow body, supporting wheels therefor, a brush supported within the body and extending therebelow for contact with the surface over which the machine traverses, means

whereby certain of the supporting wheels rotate said brush, a crushing medium arranged within the body, a wall within the body at the opposite side of the brush and



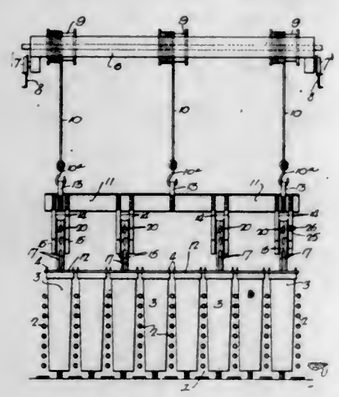
in close proximity thereto, and a second wall positioned rearwardly of the crushing medium and immediately adjacent thereto.

1,505,887. TUBE-BENDING MACHINE. JOHN HENRY HAWES, London, England. Filed Oct. 12, 1923. Serial No. 668,151. 5 Claims. (Cl. 153—45.)



1. A tube bending machine of the kind referred to comprising the combination of a radius wheel or former and shield with coacting faces grooved and proportioned to the tube to be bent, a radial lever adapted to turn on the axis of the radius wheel or former, a bending roller mounted upon said lever, a screw device for adjusting the position of the bending roller longitudinally of the radial lever, an angular gauge mounted upon said radial lever and adapted to permit of the correct angular working position for the bending roller being quickly and accurately determined for the different sizes of tubes and radius wheels.

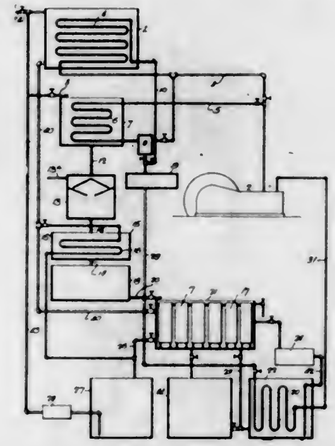
1,505,888. BRAKING MEANS. CURG W. HELTMAN, Indiana, Pa., assignor, by direct and mesne assignments, to Safety Mine Car Brake Company, Indiana, Pa., a Corporation of Pennsylvania. Filed July 22, 1921. Serial No. 486,821. 7 Claims. (Cl. 188—57.)



1. In braking means, in combination with a car, brake blocks positioned adjacent to the wheels of the car, an operating lever mounted on the car, means for causing movement of the blocks away from the wheels, and connections between said lever and the blocks and acting through tension only for forcing the blocks toward the wheels when the lever is rocked in either direction away from central position and for releasing said blocks when the lever is rocked toward central position.

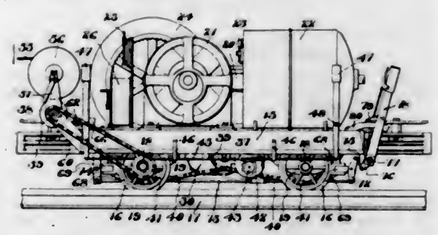
1,505,889. TRUCK. JOHN H. HERTNER, Lakewood, Ohio, assignor to The Baker R. & L. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 10, 1919. Serial No. 322,835. 22 Claims. (Cl. 254—5.)

1. In an elevating platform truck, the combination of a frame comprising a relatively low platform carrying section and an elevated section, traction wheels for said elevated section, means supported by said elevated section for driving said traction wheels, supporting wheels for said platform carrying section, a platform carried by said latter section and bodily movable relatively thereto, a motor carried by said platform carrying section and disposed between the side member thereof, and connections between said motor and said platform for raising and lowering the latter.



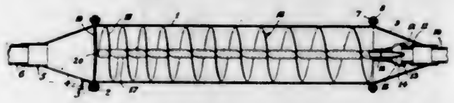
1,505,890. LIFTING DEVICE. WILLIAM E. HEXAMER, Philadelphia, Pa. Filed Feb. 3, 1922. Serial No. 533,920. 11 Claims. (Cl. 294—87.)

1. The combination of a series of containers arranged in a row; a crane; at least one bar supported from the crane at a plurality of points; and hooks on the containers in position to be detachably engaged by said bar.



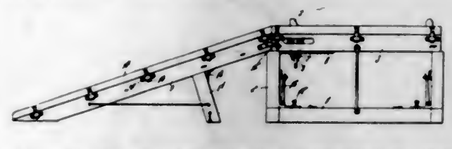
1,505,891. REFRIGERATING SYSTEM. WILLIAM E. HEXAMER, Philadelphia, Pa. Filed Dec. 12, 1922. Serial No. 606,372. 4 Claims. (Cl. 62—157.)

4. The combination in a refrigerating system of a source of heated refrigerant; a condenser and a heat exchanger both connected to receive heated gas from said source; means for delivering cooling water to the heat exchanger; a deaerator connected to receive water after it has been heated in the heat exchanger; a cooler for lowering the temperature of the water after its passage through the deaerator; and a freezing tank con-



nected to receive water from said cooler; with a connection for delivering water from the condenser to the freezing tank for melting loose the ice formed therein.

1,505,892. PORTABLE COMPRESSING APPARATUS. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 5, 1918. Serial No. 220,603. 18 Claims. (Cl. 105—27.)

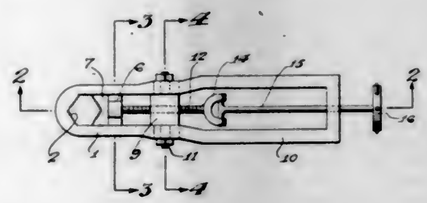


1. The combination with a truck and unitary compressing mechanism thereon, of unitary mechanism for propelling said truck, and means for alternatively supplying power to said mechanisms, respectively.

1,505,893. SILENCER FOR INTERNAL-COMBUSTION ENGINES. WILLIAM HUNTER and MAY GILL, Blackpool, England. Filed Mar. 6, 1920. Serial No. 363,808. 6 Claims. (Cl. 137—160.)

3. A silencer for internal combustion engines comprising a cylindrical tube partially closed by a resilient diaphragm having a central perforation, an ejector tube opposite said perforation and adapted to receive part of the gases and baffling means to baffle the other part of the gases.

1,505,894. VEHICLE SUPPORT. JOSEPH M. IRVING, Bradford, Mass., assignor of one-half to Emma E. Bard, Bradford, Mass. Filed Jan. 5, 1924. Serial No. 684,613. 1 Claim. (Cl. 254—88.)



A device of the class described, comprising a frame, including a pair of upper side pieces, a stationary cross piece and a movable cross piece, a crank shaft, gears thereon and racks on the side piece engaged by the gears for adjusting the cross piece.

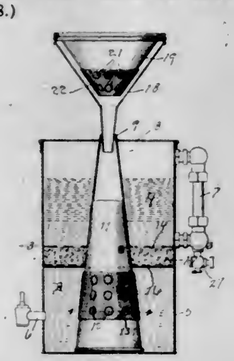
1,505,895. HOSE CLAMP. KARL F. W. KEMPF, Buffalo, N. Y. Filed Aug. 24, 1921. Serial No. 494,916. 11 Claims. (Cl. 24—9.)

1. A hose clamp comprising an open band adapted to encircle a hose and having opposite ends in overlapping relation, a pair of lugs formed on said band at the extremity of the overlapped end thereof, a rotatable element mounted between said lugs and adapted to engage the overlapping end of said band to tighten said band around the hose, and means carried by said rotatable element adapted to engage said lugs for retaining said rotatable element in tightened position.

1,505,896. WRENCH. ANDREW J. KERSHNER, Chicago, Ill. Filed Feb. 16, 1923. Serial No. 619,475. 2 Claims. (Cl. 81—177.)

1. In a wrench, a substantially U shaped body having a wrench jaw on the inner edge of its bight portion, a block slidably carried by the legs of said body, a wrench jaw carried by said block, a block rigidly attached to said body, a handle structure pivotally carried by said rigid block, and means carried by said handle structure and rigid block and connected to said slidable block for adjusting the position of the jaw carried thereby.

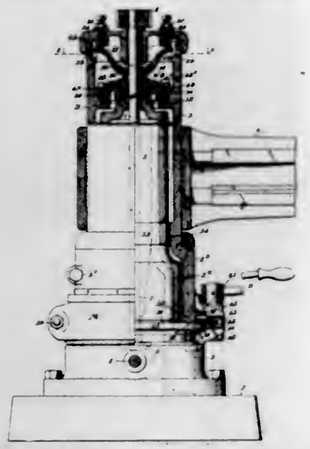
1,505,897. WRENCH. ALEX KIKTA, Flint, Mich. Filed Dec. 4, 1923. Serial No. 678,472. 5 Claims. (Cl. 81—64.)



1. A wrench comprising a hollow handle member provided with a pair of opposed lengthwise extending spaced racks to provide a series of alining fulcrums, a clamping lever extending into said handle member and pro-

vided with a pivot detachably engaging with an operating on a pair of said alining fulcrums, and a shiftable clamping member formed of a length of flexible material

having its ends connected to the forward end of said clamping lever to provide a loop extending through and projecting from the forward portion of said handle member.

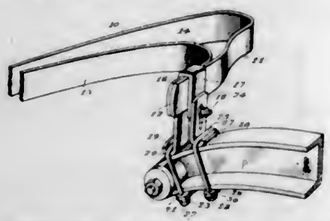


1,505,898. FILTER. BARRY KIRBY, Los Altos, Calif. Filed Sept. 26, 1923. Serial No. 664,990. 1 Claim. (Cl. 210—48.)

A device of the character described comprising a receptacle, a cone-shaped member having an inlet at its reduced end and being closed at its large end, perforations formed in the side of said cone member, a screen positioned over said perforations, said cone-shaped member being centrally positioned within said receptacle and having its inlet adjacent the top of said receptacle, a funnel disposed into said inlet of said cone, a strainer mounted within said funnel, perforated plates mounted on said cone and spaced one from the other, said plates contacting the side walls of said receptacle, a filtering material positioned between said plates, and means for withdrawing fluid from said receptacle.

1,505,899. SPRING-SUSPENSION COLUMN CLAMP. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 3, 1924. Serial No. 684,154. 10 Claims. (Cl. 77—28.)

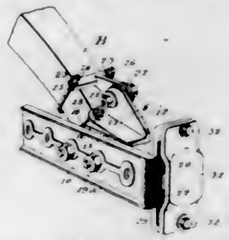
1. A radial drill combining a base and a non-rotatable post upstanding thereon; a sleeve suspended from the upper end of said post and having its lower portion circumscribing said post; said post being provided adjacent its lowermost end with an annular platform and said sleeve having an annular seat arranged in immediate proximity with said platform; said platform and seat being in the nature of weight supporting surfaces; an individual resilient element interposed between the upper



ends thereof and adapted normally to support the greater portion of the weight of the sleeve and its attached parts; and means for depressing said sleeve upon said platform against the yielding opposition of said resilient element.

1,505,900. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Fairfield, and JOHN H. LUCAS, Bridgeport, Conn., assignors to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 31, 1923. Serial No. 660,264. 8 Claims. (Cl. 293—55.)

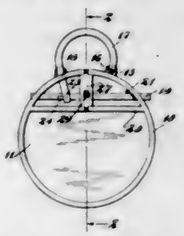
1. An automobile bumper bracket adapted for attachment to shackle bolts in the frame ends of an automobile, and having means for supporting a bumper bar, and a pocket adapted for slidable and detachable engagement with shackle bolts of different sizes, and means for securing said bracket to said frame.



1,505,901. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Bridgeport, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 13, 1923. Serial No. 662,430. 8 Claims. (Cl. 293—55.)

1. In an automobile bumper for use upon the frame ends of an automobile, a bumper bar, and an attaching bracket supporting said bar and comprising an

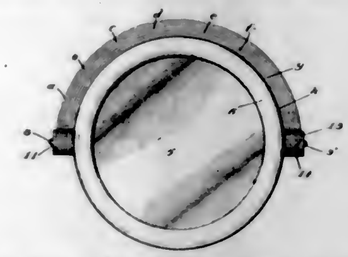
inverted U-shaped member including an adjustable two-piece leg adapted to be extended or contracted, connecting means for connecting one of said legs to the frame, and a single bolt adapted to secure the adjustable legs to each other to fix the position of the bracket, and to clamp the bumper bar in the bracket.



1,505,902. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Fairfield, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 12, 1924. Serial No. 692,240. 7 Claims. (Cl. 293—55.)

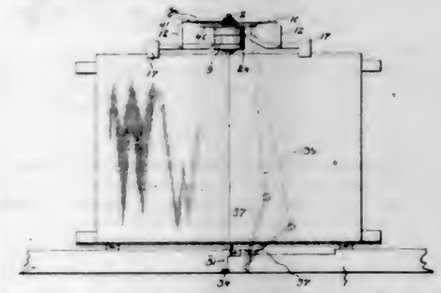
1. An automobile bumper bracket for attachment to the frame end of an automobile comprising a pair of bracket members having projected flange portions, one of the pair forming an attaching face for a bumper bar and the other a fixed member of an adjustable connection, a clamping bolt for securing one of the bracket members to a chassis frame, one of the bracket members being hingedly connected to the other member, and a bumper bar secured to the first named bracket member.

1,505,903. [WITHDRAWN.]



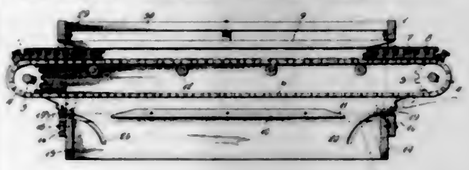
1,505,904. PADLOCK. JAN KRZESINSKI, Nanticoke, Pa. Original application filed Dec. 1, 1922, Serial No. 604,232. Divided and this application filed May 18, 1923. Serial No. 639,817. 1 Claim. (Cl. 70—106.)

A pad lock of the character described, comprising a perforated lock casing, a shackle, a recessed extended opposite end for said shackle, a horizontal recessed bolt sliding through the perforations of said casing, means for limiting the movements of said bolt in one direction, a plate, a transversal, recessed sliding bolt slidably resting in said plate for locking and unlocking said horizontal bolt, and a tongue formed with said horizontal bolt adapted to be engaged in the recess of said shackle for locking the same.



1,505,905. SHUTTER FOR AUTOMOBILE LAMPS. LOUIS LECLERC, Maria, Quebec, Canada. Filed Feb. 28, 1923. Serial No. 621,921. 2 Claims. (Cl. 240—45.2.)

1. In combination with a lamp, a shutter therefor comprising a plurality of arcuate screen members, each of said members having its ends pivoted to opposite sides of the lamp, the ends of each side being superposed, said ends being notched progressively at each side of the lamp, the notches in the ends at one side increasing from the outer end to the inner one, while the notches in the ends at the opposite side increase

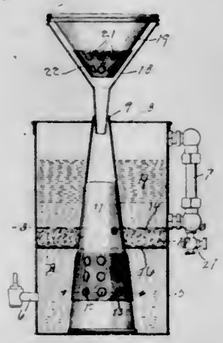


from the inner end to the outer one, an operating device secured to the end of the outer shutter at one side of the lamp and having a tongue extending through the notches at said side, and a stationary stop member fixed to the other side of the lamp and extending through the notches in the ends at said side.

1,505,906. MUSIC-LEAF TURNER. WALTER S. LUKAWSKI, Chicago, Ill. Filed June 24, 1921. Serial No. 480,209. 2 Claims. (Cl. 84—494.)

1. In a music leaf turner, the combination of a shaft and a plurality of oscillatory mounted bracing arms, music leaf carrying arms rigidly connected to said oscillatory arms, and pivotally mounted on said shaft, said music leaf carrying arms provided with horizontally positioned portions having openings therein, pivotally supported latches engaging in said openings for preventing movement of the pivotally mounted music leaf carrying arms, a release lever, and means for engaging said release lever and latches for releasing the latches to permit swinging movement of the music leaf carrying arms.

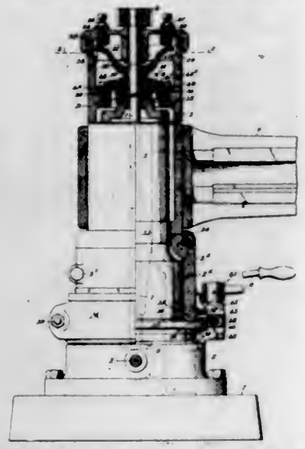
1,505,907. CONVEYER. EDWARD JOSEPH MCCLAUGHERTY, Princeton, W. Va. Filed Apr. 18, 1923. Serial No. 632,973. 3 Claims. (Cl. 198—229.)



1. A device of the character described comprising a frame, bearings rotatably mounted adjacent the opposite ends of said frame, endless carriers engaged about and

vided with a pivot detachably engaging with an operating on a pair of said alining fulcrums, and a shiftable clamping member formed of a length of flexible material

having its ends connected to the forward end of said clamping lever to provide a loop extending through and projecting from the forward portion of said handle member.

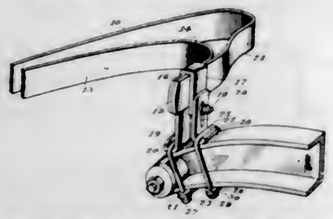


1,505,898. FILTER. BARRY KIRBY, Los Altos, Calif. Filed Sept. 26, 1923. Serial No. 664,990. 1 Claim. (Cl. 210—48.)

A device of the character described comprising a receptacle, a cone-shaped member having an inlet at its reduced end and being closed at its large end, perforations formed in the side of said cone member, a screen positioned over said perforations, said cone-shaped member being centrally positioned within said receptacle and having its inlet adjacent the top of said receptacle, a funnel disposed into said inlet of said cone, a strainer mounted within said funnel, perforated plates mounted on said cone and spaced one from the other, said plates contacting the side walls of said receptacle, a filtering material positioned between said plates, and means for withdrawing fluid from said receptacle.

1,505,899. SPRING-SUSPENSION COLUMN CLAMP. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 5, 1924. Serial No. 684,154. 10 Claims. (Cl. 77—28.)

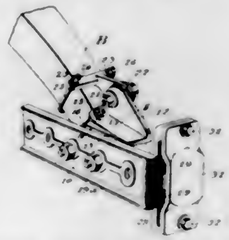
1. A radial drill combining a base and a non-rotatable post upstanding thereon; a sleeve suspended from the upper end of said post and having its lower portion circumscribing said post; said post being provided adjacent its lowermost end with an annular platform and said sleeve having an annular seat arranged in immediate proximity with said platform; said platform and seat being in the nature of weight supporting surfaces; an individual resilient element interposed between the upper



ends thereof and adapted normally to support the greater portion of the weight of the sleeve and its attached parts; and means for depressing said sleeve upon said platform against the yielding opposition of said resilient element.

1,505,900. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Fairfield, and JOHN H. LUCAS, Bridgeport, Conn., assignors to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 31, 1923. Serial No. 660,264. 8 Claims. (Cl. 293—55.)

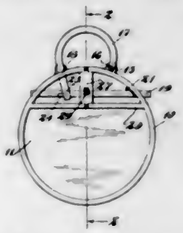
1. An automobile bumper bracket adapted for attachment to shackle bolts in the frame ends of an automobile, and having means for supporting a bumper bar, and a pocket adapted for slidable and detachable engagement with shackle bolts of different sizes, and means for securing said bracket to said frame.



1,505,901. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Bridgeport, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 13, 1923. Serial No. 662,430. 8 Claims. (Cl. 293—55.)

1. In an automobile bumper for use upon the frame ends of an automobile, a bumper bar, and an attaching bracket supporting said bar and comprising an

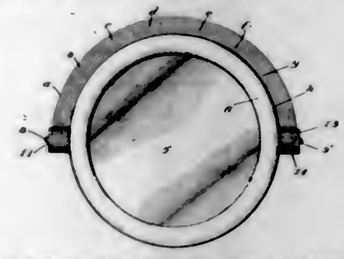
inverted U-shaped member including an adjustable two-piece leg adapted to be extended or contracted, connecting means for connecting one of said legs to the frame, and a single bolt adapted to secure the adjustable legs to each other to fix the position of the bracket, and to clamp the bumper bar in the bracket.



1,505,902. AUTOMOBILE BUMPER BRACKET. GEORGE F. KOLB, Fairfield, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 12, 1924. Serial No. 692,240. 7 Claims. (Cl. 293—55.)

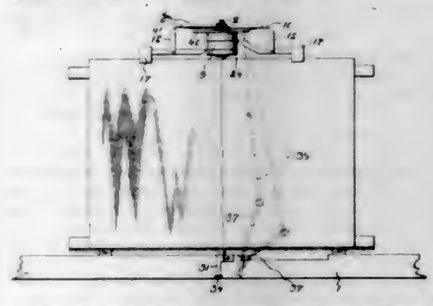
1. An automobile bumper bracket for attachment to the frame end of an automobile comprising a pair of bracket members having projected flange portions, one of the pair forming an attaching face for a bumper bar and the other a fixed member of an adjustable connection, a clamping bolt for securing one of the bracket members to a chassis frame, one of the bracket members being hingedly connected to the other member, and a bumper bar secured to the first named bracket member.

1,505,903. [WITHDRAWN.]



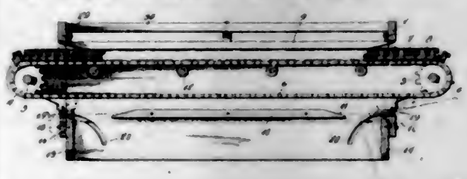
1,505,904. PADLOCK. JAN KRZESINSKI, Nanticoke, Pa. Original application filed Dec. 1, 1922, Serial No. 604,232. Divided and this application filed May 18, 1923. Serial No. 639,817. 1 Claim. (Cl. 70—106.)

A pad lock of the character described, comprising a perforated lock casing, a shackle, a recessed extended opposite end for said shackle, a horizontal recessed bolt sliding through the perforations of said casing, means for limiting the movements of said bolt in one direction, a plate, a transversal, recessed sliding bolt slidably resting in said plate for locking and unlocking said horizontal bolt, and a tongue formed with said horizontal bolt adapted to be engaged in the recess of said shackle for locking the same.



1,505,905. SHUTTER FOR AUTOMOBILE LAMPS. LOUIS LECLERC, Maria, Quebec, Canada. Filed Feb. 28, 1923. Serial No. 621,921. 2 Claims. (Cl. 240—45.2.)

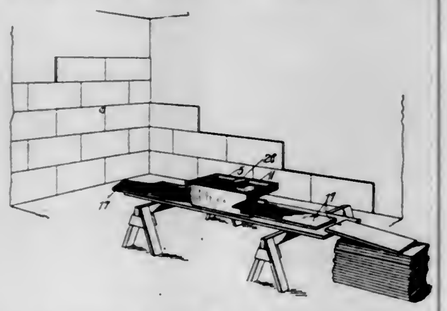
1. In combination with a lamp, a shutter therefor comprising a plurality of arcuate screen members, each of said members having its ends pivoted to opposite sides of the lamp, the ends of each side being superposed, said ends being notched progressively at each side of the lamp, the notches in the ends at one side increasing from the outer end to the inner one, while the notches in the ends at the opposite side increase



from the inner end to the outer one, an operating device secured to the end of the outer shutter at one side of the lamp and having a tongue extending through the notches at said side, and a stationary stop member fixed to the other side of the lamp and extending through the notches in the ends at said side.

1,505,906. MUSIC-LEAF TURNER. WALTER S. LUKAWSKI, Chicago, Ill. Filed June 24, 1921. Serial No. 480,209. 2 Claims. (Cl. 84—494.)

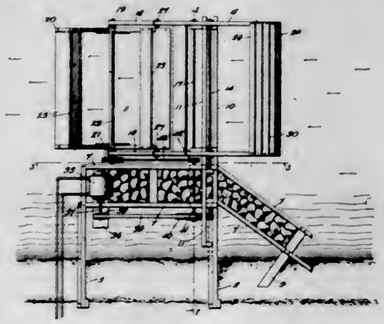
1. In a music leaf turner, the combination of a shaft and a plurality of oscillatory mounted bracing arms, music leaf carrying arms rigidly connected to said oscillatory arms, and pivotally mounted on said shaft, said music leaf carrying arms provided with horizontally positioned portions having openings therein, pivotally supported latches engaging in said openings for preventing movement of the pivotally mounted music leaf carrying arms, a release lever, and means for engaging said release lever and latches for releasing the latches to permit swinging movement of the music leaf carrying arms.



1,505,907. CONVEYER. EDWARD JOSEPH MCCLAUGHERTY, Princeton, W. Va. Filed Apr. 18, 1923. Serial No. 632,973. 3 Claims. (Cl. 198—229.)

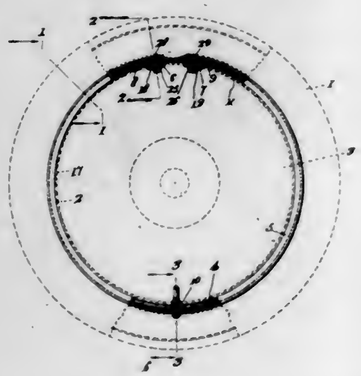
1. A device of the character described comprising a frame, bearings rotatably mounted adjacent the opposite ends of said frame, endless carriers engaged about and

movable over said bearings, a sectional platform secured to said carriers, arms pivotally mounted in the lower portions of the opposite ends of said frame, bars interconnecting said arms, spring means connected to said bars and to the adjacent sides of said frame, means engaging one of said bars for retaining the pivotal arms in normally upright positions, and cleaning means carried by said arms adapted to be engaged with the surface of said platform with movement of the same.



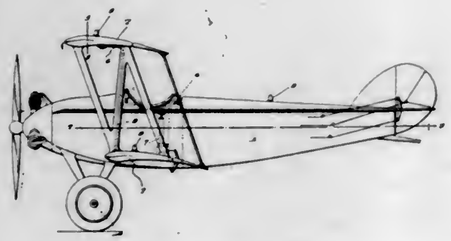
1,505,908. METHOD AND APPARATUS FOR APPLYING PLASTIC COMPOSITIONS. ARCHIBALD MACKINNON, Tuckahoe, N. Y. Filed July 25, 1923. Serial No. 653,730. 9 Claims. (Cl. 91—68.)

1. The method of applying a plastic composition to the surface of a piece of material which consists in depositing layers of a pulverulent substance along the sides of a surface to be covered and then feeding the plastic composition between the said layers as the piece of material is moved from one position to another.



4. An apparatus of the class described comprising a hopper having an outlet at its front end, a second hopper adjacent the first mentioned hopper, a false bottom extending beneath both of the hoppers, means for depositing a pulverulent substance through the false bottom and at the sides thereof and means for sliding a piece of material below the false bottom to receive the discharge of the pulverulent material in advance of material from the first hopper.

1,505,909. HYDRAULIC-POWER PLANT. OTTO MELIN and CLARENCE M. MELIN, Emigrant, Mont., assignors of one-third to A. W. T. Anderson, Emigrant, Mont. Filed Jan. 15, 1923. Serial No. 612,767. 2 Claims. (Cl. 170—107.)

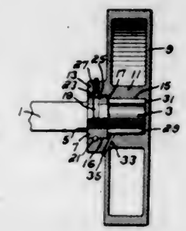


1. A hydraulic power plant comprising a frame-work fixed at the side of a stream, supports extending out from the frame-work over the water, arms pivotally carried from said supports, a water wheel rotatably mounted in the free ends of said arms, said arms adapted to extend downwardly from their pivot points when the water wheel is in operative position in the stream, uprights upon said supports adjacent the pivotal ends of the arms, a lever fulcrumed upon said supports and adapted to carry weights at its outer end, the inner end portion of the lever extending above and overlapping the said arms, links pivoted to the inner end of the lever and in intermediate portion of the arms, and means for taking off power from said water wheel.

1,505,910. TIRE ATTACHMENT. ANDRÉ JULES MICHELIN, Clermont-Ferrand, France. Filed Nov. 3, 1923. Serial No. 672,545. 7 Claims. (Cl. 152—20.)

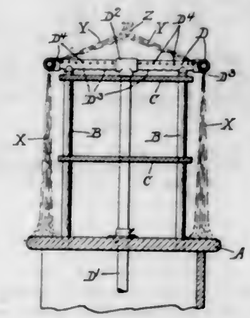
3. A safety ring for holding the beads of vehicle tires upon rims comprising a metallic flexible but inextensible band having its free ends separated and adapted to extend about within the space between the beads of the tire and between the inner tube and the rim, a body of highly flexible rubber enveloping said band and formed substantially to the shape of the space between said beads of the tire and the inner tube and the rim, the band being less in width than the distance between the tire beads, said body of rubber extending across the space between the free ends of the ring and being of reduced section at this point, and means for adjustably and rigidly securing the free ends of the band to the rim.

1,505,911. AEROPLANE. DENVER E. MILLER, Shouns, Tenn. Filed Sept. 27, 1922. Serial No. 590,879. 1 Claim. (Cl. 244—5.)



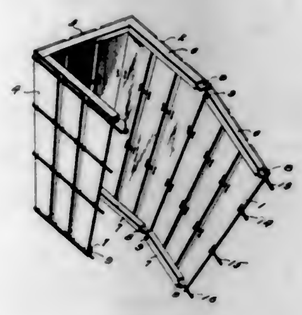
An air craft of the class described comprising a body formed with double walls, compartments in the body communicating with the spaces between the walls, hollow wings, a gas receptacle, pipes connecting the same with the spaces in the wings and body and a pump for forcing the gas into the spaces and valves for permitting the gas to be exhausted from said spaces.

1,505,912. VAT DYESTUFFS. PAUL NAWIASKY, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Jan. 30, 1923. Serial No. 615,922. 5 Claims. (Cl. 260—61.)



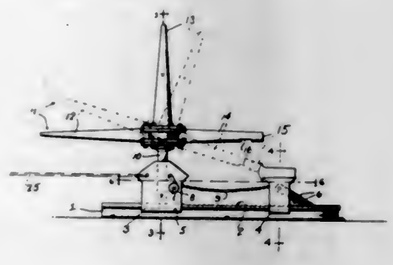
2. As a new article of manufacture a vat coloring matter of the dibenzanthrone series which dyestuff is derived from oxidized dibenzanthrone and contains bromine and methoxyl groups and which produces on cotton from the hydrosulfite vat brilliant green dyeings with a yellowish hue which do not bleed on undyed cotton when boiled together with it in soap solution and which dyestuffs dissolve in fuming sulfuric acid producing a solution remaining brown.

1,505,913. ATTACHING DEVICE FOR SKID WHEELS. AMOS W. WARNOCK, Somerville, Mass., assignor to Clarence H. Young, Boston, Mass. Filed Mar. 23, 1923. Serial No. 627,150. 6 Claims. (Cl. 301—122.)



6. The combination with an axle, of a wheel having a bore of two diameters, the end portion of said axle being received in the portion of said bore of smaller diameter and said axle having a collar received in the portion of said bore of larger diameter, longitudinally extending rollers in said portion of said bore of smaller diameter for taking the vertical thrust of said wheel on said axle, said rollers at one of their ends being retained against axial motion relative to said axle by the bottom of said bore and at their other ends by said collar, and spherical rollers cooperating with said collar and the walls of the portion of said bore of larger diameter for retaining said axle against axial movement relatively to said wheel.

1,505,914. INSECT AND DUST PROTECTION. EDMUND G. WITTEBORG, Chicago, Ill. Filed Aug. 1, 1921. Serial No. 488,794. 8 Claims. (Cl. 98—27.)

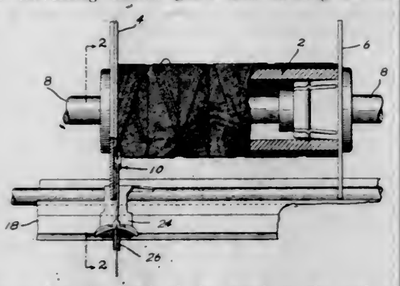


8. The combination with a display rack of means secured to it for projecting a continuous, rapidly moving air curtain about its sides and across its top.

1,505,915. METHOD OF FORMING RECTANGULAR HAMPERS AND THE LIKE. JAMES G. BOYD, Jacksonville, Fla. Filed June 28, 1921. Serial No. 481,046. 3 Claims. (Cl. 144—309.)

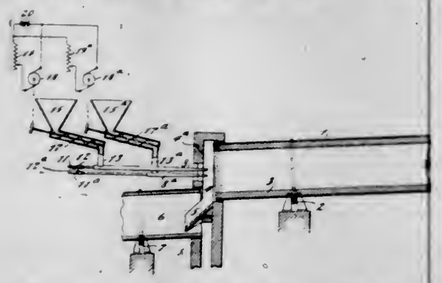
1. The method of constructing a shipping hamper rectangular in cross section which consists of first forming the respective sides of the hamper, wider at the top than at the bottom, then laying said sides beside each other in proper sequence, whereby a flat substantially fan shaped body is formed, then simultaneously stitching a plurality of wire strands of different length to said sides and completing the stitching operation of each strand of wire substantially simultaneously and leaving a material portion of each of said strands projecting free beyond the two outermost side sections.

1,505,916. BIT HAMMER AND JOINT BREAKER. MYRON BRANDENBERRY, Bloomdale, Ohio. Filed Dec. 11, 1922. Serial No. 606,149. 7 Claims. (Cl. 29—33.)



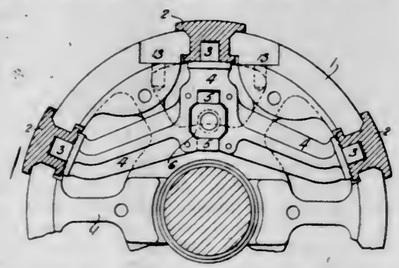
1. A device of the class described, comprising a hammer carrying member, an anvil carrying member, a hammer carrying lever movably mounted on the hammer carrying member, handles on the lever, an actuating member and means for connecting the actuating member to the hammer carrying member to reciprocate or rock it.

1,505,917. UNIVERSAL WOUND SPOOL, METHOD OF AND APPARATUS FOR USE IN MAKING THE SAME. ROBERT K. CLARK, Springfield, Mass., assignor to The American Thread Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 18, 1923. Serial No. 652,306. 8 Claims. (Cl. 242—26.)



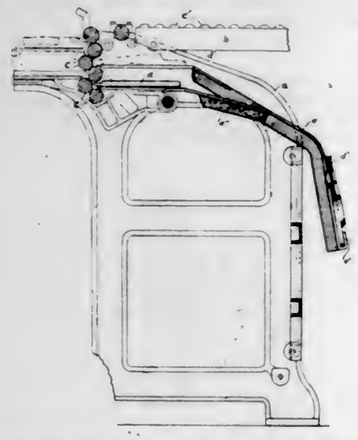
1. The method of winding a spool having a core and a flexible head of resilient material secured on one end thereof with a winding of the Universal type which

comprises cross winding the thread on the core by means of a traversing thread guide and causing the thread



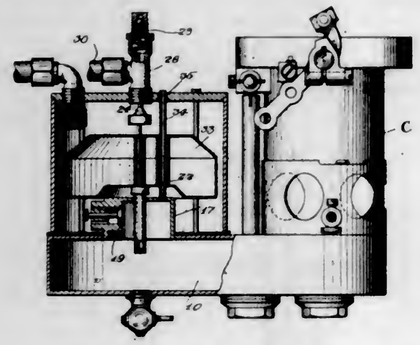
guide to flex the head of the spool at the end of its traverse between said head and laying the thread close to the original position of said head.

1,505,918. CEMENT FURNACE. ANDREW G. CADLL, Allentown, Pa., assignor to The Atlas Portland Cement Company, a Corporation of Pennsylvania. Filed Aug. 24, 1922. Serial No. 583,987. 2 Claims. (Cl. 222—4.)



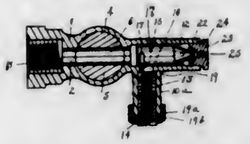
1. The method of burning fuel for cement kilns and the like which consists in admitting into a common combustion zone from separate sources finely divided fuels mixed with air, such fuels comprising one of a higher degree of combustibility such as bituminous coal and another of a lower degree of combustibility such as anthracite coal; and continuing combustion by so proportioning the relative amounts of such fuels admited to the combustion zone that there is a sufficient proportion amount of the more inflammable material to maintain the combustion of the less inflammable material and sufficient of the less inflammable material to supply a substantial portion of the heat.

1,505,919. PLATE CLAMP. ROBERT WILLIAM HATTON, Bromley, England, assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Nov. 3, 1923. Serial No. 672,499. 4 Claims. (Cl. 101—378.)



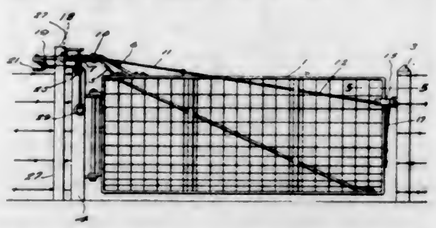
1. In means for securing a stereotype plate to a form cylinder, the combination of a plurality of plate clamps, a member having projections integral therewith and directly engaging the clamps and so mounted as to be capable of rocking, and means for moving the member longitudinally of the cylinder to effect the locking-up or release of the clamps.

1,505,920. PAPER-FOLDING MACHINE. REUBEN HITCHCOCK, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 13, 1923. Serial No. 657,018. 3 Claims. (Cl. 270—61.)



1. The combination with a paper folding machine having folding rolls and a coacting folding plate member, of lateral guides and terminal supports provided on the frame of the machine adapted to aid the insertion and removal of the folding plate member into and from its operative position, substantially as set forth.

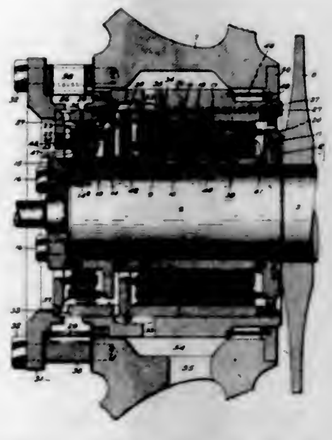
1,505,921. CARBURETOR. FLOYD F. FLINT, Detroit, Mich., assignor of one-half to Maxwell W. Benjamin, Detroit, Mich. Filed Oct. 29, 1923. Serial No. 671,504. 5 Claims. (Cl. 152—36.)



1. The combination with a source of liquid fuel supply, of a carburetor, a fuel receiving chamber communicating therewith, a conduit leading from the source of supply to the chamber, a source of suction entirely independent of the carburetor but connected to the chamber, and a relief valve interposed between the source of suction and the chamber, whereby an intermittent vacuum is obtained the maximum of which is substantially constant in said chamber independent of the pressure in the carburetor.

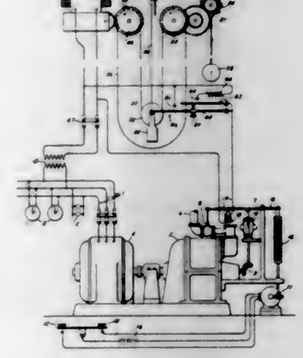
1,505,922. GAS COCK. GEORGE H. HARRIS, Utica, N. Y., assignor to Utica Valve & Fixture Company, Utica, N. Y., a Corporation of New York. Filed Apr. 14, 1921. Serial No. 461,326. 2 Claims. (Cl. 67—121.)

1. In a gas cock, a thimble having a conical shaped end located within said cock, apertures made in the thimble, whereby to cause the gas to flow therethrough in its normal swirling condition, an annular recess formed in the side of the thimble, a cam pin adapted to project through said recess, a screw for mounting said pin, a chamber having a conical shaped wall adapted to cooperate with the conical shaped end of the thimble, whereby to control the passage of the gas, said wall adapted to limit the movement of the thimble, and a shoulder formed in the casing, whereby to limit the movement of said screw.



1,505,923. GATE. HARRY O. ROCKBOHR, Delmar, Iowa. Filed Nov. 28, 1921. Serial No. 518,272. Renewed June 11, 1924. 1 Claim. (Cl. 39—36.)

A hinged gate of the character described comprising a pair of brackets secured to the upper portion of the frame thereof one extending in advance of the other and arranged one above the other, an arm formed on each bracket and the arm being spaced in parallelism to provide bearing members, a bar pivoted midway at the ends of the arms and adjacent the meeting point of the brackets therewith, flexible elements secured to the respective ends of the bar and converging therefrom toward the central portion of the gate, a long flexible element secured to the ends of the converging flexible elements, and adapted to pass through an opening in the upper horizontal portion of the frame, a bail mounted for horizontal reciprocation around the free vertical portion of the frame and receiving the opposite end of the longer flexible element, a yoke pivoted between the free ends of the arms, parallel links loosely connecting the yokes with the bar, curved guide members formed on each end of the yoke, receiving posts arranged in the path of the gate on each side thereof and in the front respectively, cable carrying posts disposed beyond the side securing posts, a pulley for each cable carrying post, cables secured to each end of the yoke, said last-mentioned cables crossing between the ends of the yoke thence trained over the guide members and extended to be received by the pulleys and a latched receiving member on each of the securing posts for the purpose specified.

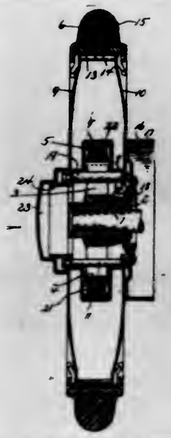


1,505,924. SHAFT PACKING FOR ELASTIC-FLUID TURBINES AND THE LIKE. GLENN B. WARREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 19, 1922. Serial No. 562,159. 2 Claims. (Cl. 286—9.)

2. In a packing, the combination of a shaft, a sleeve structure thereon provided with spaced flanges, a surrounding stationary housing, a sleeve structure thereon provided with spaced flanges which lie parallel to said

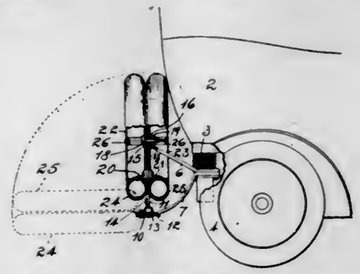
first-named flanges, axially-extending concentric sleeves yieldingly connected to said flanges, and packing teeth on adjacent surfaces of said sleeves.

1,505,925. AUTOMATIC REGULATION. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Dec. 12, 1921. Serial No. 521,589. 7 Claims. (Cl. 173—355.)



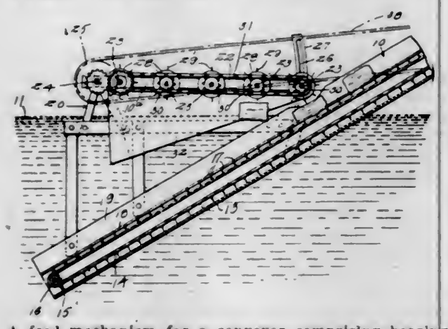
1. In a speed control system, rotating apparatus, an automatic governor adapted to keep the speed of said apparatus at a substantially constant normal value, means adapted to measure the average error in the speed of said apparatus, and means dependent on said average error measurement for producing a biasing force upon said governor.

1,505,926. VEHICLE WHEEL. NOAH CORNFIELD, Detroit, Mich., assignor to Acme Cushion Wheel Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 18, 1922. Serial No. 595,348. 10 Claims. (Cl. 152—43.)



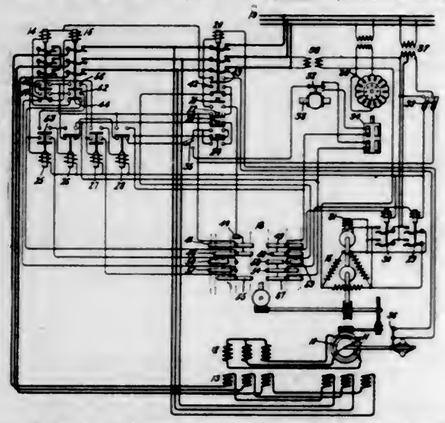
10. In a wheel, the combination with a hub and a rim, of a ring member mounted on said hub, means for de-

tachably securing said ring member to said hub, a resilient annulus mounted on said ring member, a casing



embracing opposite sides of said annulus and connected to said rim, and a driving connection between said casing and said ring.

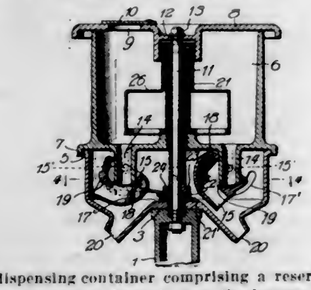
1,505,927. TIRE AND WHEEL CARRIER FOR AUTOMOBILES. GEORGE G. BAYNE, Bushnell, Ill. Filed Dec. 18, 1917. Serial No. 207,661. 2 Claims. (Cl. 224—29.)



1. In a device of the class described, the combination with a support having an upper arm and a lower arm, a tire carrier hinged to said lower arm and provided with a slot opposite the other arm, a bolt extending through said slot and connecting said tire carrier to the upper arm, said bolt having a head so formed as to pass through said slot when properly turned.

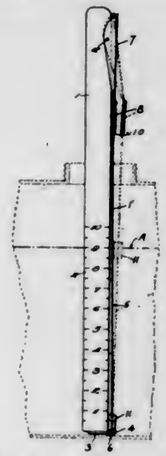
1,505,928. FEED ATTACHMENT FOR CONVEYERS. EDWARD L. BUCK and EDMUND G. NADEAU, West Enfield, Me. Filed Jan. 2, 1923. Serial No. 610,268. 1 Claim. (Cl. 198—167.)

A feed mechanism for a conveyer comprising bearings secured to the conveyer, a shaft journaled in said bearings, a frame having side bars pivotally mounted by said shaft, said shaft journaled in said side bars, the conveyer having a second shaft, the latter shaft extending beyond the side bars, brackets on the conveyer having grooves into which the ends of the last shaft extend, sprocket wheels on all of said shafts, a sprocket chain passing over said sprocket wheels, means to drive one of said shafts, said shafts being adapted to pass over the object to be conveyed, feed rollers on said shafts to engage the object, and depending side plates on said side bars.



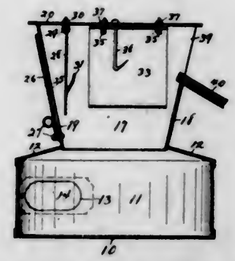
1,505,929. MOTOR CONTROL. ARTHUR C. PRESCOTT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,766. 6 Claims. (Cl. 172—274.)

1. A system of motor control comprising an electric motor of the commutator type having brushes which are adapted to be shifted to vary the motor speed and windings which are adapted to be connected in one relation for low speed operation and in a second relation for high speed operation, means for shifting the said brushes, switch mechanism for connecting the motor windings in either the low or be high speed relation, and connections whereby the said means is automatically operated to shift the motor brushes to compensate for the comparatively large change of speed effected by the change of the motor windings from one of said relations to the other.



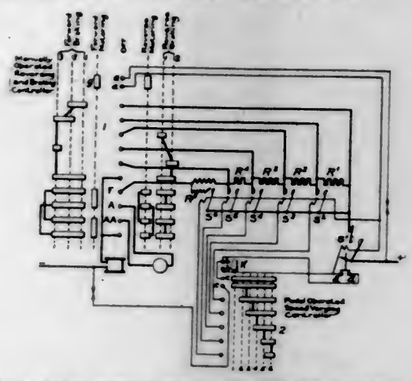
5. A system of motor control comprising a commutator type electric motor having brushes which are adapted to be shifted to vary the motor speed, means for shifting the said brushes, switch mechanism for connecting the motor to a source of supply, and connections between the said means and the said switch mechanism whereby the operation of the said switch mechanism is prevented unless the said brushes are in a predetermined position.

1,505,930. DISPENSING DEVICE. SIGMUND SCHREIBER, Pittsburgh, Pa. Filed Dec. 19, 1923. Serial No. 681,652. 5 Claims. (Cl. 221—95.)



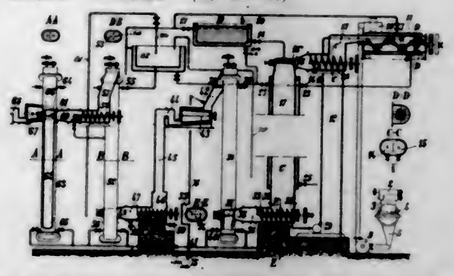
1. A dispensing container comprising a reservoir having apertured extensions formed upon the bottom of same, a base having discharge spouts in alignment with the apertured extensions, measuring cups pivoted beneath each of the apertured extensions, means formed on said cups extending through said base for discharging the contents of said cup through said discharging spout, and means for automatically returning the cup to an operative position.

1,505,931. LIQUID-DEPTH GAUGE. CECIL F. SIDERS, Norwood, Ohio. Filed Feb. 17, 1923. Serial No. 619,713. 2 Claims. (Cl. 73—120.)



1. A liquid depth gauge comprising a rule having a scale on one face graduated in terms of liquid depth and a substantially straight edge, an operating lever pivoted intermediate its ends to said rule adjacent the upper end of the latter so that the ends of the lever are spaced from said straight edge, a flexible guide spaced from and extending parallel to the straight edge of the rule, means for securing one end of said guide to the lower end of the rule, a spring connecting the other end of said guide to the lower end of the lever, and a float mounted for sliding movement on said flexible member and adapted to normally frictionally engage the edge of said rule and, when the upper end of said lever is actuated, to be free to slide vertically along said member.

1,505,932. TRAP. HENRY BUTTRAM, Moran, Iowa. Filed Sept. 15, 1922. Serial No. 588,361. 1 Claim. (Cl. 49—64.)



A trap comprising a cylindrical housing having a door and formed with a dome shaped top having an opening therein, a downwardly tapering cupola superposed on said top and having an open lower end portion extending through said top and communicating with said opening, said cupola being formed with an entrance opening vertically spaced from said top and also being formed with a door opposite to said entrance opening, a bait hanger suspended within and from the top of said cupola adjacent to said last-named door, false walls suspended within and from the top of said cupola substantially at right angles to said last-named door and an approach to said entrance opening.

1,505,933. CONTROL OF ELECTRICALLY-PROPELLED VEHICLES. HAMMOND CHARLES HASTINGS, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1922. Serial No. 589,460. 4 Claims. (Cl. 172—179.)

2. A motor control system comprising resistance in the motor circuit, a speed-varying master controller having a plurality of operative positions for controlling the said resistance, contactors controlled thereby for varying the said resistance, a separately operable reversing controller for controlling the connection of the motor to a source of supply in certain of its operative positions and for controlling the connection of the motor in a dynamic brake circuit in other of its operative positions, and electrical connections whereby moving the said reversing controller to a braking position connects the motor in a dynamic brake circuit including the said resistance independently of the position of the said speed-varying controller.

1,505,934. DEVICE FOR THE CONTINUOUS TREATMENT OF LIGNEOUS MATERIALS FOR THEIR TRANSFORMATION IN CELLULOSE. ANDRÉ OLIER, Clermont-Ferrand, France, assignor to Société Anonyme des Etablissemnts A. Olier, Clermont-Ferrand (Puy-de-Dome), France. Filed Dec. 15, 1921. Serial No. 522,616. 7 Claims. (Cl. 92—7.)

1. In a plant for the transformation of cellulose materials into paper pulp, a macerating apparatus in which the cellulose materials, previously torn, are subjected to a continuous translation in contact with the current of macerating liquid, a continuous press constituted by a worm rotating in a casing and communicating with the said macerating apparatus, a movable valve subjected to the antagonistic action of an antagonistic force, and opening under the thrust of the material for periodically putting the macerating apparatus in relation with the lye-washer.

Patents Nos. 1,505,935 to 1,506,730.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 325—No. 4. TUESDAY, AUGUST 26, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 1, 1924.*

Lone Star Blacking & Mfg. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Tom A. Tirado, jr., 703 West Alabama Street, Houston, Tex., for registration of a trade-mark and trade-mark registered May 31, 1910, No. 78,255, to Lone Star Blacking & Mfg. Co., 852 Commerce Street, Dallas, Tex., and a notice of such declaration sent by registered mail to said Lone Star Blacking & Mfg. Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Lone Star Blacking & Mfg. Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 2, 1924.*

Eagle Water Heater Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the American Heater Corporation, of 1100 North Sixth Street, St. Louis, Mo., for registration of a trade-mark and trade-mark registered August 7, 1906, No. 55,000, to the Eagle Water Heater Company, 126–130 Sixth Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Eagle Water Heater Company at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Eagle Water Heater Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,302,353, C. Friedrich, Luminous hair line, decided July 17, 1924, claims 1 to 10, inclusive.

Pat. 1,447,984, S. R. Howard, Package-transfer mechanism, decided August 11, 1924, claims 1 to 11 and 13 to 16, inclusive.

Pat. 1,465,853, Lewcock and Tallantyre, Manufacture of condensation products from carbazole and p-nitrosophenol and its derivatives, decided July 8, 1924, claims 1, 2, 3, 4, 5, 6, 8, and 10.

Pat. 1,477,870, C. Ellis, Artificial resin and method of preparation, decided July 14, 1924, claims 1, 3, and 5.

Interference Defined.

RULE 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

Disbarred Attorneys.

It is hereby directed that any person who has been disbarred from practice before the Patent Office by order of the Commissioner will be denied access to the files of the Office, either in his own capacity or as the representative of any other person or firm.

Condition of Applications Under Examination at Close of Business August 15, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 60,317; Trade-Mark Division, 1,844. Oldest new case, Dec. 17, 1923; oldest amended, Dec. 11, 1923. The dates given are 1924 except where † indicates 1923.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended. DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

THEODORE A. HEYER, DOING BUSINESS AS T. A. HEYER DUPLICATOR COMPANY, *v.* DUPLICATOR MANUFACTURING COMPANY.

Decided November 12, 1923.

CONTRIBUTORY INFRINGEMENT—REPLACEMENT OF PERISHABLE PARTS.

Purchasers of patented multiple copying machines one element of which is a duplicating band of gelatine, to which is transferred the print to be multiplied, have a right to replace the bands from any source that they choose, and the defendant in selling them does no wrong. (*Leeds* v. *Catlin*, 213 U. S., distinguished.)

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Seventh Circuit.

Mr. Samuel Walker Banning, with whom *Mr. Thomas A. Banning* was on the brief, for Heyer.

Mr. George L. Wilkinson, with whom *Mr. Henry M. Huxley* was on the brief, for Duplicator Manufacturing Company.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a bill in equity brought by the respondent against the petitioner alleging the infringement of a patent. The district court dismissed the bill, but the circuit court of appeals gave the respondent a decree, one judge dissenting upon the main point. 284 Fed. Rep. 242. The respondent owns a patent for improvements in multiple-copying machines, one element of which is a band of gelatine to which is transferred the print to be multiplied and which yields copies up to about a hundred. This band is attached to a spool or spindle which fits into the machine.[1] Anyone may make and sell the gelatine composition but the ground of recovery was that the defendant made and sold bands of sizes fitted for use in the plaintiff's machine and attached them to spindles, with intent that they should be so used. The main question is whether purchasers of these machines have a right to replace the gelatine bands from any source that they choose. If they have that right the defendant in selling to them does no wrong. It is assumed for the purposes of argument that the claim is valid and covers the band when used in this combination, since otherwise there would be nothing to discuss.

Since *Wilson* v. *Simpson*, 9 How. 109, 123, it has been the established law that a patentee has not—

> a more equitable right to force the disuse of the machine entirely, on account of the inoperativeness of a part of it, than the purchaser has to repair, who has, in the whole of it, a right of use.

The owner when he bought one of these machines had a right to suppose that he was free to maintain it in use, without the further consent of the seller, for more than the sixty days in which the present gelatine might be used up. The machine lasts indefinitely, the bands are exhausted after a limited use and manifestly must be replaced. 9 How. 126. The machine is costly, the bands are a cheap and common article of commerce. In *Wilson* v. *Simpson*, the purchaser was held free to replace the cutter knives that were the ultimate tool of the invention. The present case seems to us stronger in favor of the defendant. The gelatine probably has to be replaced at least as frequently as the cutter knives and would seem to be less distinctively appropriated to the machine. In *Leeds & Catlin Co.* v. *Victor Talking Machine Co.* (No. 2), 213 U. S. 325; 144 O. G. 1095, the question was not of a right to substitute worn out parts but of a right to use new disks in a talking machine. The authority of *Wilson* v. *Simpson* and the cases that have followed it was fully recognized and must be recognized here. We have only to establish the construction of a bargain on principles of common sense applied to the specific facts. We cannot doubt what the fair interpretation is and it would not be affected even if every purchaser knew that the vendor was prepared to furnish new bands.

Inasmuch as after the present bill had been dismissed it was reinstated on condition that the plaintiff be limited for recovery of profits or damages to the period after the reinstatement and as the evidence is that the only spools used since that date came from the plaintiff we think it unnecessary to make any order touching the spools.

Decree reversed.

[1] The claim relied upon is "42. In a multiple copying machine, the combination with a machine frame having on one side thereof a journal bearing and on the opposite side a chuck, of a duplicating band, and a spool on which said duplicating band is wound, said spool having at each end a squared chuck engaging member and a cylindrical bearing member, whereby said spool is interchangeable end for end between said chuck and journal bearing, substantially as described."

Supreme Court of the United States.

THE STANDARD PARTS COMPANY *v.* PECK.

Decided February 18, 1924.

EMPLOYER AND EMPLOYEE.

Where P. engaged by contract "to devote his time to the development of a process and machinery for the production of a front spring now used on the product of the Ford Motor Company," and received for his services a stated compensation, *Held* that the property in the invention belonged to his employer.

Mr. Bert M. Kent and *Mr. A. V. Cannon* (*Mr. John M. Garfield* and *Mr. James P. Wood* on the brief) for Standard Parts Co.

Mr. George L. Wilkinson (*Mr. Charles L. Byron* on the brief) for Peck.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Sixth Circuit.

Mr. Justice MCKENNA delivered the opinion of the Court.

Suit for injunction, preliminary and perpetual, and accounting for profits and damages, upon the

ground of infringement of Letters Patent No. 1,249,473, issued to William J. Peck, respondent.

The bill is the usual one in patent cases. For answer to it the Standard Parts Company admits the use of the devices of the patent and alleges they were constructed under the supervision of Peck and under the terms and provisions of a contract dated August 23, 1915, by and between him and the Hess-Pontiac Spring and Axle Company, for and in behalf of the latter company and the Western Spring and Axle Company, and that it, the Standard Company, has succeeded to the entire assets, business and goodwill of those other companies, including all of their rights in said contract and devices. And the Standard Company avers that Peck was fully compensated for his connection with the devices.

As an offset and counterclaim, the Standard Company avers that all of the invention in the Letters Patent was made while Peck was in the employ of its predecessors in business, the axle companies above mentioned, and that he was so employed for a period of approximately one year and eight months and paid while so employed, a salary of $300 per month, and at the conclusion of the employment, paid a bonus of $660.

In answer to the counterclaim Peck admits the contract but denies that it raised the contractual relations averred, or that it could be construed as passing any title to any inventions which might be incorporated in machinery built thereunder. And that neither the axle companies nor any person who might have purchased their assets, business, and goodwill could have acquired any right, title, or interest in the inventions.

Admits the period of employment averred and that he received the compensation averred, and that at the conclusion of his employment he received a bonus of $660 being the amount of $10 for each 1 per cent of reduction of direct labor cost as called for in said contract, the figures compiled by the Hess Company showing a reduction of 66 per cent in direct labor.

Admits that prior to and during the continuance and subsequent to the period of his employment he practiced as an attorney at law and solicitor of patents, but denies ever so acting for either the Hess Company or Western Company, and denies that he ever prepared or filed or executed any applications for either of the companies, or that any of such applications matured into the patent in suit.

He denies the other allegations of the counterclaim.

On the case as thus presented Peck's testimony and some other testimony was taken, and certain exhibits introduced and the judgment of the district court was, after a review of the decisions of this and other courts, "that the property in the invention belonged to the employer" (the Hess-Pontiac Spring and Axle Company) and that this property passed to the Standard Parts Company when it acquired the assets of the axle company, and that Peck holds the legal title in trust for the Standard Company. A decree was directed to be entered requiring an assignment of the legal title to the latter company.

A motion for rehearing was made and denied, and on March 2, 1921, a formal decree was entered, adjudging the equities to be in favor of the Standard Company, and that Peck, within 10 days from the date of the decree, assign and transfer to the company the legal title to the Letters Patent and also transfer to it, the company, all other patents or pending applications for patents for inventions made by him. Peck, in connection with the processes and machinery developed in the performance of the agreement with the axle company.

It was further adjudged that if Peck failed to perform the decree "then and in that event" the "decree shall have the same force and effect as such assignments and transfers would have had if made."

The circuit court of appeals, 282 F. R. 443; 314 O. G. 567, reversed the decree of the district court in so far as it decreed an assignment and transfer of the patent in suit and other patents and applications from Peck to the Standard Company.

The court decreed a license to exist in the Standard Company in the machines, distinguishing, however, between the first six and the last four in that, in the first six title was in the Standard Company "wholly free from the monopoly of the patent" this being "within the spirit and fairly within the law of section 4899",* and that the Pontiac Company had a right to sell these six machines to the Standard Company free from the patent. As to the last four, it was decided, that the license to construct them was not assignable and could not pass to the Standard Company "by the ordinary purchase and sale of a business."

The court concluded its opinion as follows:

> Defendant [Standard Company] may be advised that it can abandon any further claim of license as to these four machines and contest the patent on its merits—a matter about which we express no opinion—and otherwise it is clearly open to defendant to make what effort it can to establish a license on the theory of estoppel by reason of Peck's knowledge of the building of these four machines without objection—if such knowledge and conduct occured,—or on the theory of a practical consolidation of the Pontiac Company with the present defendant—if their relationship has that character. *Lane v. Locke*, 150 U. S. 193; 65 O. G., 1406.
>
> The decree below is reversed and the record remanded for further proceedings in accordance with this opinion.

The courts reached different rulings because of different readings of the cases. That of the district court was, that while the mere fact that one is employed by another does not preclude him from making improvements in the machines with which he is connected, and obtaining patents therefor, as his individual property, yet, if he—

> be employed to invent or devise such improvements his patents therefor belong to his employer, since in making such improvements he is merely doing what he was hired to do.

The circuit court of appeals rejected this test. It conceded, however, that the deduction of the district court was sustained by *Solomons* v. *United States*, 137 U. S. 342; 54 O. G. 265; *McAleer* v. *United States*, 150 U. S. 424, and *Gill* v. *United States*, 160 U. S. 426, and if correct, required the affirmance of the decree of the district court. And the court admitted that there was no later declaration than that of those cases, nor any criticism of it. The court, nevertheless, dissented from it, subordinating it to other cases and reasoning, they establishing, it was considered,

> that an invention does not belong to the employer, merely by virtue of an employment contract, as well when that employment is to devise or improve a specific thing as when the employment is to devise improvements generally in the line of the employer's business.

And considering further that Peck's employment was to devise or improve a specific thing, decided that his contract did not "of its own force, convey to the employer the equitable title to the patentable inventions" which he "might make in the course of its execution" but gave "to the employer a license only."

It is going very far to say that the declaration of *Solomons* v. *United States*, repeated in subsequent cases, and apparently constituting their grounds of decision, may be put aside or underrated—assigned the inconsequence and uncommand of dicta. It might be said that there is persuasion in the repetition. It can not be contended that the invention of a specific thing can not be made the subject of a bargain and pass in execution of it. And such, we think, was the object and effect of Peck's contract with the Hess-Pontiac Spring and Axle Company. That company had a want in its business, a "problem", is Peck's word, and he testified that "Mr. Hess thought probably" that he, Peck, "could be of some assistance to him [Hess] in working out" the "problem", and the "thought" was natural. Hess had previous acquaintance with Peck—his inventive and other ability, and approached him, the result being the contract of August 23, 1915, the material parts of which are as follows:

> This agreement witnesseth, that second party is to devote his time to the development of a process and machinery for the production of the front spring now used on the product of the Ford Motor Company. First party is to pay second party for such services the sum of $300 per month. That should said process and machinery be finished at or before the expiration of four months from August 11, 1915, second party is to receive a bonus of $100 a month. That when finished second party is to receive a bonus of $10 for each per cent of reduction from present direct labor, as disclosed by the books of the first party.

By the contract Peck engaged to "devote his time to the development of a process and machinery" and was to receive therefor a stated compensation. Whose property was the "process and machinery" to be when developed? The answer would seem to be inevitable and resistless—for him who engaged the services and paid for them, they being his inducement and compensation, they being not for temporary use but perpetual use, a provision for a business, a facility in it and an asset of it, therefore, contributing to it whether retained or sold—the vendee (in this case the Standard Company) paying for it and getting the rights the vendor had (in this case, the axle company).

Other meaning to the contract would confuse the relation of the parties to it—take from the axle company the inducement the company had to make it—take from the company the advantage of its exclusive use and subject the company to the rivalry of competitors. And yet, such, we think, is the contention of Peck. He seems somewhat absorbing in his assertion of rights. He yields to the axle company a shop right only free from the payment of royalty but—personal and temporary—not one that could be assigned or transferred. Peck, therefore, virtually asserts, though stimulated to services by the Hess Company and paid for them; doing nothing more than he was engaged to do and paid for doing—that the product of the services was so entirely his property that he might give as great a right to any member of the mechanical world as to the one who engaged him and paid him—a right to be used in competition with the one who engaged him and paid him.

We can not assent to this nor even to the limitation the court of appeals put upon Pecks' contention. We concur with the district court and therefore reverse the decree of the circuit court of appeals.

Reversed.

*Every person who purchases of the inventor or discoverer, or with his knowledge and consent constructs, any newly invented or discovered machine or other patentable article, prior to the application by the inventor or disoverer for a patent, or who sells or uses one so constructed, shall have the right to use, and vend to others to be used, the specific thing so made or purchased, without liability therefor.

U. S. Circuit Court of Appeals—Second Circuit.

AMERICAN LAUNDRY MACHINERY CO. ET AL. v. PROSPERITY CO., INC.

Decided January 25, 1924.

[295 Fed. Rep. 819.]

1. DIVISIONAL APPLICATIONS.
   It being difficult to lay down general rules determining when improvements should be embraced in one or more patents, discretion must be left to the Patent Office.
2. DIVISION—EFFECT OF ACQUIESCENCE IN REQUIREMENT.
   If applicant for patent does not agree with ruling requiring division, he may appeal, and thereby probably delay obtaining any patent; but no applicant can justly be blamed for acquiescing in a command by lawful authority, much less can he properly be made to suffer loss by obedience.
3. DIVISIONAL APPLICATION RELATES BACK TO ORIGINAL.
   In the absence of laches, estoppel, or intervening rights, a divisional application relates back to the original from which it was carved, and will be regarded as having the filing date and priorities of that original.

APPEAL from the District Court of the United States for the Northern District of New York.

Suit in equity by the American Laundry Machinery Company and another against the Prosperity Company, Incorporated. From a final decree (294 Fed. 144) for defendant, plaintiffs appeal. Reversed and remanded.

STATEMENT OF THE CASE.

Plaintiffs brought the usual patent bill on No. 1,379,601 and another patent. In respect of the above-numbered patent the bill states in usual form that the patentee, being "the first," etc., "inventor or certain improvements not known or used by others in this country before his invention * * * and not patented or described in any printed publications in this or any foreign country before his invention thereof for more than two years prior to his application, * * * and not in public use or on sale in this country for more than two years prior to [said] date of application, * * * and not patented * * * on an application filed more than twelve months prior to his said application,"

did on June 7, 1916, file in the Patent Office an application for Letters Patent. It is then pleaded that, "while the said application aforesaid was pending, in full force and effect, said invention never having been abandoned it was duly divided, and a divisional application for the said invention" was duly filed by the patentee on October 31, 1919, which divisional application ripened into the patent in suit on May 24, 1921.

This bill was met by a motion to dismiss, because "it does not appear from any allegations in the bill of complaint that, more than two years prior to the date of filing of the alleged divisional applications, * * * the alleged inventions of said patent (*a*) were not in public use or on sale in this country, and (*b*) were not patented or described in any printed publication in this or any foreign country." This motion the district court granted and dismissed the bill. Plaintiffs appealed.[1]

Mr. Charles Neave, *Mr. B. W. Brockett*, and *Mr. Maxwell Barus* for the appellants.

Mr. Arthur E. Parsons and *Mr. Albert F. Nathan* for the appellee.

Before HOUGH, MANTON, and MAYER, Circuit Judges.

HOUGH, *Cir. J.* (after stating the facts as above):

The matter at bar is interesting and not unimportant; for, if the order appealed from be well founded, its effect is to render a familiar portion of Patent Office practice extremely dangerous for those acquiescing therein, yet such danger is said to be created by a decision of the Supreme Court. *Chapman* v. *Wintroath*, 252 U. S. 126; 40 Sup. Ct. 234; 64 L. Ed. 491; 272 O. G. 913.

Under what the cited decision calls "the statute which is fundamental to all others in our patent law" (R. S. sec. 4886; Comp. St. sec. 9430), patents are granted to those inventing new and useful arts which (inter alia) were not in public use, and not patented or described for more than two years "prior to his [the petitioning inventor's] application." Under this act it is good pleading for plaintiff in a patent suit to negative the exceptions of the statute in his bill, and this the present plaintiff did, as shown above.

[1] It being "difficult, perhaps impossible," to lay down general rules determining when improvements should be embraced in "one, two, or more" patents, discretion must be left to the Patent Office on this "nice and perplexing question." *Bennet* v. *Fowler*, 8 Wall. 445, 448 (19 L. Ed. 431). Accordingly the Office has for many years made rules on what are too well known as "divisional applications" to need explanation; but the statutes may be searched in vain for anything about division.

[2] The sense of the rules is that, if a single application claims "several inventions" and the "independence of the inventions" be clear, the division will be insisted on "before any action on the merits," but otherwise, at any time during the pendency of the application; that is, division may be, and often is, required years after application filed, and when it is required the applicant must "elect" to which invention he will limit his pending application, while the other inventions "may be made the subject of separate applications." Rule 42. If the applicant does not agree with the ruling requiring division, he may appeal, and thereby probably delay obtaining any patent; but no applicant can justly be blamed for acquiescing in a command by lawful authority, much less can he properly be made to suffer loss by obedience.

The patent at bar was divided, and the applicant elected to prosecute that part of his invention, now represented by the patent in suit, in a "separate application"—i. e., a "divisional" one. The matter is so pleaded, and from the bill the necessary legal inference is that everything material, both in specification and claims of the divisional application, was fully contained in the application originally filed. There is nothing of laches, estoppel, abandonment, or intervening rights suggested in this case. The solicitation of the patent ran smoothly for all we know, except for a difference of opinion between solicitor and Examiner, as to how *many* patents the original disclosure justified.

The defendant has not answered, the facts at present stand as above set forth, but by motion, equivalent to a general demurrer, it is asserted, and has been held by the court below, that plaintiff must here allege (and subsequently prove) that the invention of this divisional application was not patented, described, in public use, nor on sale for more than two years prior to October 31, 1919. In other words, and in this case, the inventor might have made, used in public, and sold his invention on the day after he filed his application on June 7, 1916, and then, because he acquiesced in a divisional ruling in 1919, invalidated in limine whatever he requested by the "separate" application provided for by the rule and known to the profession long before the present code of patent practice. And this is said to be the peremptory rule of the Chapman case, supra. We feel assured that no such rule exists.

First. There is no intent shown by that decision to overrule earlier cases dealing with divisional applications in no "hostile spirit." Some are cited with approval at page 137 of the report. Divisional and renewed applications (absent intervening rights) should logically be treated alike. See *Godfrey* v. *Eames*, 1 Wall. 317; 17 L. Ed. 684; *Smith* v. *Goodyear*, 93 U. S. 486; 23 L. Ed. 952; 11 O. G. 246.

Second. The decisions in this and other circuits, distinctly holding the contrary of the rule asserted, were not overruled or adverted to. *Victor, etc.*, v. *American, etc., Co.*, 145 Fed. 350; 76 C. C. A. 180; *General, Etc., Co.* v. *Continental, Etc., Co.*, 256 Fed. 660; 168 C. C. A. 54; 286 O. G. 193; *Rosenwasser* v *B. E. Mfg. Co.* (C. C. A.) 264 Fed. 114. Some of these cases treat of renewed applications; however, they show the analogy, and we might rest decision, so far as we are concerned, on the last citation. It can not be thought that the court intended to overset without comment the whole current of authority, something so firmly established that it had long passed unchallenged into textbooks.

Third. The Chapman case, in our opinion, did not decide, nor touch upon, the point at bar. As may be seen by examining the record of that litigation, it began with an Examiner's ruling that Chapman was guilty of laches in not basing *any* claim on a disclosure he had made in a pending application, until some 20 months after Wintroath had obtained a patent for the same invention. It is this theory of laches that underlies and in truth constitutes the decision in Chapman's case. The result is that Chapman was finally held not guilty of laches in taking (for interference with Wintroath) the latter's claim, and annexing the same to his specification, more than one year—i. e., 20 months—after Wintroath obtained a patent. Delay in action or laches was measured by the two-year space of Revised Statutes section 4886 (Comp. St. sec. 9430), and other sections of the patent law, and not by Revised Statutes section 4894 (Comp. St. sec. 9438), as the lower court had ruled in *Rowntree* v. *Sloan*, 45 App. D. C. 207; 227 O. G., 744. But it must be borne in mind that this is reasoning merely from analogy; it is judge-made law, as distinguished from statute law; the statute is silent. Furthermore, it asserts agreement in result with the Patent Office ruling of long standing, which *Rowntree* v. *Sloan* supra, had upset.

The court below has stated appellee's position by the assertion that the Chapman case "has held that the two-year limitation for the filing of applications (R. S. sec. 4886) applied to a divisional as well as an original application." As thus stated, no such ruling can be found in the Supreme Court's opinion, and no justification for it can be found in the statutory language. But it is evidently possible to assert the highest court as holding that, where no claim was made in the original specification, a divisional application, making a claim already appropriated in substance by an issued patent, must be filed within two years of the publication of that patent. The reporter perhaps so understood the Court (see first paragraph of syllabus), and the seventh circuit seem to have accepted that view. *Splitdorf, Etc., Co.* v. *Webster*, 283 Fed. 83, at page 93; 316 O. G. 233.

We think this an erroneous reading. There is no reason for any such special rule as to divisional applications; on reason, the objection to belated appropriations, in interference or otherwise, of claims of published patents, is just as valid when the appropriator is an original applicant, whose application is incapable of division. What the Office and all the courts were considering in the Chapman case was the evil of applicants who had not claimed, watching the published art, and demanding interference with men whose patents quite likely suggested to them, what they might have done. Such men can only be disciplined under existing statutes, by somewhat drastic imputations of laches, or establishing estoppels, and the Chapman decision has we think been so understood by the very court whose endeavors at discipline the Supreme Court found too drastic. For example, *In re Nathan*, 51 App. D. C. 347; 279 Fed. 925; 301 O. G. 183, pointing out that "no excuse is offered" by the divisional applicant for not filing within two years of issue of intervening patent. If the rule were not of assumed or imputed laches, but of statutory firmness, why refer to excuses? Also *Ransdall* v. *Jahns*, 51 App. D. C. 3; 273 Fed. 365; 288 O. G., 206, where no division of application was made and (semble) none was possible, but the doctrine of Chapman's case was applicable.

[3] We thus find no compulsion to depart from the obviously equitable rule, certainly long settled in this circuit, and we still think in the Supreme Court also, that in the absence of laches, estoppel, or intervening rights a divisional applicataion relates back to the original from which it was carved, and will be regarded as having the filing date and priorities of that original. The ordinary difficulty with divided, renewed, and sometimes even amended applications, is that they are efforts to validate something that was not carved out of anything but second thoughts, and can not be called amendments of any original. This case is wholly free from such objections.

Decree reversed, with costs, and cause remanded for further proceedings not inconsistent with this opinion.

[1] The form of the order appealed from is open to criticism, and it is not overlooked that the order as entered affects only one patent; but as these technical difficulties might have been overcome in the court below, and neither party has referred to them on this hearing, we pass them by, without by silence approving the practice.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 26, 1924.

[VOL. 325. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 159,246. (CLASS 15. OILS AND GREASES.) J. ALEX. DINGWALL, Jr., New York, N. Y. Filed Feb. 13, 1922.

Particular description of goods.—General Lubricants and Gasoline, Kerosene, and Naphtha.

Claims use since Sept. 1, 1920.

Ser. No. 160,581. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BATTERY EQUIPMENT & SUPPLY CO., Chicago, Ill. Filed Mar. 13, 1922.

BESCO—PRODUCTS

No claim is made to the word "Products" apart from the mark as shown.

Particular description of goods.—Terminal Connecter Reamers, Separator Knives, Terminal Tongs, Lead Scrapers, Lead Files, Separator Trimmers, Grid Cutters, Vise and Plate Presses, Separator Inserters, Battery End Cutters, Burning Racks, Battery-Post Builders, and Battery-Post Reducers.

Claims use since Jan. 1, 1920.

Ser. No. 161,866. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SONORA PHONOGRAPH COMPANY, INC., New York, N. Y. Filed Apr. 6, 1922.

Sonoradio
CLEAR AS A BELL

No claim is made to any right of registration under the statute of the words "Clear as a Bell" apart from the mark shown in the drawing, applicant, however, reserving and not waiving its common-law rights to the words "Clear as a Bell."

Particular description of goods.—Wireless Apparatus and Devices—Namely, Radio Receiving Sets, Amplifiers, and Loud Speakers for Receiving Sets.

Claims use since latter part of February, 1922.

Ser. No. 164,491. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CHEMICAL MACHINERY EXPERIMENT CO. INC., New York, N. Y. Filed May 25, 1922.

FISCHER

The lining shown on the drawing is merely for the purpose of shading and does not indicate color.

Particular description of goods.—Electric-Current-Flow Indicators.

Claims use since May 18, 1922.

Ser. No. 165,797. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) CHARLES LEDERER, Chicago, Ill. Filed June 21, 1922.

KUTI-KUTS
(CUTIE CUTS)

Particular description of goods.—Game—Namely, Children's Sectional Cardboard or Paper Cut-Outs.

Claims use since May 18, 1922.

Ser. No. 166,947. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) KERMIT PRODUCTS CORP., Hartford, Conn. Filed July 15, 1922.

GETS-IT

Particular description of goods.—Soap.
Claims use since June 1, 1922.

Ser. No. 171,579. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD BENTON KNIGHT, doing business as E. Ben Knight, Penn Yan, N. Y. Filed Nov. 4, 1922.

HONEYSENE

SIPSEY COAL EXCELS

No claim to the exclusive use of the words "Coal Excels" is made apart from the mark as shown.
Particular description of goods.—Coal.
Claims use since about 1912.

Ser. No. 196,444. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) DIETZEN, INC., New York, N. Y. Filed May 2, 1924.

QUALITY Dietzen PRODUCTS

No claim is made to the words "Quality Products" apart from the mark shown in the drawing.
Particular description of goods.—Head Phones, Condensers, Rheostats, Radio Loud Speakers, and Assembled Radio Sets.
Claims use since Jan. 1, 1922.

Ser. No. 196,521. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) A. E. HILL MFG. CO., Atlanta, Ga. Filed May 3, 1924.

HILCO

Particular description of goods.—Complete Radio Receiving and Sending Sets and Instruments and Parts Thereof.
Claims use since June 1, 1922.

Ser. No. 196,588. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) GORHAM MANUFACTURING COMPANY, Providence, R. I. Filed May 5, 1924.

MAINTENON

Particular description of goods.—Sterling-Silver Dinner Service.
Claims use since January, 1917.

Ser. No. 196,706. (CLASS 38. PRINTS AND PUBLICATIONS.) ARCHIE C. HOFF, Los Angeles, Calif. Filed May 7, 1924.

Los Angeles Annual Builders Guide

Particular description of goods.—Building-Ordinance Handbook, Which is an Annual Publication.
Claims use since Nov. 1, 1923.

Ser. No. 196,714. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) JOSEPH TILLOU SATTELS, doing business as Ambassador Sales Company, New York, N. Y. Filed May 7, 1924.

AMBASSADOR

Particular description of goods.—Radio Receiving Sets and Parts Therefor, Phones, Head Sets, Tuning Coils, Induction Coils, Condensers, Transformers, Detectors, Insulators, Plugs, Extension Cords, Lightning Protectors or Arresters, Vacuum Tubes, Vacuum-Tube Sockets, and Loud Speakers and Horns for Radio Apparatus.
Claims use since May 12, 1923.

Ser. No. 196,811. (CLASS 27. HOROLOGICAL INSTRUMENTS.) INTERNATIONAL TIME RECORDING COMPANY OF NEW YORK, New York, N. Y. Filed May 9, 1924.

International

Particular description of goods.—Clocks and Time Recorders.
Claims use since April, 1900.

Ser. No. 196,942. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAM-BON PRODUCTS COMPANY, Providence, R. I. Filed May 12, 1924.

TAM-BON

Particular description of goods.—Cough Sirup.
Claims use since Sept. 1, 1923.

Ser. No. 196,949. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE ASBESTOS & ELECTRICAL FITTINGS CO. LTD., London, England. Filed May 13, 1924.

SINDANYO

Particular description of goods.—Composition Consisting Principally of Asbestos for Use for Electrical Insulation.
Claims use since Sept. 17, 1908.

Ser. No. 196,981. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REHFUSS & ANDERSON, Philadelphia, Pa. Filed May 10, 1924.

Mfg'd. by REHFUSS & ANDERSON
RASOL SPRA
INERT WATER 12%
PHILA. PA.

No claim is made to the words "Mfg'd. by," "Inert Water 12%," and "Phila., Pa.," apart from the mark shown.
Particular description of goods.—Contact Insecticide.
Claims use since March, 1923.

Ser. No. 196,982. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REHFUSS & ANDERSON, Philadelphia, Pa. Filed May 10, 1924.

MFG'D BY REHFUSS & ANDERSON
BEETOL
SPRA
INERT WATER
12%
PHILA. PA.

No claim is made to the words "Mfg'd. by," "Inert Water 12%," and "Phila., Pa.," apart from the mark shown.

Particular description of goods.—Contact Insecticide.
Claims use since October, 1923.

Ser. No. 196,991. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TIP-TOP BOTTLING COMPANY, St. Louis, Mo. Filed May 13, 1924.

SNOWLITE

Particular description of goods.—A Topping for Ice-Cream Confections and for Fancy Drinks.

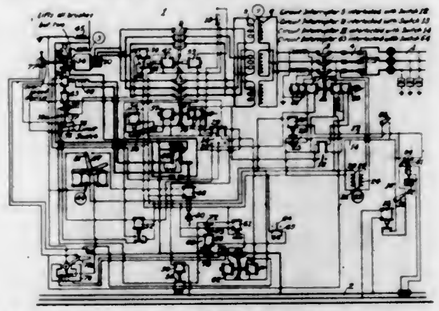
PRINTS RENEWED.

26. COLMAN'S MUSTARD ALL OVER THE WORLD For Mustard. Registered September 22, 1896. J. & J. COLMAN. Renewed September 22, 1924, to J. & J. Colman Ltd., London, England, assignee.

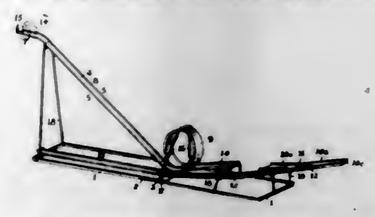
REISSUES



AUGUST 26, 1924.

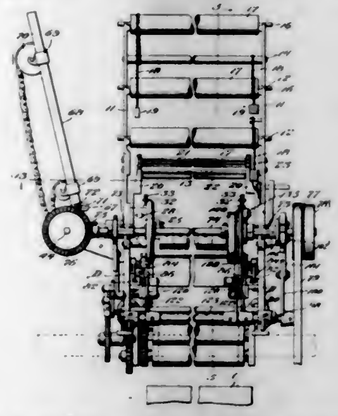
15,898. SYSTEM OF CONTROL. BASCUM O. AUSTIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 4, 1924. Serial No. 704,289. Original No. 1,427,342, dated Aug. 29, 1922, Serial No. 328,847, filed Oct. 6, 1919. 27 Claims. (Cl. 172—179.)

10. In a system of control, the combination with a main dynamo-electric machine, of a controlling device therefor, an auxiliary dynamo-electric machine for actuating said device and having an armature and a field winding, and means for varying the voltages of said armature and field winding inversely as the main-machine load increases.



15,899. ELECTRICAL SYSTEM. FREDERIC C. HANKER, Wilkinsburg, and CHARLES McL. MOSS, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 31, 1924. Serial No. 717,147. Original No. 1,435,229, dated Nov. 14, 1922, Serial No. 122,377, filed Sept. 27, 1916. 84 Claims. (Cl. 171—312.)

38. The combination with an alternating-current circuit, a direct-current circuit and a synchronous converter, of automatic means for starting the converter from the alternating-current circuit to permit the development of the polarity thereof at random, reversing the polarity if it should develop in a direction opposite to a predetermined polarity, and completing the normal connections between the alternating-current circuit and the converter, and then connecting the converter to the direct-current circuit.

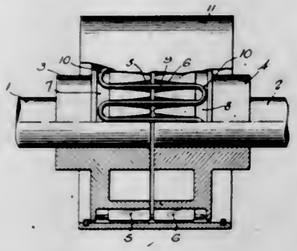


15,900. TOY AMUSEMENT APPARATUS. ALBERT HETZNER, Chicago, Ill., assignor to Benjamin F. Bain, Pittsburgh, Pa. Filed Feb. 26, 1924. Serial No. 695,365. Original No. 1,431,398, dated Oct. 10, 1922, Serial No. 539,612, filed Feb. 27, 1922. 12 Claims. (Cl. 104—55.)

1. In an amusement apparatus, the combination of a sectional track adapted to support a moving car and formed with an aligned starting platform, a main inclined portion, an intermediate loop portion and secondary inclined portions, a supporting base formed in sections having overlapping ends, lateral stud and orifice

connections for said ends, and an arched brace engaging the crown of the loop portion of the track and having prongs at its lower ends for engagement in aligned orifices in the overlapping ends of the track sections.

15,901. LACE-KNITTING MACHINE. ISAAC SPRINGTHORPE, Germantown, Pa., assignor, by mesne assignments, to Springthorpe Textile Machine Company, a Corporation of Delaware. Filed July 16, 1917. Serial No. 180,936. Original No. 1,165,294, dated Dec. 21, 1915, Serial No. 729,865, filed Nov. 6, 1912. 55 Claims. (Cl. 66—33.)

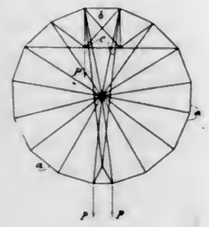


1. In a knitting machine, a row of vertically, horizontally and obliquely movable needles, a series of angularly adjustable slidable thread guides movable at right angles to the path of movement of the needles, and mechanism for simultaneously moving the needles in the said named directions and also for shifting the thread guides.

15,902. PRESERVING COMPOUND FOR PISTACHIO NUTS. SALIM F. ZALOOM, New York, N. Y., assignor to Royal Nut Company, a Corporation of New York. Filed May 15, 1924. Serial No. 713,620. Original No. 1,460,510, dated July 3, 1923, Serial No. 569,972, filed June 21, 1922. 6 Claims. (Cl. 99—1.)

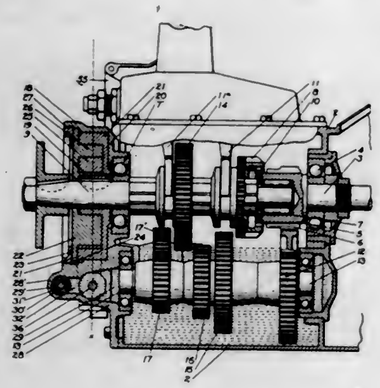
1. A compound for treating pistachio nuts consisting of sodium chloride and gum-arabic in aqueous solution.

15,903. POWER-TRANSMISSION COUPLING. JAMES BIBBY, London, England. Filed May 2, 1923. Serial No. 636,258. Original No. 1,391,713, dated Sept. 27, 1921, Serial No. 430,709, filed Dec. 14, 1920. 9 Claims. (Cl. 64—96.)



1. A flexible shaft coupling comprising two coupling elements arranged side by side on the driving and driven shafts respectively and a grid-like interconnecting member having its parallel limbs extending longitudinally in normally alined grooves in said elements, the walls of said grooves being so shaped that the more the limbs become deflected by relative angular movement between the elements during torque transmission the less becomes their unsupported length.

15,904. SUN AND GLARE SHADE FOR VEHICLES. GEORGE N. HEIN, San Francisco, Calif. Filed Sept. 11, 1923. Serial No. 662,092. Original No. 1,459,180, dated June 19, 1923, Serial No. 508,368, filed Oct. 17, 1921. 4 Claims. (Cl. 296—97.)



4. In combination with a vehicle windshield, consisting of a transparent pane, adjustable non-transparent light shading members operatively positioned one near the top and the other near the bottom edge of the pane, at least one of said members moving parallel with the windshield pane toward the other, said light shading members arranged to restrict the vision through the upper and lower portions of said windshield pane above and below the normal line of sight, and means for adjusting at least one of said light shading members toward the other to vary the position of the limits of the sight opening through the pane.

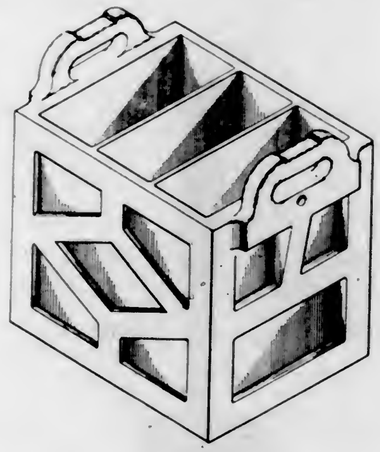
15,905. AIRSHIP. JOHANN SCHUETTE, Zeesen-Koenigs-Wusterhausen, near Berlin, Germany, assignor to American Investigation Corporation, New York, N. Y., a Corporation of Maryland. Filed July 3, 1924. Serial No. 724,124. Original No. 1,416,581, dated May 16, 1922, Serial No. 292,768, filed Apr. 25, 1919. 7 Claims. (Cl. 244—3.)

1. A frame work for airships of the rigid type comprising longitudinal girders; rings connected to said longitudinal girders; and load carrying means applicable to each ring comprising truss work having beams connected to a ring at a plurality of points for distributing the load over a predetermined section of said ring.

15,906. AUTOMATIC BRAKE CONTROL FOR POWER-PROPELLED VEHICLES. EDWIN GUSTAVE STAUDE, Minneapolis, Minn. Filed June 9, 1924. Serial No. 719,019. Original No. 1,470,701, dated Oct. 16, 1923, Serial No. 60,751, filed Nov. 10, 1915. Renewed Mar. 22, 1920. Serial No. 367,827. 43 Claims. (Cl. 192—3.)

1. An automatic control for power propelled vehicles comprising a pump, a fluid circulating system therefor, a controlling valve operable to open the suction side of the pump to supply of fluid and close the exhaust side to render the pump active and create a pressure on the exhaust side of the pump, means actuated by the pressure on the exhaust side of said pump, and a rod connected with said means and with the controlling mechanism of the vehicle.

DESIGNS



AUGUST 26, 1924.

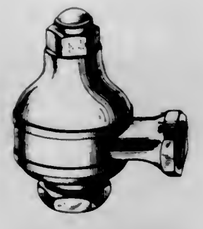
65,460. GLASS DECANTER. JOHN S. ALGEO, Wheeling, W. Va., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Mar. 12, 1924. Serial No. 8,907. Term of patent 14 years.

The ornamental design for a glass decanter, as shown.

65,461. STORAGE-BATTERY CONTAINER OR SIMILAR ARTICLE. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,803. Term of patent 3½ years.

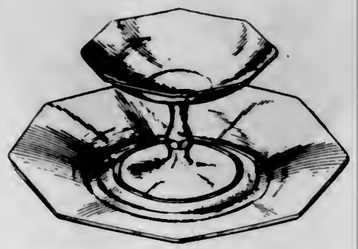
The ornamental design for a storage battery container or similar article, as shown.

65,462. PLATE OR SIMILAR ARTICLE. GEORGE B. BEEBEE, Brooklyn, N. Y., assignor to Eugene L. Fondeville, East Orange, N. J. Filed May 29, 1924. Serial No. 9,735. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

65,463. ELECTROLIER. DAVID BRUSSELL, Philadelphia, Pa. Filed June 11, 1924. Serial No. 9,853. Term of patent 7 years.

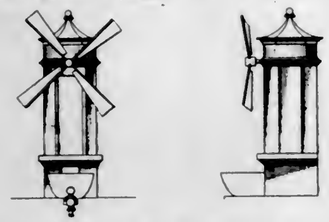


The ornamental design for an electrolier, as shown.

65,464. FLUSH VALVE. EDWARD P. BURNS and GEORGE LE WITT, New Britain, Conn., assignors to The Beaton & Caldwell Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 1, 1924. Serial No. 9,126. Term of patent 14 years.

The ornamental design for a flush valve as shown.

65,465. COMBINATION CHEESE AND CRACKER DISH. HARRY B. DUNCAN, Washington, Pa., assignor to Duncan & Miller Glass Company, Washington, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1923. Serial No. 7,886. Term of patent 3½ years.



The ornamental design for a combination cheese and cracker dish, substantially as described.

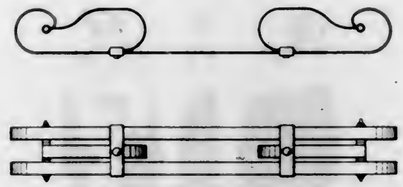
65,466. BALL. ALBERT J. ELDON, Montclair, N. J., assignor to Paramount Rubber Consolidated, Inc., Little Falls, N. J., a Corporation of Delaware. Filed Feb. 15, 1923. Serial No. 5,178. Term of patent 14 years.

The ornamental design for a ball substantially as shown in the drawings hereof.

65,467. DISPENSING STAND. JAMES FAZIO, Los Angeles, Calif. Filed Aug. 12, 1922. Serial No. 3,365. Term of patent 7 years.

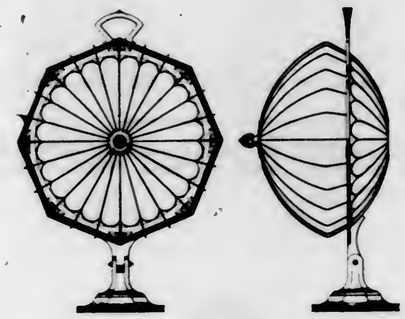
The ornamental design for a dispensing stand as shown.

65,468. AUTOMOBILE HEADLIGHT. GEORGE FENWICK and MARIE NEVA FENWICK, Venice, Calif. Filed May 10, 1924. Serial No. 9,553. Term of patent 14 years.



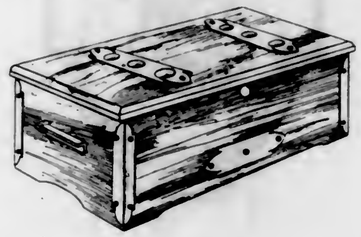
The ornamental design for an automobile headlight, as shown.

65,469. CANDLESTICK OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed June 23, 1924. Serial No. 9,950. Term of patent 7 years.



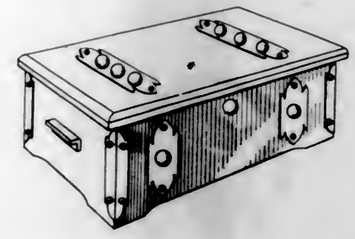
The ornamental design for a candlestick or similar article as shown.

65,470. BUMPER FOR VEHICLES. ARTHUR M. GODWIN, Grand Rapids, Mich., assignor to Wolverine Bumper & Specialty Company, Grand Rapids, Mich., a Corporation of Michigan. Filed June 26, 1924. Serial No. 9,978. Term of patent 3½ years.



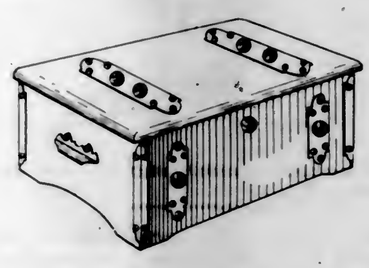
The ornamental design for a bumper for vehicles substantially as shown.

65,471. ELECTRIC-HEATER CASING. GEORGE GRAFF, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1920. Serial No. 354,269. Term of patent 3½ years.



The ornamental design for an electric heater casing as shown.

65,472. BOX. FRANCIS F. HAMILTON, Indianapolis, Ind. Filed Jan. 28, 1924. Serial No. 8,456. Term of patent 14 years.



The ornamental design for a box, as shown and described.

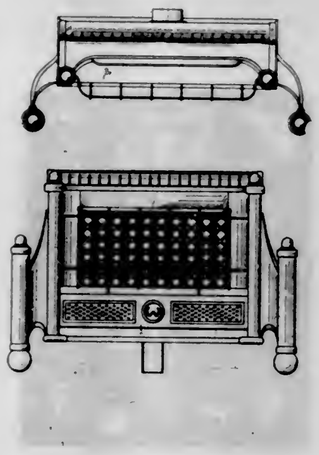
65,473. BOX. FRANCIS F. HAMILTON, Indianapolis, Ind. Filed Jan. 7, 1924. Serial No. 8,258. Term of patent 14 years.

The ornamental design for a box, as shown.

65,474. BOX. FRANCIS F. HAMILTON, Indianapolis, Ind. Filed Jan. 7, 1924. Serial No. 8,259. Term of patent 14 years.

The ornamental design for a box, as shown and described.

65,475. BLANKET. KATHERINE G. HEALEY, Cambridge, Mass., assignor to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed July 1, 1924. Serial No. 10,020. Term of patent 14 years.



The ornamental design for a blanket as shown.

65,476. WEATHER VANE. FRANK XAVER HERFORT, Bergenfield, N. J. Filed Jan. 21, 1922. Serial No. 302. Term of patent 3½ years.

The new and ornamental design for a weather vane, as shown.

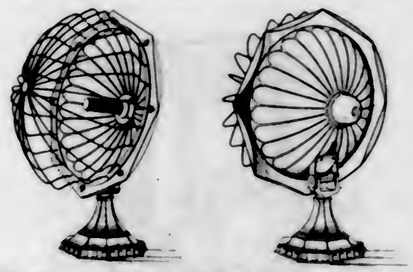
65,477. RADIANT GAS HEATER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 16, 1924. Serial No. 9,292. Term of patent 14 years.

The ornamental design for a radiant gas heater substantially as shown.

65,478. DOLL. FRANK O. KING, Glencoe, Ill. Filed June 23, 1924. Serial No. 9,943. Term of patent 7 years.

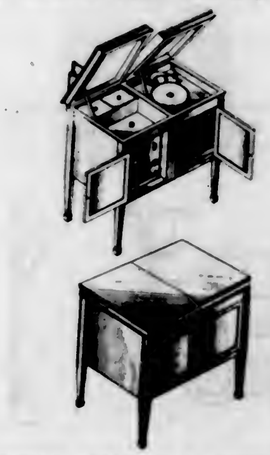
The ornamental design for a doll substantially as shown.

65,479. PLAQUE. EMIL KLEIN, New York, N. Y. Filed Apr. 21, 1924. Serial No. 9,342. Term of patent 3½ years.



The ornamental design for a plaque, as shown.

65,480. POWDER CONTAINER. JAMES J. LARMOUR, New York, N. Y. Filed Mar. 21, 1924. Serial No. 9,015. Term of patent 7 years.



The ornamental design for a powder container, as shown.

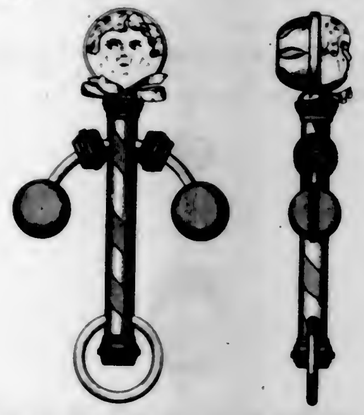
65,481. ELECTRIC-HEATER CASING. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 21, 1920. Serial No. 405,208. Term of patent 3½ years.

The ornamental design for an electric heater casing as shown.

65,482. COMBINED RADIO AND PHONOGRAPH CABINET. WALTER LYTTON, Chicago, Ill. Filed Oct. 2, 1922. Serial No. 3,868. Term of patent 14 years.

The ornamental design for a combined radio and phonograph cabinet, as shown.

65,483. CUFF BUTTON. WILLIAM MCCLELLAN, Taunton, Mass., assignor to Freeman-Daughaday Company, Chartley, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 9,757. Term of patent 3½ years.



The ornamental design for a cuff button substantially as shown.

65,484. TEACUP. SYDNEY MCNAMARA and WILLIAM NICHOLSON, New York, N. Y. Filed Dec. 3, 1923. Serial No. 7,942. Term of patent 7 years.

The ornamental design for a tea cup, as shown.

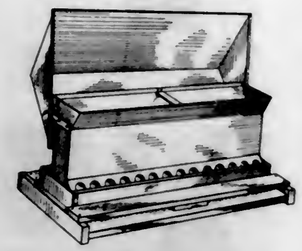
65,485. TOY RATTLE. LEO MORSE, New York, N. Y. Filed May 29, 1924. Serial No. 9,734. Term of patent 7 years.

The ornamental design for a toy rattle as shown.

65,486. HANDLE FOR SAFETY RAZORS. GEORGE D. MOULTON, Denison, Tex. Filed June 5, 1924. Serial No. 9,807. Term of patent 14 years.

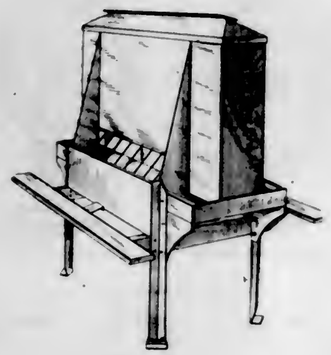
The ornamental design for a handle for safety razors, as shown.

65,487. LAMP BASE. FRANK H. NALL, Evansville, Ind. Filed May 27, 1924. Serial No. 9,717. Term of patent 3½ years.



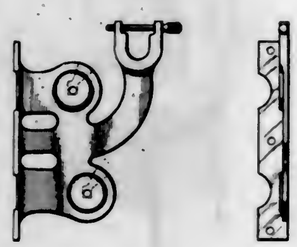
The ornamental design for a lamp base as shown.

65,488. FINGER RING. ALBERT NIOLA and MICHAEL MARINO, Newark, N. J. Filed May 21, 1923. Serial No. 6,236. Term of patent 7 years.



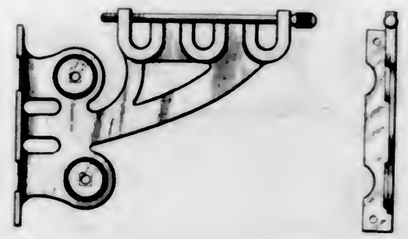
The ornamental design for a finger ring, substantially as shown.

65,489. POULTRY-FEEDING DEVICE. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Co., Fort Atkinson, Wis. Filed Oct. 26, 1922. Serial No. 4,108. Term of patent 7 years.



The ornamental design for a poultry feeding device as shown.

65,490. POULTRY-FEEDING DEVICE. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Co., Fort Atkinson, Wis. Filed Oct. 23, 1922. Serial No. 4,061. Term of patent 7 years.



The ornamental design for a poultry feeding device as shown.

65,491. SHADE BRACKET. ELMER J. POURMON, Newark, N. J. Filed Mar. 1, 1921. Serial No. 448,854. Term of patent 3½ years.

The ornamental design for a shade bracket as shown.

65,492. SHADE BRACKET. ELMER J. POURMON, Newark, N. J. Filed Mar. 1, 1921. Serial No. 448,855. Term of patent 3½ years.

The ornamental design for a shade bracket as shown.

65,493. SHEET GLASS OR SIMILAR ARTICLE. JOSHUA M. RICHARDS, Belmont, Mass. Filed Nov. 9, 1923. Serial No. 7,722. Term of patent 14 years.

The ornamental design for sheet glass or similar article as shown.

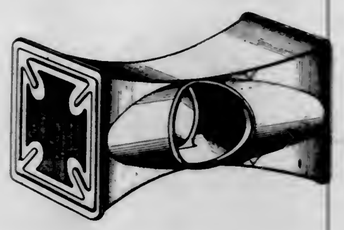
65,494. MOTOR-VEHICLE RADIATOR. JOHN RHSE, Doylestown, Ohio. Filed May 29, 1924. Serial No. 9,738. Term of patent 14 years.

The ornamental design for a motor vehicle radiator, as shown.

65,495. COMBINED CLOCK AND BANK. HOWARD R. ROBERTS, Chicago, Ill., assignor to Stronghart Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1922. Serial No. 4,766. Term of patent 3½ years.

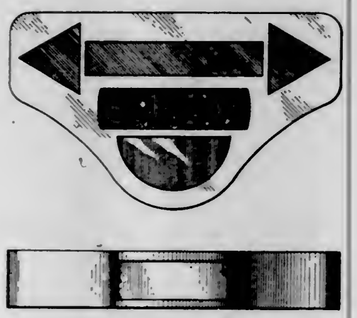
The ornamental design for a combined clock and bank, as shown.

65,496. LIGHTING FIXTURE OR AN ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed May 16, 1924. Serial No. 9,617. Term of patent 3½ years.



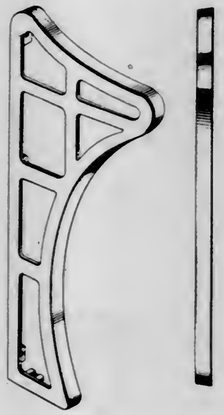
The ornamental design for a lighting fixture or an article of similar nature, as shown.

65,497. HANGING LAMP OR SIMILAR ARTICLE. ISIDOR ROSENBLATT, New York, N. Y. Filed June 19, 1924. Serial No. 9,904. Term of patent 3½ years.



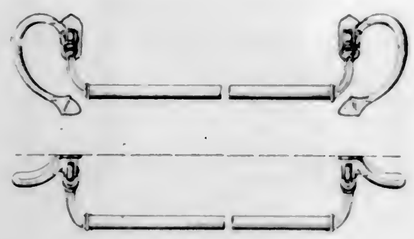
The ornamental design for a hanging lamp or similar article, as shown.

65,498. TELEPHONE MUFFLER. LOUIS S. SCHER, Bronx, N. Y. Filed Mar. 30, 1922. Serial No. 1,448. Term of patent 3½ years.



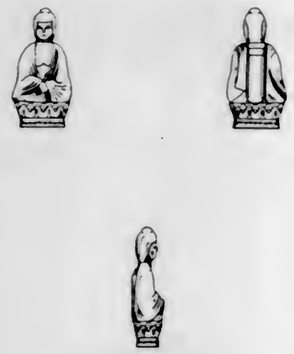
The ornamental design for a telephone muffler as shown.

65,499. VEHICLE INDICATOR. ALBERT E. SCHILLINGER, Denver, Colo. Filed May 31, 1924. Serial No. 9,761. Term of patent 14 years.



The ornamental design for a vehicle indicator as shown.

65,500. STOVE BRACKET OR SIMILAR ARTICLE. ERNEST SCHMALE, Belleville, Ill. Filed Apr. 12, 1923. Serial No. 5,801. Term of patent 3½ years.

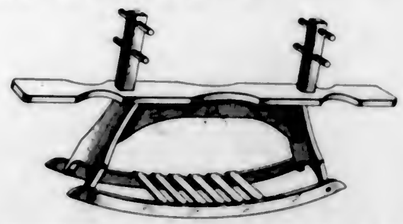


The ornamental design for a stove bracket or similar article, as shown.

65,501. AUTOMOBILE ROBE-RAIL FIXTURE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed May 10, 1924. Serial No. 9,546. Term of patent 14 years.

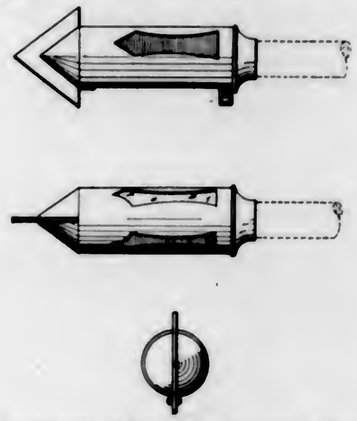
The ornamental design for an automobile robe-rail fixture, as shown.

65,502. PORTABLE LIGHTER. ROBERT SCHRAMM, Pforzheim, Baden, Germany, assignor to R. F. Waechter & Company, G. m. b. H., Frankfort-on-the-Main, Germany. Filed Apr. 28, 1924. Serial No. 9,429. Term of patent 3½ years.



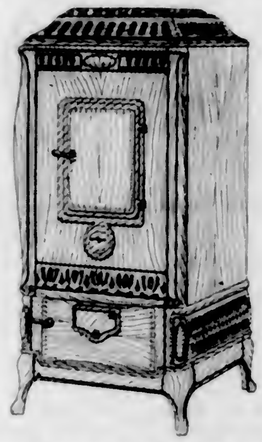
The ornamental design for a portable lighter as shown.

65,503. COMBINED BRUSH AND TUMBLER BRACKET. PAUL SPIEDEL, New York, N. Y. Filed Aug. 18, 1922. Serial No. 3,439. Term of patent 7 years.



The ornamental design for a combined brush and tumbler bracket, as shown.

65,504. CHILD'S ROCKER. WHITNEY R. SPIEGEL, Indianapolis, Ind. Filed Mar. 31, 1924. Serial No. 9,119. Term of patent 3½ years.

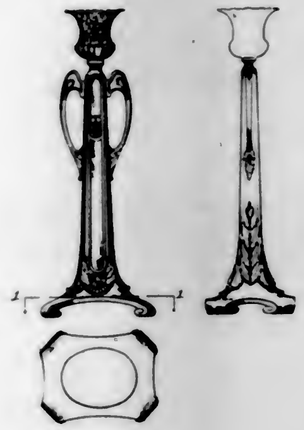


The ornamental design for a child's rocker as shown.

65,505. DIRECTION, TROUBLE, AND PARKING LAMP. WILLIAM J. STOTT, Worcester, Mass. Filed Apr. 3, 1924. Serial No. 9,152. Term of patent 14 years.

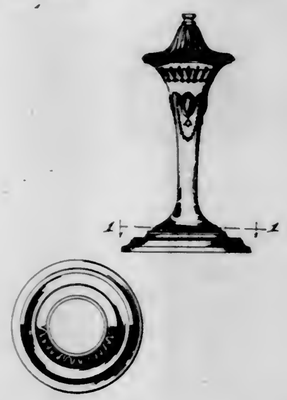
The ornamental design for a direction, trouble, and parking lamp, as shown.

65,506. HEATING STOVE. JONES T. TEMPLETON, St. Louis, Mo., assignor to The Buck's Stove & Range Company, St. Louis, Mo., a Corporation of Missouri. Filed May 24, 1924. Serial No. 9,700. Term of patent 14 years.



The ornamental design for a heating stove, as shown.

65,507. CANE OR SIMILAR ARTICLE. JAMES WILL TRACY, Smithland, Ky. Filed Dec. 2, 1922. Serial No. 4,468. Term of patent 14 years.



The ornamental design for a cane, or similar article, as shown.

65,508. CANDLESTICK. GUSTAVE E. VILLARET, New York, N. Y., assignor to William R. Noe & Sons, a Copartnership of New York, N. Y. Filed May 11, 1923. Serial No. 6,136. Term of patent 7 years.

The ornamental design for a candlestick, as shown.

65,509. BASE FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to William R. Noe & Sons, New York, N. Y., a Corporation of New York. Filed May 25, 1923. Serial No. 6,283. Term of patent 7 years.

The ornamental design for a base for lighting fixtures, as shown.

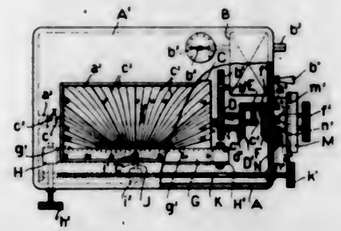
65,510. PEDESTAL FOR LAMPS OR SIMILAR ARTICLES. GUSTAVE E. VILLARET, New York, N. Y., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Apr. 8, 1924. Serial No. 9,197. Term of patent 7 years.

The ornamental design for a pedestal for lamps or similar articles, as shown.

65,511. CORNET OR SIMILAR ARTICLE. FRANK MERWIN WAKEMAN, Durham, Me. Filed Feb. 28, 1924. Serial No. 8,771. Term of patent 7 years.

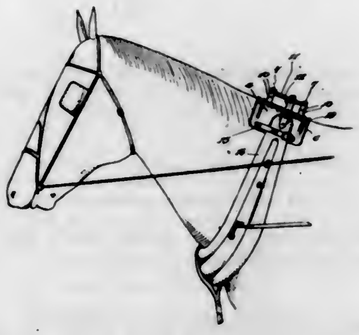
The ornamental design for a cornet or similar article, as shown.

65,512. TOY BALLOON. THOMAS J. WORSTELL, St. Louis, Mo. Filed Aug. 13, 1923. Serial No. 6,997. Term of patent 14 years.



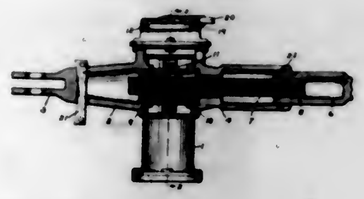
The ornamental design for a toy balloon as shown.

PATENTS



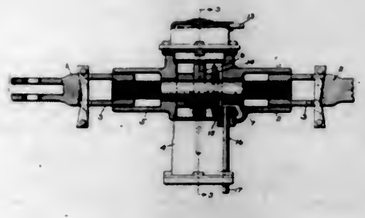
GRANTED AUGUST 26, 1924.

1,505,935. APPARATUS FOR DETERMINING A MAGNITUDE, WHICH VARIES WITH THE TIME. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,076. 11 Claims. (Cl. 235—61.)



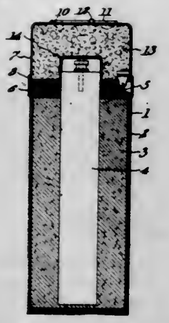
1. An apparatus for determining a magnitude which varies with time which comprises a movable member being provided with a multiplicity of lines radiating from one point, said lines each representing a fixed value of variation, referred to the unit of time of the said magnitude, a member having a graduation disposed adjacent said movable member, said two members being movable transversely with respect to each other the graduation of said grad graduated member being divided into units of said magniture based on the same unit as said radiating lines, constant speed means for moving said movable member and means for moving said graduated member whereby the magnitude to be determined is indicated by the intersection of a selected radiating line with a division line of said graduation.

1,505,936. HORSE-COLLAR PAD. HENRY G. ANDERSON, Inwood, Iowa. Filed Dec. 12, 1923. Serial No. 680,280. 3 Claims. (Cl. 54—19.)



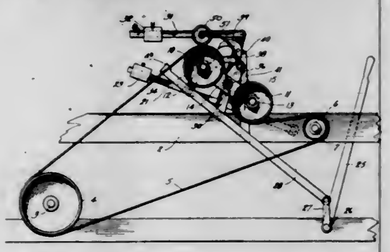
1. A collar pad comprising a portion shaped to fit upon the neck of an animal and provided at its side edges with longitudinally disposed collar-retaining elements, posts erected upon said member adjacent the ends thereof, a bridge bar having its ends engaged over said posts, filler blocks also mounted on said posts and interengageable with the ends of the bridge bar whereby to effect vertical adjustment of the bridge bar relative to the neck-engaging portion of the pad, and means for retaining the bridge bar upon the posts.

1,505,937. SLACK ADJUSTER. ROBERT E. ADREON, St. Louis, Mo., and CHRISTOPHER P. CASS, Berkeley, Calif., assignors to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed July 19, 1922. Serial No. 575,934. 9 Claims. (Cl. 188—202.)



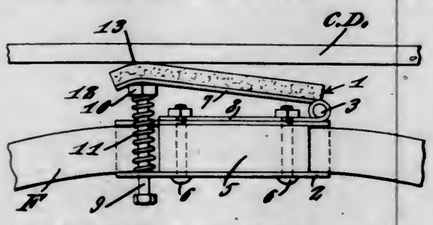
5. The combination with a pair of tie rod members, each secured to a brake lever, of a take-up cylinder fixed to one member, a nut associated with said cylinder, and a screw fixed to the other member and having screw-threaded engagement with said nut.

1,505,938. SLACK ADJUSTER. ROBERT E. ADREON, St. Louis, Mo., and CHRISTOPHER P. CASS, Berkeley, Calif., assignors to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed July 19, 1922. Serial No. 575,937. 7 Claims. (Cl. 188—202.)



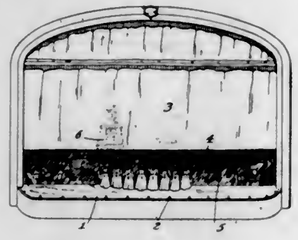
5. In a slack adjuster, the combination with a take-up cylinder having opposite sleeve portions provided with recesses, an adjusting screw extending into said recesses, and a ratchet wheel mounted in said cylinder and secured to said screw, of opposite brake lever tie rod members having telescopic engagement in each recess and having screw-threaded engagement with opposite ends of said adjusting screw.

1,505,939. HERMETICALLY-SEALED DRY CELL. HARRY D. BATCHELOR, New York, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed June 21, 1921. Serial No. 479,287. 6 Claims. (Cl. 204—38.)



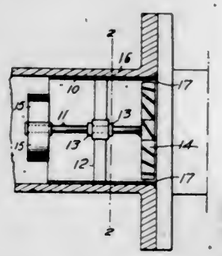
1. In a dry cell, means independent of the depolarizer for fixing gases evolved in said cell.

1,505,940. SAFETY LOCK FOR BELT-TIGHTENING MECHANISM. JAMES H. BERRYMAN, Snoqualmie, Wash. Filed Nov. 14, 1922. Serial No. 600,955. 6 Claims. (Cl. 64—5.)



2. A device of the class described, comprising in combination with a driving belt, a rotatably supported belt tightening device, means connected with said device for normally maintaining driving tension on the belt, a ratchet member carried by the tightening device, a setting mechanism manually movable between "off" and "on" positions, means for yieldingly retaining it in either set position, a pawl carried by the setting mechanism for engagng said ratchet when the setting mechanism is shifted from "on" to "off" position to effect rotation of the belt tightening device whereby driving tension will be removed from the belt.

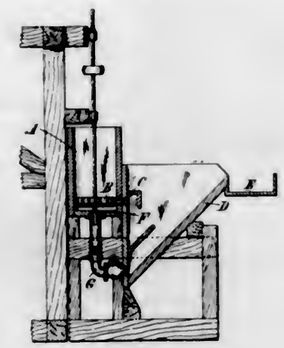
1,505,941. CLUTCH BRAKE. JACOB S. BIDDLE and JAMES P. THOMPSON, Leavenworth, Kans. Filed Sept. 4, 1923. Serial No. 660,866. 2 Claims. (Cl. 192—12.)



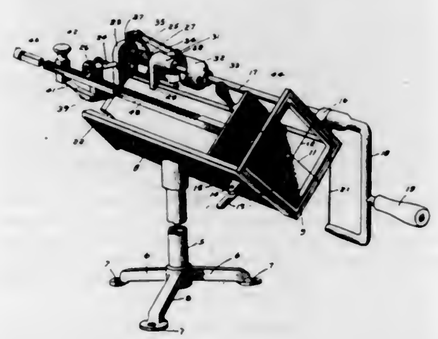
1. A disk clutch brake comprising a braking element to be located in the path of a disk clutch and having means for attaching it to a support, said means comprising a clamp U-shaped in cross section to straddle a support, means for securing said member in operative position and a braking element carried by the outer face of said member and adapted to lie in the path of a disk clutch so that when the clutch is thrown out it will be frictionally engaged by said braking element.

1,505,942. ART OF PRODUCING MANIKIN ACTORS. ELMA OSBORN BLANTON, Jacksonville, Fla. Filed Apr. 21, 1921. Serial No. 463,171. 4 Claims. (Cl. 46—70.)

1. The art of producing a manikin actor which consists in first painting face feature on the knee cap of the operator and then dressing the leg of the operator in suitable clothes characteristic of a manikin and concealing that portion of the operator which is not dressed as a manikin.



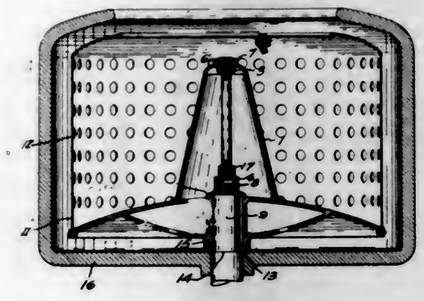
1,505,943. INTERNAL-COMBUSTION ENGINE. CHARLES J. BOHRER and CHARLES E. NACHTRAB, Toledo, Ohio. Filed July 15, 1922. Serial No. 575,166. 2 Claims. (Cl. 48—180.)



1. As an improvement in internal combustion engines, the combination of a carburetor having the usual position with reference to the intake manifold, a cylinder fitting the intake manifold beyond the carburetor, a shaft within the cylinder, means between the ends of the cylinder supporting the shaft, a rotary device at the end of the cylinder towards the carburetor that is mounted on said shaft and which derives motion from the inflowing current of fuel, and radial arms on the shaft situated beyond said shaft support having concave faces turnd in the direction of rotation of said arms.

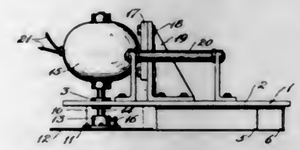
1,505,944. TREATMENT OF EMULSIONS. WALTER BROADBRIDGE and EDWIN EDSER, London, England, assignors to Minerals Separation Limited, London, England, a British Limited Liability Company. Filed June 26, 1920. Serial No. 391,918. 8 Claims. (Cl. 87—26.)

1. The process of separating the constituents of an emulsion which consists in agitating and aerating the emulsion under such conditions that there are formed therein a multitude of the minute bubbles characteristic of the froth-flotation separation process so as to form a froth preferentially carrying one constituent of the emulsion, and separating the froth.



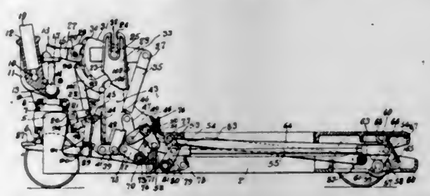
1,505,945. BUTTER CUTTER. JOHN G. CALVERT and DWIGHT C. CLINTON, Oakland, Calif. Filed Apr. 20, 1920. Serial No. 375,313. 3 Claims. (Cl. 31—65.)

1. In a butter cutter, an angular shaped member, a frame carried at one end of said angular shaped member, cutting wires carried by said frame, a pusher mounted within said angular shaped member, a rack bar extended to rear of said pusher, a spring pressed guide adapted to support the rear of said rack, means for advancing said pusher intermittently.



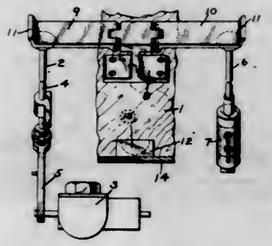
1,505,946. DETACHABLE CONE FOR LAUNDRY EXTRACTORS. WILLIAM M. CHACE, Detroit, Mich. Filed Aug. 22, 1921. Serial No. 494,099. 3 Claims. (Cl. 210—76.)

1. A detachable cone for use with a centrifugal extractor comprising the combination with a perforated basket having a shaft secured centrally thereto and provided with a threaded end extending into the basket, of a nut threaded onto the threaded end of the shaft and having a threaded recess in the upper end, a rod threaded into the said recess, the said rod supporting a bell shaped disc at the upper end, a conical shell having a flange at the lower edge adapted to engage the bottom of the basket, said shell fitting over the bell shaped disc



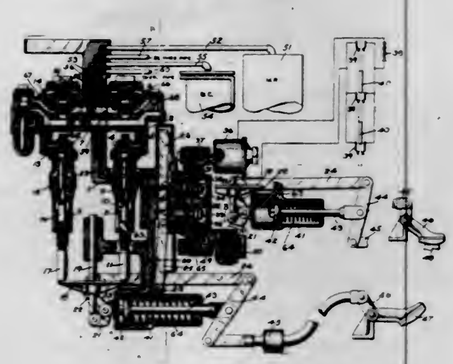
at the upper end and a nut threaded on the upper end of the said rod and adapted when turned up to bindingly secure the cone and the bell shaped disc together.

1,505,947. BLOCK-SURFACING MACHINE. EARL CHAPMAN, Oakland, Calif., assignor of one-half to Frank McCarroll, Boise, Idaho. Filed Mar. 19, 1923. Serial No. 626,129. 2 Claims. (Cl. 144—119.)



1. A block-surfacing machine including a horizontal supporting plate, vertical runners arranged in crossed relation beneath said plate and supporting the latter, parallel vertical runners provided on the under side of said plate and arranged near the opposite side edges of the plate, a circular saw-blade arranged to rotate partially between said crossed runners, a motor carried by said plate, a shaft for said motor on which the saw blade is mounted, and handles provided on the upper side of the plate to enable the operator to move the machine universally over the surface to be dressed.

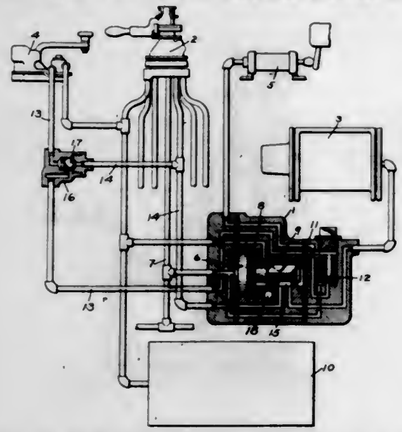
1,505,948. JACK. SHERWOOD M. CHASE, Columbus, Ohio. Filed May 8, 1922, Serial No. 559,186. Renewed July 14, 1924. 22 Claims. (Cl. 254—2.)



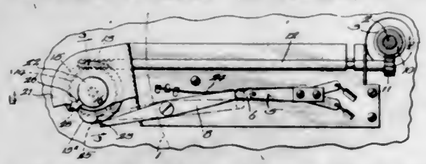
1. In a jack of the class described, a load carrying member, an expansible element consisting of a pair of telescoping members movable in opposite directions, a linkage connecting one of the last mentioned members with one end of the load carrying member, a second linkage connecting the other member of the expansible element with the remaining end of the load carrying member, and means to expand the expansible member.

1,505,949. AUTOMOTIVE CONTROL DEVICE. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1922. Serial No. 600,308. 4 Claims. (Cl. 74—81.)

1. In a motor vehicle controlling device, the combination with a pair of foot operable vehicle controlling members, of a bracket mounted between said members, and an arm hinged to said bracket for operating each member.



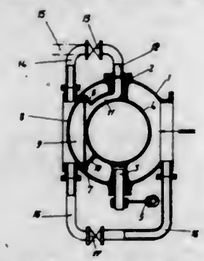
1,505,950. VARIABLE-LOAD BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1923. Serial No. 665,110. 6 Claims. (Cl. 303—22.)



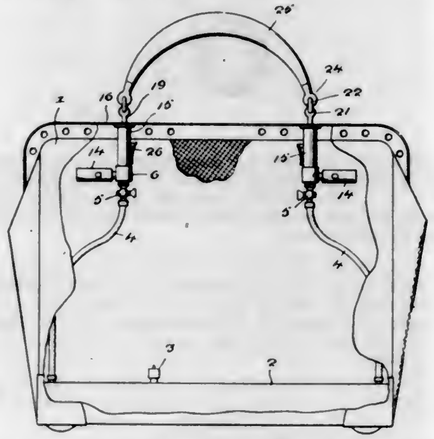
1. In a load brake apparatus, the combination with a mechanism for limiting the braking power according to the load on the car, of fluid pressure means for rendering said mechanism operative by the load on the car, fluid pressure means for locking said mechanism in its adjusted position, a magnet, and valve means operated by said magnet for controlling the fluid pressure on both said means.

1,505,951. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1923. Serial No. 666,616. 4 Claims. (Cl. 303—6.)

1. In a fluid pressure brake, the combination with a safety control pipe, an emergency brake pipe, and means operated upon a reduction in pressure in the safety control pipe for venting fluid from the emergency brake pipe, of a straight air pipe, means operated by pressure in the straight air pipe fo cutting off communication through the safety control pipe, and an emergency valve device operated upon a reduction in brake pipe pressure for effecting an application of the brakes and adapted in emergency position to vent fluid from said straight air pipe.

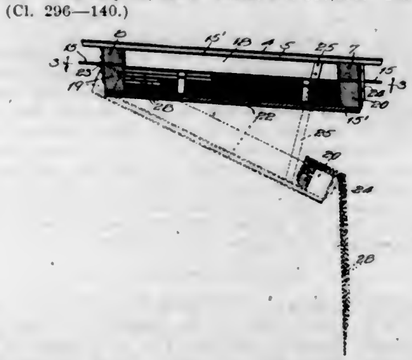


1,505,952. PHONOGRAPH MECHANISM. WILLIAM A. FRICKE, Oak Park, Ill. Filed May 12, 1923. Serial No. 638,524. 6 Claims. (Cl. 192—119.)



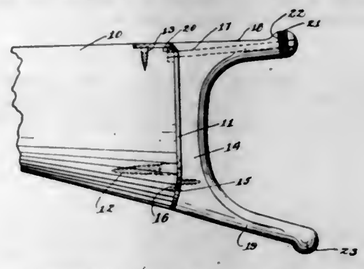
1. The combination with the revoluble record support of a phonograph; of an electric motor in driving relation to said support; a switch in circuit with the motor for bringing it into and out of action; a cam in actuating relation to the switch to open and close it and having one portion that serves to maintain the switch closed and another portion which causes the switch to open; and gearing driven by said motor and driving said cam and with respect to which said cam is adjustable to adjust the duration of the closure of the switch.

1,505,953. ROTARY VALVE FOR PIPE LINES. ANTON GAGG, Zurich, Switzerland, assignor to the Firm: Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed Nov. 26, 1923. Serial No. 676,999. 4 Claims. (Cl. 251—102.)



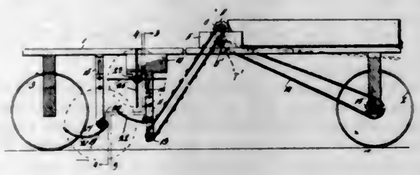
1. A rotary valve for pipe lines, comprising in combination a valve casing provided with a seat, a gate body movable within said casing, a closing member provided with a seat adapted to cooperate with the seat of the casing, said member being movable relatively to and with the gate body and confining together with the latter a hollow space adapted to take up fluid in order to press said member against the seat of the casing, said member being so designed that the pressure present inside the valve casing acts on the member in opposition to the pressure present in said hollow space, and means for relieving said space from pressure whilst said member is still in closing position.

1,505,954. SATCHEL ALARM. RUDOLPH PARKER GILL, Orange, Va. Filed May 2, 1924. Serial No. 710,630. 2 Claims. (Cl. 116—99.)



2. In combination with a satchel or the like having a carrying handle, of a means for sounding an alarm when the satchel is not suspended from the handle, comprising a reservoir in the satchel having air under pressure therein, valve controlled tubes leading therefrom, a casing carrying a spring influenced valve for each whistle and connected with each tube, means for adjusting each valve with respect to its seat, spring influenced plungers connected with the handle and normally sustained in one position by the weight of the satchel when the latter is suspended from the handle and designed for movement to unseat the valves when hold on the handle has been released, and means for holding the plungers in valve unseating position.

1,505,955. VEHICLE TOP. OLLIE L. HERON, Chicago, Ill. Filed May 15, 1920. Serial No. 381,699. 1 Claim. (Cl. 296—140.)

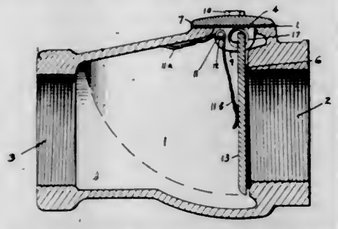


In a device of the kind described and in combination, a rigid vehicle top having cross bars extending transversely across the same from side to side and a pair of spaced bars extending lengthwise the top and connecting two of the transverse bars adjacent the rear of the driver's seat, a curtain container comprising a box shaped receptacle of a size to receive the curtains flat without folding and constructed to fit the enclosure formed by said cross bars and spaced bars and abut the bars, said box shaped receptacle hinged at its rear edge to the rear transverse bar and provided with locking means at the front edge for securing the same to the forward transverse bar, a plurality of fabric curtain separators secured to the inside of the front edge of the receptacle with the remainder of the edges free, and means for limiting the opening movement of the receptacle to less than an arc of 45°.

1,505,956. DETACHABLE TARGET BUTT PLATE. ALFRED H. HOFER, Dayton, Ohio. Filed Sept. 21, 1923. Serial No. 664,129. 4 Claims. (Cl. 42—71.)

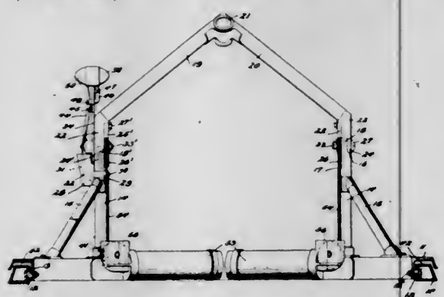
2. The combination with a butt of a firearm, of a quickly detachable butt piece having a shoulder prong extending rearwardly therefrom, a screw extending through said prong for securing said butt piece, and a finger knob rigid with the outer end of said screw for turning the same forming the end of said prong with said butt piece in place.

1,505,957. BEET HARVESTER. JOSEPH J. HRUSKA, Milwaukee, Wis. Filed Oct. 22, 1920. Serial No. 418,688. 1 Claim. (Cl. 55—59.)



In a beet harvester, an extracting mechanism including a rotatable shaft, a digger mounted on said shaft and comprising a body portion curved concentrically with the shaft and fixed thereto, and a plurality of spaced fingers extending therefrom and curved throughout their length, said fingers being curved in the same direction in which said shaft is adapted to rotate for digging the beets from the ground, a second shaft to the rear of said extension mechanism, and a plurality of radiating bars extending from said second shaft, said bars being situated so as to pass between the fingers of the digger and knock the beets therefrom so as to throw the same rearwardly.

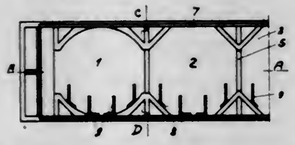
1,505,958. VALVE. SAMUEL E. HUNTTING, San Francisco, Calif. Filed Aug. 11, 1921. Serial No. 491,456. 2 Claims. (Cl. 251—125.)



1. A valve provided with inlet and outlet orifices and with a side orifice, a cover for said orifice provided with lugs extending into the said orifice, said lugs provided with holes, a flapper adapted to close the inlet orifice of

said valve and dependent from said holes by a shaft at the top of the flapper and an integral part of it, said shaft so constructed as to permit one end of said shaft to be in-

serted in a hole in one of said lugs and passed therethrough far enough to allow the other end to be inserted in the hole in the other of said lugs, and the entire shaft to be moved back to a central position.

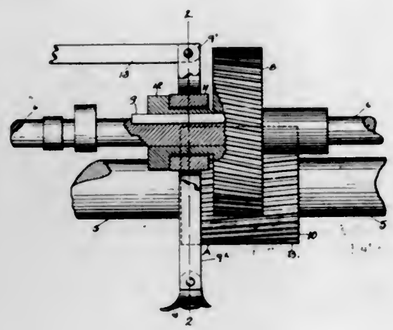


1,505,959. DUPLEX CONTROL FOR FLEXIBLY-MOUNTED GUNS. HENRY B. INGLIS, Dayton, Ohio. Filed Apr. 30, 1923. Serial No. 635,769. 10 Claims. (Cl. 89—40.)

1. In combination, a gun support movable about two axes, a means for locking said gun support against movement about one of said axes, another means for locking said gun support against movement about the other of said axes, and a single control handle for releasing the two said locking means by initial pressure in the direction in which such pressure when continued will move the gun support.

7. In combination, a gun support movable about an axis, means for locking the gun support against movement about such axis, and a movable controlling device for controlling said locking means, the controlling device being mounted so that a force applied to it in the same direction in which it is desired to move the gun support releases the gun support for movement in that direction.

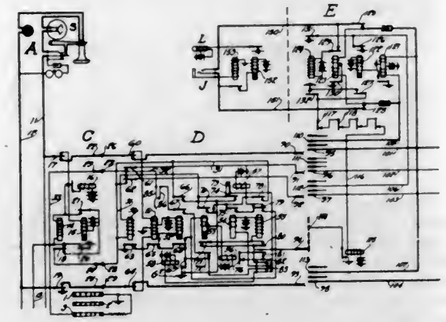
1,505,960. PLANE SIEVE. CHARLES JAQUET, Strasbourg-Koenigshoffen, France. Filed Aug. 29, 1921. Serial No. 496,513. 1 Claim. (Cl. 83—38.)



In a plane sorting device a sieve surface having cross traverses, whereby above each transverse on both sides of the longitudinal walls of the sieve surface wedge shaped corners are disposed, which consist of frames whereby the individual cross compartments receive a round or approximately round sieve surface, said corner serving at the same time as inlet and outlet passages between the individual compartments and transporting plates arranged at one side of the cross compartments and extending partly thereacross.

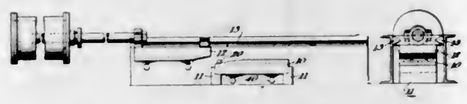
1,505,961. ENGINE AIR PERCOLATOR. LAWRENCE JOUBERT, Williamstown, Ontario, Canada, assignor to Chilian Longley Hervey, trustee, Montreal, Canada. Filed July 31, 1922. Serial No. 578,638. 1 Claim. (Cl. 48—180.)

An engine air percolator comprising a separator plate having projecting prongs receding in opposite directions from a central irregular enlarged solid portion, and having irregular enlarged solid portions adapted to be pivoted to the air tube.



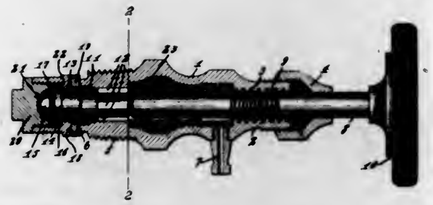
1,505,962. VALVE-CONTROLLING MECHANISM. CHARLES W. LEE, Brooklyn, N. Y., assignor of one-fourth to Frederick S. Bartram, Brooklyn, N. Y. Filed Apr. 9, 1923. Serial No. 631,043. 1 Claim. (Cl. 123—90.)

A mechanism for controlling the action of the valves of an internal combustion engine while the latter is in operation and in operative time with the speed of the engine, a gear splined to the cam shaft of the engine, a grooved hub laterally formed on the gear, a collar surrounding the hub and arranged in the groove, studs extending from diametrically opposite sides of the collar, a yoke pivotally secured at its lower end and provided with openings receiving the studs whereby movement of the yoke on its pivot will slide the gear upon the shaft through the medium of the collar and grooved hub, a gear keyed to the crank shaft of the engine and meshing with the splined gear and manually operated means secured to the upper end of the yoke.



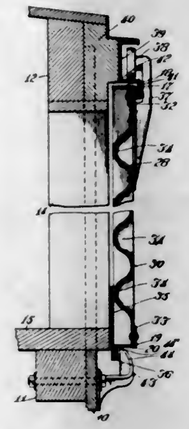
1,505,963. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1920. Serial No. 409,932. 14 Claims. (Cl. 179—27.)

1. In a telephone system, selection and connector switches for connecting calling and called lines, service restricting means for each line, service restricting means in the selectors, and service restricting means in the



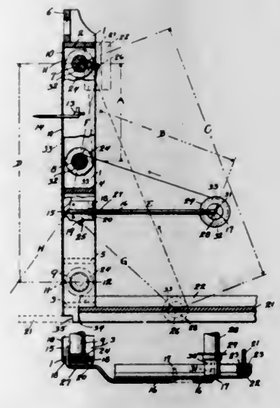
connectors, the said means cooperating to divide the subscribers into three classes in accordance with the kinds of service they are entitled to.

1,505,964. PROCESS OF AND APPARATUS FOR FORMING BALLS. FRANK EARL MARCY, Los Angeles, Calif. Filed Mar. 28, 1922. Serial No. 547,501. 3 Claims. (Cl. 80—20.)



2. Apparatus for forming balls, comprising two dies mounted for sliding movement over one another and having co-operating ball-forming grooves, the grooves having portions substantially V-shaped in cross-section co-operating intermediate the ends of the stroke and portions progressively changing from V-shape to semi-circular shape, said last mentioned portions co-operating during the final part of the rolling stroke.

1,505,965. GAUGE COCK. CHARLES R. MOORE, Newport, Vt. Filed Mar. 16, 1923. Serial No. 625,512. 1 Claim. (Cl. 251—46.)

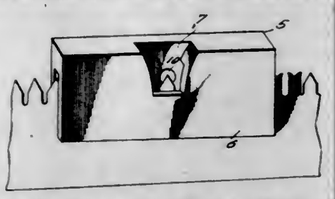


In a gauge cock the combination with a casing having a valve seat at one end, and a stem projecting through and beyond the ends of the casing, of cooperating screw threads upon the stem and casing, a head at one end of the stem having an annular enlargement, a tapered knob projecting from the enlargement, a valve rotatably engaged by the head on the stem and having an internal annular shoulder constituting a thrust bearing for the enlargement, a screw plug adjustably seated in the valve and closing one end thereof, said plug having a concave recess, the center portion of the wall of which constitutes the sole means for receiving thrust from the knob to shift the valve from the seat on the end of the casing.

1,505,966. SHEET-METAL CAR DOOR. WALTER P. MURPHY, New York, N. Y. Original application filed May 8, 1920, Serial No. 379,807. Divided and this application filed Apr. 6, 1922. Serial No. 550,139. 18 Claims. (Cl. 189—46.)

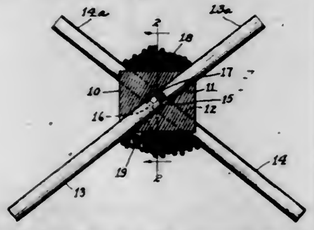
15. A railway car door comprising, in combination a marginal rectangular frame, a sheet metal panel, and a plate cooperating with said frame and panel to provide a hollow box-like structure at the lower edge of the door.

1,505,967. DETACHABLE SCROLL FOR PORTABLE DESKS. LEWIS E. MYERS, Valparaiso, Ind. Filed Feb. 11, 1920. Serial No. 357,840½. 7 Claims. (Cl. 45—51.)



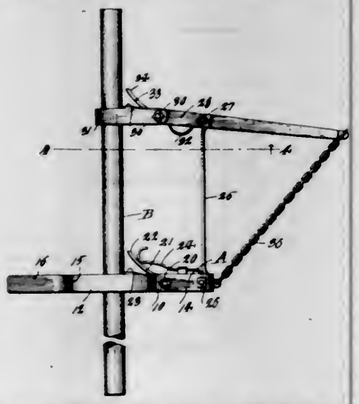
1. In interchangeable scroll display devices, a plurality of rollers, removable scrolls attachable to and detachable from the rollers at will, a suitable frame on which said rollers are supported, and a supplementay pivoted roller support adapted to hold a transfer roller in substantial parallelism with the other rollers at various distances therefrom.

1,505,968. SAW SET. LARKIN S. OSBORN, Duncan, Oreg. Filed May 23, 1923. Serial No. 640,918. 2 Claims. (Cl. 76—60.)



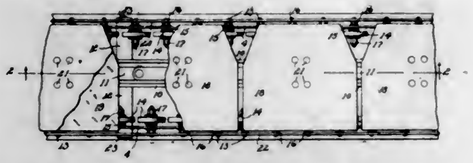
1. A device of the class described including a body adapted to be disposed on a saw and setting means associ-

ated with the body, said setting means including a bolt threaded through the body, a nut on the bolt, and means



for locking the nut on the bolt in a desired position so that the movement of the bolt in respect to the body may be limited.

1,505,969. CLOTHESLINE REEL. CONRAD PETERSON, Chicago, Ill. Filed Apr. 24, 1922. Serial No. 556,315. 6 Claims. (Cl. 242—100.)

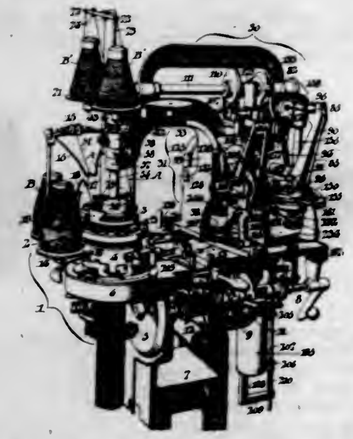


1. In a clothes line reel, the combination of a central block having holes extending diagonally through the block in parallel planes and in directions crossing each other, handles extending through said holes and rotatable therein, each of said handles having a groove therein, and a pin extending through said block and lying in both of said grooves.

1,505,970. COMBINED GRIP AND JACK. LOYD C. POWELL, Cushing, Okla. Filed Aug. 16, 1923. Serial No. 657,799. 3 Claims. (Cl. 254—31.)

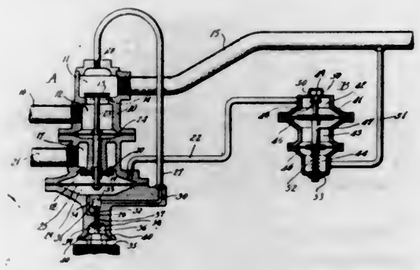
1. In a device of the character described, a frame including a pair of integrally connected arms, the intermediate portions of the arms being bowed in opposite directions, a strap carried by the frame, a hook formed on the strap for encircling the device to be raised and lowered, a double ended dog pivotally carried by the strap and arranged in opposite relation to the hook, a link pivotally secured to the frame, a lever pivotally secured intermediate its ends to the link, a U-shaped frame pivotally secured to the lever for embracing the device to be raised and lowered, and a double ended dog rockably carried by the lever for engaging the device to be raised and lowered.

1,505,971. CONVEYER. AUGUST J. REBSTOCK, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 11, 1921. Serial No. 483,751. 3 Claims. (Cl. 198—181.)



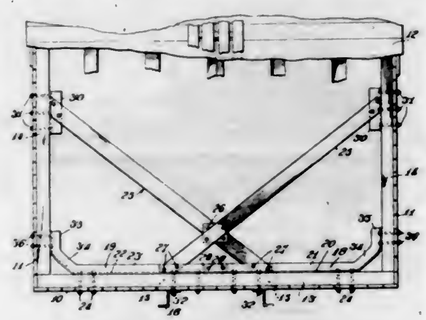
1. A conveyer comprising spaced side rails and spaced guide members located therebelow, a chain running between said guide members, rollers journaled on said side rails, article supporting devices movable thereover, and means for connecting said article supporting devices with said chain, said means comprising U-shaped straps having their web portions secured to said chain and having their branches secured to the under sides of said article supporting devices.

1,505,972. HORN FOR TALKING MACHINES. BAGSTER ROADS SEABROOK, Mishawaka, Ind. Filed June 17, 1918, Serial No. 240,475. Renewed June 20, 1924. 5 Claims. (Cl. 181—27.)



1. An amplifying horn body formed of a porous paper-like material of approximately uniform thickness having an elbow at its small end, and a coating of cement-like composition placed on the body thicker at the elbow than at the large end of the horn.

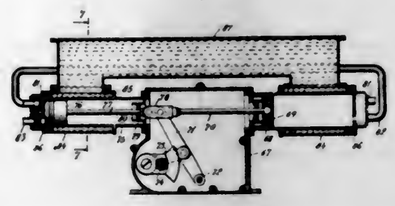
1,505,973. KNITTING MACHINE. HEISTER SEIDERS, Reading, Pa. Filed Sept. 12, 1922. Serial No. 587,688. 22 Claims. (Cl. 66—12.)



1. A knitting machine comprising a needle cylinder and a main yarn feed, a number of auxiliary yarn feeds, a support for said auxiliary feeds co-axial with the needle cylinder, and independently rotatable means for oscillating the support to cause said auxiliary feeds to supply yarns to definite groups of the needles.

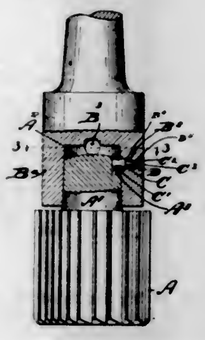
1,505,974. EXHAUST-CONTROL RESERVOIR AND BRAKE VALVE. ARCHIBALD G. SHAVER, Chicago, Ill., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 7, 1922. Serial No. 599,512. 32 Claims. (Cl. 303—18.)

1. In a train control apparatus, in combination with the main reservoir and brake pipe of an air brake system, means for opening the brake pipe to exhaust to effect an application of the brakes, and an exhaust control mechanism connected to the said means in the line of exhaust and having connections to the brake pipe and main reservoir to be governed by brake pipe and main reservoir pressures for automatically controlling the said exhaust to effect a predetermined reduction of pressure in the said brake pipe.



1,505,975. METAL REENFORCEMENT FOR THE WOODEN END WALL OF A RAILWAY BOX CAR. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed July 30, 1920. Serial No. 400,099. 15 Claims. (Cl. 105—411.)

1. In combination with the wooden end wall of a railway box car, a metal reenforcement for the same comprising substantially upright members on the outside of the end wall, and a transverse brace on the inside of the car composed of two members each of which extends only part way across the end of the car, the inner ends of which are arranged in overlapped relation one above the other, to the extent of more than the distance between the upright members, the upper ends of said upright members being each secured at points one above the other to both the members of said transverse brace.

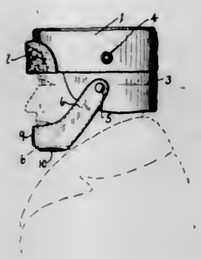


1,505,976. COMPRESSOR. GREGORY JOHN SPOHRER, East Orange, N. J. Filed Nov. 22, 1919. Serial No. 339,986. 2 Claims. (Cl. 230—6.)

1. In a compressor, the combination of a casing having a pair of cylinders connected thereto in oppositely disposed relation, operating mechanism including a pivoted lever within said casing, pistons in said cylinders connected to said lever mechanism, an inlet to and outlet from each cylinder, the outlet from one cylinder being connected to the inlet to the other, a flange on each of

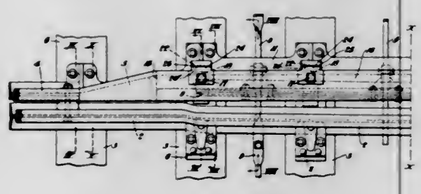
said cylinders, a water jacket surrounding said cylinder, means for holding said jacket in water-tight engagement with said flanges and a common water chamber disposed above and communicating with said jacket.

1,505,977. TOOL HOLDER. ARTHUR STANWORTH, Detroit, Mich. Filed Aug. 30, 1922. Serial No. 585,139. 1 Claim. (Cl. 279—76.)



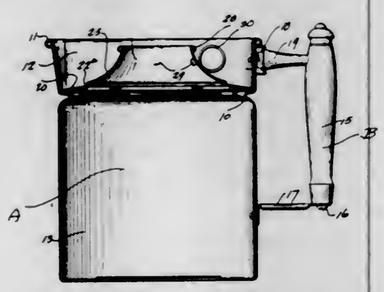
In a device of the character described, a tool holder provided with a socket, the wall of which has a perforation enlarged at its inner and outer ends to form an inner and an outer shoulder adjacent the ends of the perforation, a tool having a shank fitted in the socket of the holder provided with a longitudinal groove extending from the end of the shank, and a pin inserted in the perforation from within the socket and having an enlarged head at its inner end fitting the enlarged inner portion of the perforation with the outer side of the head bearing against the inner shoulder of the perforation to prevent the pin from working exteriorly through the wall of the socket and at its inner side projecting into the groove of the shank of the tool to provide a driving connection between the tool and holder, the outer end of the pin being riveted against the outer shoulder of the perforation to hold the pin against displacement inwardly of the socket.

1,505,978. AVIATOR'S CAP. WARNER D. STETSON, Mount Clemens, Mich. Filed June 6, 1923. Serial No. 643,630. 3 Claims. (Cl. 2—6.)



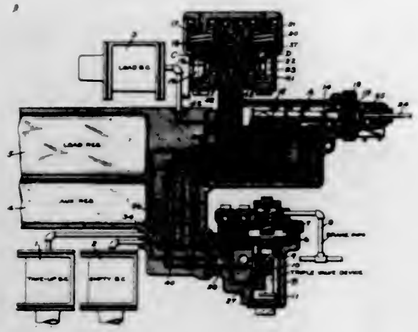
1. An aviator's cap comprising a body portion, a visor attached to the forward side thereof and a flap secured to the lower margin of the body and extending around the back adapted to be turned up or down, a fastener member on opposite sides of the body and a similar fastener member on opposite sides of the flap and on the outer side thereof when turned down, a chin strap formed with a pocket for the chin of the wearer

and a portion extending beneath the chin to the throat, a fastener member at each end of the chin strap adapted to be secured in either of the fastener members upon the



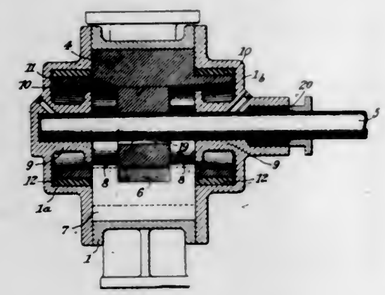
body or flap of the cap, the strap when attached to the fasteners in the body being adapted to fit the upper periphery of the cap.

1,505,979. RAILWAY-TRACK STRUCTURE. HENRY C. STIFF, Johnstown, Pa. Filed Apr. 8, 1924. Serial No. 705,052. 11 Claims. (Cl. 246—435.)



3. A guard rail having its head portion located entirely at one side of the web, and said head being provided with an adjustable section, removably secured to said rail and adjustable transversely of the web.

1,505,980. COOKING UTENSIL. FRANK J. STOLITZKA, Massillon, Ohio. Filed June 8, 1921. Serial No. 476,045. 2 Claims. (Cl. 53—1.)

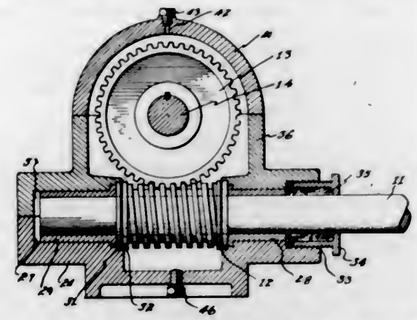


1. A cooking utensil comprising a container, and a detachable member for said container including an outer substantially flat sloping portion provided with circumferential rows of perforations therein, and an upper arcuate sloping portion terminating in a relatively large opening and provided with a circumferential row of perforations adjacent said central opening.

1,505,981. LOAD BRAKE DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1923. Serial No. 666,595. 6 Claims. (Cl. 303—23.)

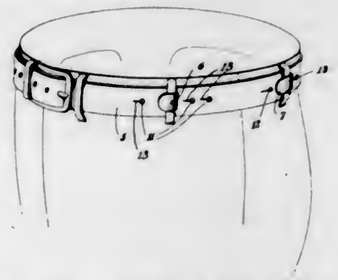
1. In a load brake apparatus, the combination with a plurality of brake cylinders, of a spring and a valve device subject to the opposing pressure of said spring and one brake cylinder for controlling the supply of fluid under pressure to another brake cylinder.

1,505,982. ROTARY PUMP. WILLIAM F. TRAUDT, Buffalo, N. Y., assignor to Taber Pump Company, Buffalo, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 477,927. 3 Claims. (Cl. 103—136.)



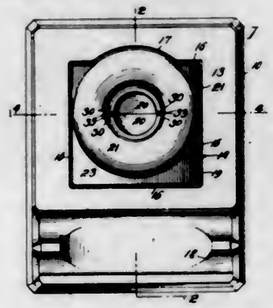
1. In a rotary pump, or the like apparatus, comprising a cylindrical casing, a cylindrical rotor mounted eccentrically in said casing, on a shaft extending out through one head of the casing, suitable valves mounted in radial slots in said rotor, and a pair of spacing rings for said valves floating between the rotor and the casing, the combination, with said apparatus, of a pair of ring-shaped bearings in said casing of considerably larger diameter than said shaft but concentric therewith and journals on said rotor adapted to project into and revolve in said bearings.

1,505,983. WORM-GEAR ASSEMBLY. HOWARD E. VAN ALSTYNE, Detroit, Mich., assignor to Miller-Seldon Electric Company, Detroit, Mich. Filed Aug. 29, 1921. Serial No. 496,358. 3 Claims. (Cl. 74—56.)



1. A gear wheel assembly including a worm gear and shaft, a spur gear and shaft angularly disposed with

reference to the worm gear shaft, a tri-partite sectional casing enclosing said gears and having cooperating semi-

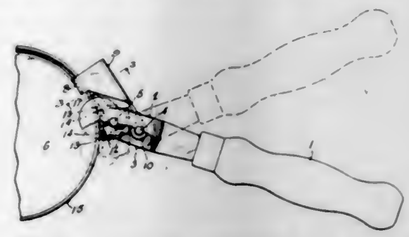


cylindrical portions forming journal seats for said shafts, and a single set of fastening bolts arranged to secure the casing sections and the gear shafts in position.

1,505,984. BELT. KAUFMAN RICHARD WALLACH, New York, N. Y. Filed Dec. 6, 1922. Serial No. 605,169. 2 Claims. (Cl. 241—9.)

1. A belt having a plurality of holes spaced along the belt in position to lie adjacent the belt straps of a pair of trousers and hooks attachable to the belt by engagement with selected holes and arranged to engage the belt straps of the trousers to draw the trousers tight around the back of the wearer.

1,505,985. INKSTAND. FRANK A. WEEKS, Plainfield, N. J. Filed Feb. 20, 1924. Serial No. 694,033. 5 Claims. (Cl. 120—68.)

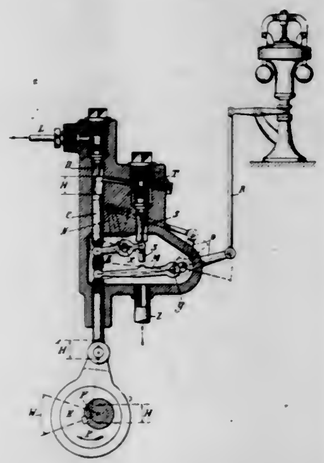


1. An inkstand comprising a base having an inkwell therein and a recess surrounding the upper edges of said well and extending laterally therefrom, and a removable cover adapted to said recess and comprising a base-member having an elevated central portion containing a vertical opening and bearing-recesses at opposite sides of the upper portion of said opening, tiltable closure sections having side trunnions mounted in said bearing-recesses and suspended within said opening and an outer hollow ring-member encompassing said elevated portion and at the lower edge of its sides engaging said base member and at its upper portion being extended over and engaging the top of said elevated portion around the opening therein and closing the upper ends of said recesses.

1,505,986. GARMENT. ROSA R. WELLSTATTER, New York, N. Y. Filed Aug. 4, 1920. Serial No. 401,254. 3 Claims. (Cl. 2—213.)

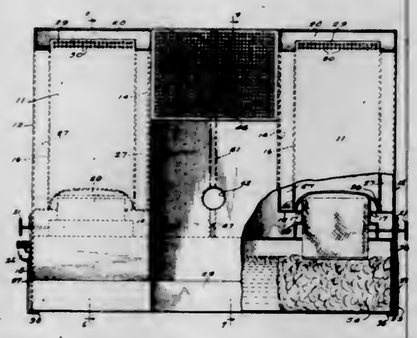
1. In combination, a nether garment having a leg member, and an endless band to encircle the leg to form a hose supporting member, the leg member having its dimensions substantially larger than the hose supporting member whereby a loose leg effect is produced, the lower end of said leg member and the hose supporting member having coacting elements, so arranged that when they are interengaged the material of the leg member is held against the leg with the material in folds so as to give a bloomer effect.

1,505,987. CAN OPENER. CHARLES P. WETMORE, Milwaukee, Wis., assignor to Wetmore-Gibbons Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1923. Serial No. 669,703. 6 Claims. (Cl. 30—3.)



1. In a can opener the combination of a handle having a forked end provided with cross pins between the fork arms, a blade having an outwardly and downwardly extending shank which is pivoted on one of the cross pins, and a dog pivoted on the other pin nearer the free ends of the fork arms and provided with teeth adapted to engage the side of the can when the blade is thrust through the can cover into operative position.

1,505,988. INTERNAL-COMBUSTION ENGINE. HANS WIEDERKEHR, Zurich, Switzerland, assignor to Firm Schweizerische Lokomotiv- & Maschinenfabrik, Winterthur, Switzerland. Filed Oct. 2, 1922. Serial No. 591,953. 3 Claims. (Cl. 123—140.)

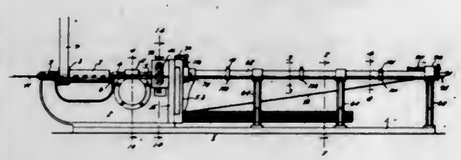


1. In a fuel pump for internal combustion engines, the combination of a cylinder, its plunger, a fuel supply, a valve controlling the connection between said fuel supply

and said cylinder, a lever operating in unison with said plunger and controlling said valve to determine the beginning of the pressure stroke, a second lever operating in unison with said plunger and controlling said valve to

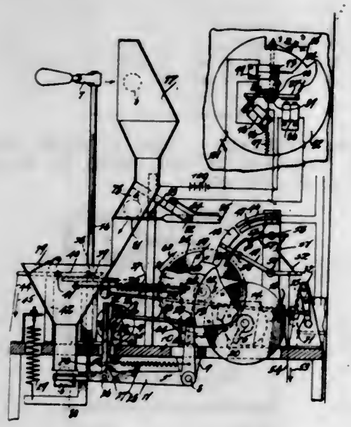
determine the end of the pressure stroke and means adapted to alter the stroke of said levers so that the beginning as well as the end of the pressure stroke is altered.

1,505,989. HEATING DEVICE. ROBERT WALTON WIEDERWAX, Atlantic City, N. J., assignor, by direct and mesne assignments, to Geist Manufacturing Company, Atlantic City, N. J., a Corporation of Delaware. Filed July 29, 1921. Serial No. 4oo,443. 11 Claims. (Cl. 126—350.)



1. A device for heating the cooling systems of motor vehicles comprising a casing adapted to be arranged on the radiator, said casing being provided with burner receiving sections arranged at each side, burners mounted in said sections, and a central chamber arranged between said burner receiving sections, said central chamber being provided with openings to permit passage of air into said chamber and thence to the bottom of said burner receiving sections.

1,505,990. PASTE FOR STORAGE BATTERIES. THEODORE A. WILLARD, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 4, 1920. Serial No. 356,287. Renewed Dec. 26, 1923. 5 Claims. (Cl. 204—29.)

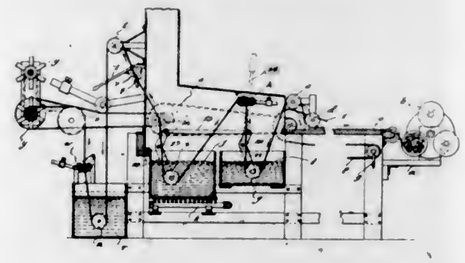


3. A paste for storage batteries comprising active material in which is incorporated a vegetable substance free of free cellulose.

1,505,991. AUTOMATIC WIRE STRAIGHTENING AND CUTTING-OFF MACHINE. EARL H. WISEMAN, Cleveland, Ohio, assignor, by mesne assignments, to The F. B. Shuster Company, New Haven, Conn., a Corporation. Filed Apr. 11, 1921. Serial No. 460,419. 18 Claims. (Cl. 140—140.)

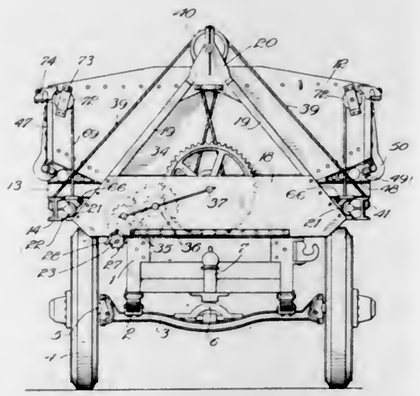
1. In a wire working machine, the combination of a grooved element, a fixed tubular member to rotatably support said element and which closes the groove of the element throughout its length when the element is in wire receiving position, a guide member through which the wire is fed to the groove of the element, a cutter cooperating therewith and movable with the element, and means for moving the element when a length of wire has been advanced into its groove.

1,505,992. AMUSEMENT DEVICE. SAMUEL L. ADELSON, New York, N. Y., assignor of one-half to Phil Addison, Rockaway Beach, N. Y. Filed Feb. 18, 1922. Serial No. 537,410. 17 Claims. (Cl. 46—59.)



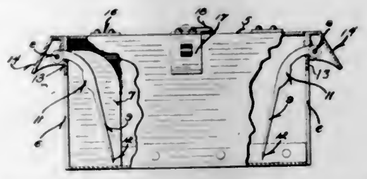
1. In a game apparatus, a movable device to retain a ball, mechanical means to actuate the ball retaining device to cast the ball, a batting device, means to manually control the operation of the batting device to strike at a cast ball, and means automatically operable by the actuating means for the ball retaining means to vary the speed at which the ball is cast, after each casting movement of the retaining means.

1,505,993. ELECTROLYTE FOR STORAGE BATTERIES. EDGAR A. BARKALOW, Kokomo, Ind., assignor of one-half to Orris J. Hollowell, Kokomo, Ind. Filed Apr. 21, 1923. Serial No. 633,785. 4 Claims. (Cl 204—29.)



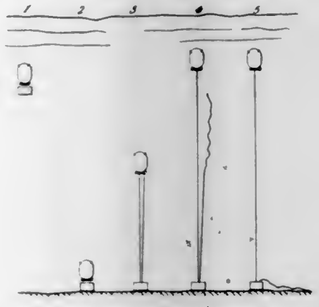
4. An electrolyte comprising sulphuric acid, corn starch, calcium sulphate, formaldehyde and water in the proportions and commingled as specified.

1,505,994. TINNING MACHINE. HARRY W. BUNDY, Detroit, Mich. Filed Sept. 15, 1922. Serial No. 588,338. 10 Claims. (Cl. 91—12.6.)



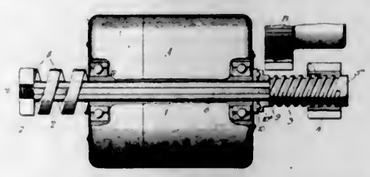
1. In a machine for the purpose specified, the combination of a soldering bath, a pair of width sizing rolls located adjacent to the soldering bath, and means for propelling a strip of metal through the soldering bath and through the sizing rolls.

1,505,995. DUMPING VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Manufacturing Company, a Corporation of Wisconsin. Filed Aug. 23, 1920. Serial No. 405,216. 3 Claims. (Cl. 298—13.)



1. In a vehicle of the character described, a supporting frame, and a side dumping body thereon arranged to be laterally movable toward either side to dump on either side of the vehicle, a two-way cable-winding drum having means forming a partition between the two ways thereof, said partition having an opening therethrough, and a single-length cable attached at opposite ends to opposite sides of the body and lying intermediate its ends in said opening with the two halves of the length thereof arranged to wind oppositely in said ways so that one end is drawn in or paid out as the other end is paid out or drawn in.

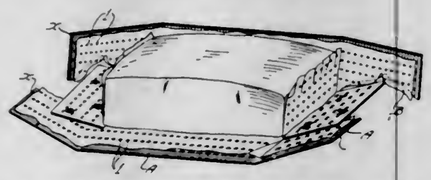
1,505,996. ANIMAL TRAP. WILLIAM H. DROUGHT, Watertown, Wis. Filed Jan. 3, 1922. Serial No. 526,626. 1 Claim. (Cl. 43—66.)



An animal trap comprising a casing having an entrance opening therein, a pivot pin located above said opening, a plurality of prongs independently pivoted adjacent each other upon said pin, a shield positioned above said pivot pin, each of said prongs having a curved end portion in which said pivot pin is mounted, a straight portion extending from said curved portion, and a weight formed integral with said prong at the junction of said curved and straight portions.

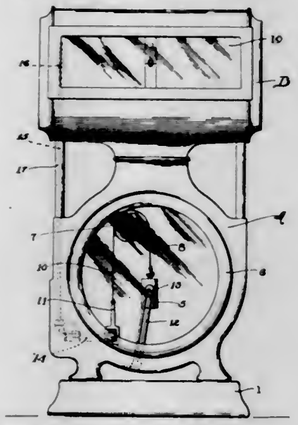
1,505,997. SUBMARINE MINE. GIOVANNI EMANUELE ELIA, Westminster, England, assignor to Vickers Limited, Westminster, London, England. Filed Feb. 5, 1924. Serial No. 690,856. 9 Claims. (Cl. 202—3.)

1. A submarine mine comprising a flotation chamber, a sinker, a drum within said sinker, a mooring rope upon said drum said mooring rope connecting said flotation chamber to said sinker, an auxiliary drum within said sinker, an auxiliary line upon said drum, means connecting one end of said auxiliary line to said flotation chamber and automatically acting means for releasing said connecting means for the purpose specified.



1,505,998. ENGINE STARTER. STEPHEN A. ELLETT, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Mar. 3, 1919. Serial No. 280,313. 3 Claims. (Cl. 290—48.)

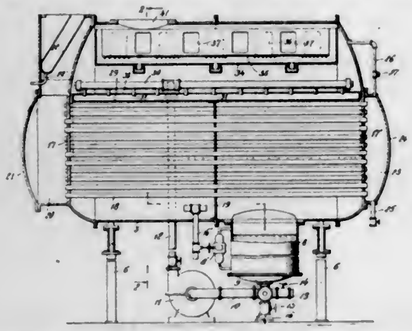
1. A drive or transmission for an engine starter comprising, in combination, an electric motor having a hollow rotatable armature shaft, a driven shaft arranged within said armature shaft and having a spline and groove connection therewith for positive rotary movement between the two shafts and a relative longitudinal



movement thereof, the driven shaft being of such length that its opposite ends project beyond the ends of the armature shaft, a driving member mounted on one of the projecting ends of said driven shaft for longitudinal movement thereof and rotary movement therewith, and resilient means positioned on the opposite projecting end of said driven shaft for resisting longitudinal movement of the same in one direction.

1,505,999. CARDBOARD CONTAINER. EDWARD G. GEREKE, St. Louis, Mo. Filed Apr. 24, 1922. Serial No. 556,161. 2 Claims. (Cl. 53—6.)

1. A baking utensil composed of an outer shell constructed of flexible cardboard, and a flexible paper inner lining arrang d in engagement with the inner side of said shell and connected to same by means which permits said inner lining to separate from the shell when the utensil is subjected to heat, the side wall portions of said shell and inner lining having aligned perforations.

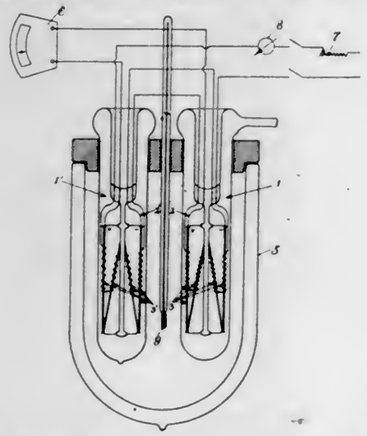


1,506,000. WEIGHING SCALE. CLARENCE H. HAGGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 7, 1921. Serial No. 442,954. 5 Claims. (Cl. 265—70.)

1. In a weighing scale, in combination, a lever, a platform supported thereby, a counterpoise operative connection between said lever and said counterpoise, a spiral member interposed in the connection between said lever and said counterpoise whereby the leverage of said counterpoise changes with the position of said lever, and indicating mechanism operatively connected to said lever.

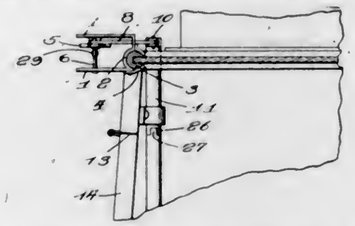
1,506,001. FILM EVAPORATOR. BURTON S. HUGHES, Buffalo, N. Y., assignor to Zaremba Company, Buffalo, N. Y., a Corporation of Maine. Filed July 5, 1919. Serial No. 308,899. 6 Claims. (Cl. 159—13.)

2. In an evaporator, the combination of a shell, a nest of heating tubes within the shell, means for supplying a heating medium to the tubes, means for distributing a liquid to be evaporated over the tubes, and means surrounding the tubes and providing a confined space to cause the vapor formed from the liquid to follow the direction of flow thereof in contact with the liquid during a portion of its downward travel, said means being spaced from the wall of the shell to provide a



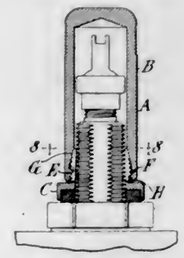
surrounding space in which the vapor is permitted to pass in the contrary direction out of contact with the liquid after separation therefrom.

1,506,002. CANE-CRUSHING APPARATUS. HENRY HURTER, St. Louis, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 20, 1923. Serial No. 633,350. 3 Claims. (Cl. 100—47.)



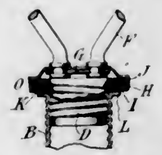
1. In a cane-crushing apparatus, a primary crusher comprising a pair of crushing rolls, and a second crusher comprising a pair of crushing rolls arranged in advance of the primary crusher and adapted to receive the cane passing therefrom, the rolls of said primary crusher being of greater diameters than the rolls of said second crusher.

1,506,003. THERMOCOUPLE MANOMETER. KAZUO KAMBAYASHI, Kuze-gun, Japan. Filed Apr. 29, 1921. Serial No. 465,552. 3 Claims. (Cl. 175—183.)



2. A thermo-couple manometer, comprising a pair of bulbs, each provided with a thermo-couple and a heating coil wound around and insulated from said couple, the heating coils of the bulbs being connected in series and the thermo-couples in opposition.

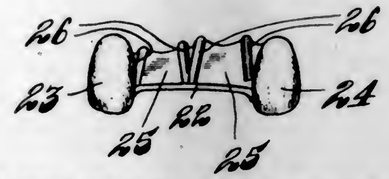
1,506,004. SIGNAL FOR AUTOMOBILES. KURT KOENIGSBERG, Seattle, Wash. Filed Jan. 26, 1923. Serial No. 615,084. 6 Claims. (Cl. 116—52.)



1. The combination with an automobile, of a signal arm therefor, and an operating rod for actuating the signal arm, said rod including a movable section normally serving as a locking means for a door.

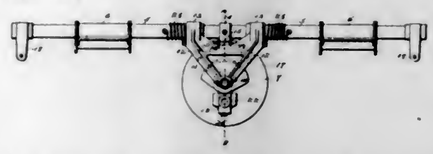
1,506,005. DUST CAP OR THE LIKE. HENRY P. KRAFT, Ridgewood, N. J. Filed Oct. 7, 1919. Serial No. 329,089. 3 Claims. (Cl. 152—12.)

3. A dust cap or the like comprising a foot portion and a cap portion non-separably connected therewith and adapted for only limited relative movement thereto, the foot portion having flats adapted to engage the flats of a tire valve and spring arms adapted to be forced into contact with said tire valve by a wedging surface on the cap portion when the latter is rotated.



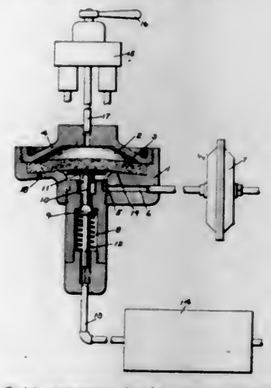
1,506,006. WATER-BOTTLE STOPPER. HENRY P. KRAFT, Ridgewood, N. J. Filed Apr. 20, 1921. Serial No. 463,010. 1 Claim. (Cl. 150—8.)

A stopper of the class described, having a body portion and a top portion formed of sheet metal, the top portion having a flat flange and the body portion having a flat flange, the flange on the top portion being turned beneath the flange of the body portion to provide an overlapping interengagement therebetween, and the overlapping portion of the resulting flange being turned down to form with the wall of the body portion, a recess for the packing washer.



1,506,007. ARTIFICIAL-TOOTH MOUNTING. HUGO H. KRAUS, Chicago, Ill. Filed May 10, 1917. Serial No. 167,766. 2 Claims. (Cl. 32—12.)

1. An artificial tooth mounting comprising a bridge, socket in the face of the bridge, securing flanges on the sides of said socket intermediate the bottom and outer edges thereof, a tooth slidably fitting said socket and provided with grooves fitting said flanges and abutment on said tooth contacting with the bridge, the abutting

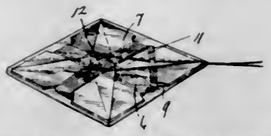


faces thereof being in the path of the greatest pressure and at substantially right angles thereto, substantially as described.

1,506,008. SELF-LOCKING RUDDER BAR FOR AIRCRAFT. ISAAC MACHLIN LADDON, Dayton, Ohio. Filed May 11, 1923. Serial No. 638,250. 9 Claims. (Cl. 244—29.)

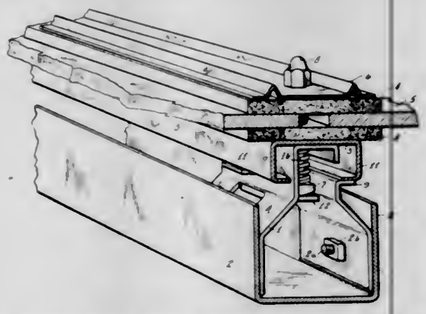
1. A self-locking rudder bar for aircraft comprising a stationary base, a rudder bar mounted for pivotal movement on said base and capable of a rocking movement about its longitudinal axis, and rudder bar locking means between the rudder bar and base, said locking means being thrown into and out of operation by such rocking movement of the rudder bar.

1,506,009. FLUID-PRESSURE BRAKE. GEORGE S. LANE, San Francisco, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 23, 1922. Serial No. 570,372. 6 Claims. (Cl. 303—28.)



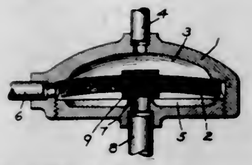
1. In a fluid pressure brake, the combination with a brake cylinder, of an application and release valve device comprising a casing containing a flexible diaphragm, a valve operated by said diaphragm for controlling the supply of fluid to the brake cylinder, and an exhaust port for controlling the release of fluid from the brake cylinder, said diaphragm acting as a valve to open and close said port.

1,506,010. BEAD STRINGER AND PACKAGE. SAMUEL LAPIN, New York, N. Y. Filed Dec. 22, 1923. Serial No. 682,278. 2 Claims. (Cl. 206—46.)



1. A package of the class described comprising a card notched at its sides and ends, a length of thread or silk

having its ends stiffened, wound in two directions on the card between the notches, a transparent wrapper en-

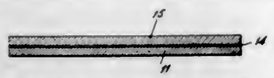


closing the card and the thread or silk, the stiffened ends extending beyond the card and the wrapper to facilitate opening of the package.

1,506,011. SKYLIGHT STRUCTURE. GOTTFRID C. LAWSON, Cleveland, Ohio. Filed June 22, 1922. Serial No. 570,146. 5 Claims. (Cl. 108—16.)

1. A sheet metal chair substantially U-shaped in transverse cross section having bed supporting portions struck outwardly from each side thereof.

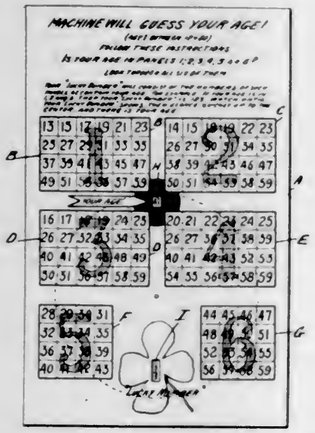
1,506,012. QUICK-RELEASE VALVE. LLOYD V. LEWIS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1921. Serial No. 507,502. 4 Claims. (Cl. 251—119.)



1. A quick release valve device comprising a casing and a flexible resilient disk mounted in said casing and having a centrally arranged seat for controlling a release port and having the central seat portion of the disk weighted to thereby increase the inertia of the disk.

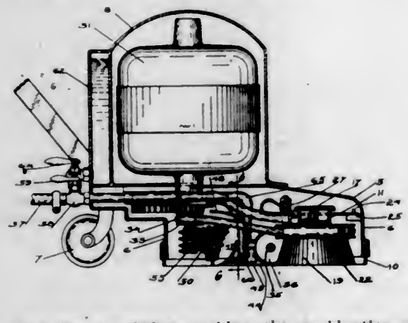
1,506,013. WATER-RESISTANT GLUE. ALFRED C. LINDAUER and GEORGE M. HUNT, Madison, Wis., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Nov. 7, 1923. Serial No. 673,339. 2 Claims. (Cl. 87—17.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A glue the composition of which consists essentially of animal glue, water and paraformaldehyde.



1,506,014. DECORATED BODY AND PROCESS FOR MAKING SAME. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Nov. 28, 1922. Serial No. 603,887. 9 Claims. (Cl. 18—59.)

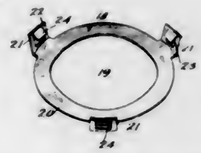
1. Decorated material comprising an opaque base, a layer of divided lustrous scale material adherent to said base, a transparent plastic sheet covering said material and firmly united to said base through spaces between the particles of lustrous material, said particles having visible faces which extend approximately in the same gen-



eral direction along a smooth surface and said particles being so spaced that said material when viewed through said sheet has the appearance of a continuous lustrous surface.

1,506,015. PUZZLE DEVICE. SAMUEL LOYD, Brooklyn, N. Y. Filed Apr. 4, 1923. Serial No. 629,772. 11 Claims. (Cl. 46—41.)

1. In a puzzle device embodying, in combination, a plurality of tables each comprising a series of symbols and each table being individually identified with an index symbol, a relatively stationary member having a pair of exposure openings therethrough and a member movable at one side of said stationary member and having inscribed thereon two rows of symbols, one of which comprises symbols tabulated in said tables and the other of which comprises index symbols indicating the tables in which the tabulated symbols will be found, and means for successively exposing identifiable pairs of such symbols simultaneously.

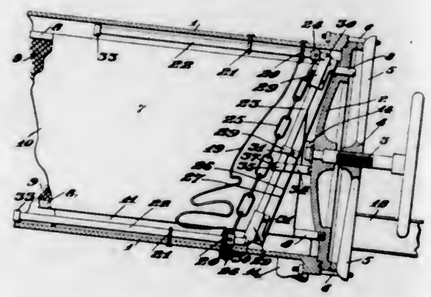


1,506,016. FLOOR-SCRUBBING MACHINE. CARL S. LUNDGREN, Chicago, Ill. Filed July 19, 1919. Serial No. 311,928. 10 Claims. (Cl. 15—52.)

1. In a floor scrubbing machine, the combination with a movable floor-engaging brush, of means for directing a supply of liquid to said brush, a transversely extending liquid-receiving conduit disposed in rear of said brush,

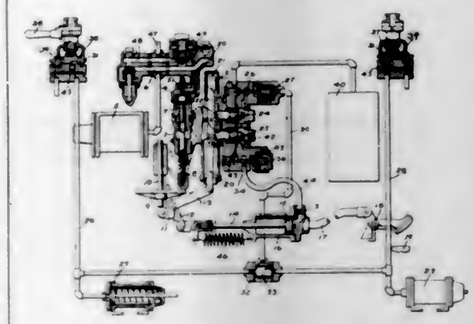
and arranged to direct the liquid from the end portions to the center portion thereof, axially spaced means arranged to transfer the liquid from the floor into the end portions of said conduit, and means operating at the central portion of said conduit and disposed between said axially spaced means to remove the liquid therefrom.

1,506,017. VANITY BOX. ALBERT C. LUSHER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 7, 1923. Serial No. 623,348. 6 Claims. (Cl. 132—82.)



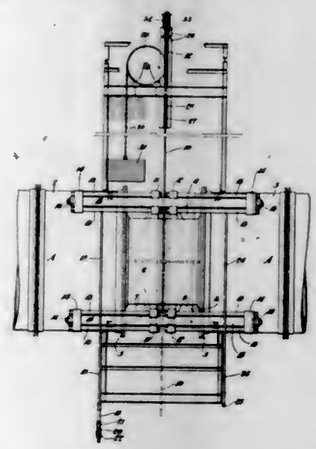
3. In a box of the character described, the combination of bottom and cover members, an interior shoulder formed on the bottom member, a compact holder having a side recess, and a plate having outwardly extending projections arranged to spring under the shoulder and projections extending oppositely thereto at an acute angle and engaging the recess.

1,506,018. PLUNGER FOR GREASE GUNS. KENT E. LYMAN, Cleveland, Ohio. Filed Aug. 6, 1921. Serial No. 490,244. 6 Claims. (Cl. 74—108.)



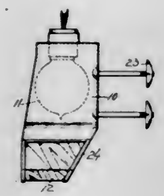
1. In a plunger for grease guns and the like, the combination of a washer, the washer being constructed of resilient material and being convex, the washer having a flange, and the flange being slotted, substantially as described.

1,506,019. FILTER. CHARLES L. MCCARTY, East St. Louis, Ill., assignor, by direct and mesne assignments, of one-sixth to William H. Horner and one-sixth to Robert W. Sikking, both of East St. Louis, Ill. Filed May 16, 1919. Serial No. 297,455. 6 Claims. (Cl. 210—182.)



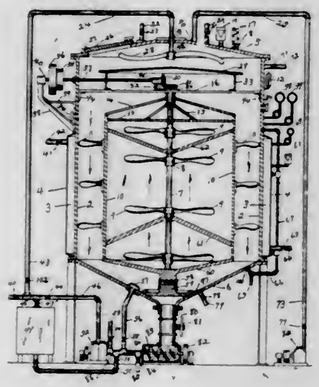
1. In a filter of the character described, a pliable element supported at its ends in the planes of the top and bottom of the filter element and being normally loose and slack within the container, whereby to be drawn taut in a loop outside of the container by the engagement of the deposit on the filter element as the latter is withdrawn from the container.

1,506,020. VARIABLE-LOAD BRAKE. JOSEPH C. MCCUNE, Orange, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1923. Serial No. 669,491. 3 Claims. (Cl. 303—22.)



1. In a variable load brake, the combination with means for adjusting the braking power according to the load on the car, of fluid pressure operated locking mechanism for locking said means in its adjusted position, a fluid pressure operated mechanism for connecting up said adjusting means for control according to the load on the car, means including a piston for controlling the fluid pressure for operating said locking mechanism and said connecting mechanism, and fluid pressure means for controlling a car door, said piston being operated by fluid pressure supplied to said car door controlling means.

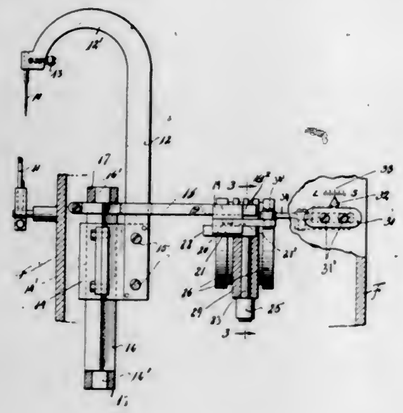
1,506,021. VALVE. FRANK R. MCGEE, Steubenville, Ohio. Filed Jan. 31, 1924. Serial No. 689,750. 9 Claims. (Cl. 251—51.)



1. The combination with a pipe line, of a plate valve slidably mounted for transverse movement relative to the line, valve seats secured to the pipe line and adapted to contact with said valve, and heat operated means for forcing at least one of said valve seats toward and away from said valve.

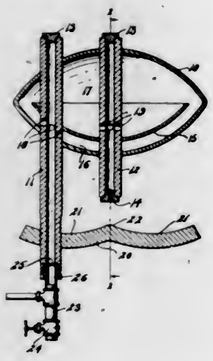
1,506,022. LIGHT FOR AUTOMOBILES. ANGUS D. MACFARLANE, Hartford, Conn. Filed Oct. 27, 1922. Serial No. 597,338. 1 Claim. (Cl. 240—7.)

A lamp attachment for the sides of automobile bodies adapted for casting light rays downwardly, forwardly and rearwardly between the front and rear mud guards of an automobile and comprising a casing, having front and rear walls, downwardly diverging side walls, the rear wall of the casing adjacent the lower end thereof being inclined outwardly for projecting the downwardly projected light rays outwardly of the running board, the casing being open at itsl ower side and a lens in said opening.



1,506,023. APPARATUS FOR THE STEAM MILLING OF VEGETABLE SUBSTANCES. CHARLES R. MABEE, Buffalo, N. Y. Filed Aug. 16, 1920. Serial No. 403,862. 5 Claims. (Cl. 99—2.)

1. An apparatus for treating vegetable materials comprising a closed cylindrical container, a conveyor centrally located therein and comprising a central shaft upon which are mounted casting rings and blades adapted to exert a lifting action upon rotation, and braces and arms which carry a plurality of plates adapted to direct the material downward upon rotation, positive feeding means for introducing said materials into said container, and means for spraying liquid materials upon said vegetable materials within said container.



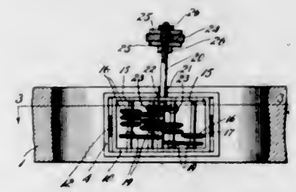
1,506,024. STRAW-SEWING MACHINE. EDWARD J. MALONEY, Long Island City, N. Y., assignor to Andrew Wolf, New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,214. 2 Claims. (Cl. 112—213.)

2. In a stitch forming machine, a double hook needle and means for imparting thereto variable horizontally oscillating movement, said means including a horizontally oscillatory arbor, a needle carrier mounted thereon, so as to oscillate with and be capable of reciprocating

thereon, a cam controlled slide, means for transmitting motion from said slide to said arbor and means for adjusting said slide, so as to vary the stroke of the needle.

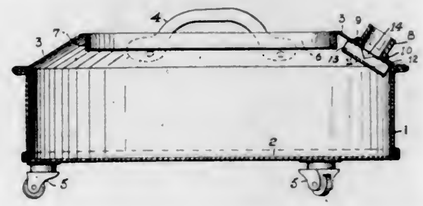
1,506,025. BURNER. WILLIAM W. MINTER, St. Joseph, Mo. Filed Sept. 10, 1923. Serial No. 661,987. 6 Claims. (Cl. 158—63.)

1. An oil burner comprising a casing, an inner wall spaced from the bottom of the casing and defining a vaporizing chamber below and a gas chamber above said wall, an inlet pipe extending through the casing and having an opening communicating with the vaporizing chamber, a burner pipe extending through the casing and having an opening communicating with the gas chamber, a burner at one end of the burner pipe and a baffle plate spaced from the burner.



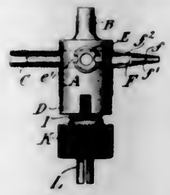
1,506,026. BOTTOM-SUPPORTED CAR DOOR. WALTER P. MURPHY, New York, N. Y. Original application filed May 8, 1920, Serial No. 379,807. Divided and this application filed Apr. 6, 1922. Serial No. 550,140. 14 Claims. (Cl. 189—46.)

6. In combination with a railway car having a door opening, rollers arranged under said door opening, and a door the upper portion of which consists of a single thickness of sheet metal and the lower portion of hol-



low box-like construction, the bottom of which bears on said rollers.

1,506,027. ADJUSTABLE THREAD SHAPER. FRANK O'BRIEN, Canton, Ohio. Filed May 19, 1923. Serial No. 640,069. 5 Claims. (Cl. 10—1.)

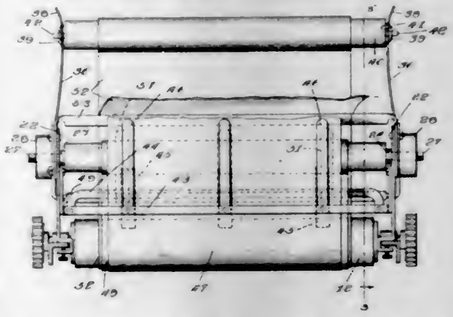


1. A rethreading tool comprising an open frame, disk shaped members mounted in the frame and adapted to engage threads upon a pipe or the like, and a friction roller operatively connected to the disk and adapted to engage the periphery of the pipe for rotating the disk as the tool is rotated around the pipe.

1,506,028. DRAIN PAN. ELLIOTT E. PERRITT, Pittsburgh, Pa. Filed Aug. 7, 1923. Serial No. 656,192. 5 Claims. (Cl. 220—1.)

1. In combination in a drainage pan, a body portion provided with three rollers or casters, an upwardly inclined top open at the center and having the inner edge recurved downwardly at an acute angle downwardly forming an anti-splash flange having its lower edge spaced away from the wall of said top, and an outlet spout extending outwardly from said inclined top at substantially right angles thereto, the said rollers being spaced around the bottom of the pan so that the spout lies midway betwen two of them.

1,506,029. TIRE-VALVE REPAIR TOOL. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y. Filed Nov. 10, 1921. Serial No. 514,254. 4 Claims. (Cl. 7—1.)

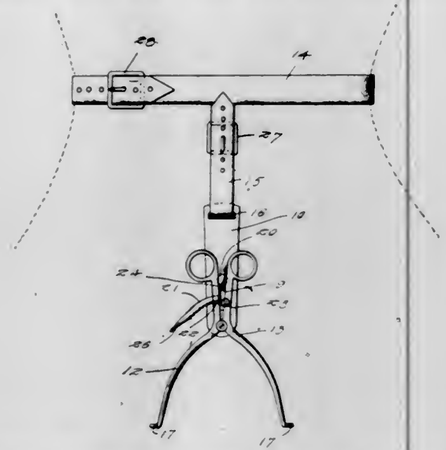


1. A tire-valve repair tool having a body portion comprising among other instrumentalities a die and a part carrying a valve-pin extractor, said part having a threaded portion engaging the threads of the die, and said threaded portion when removed from the die being adapted to serve as a tap to clear the internal threads on a valve cap or valve pump coupling.

1,506,030. WHEELBARROW ARM. IRVING R. SMITH, Wauwatosa, Wis. Filed June 4, 1923. Serial No. 643,344. 5 Claims. (Cl. 280—52.)

1. A wheelbarrow arm formed of sheet metal and bent substantially rectangular in cross section, one end of said arm being bent substantially cylindrical in cross section, a handle adapted to be inserted into said cylindrical end and clamping means for clamping the end of said arm around said handle.

1,506,031. TYPEWRITER ATTACHMENT. ROBERT G. STARKE, Delray, Fla., assignor of one-half to Theodore M. O'Neal, Delray, Fla. Filed Feb. 28, 1923. Serial No. 621,872. 9 Claims. (Cl. 197—134.)

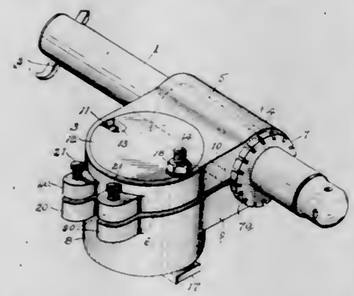


1. An attachment for typewriters comprising end members adapted for engagement with the carriage of the typewriter to be supported thereby, a carbon sheet holding roller and a carbon sheet rewinding roller having their ends supported by said end members for rotation and spring for said rollers tending to rotate the rollers in opposite directions.

1,506,032. SURGICAL INSTRUMENT. JOSEPH L. STEVENS, Stockton, Kans. Filed Aug. 15, 1921. Serial No. 492,285. 2 Claims. (Cl. 128—17.)

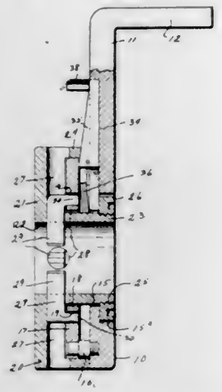
1. A surgical instrument for use in performing perineal operations, the same comprising a lever member provided with an intermediate bearing element adapted to be seated upon the pubic bone, dilating forceps pivotally

carried by one end of said lever member, an abdominal belt, a tongue carried by said belt and passing through a slot in the end of the lever remote from that at which the forceps are carried, and said tongue having



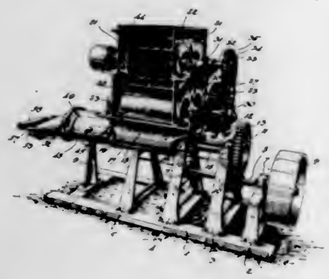
means associated therewith for varying the active length of the tongue, whereby rearward pressure may be applied to the end of the lever member through which the tongue passes.

1,506,033. PROCESS OF PRODUCING MEALY COOKED POTATOES. CHARLES B. TRESCOTT, Chicago, Ill. Filed Apr. 14, 1923. Serial No. 632,138. 3 Claims. (Cl. 99—5.)



1. The process of rendering boiled potatoes mealy, which consists in subjecting them, while in whole and hot condition and under close confinement, to exhaustion of their contained moisture to the desired mealy-rendering degree of dryness.

1,506,034. BORING-TOOL HOLDER. LUDWIG SWANSON, Detroit, Mich. Filed Aug. 19, 1920. Serial No. 404,565. 7 Claims. (Cl. 82—36.)

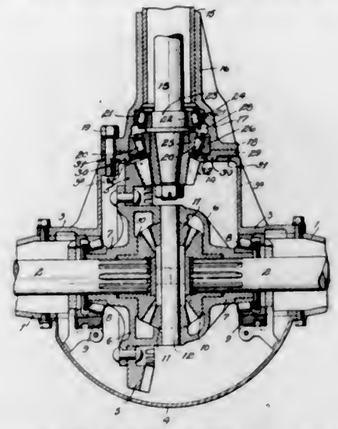


1. A device of the character described comprising a hollow body with the opening in the body extending vertically therethrough, said body being formed with a laterally extending portion providing a tool holding eye with the axis of the eye extending at right angles to the opening through the body, and said body being divided horizontally with the dividing slit extending into the bore of the eye, a circular member seated within the body to permit rotation of the body relative thereto about a vertical axis, and a plurality of securing members extending through the circular member in spaced relation to secure said member against rotation upon a support.

1,506,035. LATHE DOG. ANTON VALTMAN, Bovey, Minn., assignor of one-half to Henry Volke, Bovey, Minn. Filed July 28, 1923. Serial No. 654,376. 7 Claims. (Cl. 82—42.)

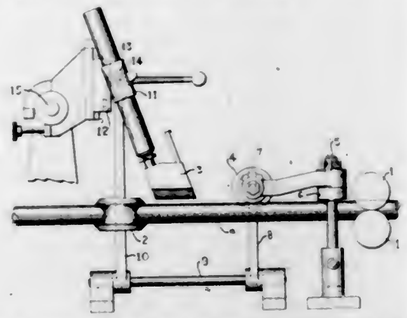
1. A universal lathe dog including an apertured cam plate, a slotted plate carried by the cam plate and having an aperture aligning with the aperture thereof, a carrier plate opposing the last named plate and provided in its face with radially extending channels, said carrier plate having tubular means engaging through the apertures of the first named plates permitting relative rotation thereof with relation to the first named plates for preventing separation of the plates, and locking members slidably mounted in the channels of said carrier plate and having angular portions engaging in corresponding slots of said slotted plate.

1,506,036. PEAT MACHINE. CHARLES A. WILLMARTH, Tecumseh, Mich. Filed Sept. 28, 1923. Serial No. 665,340. 7 Claims. (Cl. 44—28.)



1. In a peat machine, a set of driven crushing rolls, a set of disintegrating rolls above said crushing rolls and discharging into the pass of said crushing rolls, a hopper below said crushing rolls, feed screws in said hopper, and a moulding member at an end of said hopper adapted to receive peat therefrom.

1,506,037. DRIVING-AXLE CONSTRUCTION. HERBERT W. ALDEN and LAWRENCE R. BUCKENDALE, Detroit, Mich., assignors to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Michigan. Filed July 5, 1922. Serial No. 572,874. 9 Claims. (Cl. 74—99.)

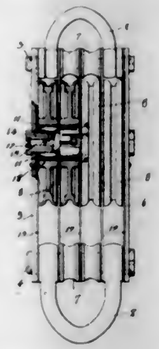


1. The combination with a driving axle comprising a differential mechanism and a propeller shaft operatively connected to said differential mechanism, of a torque tube surrounding said propeller shaft and having one end

removably secured to said driving axle, and a pair of conical roller bearings intervening between said torque tube and said propeller shaft, said torque tube having

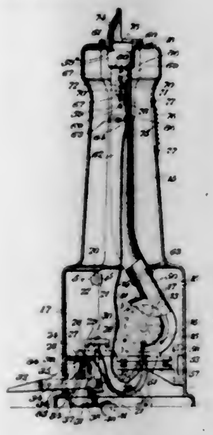
internal shoulders forming abutments for the outer ends of said bearings and said propeller shaft having an external shoulder located between the opposed ends of said bearings and forming a spacer and abutment therefor.

1,506,038. AUTOMATIC ADJUSTER FOR TUBE-WELDING MACHINES. JAMES L. ANDERSON, Bayonne, N. J., assignor, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,716. 3 Claims. (Cl. 78—83.)



1. In tube-welding apparatus, comprising means for driving and fixed means for holding the tube in transit and a device for heating the traveling edges, a feeler positioned to stand in the open part of the seam, and connections between the feeler and the heating device to cause the latter to follow automatically lateral deviations in the seam due to twisting, the automatic movements of the feeler and heating device being relative to the fixed holding means.

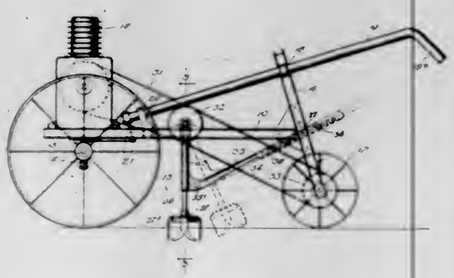
1,506,039. SPRINGING OF VEHICLES. BENJAMIN HAROLD BAKER, Bristol, England. Filed Oct. 8, 1923. Serial No. 667,230. 3 Claims. (Cl. 267—45.)



1. A spring device for vehicles comprising a main semi-elliptic spring connected to the chassis of the vehicle, a member carrying the road wheel axle secured to the mainspring, an auxiliary quarter-elliptic spring pivotally mounted at one end to the chassis and the other end engaging said mainspring, and a cam engaging the other end of said auxiliary spring to vary the tension thereon.

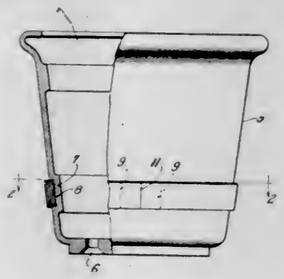
1,506,040. WELL-RIG TRAVELING BLOCK. ROBERT D. BANE, Long Beach, and EDWIN W. GOESER, Torrance, Calif.; said Goeser assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed May 19, 1923. Serial No. 640,130. 1 Claim. (Cl. 64—62.)

In a well rig traveling block, the combination with an upper and lower bail and interconnecting side plates, of a rotatable sheave supporting shaft mounted on said side plates, a plurality of spaced diaphragms through which the shaft extends, roller bearing retainer cages mounted on the shaft between the diaphragms and having bearing receiving ways opening at alternate sides of the cages, continuous cylindrical rollers mounted in the cages between the diaphragms, radial ducts extending from the roller bearings to within the shaft and communicating through the shaft for lubricating the roller bearings, and sheaves mounted on the bearings.



1,506,041. DRYING APPARATUS. JOHN G. BASSETTE and CHARLES D. CORWIN, Groton, N. Y., assignors to Airdry Corporation, Groton, N. Y., a Corporation of New York. Filed Aug. 8, 1922. Serial No. 580,479. 17 Claims. (Cl. 34—26.)

1. A drying apparatus comprising a columnar casing adapted to stand upright upon a floor and having an air inlet adjacent its upper end, said casing having a top wall, a rigid air-discharge nozzle supported on the cas-

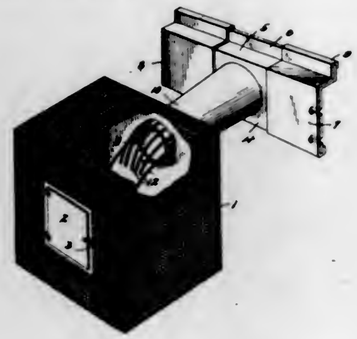


ing and extending through the top wall of the casing, a fan-blower housed within the lower part of the casing, sound-deadening supporting means for said blower mounted on the casing, and a flexible sound-deadening air-conduit connecting the rigid nozzle with the outlet of the blower.

1,506,042. CULTIVATOR. CARL E. BAUER, Hammond, Ind. Filed Nov. 16, 1922. Serial No. 601,285. 6 Claims. (Cl. 97—43.)

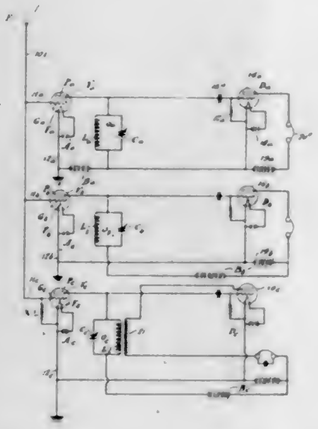
1. A cultivator including a frame, a prime mover on said frame adjacent the forward end thereof, a relatively large non-driven ground wheel journaled on the frame and having its axis below said prime mover and adjacent said forward end of the frame, a cultivating means on said frame in the rear of said axis, a ground wheel driven from the prime mover, the latter ground wheel being relatively small with respect to the non-driven ground wheel and supported on said frame in the rear of said cultivating means, and means extending from the frame engageable adjacent the rear of the machine to tilt the latter.

1,506,043. TABLE-LEG SHOE. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 18, 1922. Serial No. 588,823. 6 Claims. (Cl. 45—137.)



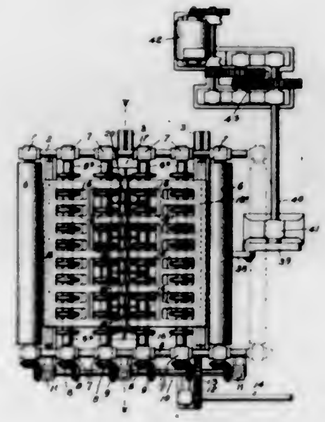
1. A shoe for the leg of a table or other article of furniture having a seat therein in its outer face, and a divided buffer strip located in said seat and having its ends engaged with a side wall of said shoe detachably.

1,506,044. JOINTING COMPOSITION. GEORGE WILLIAM BLAKE and CHARLES EDWARD SHELDON, Biggleswade, England. Filed Feb. 5, 1923. Serial No. 617,114. 1 Claim. (Cl. 106—8.)



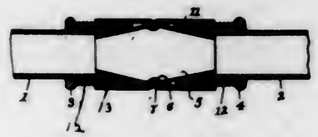
A composition for application to joints of automobile engines comprising a mixture of soft soap and French chalk in the proportion of approximately 10 parts of soft soap to one part of French chalk by weight.

1,506,045. SPARROW TRAP. HENRY BOYER, Milford, Ill. Filed Apr. 18, 1922. Serial No. 554,706. 1 Claim. (Cl. 43—65.)



A bird trap comprising a wire cage; a supporting means adapted to engage the frame of a window, a tubular member extended from the supporting means and communicating with the interior of the wire cage at one end and the opposite end open and communicating with the atmosphere; and a non-return means incorporated in the end of the tubular member communicating with the trap.

1,506,046. RADIO RECEIVING SYSTEM. WALTER H. BULLOCK, New York, N. Y., assignor of forty-nine per cent to Frederic W. Procter, New York, N. Y. Filed Jan. 23, 1923. Serial No. 614,347. 3 Claims. (Cl. 250—9.)

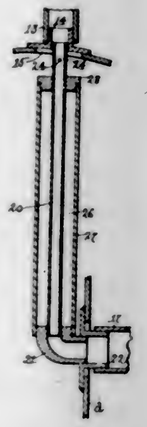


1. A radio receiving system, comprising an energy absorbing circuit, a plurality of three-element electron emission vacuum tubes having their grid and filament elements connected in parallel in said circuit so as to prevent a flow of current in one direction therein, a leakage path between the grid and filament elements of one of said tubes to prevent the grids from acquiring a static negative charge and having a resistance too high to permit radio frequency current oscillations in the energy absorbing circuit, a plurality of oscillatory circuits, one connected between the plate and the filament elements of each of said tubes, separate means for varying the natural period of each of said oscillatory circuits, and a detector associated with each oscillatory circuit.

1,506,047. TURNOVER TABLE. ROBERT N. BRYAN and GEORGE M. MEIGS, Pittsburgh, Pa. Filed Jan. 10, 1921. Serial No. 436,164. 1 Claim. (Cl. 80—48.)

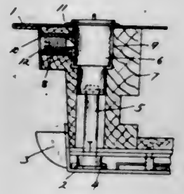
A turning mechanism for rolling mills, comprising a roller table having a plurality of disk conveyer rollers, a pair of plates hinged to the table at approximately the lengthwise center of said table, said plates extending substantially parallel with and below the top face of said roller disks and having apertures therein through which the disks project, lifting means for raising said plates to turn over on said table, said means comprising lifting arms for each of said plates, a pair of rocker shafts journaled in suitable bearings below each of said plates, levers on each of said shafts and pivotally connected to the lower ends of said lifting arms, the levers on one of said shafts being shorter than the levers on the other shaft, and being adapted to raise the lifting arms connected therewith, and the plate connected to said arms a lesser distance than the other longer levers on the other of said shafts, means for rocking said shafts, said means comprising levers having one end secured on said shafts and the other end thereof pivotally secured to a reciprocating connecting rod, said rod being connected to a crank arm on a suitable power driven shaft.

1,506,048. HOSE COUPLING. GEORGE W. CHABETTE, Fort Collins, Colo., assignor of one-half to Hugh Donnan, Fort Collins, Colo. Filed Jan. 15, 1923. Serial No. 612,733. 4 Claims. (Cl. 285—79.)



1. A hose-coupling, comprising an internal bracing thimble having reduced ends and a circumferential groove in its center, an external sleeve having a ridge to engage the groove in the internal thimble, and means for holding pipe between the same.

1,506,049. RENEWABLE ELECTRIC FUSE. SEARS B. CONDIT, Jr., Brookline, Mass., assignor to Condit Electrical Manufacturing Company, South Boston, Mass., a Corporation of Massachusetts. Filed June 7, 1919. Serial No. 302,516. 9 Claims. (Cl. 200—132.)

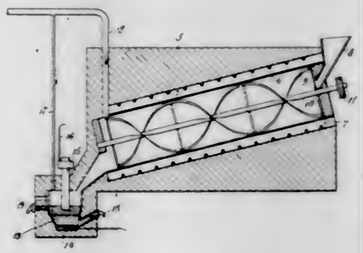


1. A renewable electric fuse of the cartridge type comprising the combination of a tubular enclosing casing, an exteriorly screw-threaded ferrule having an apertured end wall carried by the end of said casing, and an internally screw-threaded end cap having an end wall formed with an aperture therethrough, and a dished pressure plate received in said end cap over the aperture in said end wall and with its periphery in secure frictional engagement with said end cap and having eccentrically disposed gas passages therethrough, said pressure plate arranged to press the end of a fusible element against the end wall of said ferrule.

1,506,050. BOILER. THEODORE W. DAHLQUIST, Dedham, Mass. Filed Mar. 3, 1921. Serial No. 449,309. 2 Claims. (Cl. 126—362.)

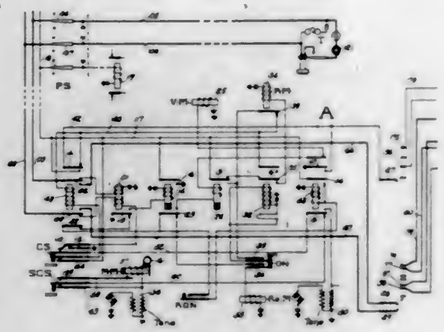
2. A boiler provided with an opening in the top thereof and with a nipple secured to the outside of the boiler and covering said opening and adapted for connection to the usual hot water discharge pipe from the boiler, an opening in the side of the boiler and a nipple secured to the boiler and covering such opening and adapted for connection to the usual hot water inlet pipe leading from the heater, and an insulated pipe detachably secured within the boiler, having its lower end inserted into said last-named nipple to form a substantially water-tight joint therewith, and having its upper end extended into said first-named nipple to form a substantially close fit joint therewith, and to thereby directly connect the hot water inlet and outlet pipes leading to and from the boiler and having a small opening therein near the top of the boiler for the purpose specified, said insulated pipe being of a size capable of insertion into the boiler through the first-named opening in the top of the boiler.

1,506,051. DOOR-LOCK INSTALLATION. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed May 7, 1923. Serial No. 637,370. 2 Claims. (Cl. 70—46.)



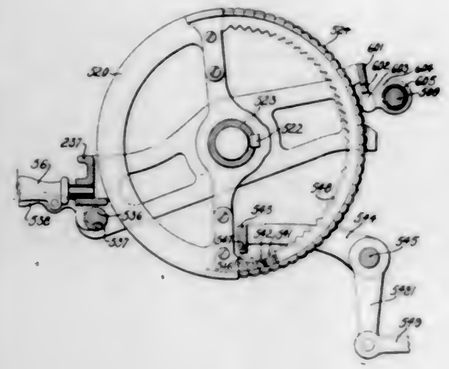
1. The combination with a door having a transversely extending bore and a longitudinally extending bore connecting into the transverse bore, of a lock cylinder in the transverse bore having a serrated outer surface, a bushing having a pressed fit in the longitudinally extending bore, a polygonal flange at one end of the bushing embedded in the wood work of the door, and a screw threadedly engaging the bushing and having a pointed end portion engageable with the serrated portion of the lock cylinder to prevent longitudinal movement thereof.

1,506,052. MANUFACTURE OR TREATMENT OF THREADS OF ARTIFICIAL FILAMENTS. HENRY DREYFUS, London, England. Filed Dec. 19, 1922. Serial No. 681,666. 1 Claim. (Cl. 18—54.)



Process for the manufacture or treatment of threads or yarns consisting of or comprising filaments of cellulose acetate or other cellulose esters, ethers or derivatives by the dry or evaporative method of formation, characterized in that an adhesive sizing or dressing is applied to the threads or yarns as a combined operation with their production and winding with or without cap or other twisting, the size or adhesive agent or preparation being applied to the travelling threads or yarns of associated filaments.

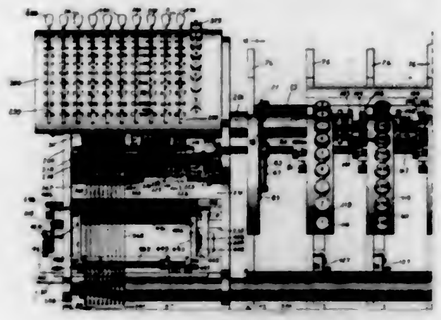
1,506,053. METALLURGY OF TIN. COLIN G. FINK, Yonkers, N. Y., assignor to Guggenheim Brothers, a Copartnership of New York, N. Y. Filed Mar. 17, 1921. Serial No. 452,951. 10 Claims. (Cl. 75—17.)



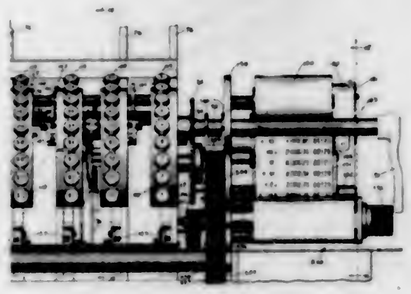
1. A metallurgical process for the treatment of tin ores, concentrates, or other appropriate tin-containing material, which comprises heating the tin-containing material to an elevated temperature but below the fusing temperature of the non-metallic constituents of the charge, and bringing an externally prepared gaseous reducing agent into intimate contact with the thus-heated material and thereby reducing the compounds of tin to metallic tin without fusion of the non-metallic constituents of said material.

1,506,054. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Portland, Oreg. Filed May 20, 1921. Serial No. 471,165. 77 Claims. (Cl. 179—27.)

1. In a selector adapted to automatically busy-test for the first idle trunk of a group, means to cause its wipers to pass over all trunks of a group being tested regardless of the busy or idle state thereof if control impulses are applied to the selector while it is in the process of said testing.

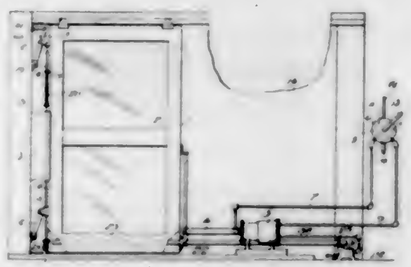


1,506,055. TICKET-PRINTING MECHANISM. FREDERICK L. FULLER, Hion, N. Y., assignor to The National Cash Register Company, Dayton, Ohio. Original application filed Mar. 23, 1916, Serial No. 86,088. Divided and this application filed Aug. 13, 1921. Serial No. 491,968. 28 Claims. (Cl. 101—66.)

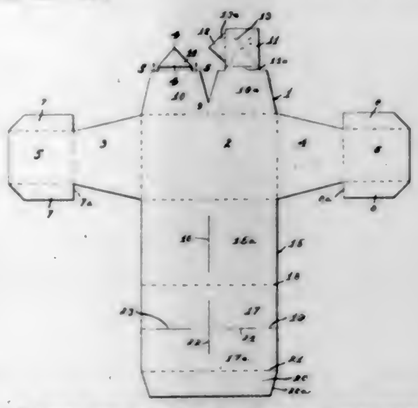


1. In a machine of the class described, the combination of a printing platen, a drum mounted for endwise and rotative movement, a plurality of printing devices mounted in parallel rows on the periphery of the drum, independent manipulative means for rotating the drum and moving the drum endwise, said manipulative means being operable singly or simultaneously to bring any desired printing device into position to cooperate with the platen.

1,506,056. CASH REGISTER. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed June 21, 1920. Serial No. 390,378. 27 Claims. (Cl. 164—111.)



1. In a machine of the class described, the combination of a plurality of manipulative devices, a plurality of series of punches for producing a perforated record, a plurality of slides having projections thereon for moving said punches, and means connected to said slides



and said devices and moved by the devices to position the slides to select the proper punch or combination of punches to be moved.

1,506,057. DOOR-CONTROL APPARATUS. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Apr. 1, 1921. Serial No. 457,595. 8 Claims. (Cl. 268—8.)

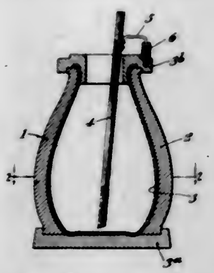
1. The combination with a door, and an operating motor therefor, of a collapsible shoe supported at the front edge of the door, a slide rod, means on said door on which said rod is pivotally supported intermediate its ends, means for rocking said rod about its pivotal support when said door shoe is collapsed, and a motor control device actuated by said rod when rocked, and means for preventing the actuation of said motor control device after said door has completed its movement towards closed position.

1,506,058. NONMUCILAGE SELF-SEALING ENVELOPE. PETER THOMAS GRIFFIN, Van Zandt, Wash. Filed Apr. 28, 1922. Serial No. 557,082. 3 Claims. (Cl. 229—84.)

1. A non-mucilage self-sealing envelope comprising a body having end and side flaps, said end flaps having heads at their outer ends equipped with side wings, one of said side flaps having a locking head, the other being extended and foldable to form superposed layers, said layers having registering transversely extending slits, to receive the winged heads of said end flaps, a pocket formed between said layers and having a slit in its bottom to receive the head of the other side flap and interlockingly hold it whereby the envelope is sealed.

1,506,059. GARMENT POCKET. LYMAN P. HAMMOND, New York, N. Y. Filed Apr. 8, 1924. Serial No. 704,909. 4 Claims. (Cl. 2—247.)

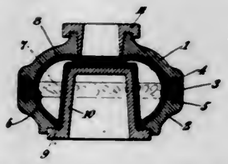
1. In overalls or the like, a rear outside pocket consisting of an upper patch portion secured at opposite sides only to the garment body, and a lower pouch portion forming the bottom of the pocket and movable relative to the garment body at the bottom.



1,506,060. PROCESS FOR MANUFACTURING CAST ARTICLES. WILLY HENKER, Neukolln, near Berlin, Germany. Filed Dec. 6, 1921. Serial No. 520,460. 4 Claims. (Cl. 18—488.)

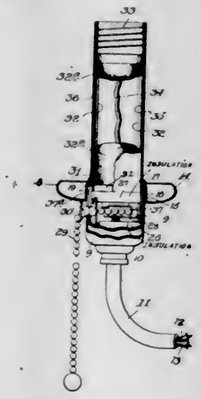
1. Process of manufacturing cast articles consisting in mixing on the one hand sand which contains finely divided metal and on the other hand magnesite (carbonate of magnesit) with divided sulphur, heating the first mixture up to the melting point of the sulphur and the second to a temperature considerably above said point, bringing the two meltings together and allowing the molten mass to solidify by cooling.

1,506,061. METHOD OF MOLDING HOLLOW OBJECTS. WILLY HENKER, Berlin, Germany, assignor to Art Industries, Inc., a Corporation of New York. Filed Aug. 5, 1922. Serial No. 579,957. 5 Claims. (Cl. 18—58.)



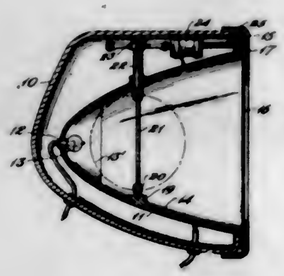
1. The process which comprises molding an object by pouring a molten material into a mold while avoiding

splashing of the molten material against the walls of the mold by introducing the molten material into the



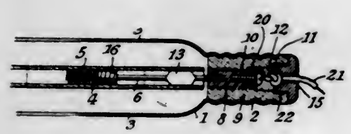
mold with a guiding means approaching the bottom of the mold, and pouring out the remainder of the liquid when the outer portion thereof has hardened.

1,506,062. METHOD OF MOLDING HOLLOW OBJECTS. WILLY HENKER, Berlin, Germany, assignor to Art Industries, Inc., a Corporation of New York. Filed Aug. 5, 1922. Serial No. 579,958. 12 Claims. (Cl. 18—58.)



1. The proces which comprises molding an object by pouring a molten material into a mold having a core, pouring out molten material therefrom to leave a hollow space when some of the molten material has hardened to form external and internal walls, then closing the mold to prevent the escape of the molten liquid remaining therein and allowing the same to harden to close the hollow space.

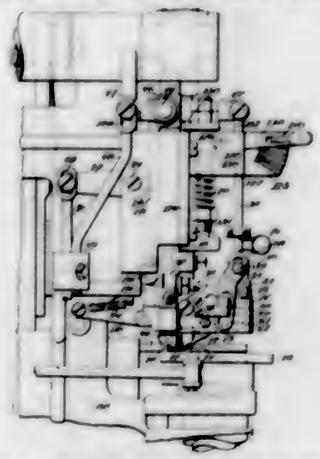
1,506,063. ELECTRIC CANDLE-SOCKET STRUCTURE. MAX HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 10, 1920. Serial No. 423,026. 9 Claims. (Cl. 240—52.)



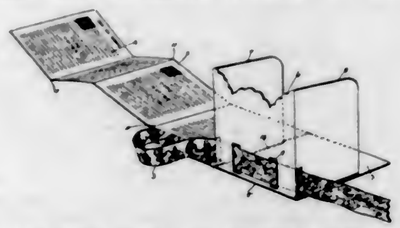
1. In a device of the character described, a switch assembly, an inner tube permanently assembled therewith, a supporting cup member enclosing said switch assembly, a locking ring member interlocking with said cup member, one of said members having a slot, a portion of said switch projecting through said slot and retained by coaction of said members, and an outer, candle, tube freely slidable on said inner tube and telescoping with said ring.

1,506,064. HEADLIGHT DIMMER. KERON J. HOLLAND and GATUS D. WEBB, Joliet, Ill. Filed Feb. 24, 1923. Serial No. 621,047. 3 Claims. (Cl. 240—41.)

1. In an automobile headlight, a parabolic reflector having a central portion of high reflective power adapted to reflect practically all light impinging upon it, an outer portion adapted to reflect light impinging upon it in a softened and diffused manner, and a softening and diffusing screen of greater diameter than the central portion and of less diameter than the outer portion of the reflector, said screen being mounted in said reflector between the focus and the open end of the reflector and arranged to swing between a position at right angles to the axis of the reflector and a position edgewise to the light from the central portion of said reflector.



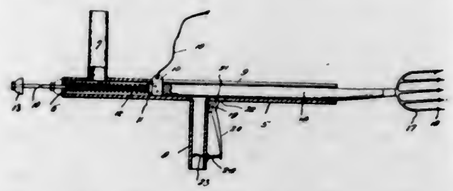
1,506,065. ELECTRIC HEATER AND ITS MODE OF MANUFACTURE. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Jan. 26, 1922. Serial No. 531,956. 63 Claims. (Cl. 219—63.)



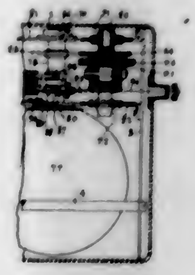
1. An electric heater comprising a metallic shell, a refractory lining therefrom and a heating coil extended through said lining under maintained longitudinal tension and free from longitudinal obstruction in the lining.

1,506,066. STOCK-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1919. Serial No. 289,879. 47 Claims. (Cl. 12—27.)

14. A stock fitting machine having, in combination, a work support, a lip forming knife, a knife carrier movable toward and from said support, a spring for yieldingly urging the carrier toward said support, means for setting the spring to a predetermined tension, a movable member interposed between said spring and its setting means whereby the carrier may be moved without disturbing the setting of the spring, and means under control of the operator for moving said member predetermined amounts.

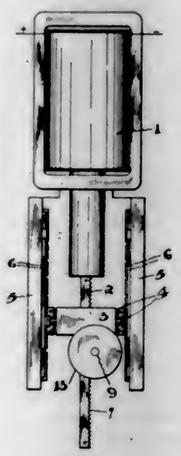


1,506,067. ILLUSTRATED STORY DISPLAY DEVICE. THOMAS B. LAMB, New York, N. Y. Filed June 19, 1923. Serial No. 646,350. 6 Claims. (Cl. 46—37.)



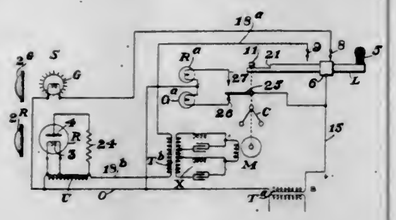
1. In a device of the class described, a sheet of material comprising a body portion having an extension comprising a plurality of pages hinged to one side of the same, said extension having a plurality of pictures depicted thereon together with explanatory matter thereof, said body portion also having hinged to another side of the same another extension apertured to permit said pictures to be shown thereat, the last named extension having flaps hinged to the same.

1,506,068. FISH-SPEARING DEVICE. JOHN H. LANGE, Alpena, Mich. Filed Oct. 3, 1923. Serial No. 666,325. 3 Claims. (Cl. 43—6.)



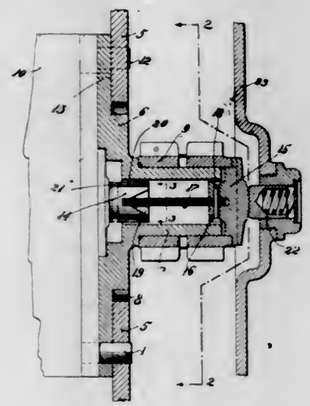
1. In a fish spearing device of the character described, a barrel open at one end and closed at the other, a pair of rigid handles respectively projecting laterally from the barrel at the inner end portion of the latter and substantially at a point intermediate the ends of the same, a spear having a shank positionable within said barrel, means for automatically latching the shank within the barrel against outward projection and carried adjacent the second named handle, and spring means upon the inner end of the barrel for projecting the spear therefrom.

1,506,069. STABILIZER AND DIRECTION CONTROL FOR AIRCRAFT. WARD LEATHERS, Haworth, N. J. Filed May 18, 1922. Serial No. 561,868. 11 Claims. (Cl. 244—29.)



1. In an automatic controller for aircraft a control connection, a follow-up mechanism, a rotatable electric contact tube, a source of electric current, a reversible service motor, electrical means in circuit with said contact tube and said source of electric current, said service motor being reversibly controllable by said electrical means and a relation altering mechanism, said relation altering mechanism being adapted to alter the relation between said rotatable electric contact tube and said control connection and said follow-up mechanism.

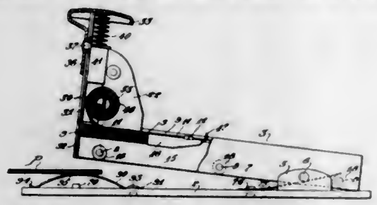
1,506,070. CONTROLLER FOR DIRECT-CURRENT MOTORS. WILLIAM H. LESLIE, Toronto, Ontario, Canada. Filed Oct. 13, 1923. Serial No. 668,437. 2 Claims. (Cl. 219—48.)



1. In a rheostat the combination of a solenoid; a plunger forming the core of the solenoid; fixed contacts arranged in a series and connected with motor controlling resistances; a cross head connected with the plunger and adapted to engage the fixed contacts to vary the motor controlling resistances as the cross head is moved by the plunger; and means for adjusting the said cross head longitudinally of the plunger.

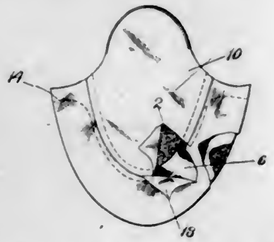
1,506,071. ELECTRIC LAMP. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No 364,485, filed Mar. 9, 1920. This application filed Aug. 24, 1921. Serial No. 494,823. 18 Claims. (Cl. 246—138.)

1. In combination, an electric lamp in the form of a rectifier having a filament and an anode, means for supplying lighting current to said filament, a device for indicating at a distance whether or not said lamp is lighted, and a circuit for controlling said device and including the filament and anode of said lamp and a source of alternating current.



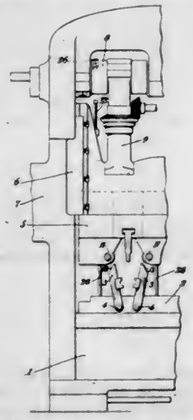
1,506,072. ADJUSTABLE DRIVING CONNECTION. GEORGE L. MCCAIN, Detroit, Mich. Filed May 10, 1921. Serial No. 468,455. 5 Claims. (Cl. 64—96.)

1. In a driving connection, the combination of a supporting plate having a tubular bearing portion projecting therefrom, a driving wheel mounted on said bearing, a cap extending over the end of said tubular bearing and connected to the driving wheel, said cap having a boss containing a slot, a driven shaft carried by said support and having a slot in its end, and a pack of thin flexible metal plates secured at one end in the slot in said boss and extending through the tubular bearing into the slot in the end of said shaft.



1,506,073. STAPLING MACHINE. ARTHUR H. MAYNARD, Warwick, R. I., assignor to Boston Wire Stitcher Company, East Greenwich, R. I., a Corporation of Maine. Filed June 10, 1922. Serial No. 567,305. 4 Claims. (Cl. 1—3.)

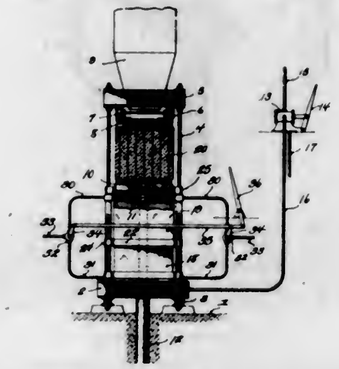
3. In a stapling-machine, the combination of a base, a clincher-anvil on said base, an arm mounted above the base, a staple-driver reciprocable on said arm, and a work support comprising a resilient arched plate secured at one end to the base with its arched portion elevated



above the anvil and its opposite end bearing against the base and adapted to slide thereon.

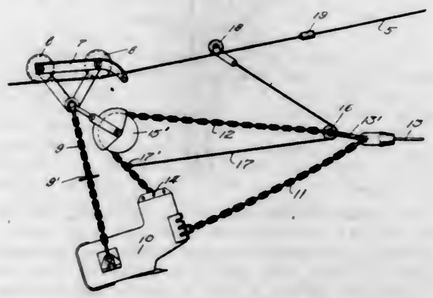
1,506,074. METHOD OF MAKING RUBBER FOOTWEAR. CHARLES H. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 16, 1919. Serial No. 271,397. 21 Claims. (Cl. 12—142.)

1. That improvement in methods of making arctic shoes which consists in cutting out pieces to constitute the vamp of the arctic, including the lining, a cashmerette and a collarette; cutting out pieces to constitute the quarter of the arctic, including a lining, a collarette, a cashmerette and a junior, assembling the pieces of the vamp and the pieces of the quarter, uniting the vamp and the quarter into an assembled top unit, subsequently assembling the unitary top and an insole upon a form, and thereafter attaching the margin of the top to an insole and performing subsequent operations to complete the shoe.



1,506,075. METAL-PUNCHING PRESS. MORRIS S. NEAL, Collinsville, Conn. Filed Dec. 29, 1922. Serial No. 609,580. 9 Claims. (Cl. 76—6.)

1. A metal punching press, comprising dies, means for supporting said dies to permit relative lateral movement therebetween, a head reciprocable relative to said

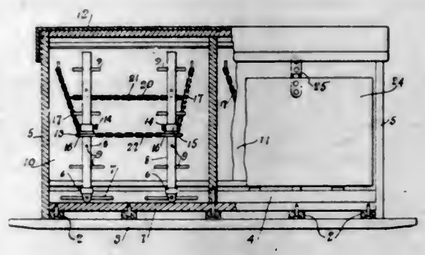


dies and provided with means to apply lateral pressure to said dies during forward movement of said head, and means for releasing said lateral pressure near the limit of such forward movement.

1,506,076. BALING MACHINE. KARL O. NELSON, Milwaukee, Wis., assignor to Galland-Henning Mfg. Co., Milwaukee, Wis. Filed Jan. 16, 1923. Serial No. 612,998. 4 Claims. (Cl. 100—19).

1. A baling press comprising a frame having a base and an upper portion and tie rods joining said portions, an upper platen associated with said upper portion, a lower movable platen, means associated with the lower portion of said frame for operating said lower platen, a press box having a lower stationary portion cooperating with said lower platen and having an upper movable portion adapted to telescope the lower portion and cooperate with said upper platen, and means carried by said base for shifting the upper movable portion of said press box.

1,506,077. EXCAVATING DEVICE. JOHN W. PAGE, Chicago, Ill. Filed Jan. 12, 1924. Serial No. 685,750. 7 Claims. (Cl. 37—117.)

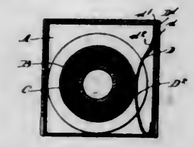


1. In an apparatus of the character set forth, the combination of a main cable, a carriage movable thereon, a scraper bucket pivotally mounted on said carriage in the rear of the center of gravity of the bucket when loaded, a hauling line for pulling the bucket along said main cable, a block attached to the carriage, a holding chain running from the front of the bucket over said block to the hauling line, means arranged in connection with said block whereby a leverage in favor of the end of the holding chain attached to the hauling line is established when the bucket is in load-retaining position and destroyed when said bucket is in partial or complete dumping position, and means engaging said hauling line in advance of said bucket operating at a predetermined point to directly pull the holding chain over the block attached to the carriage toward the front end of the bucket.

1,506,078. DENTAL POLISHING DISK. GEORGE A. PARKS, Sherrard, Ill. Filed July 22, 1922. Serial No. 576,669. 1 Claim. (Cl. 32—13.)

A dental disk comprising a thin polishing disk, and a reinforcing disk of thin nonabsorbent flexible material affixed to one side of the polishing disk and of less diameter than the polishing disk to permit the polishing disk to be used between approximating surfaces of the fillings to be reduced and finished.

1,506,079. MECHANICAL STOCK FEEDER. ALLEN T. PENCE, Hillsboro, Ohio, assignor of one-fifth to A. B. Simpson, one-tenth to Joseph Gavey, one-tenth to F. F. Stevens, one-fifth to William R. Lukens, and one-fifth to Robert B. McMullen, all of Hillsboro, Ohio. Filed Oct. 4, 1923. Serial No. 666,646. 5 Claims. (Cl. 119—54.)



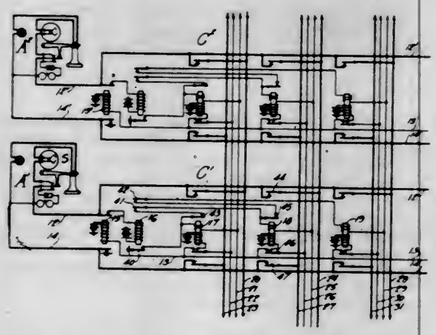
4. In a mechanical stock feeder, a feed compartment, a hopper mounted thereover, a plurality of agitator shafts suspended in said hopper, having one end in said feed compartment, diagonal supporting chains supporting said agitators in said hopper and feed compartment, longitudinal chains connecting said agitators to one another through their suspending chains, steadying chains connecting the suspending chains to one another, and a transverse chain to steady the longitudinal chains.

1,506,080. MUSIC-ROLL-BOX CLIP. THOMAS M. PLETCHER, Fontana, Wis., assignor to The Q R S Music Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1923. Serial No. 645,231. 5 Claims. (Cl. 206—52.)

1. In combination with a music roll box and the like container, a clip for checking the roll content of the box against slacking on and uncoiling from the spool, consisting of a piece of sheet metal folded upon itself at one end forming a hook for closely clasping the edge of one side of the box and flexed off from the plane of the hook recess inward with respect to the box cavity, said flexure

being made at a distance from the bend which forms the hook sufficient for rendering the depth of the hook adequate to secure a grasp upon the box edge; whereby the

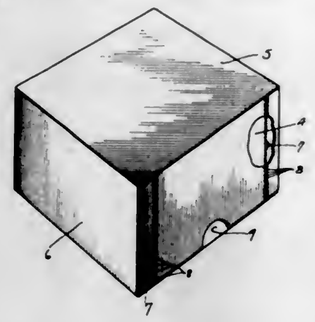
remainder of the length from said flexor to the limit permitted by the depth of the box forms a spring finger for pressing against the roll.



1,506,081. CASEIN SIZE AND METHOD OF PRODUCING SAME. ADRIEN E. REGNIER, Revere, Mass., assignor of one-half to Reginald W. Bird, Framingham, Mass. Filed Aug. 31, 1921. Serial No. 497,323. 13 Claims. (Cl. 134—20.)

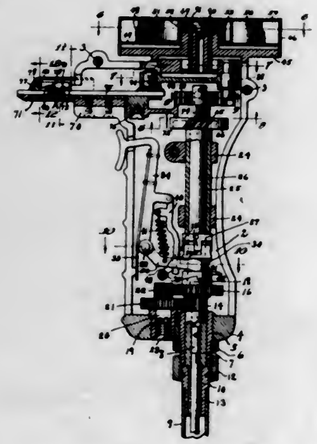
3. A process of producing a size or glue, which comprises the congulation and precipitation of casein with hydrochloric acid, followed by the drying of the precipitated casein, and the conversion of such casein into an adhesive state by the use of sodium fluoride.

1,506,082. INK. ENRIQUE REITZE and EMILIO TRUJILLO, Santiago, Chile. Filed May 24, 1923. Serial No. 641,276. 2 Claims. (Cl. 134—34.)



2. The process of making ink which consists in heating ten parts by weight of glycerin and dissolving therein one part by weight of gelatine, permitting the mixture to cool down to approximately 20° C., adding alcohol to the cooled mixture in the proportion by weight of one-half to one of glycerin, stirring said mixture, adding coloring matter to the mixture in the proportion by weight of one-fifth to one of glycerin, and grinding the mass.

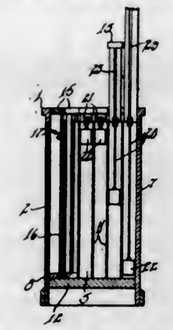
1,506,083. RELAY AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1920. Serial No. 399,528. 21 Claims. (Cl. 179—18.)



1. In a telephone system, subscribers' lines, trunk lines, a series of connecting relays associated with each trunk line, each series comprising a relay individual to each subscriber's line, means whereby a calling subscriber can connect with an idle trunk line, means whereby the calling subscriber can energize the relays associated with the connected trunk line successively by impulses transmitted over the connected trunk line, and means for maintaining the last energized relay in operated position to complete the connection to a called line and to maintain said lines connected during conversation.

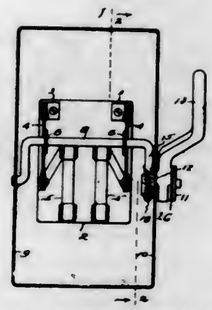
1,506,084. SHOT-SHELL CARTON. NORMAN L. RICHMOND, Loveland, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 27, 1922. Serial No. 546,956. 10 Claims. (Cl. 223—7.)

1. A carton comprising a box having upstanding walls and spaced-apart lines of perforations in one of said walls, and a lid for the box, said lid having a depending flange in overlapping relation with said perforated side wall and itself also having spaced-apart upright lines of perforations.



1,506,085. STAPLE MAKING AND DRIVING TOOL. PAUL RISSMAN, Detroit, Mich. Filed Dec. 5, 1921. Serial No. 520,027. 14 Claims. (Cl. 1—2.)

1. In a staple forming and driving tool, a case adapted to be held in a hand of an operator and a guide therein, a shearing and bending member slidable in the guide, means for feeding wire thereto, a hammer to force the staple out of the tool, a shaft to control the operation of the hammer, a spring to actuate the hammer, and a main shaft to actuate the wire feeding means, the staple forming means and the hammer.

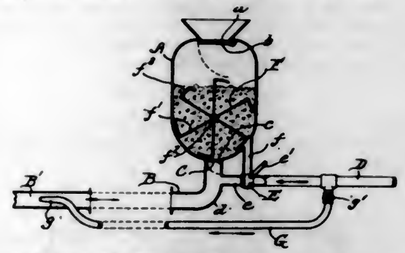


1,506,086. AUTOMATIC DISPLAY-MERCHANDISE SHOW CASE. EARL G. RUBY, St. Joseph, Mo. Filed Dec. 16, 1922. Serial No. 607,331. 1 Claim. (Cl. 211—16.)

A device of the character described comprising a casing having a transparent glass window in the front wall thereof, a plurality of upright garment containing sections slidably mounted in said casing, the forward section being visible through said window, means for selectively projecting said sections through a vertical plane to a position substantially above the top wall of said casing, whereby the garments in said sections may be viewed, said means comprising weights heavier than said

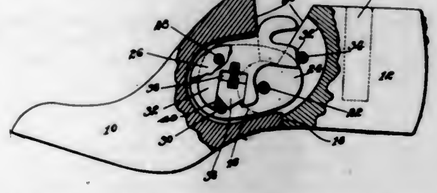
sections, cables connecting said weights with their respective sections, pulleys disposed at the upper end of said casing for supporting the intermediate portion of said cables, and fastening means for normally retaining said sections in said casing against the action of said weights.

1,506,087. QUICK-OPENING SAFETY SWITCH. JOSEPH SACHS, Hartford, Conn. Filed Jan. 25, 1922. Serial No. 531,580. 11 Claims. (Cl. 200—42.)



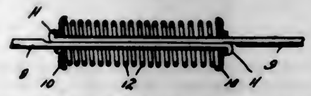
1. A switch mechanism comprising a casing, a spindle, a handle hub rotatably fitted on the spindle and extending through the side wall of the casing, and having a lost motion engagement with a bent portion of the spindle within the casing, and a spring connected between the handle hub and the spindle, whereby when the handle is turned the spring is first made tense, then the hub positively engages directly with and moves the spindle, and finally the spring throws the spindle.

1,506,088. MAH-JUCK RACK. JOHN SANCHEZ, San Pedro, Calif., assignor to John T. Gaffey, San Pedro, Calif. Filed Oct. 21, 1922. Serial No. 595,931. 1 Claim. (Cl. 46—55.)



A game element consisting of a combined rule and rack including along one side a longitudinal seat upon which game blocks can be set upright, the rack having a plane face against which the blocks can be alined in building a wall while resting on a plane primary support, and a device projecting from one end of the rack to act as a stop for the contiguous end of the wall being built.

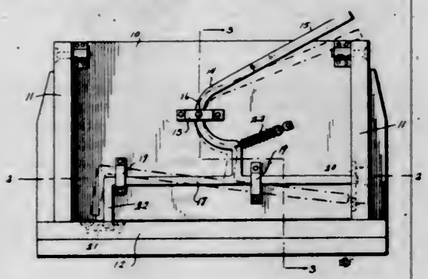
1,506,089. CONCRETE MIXER AND CONVEYER. KARL R. SCHUSTER, Brooklyn, N. Y. Filed Dec. 6, 1919. Serial No. 343,037. 10 Claims. (Cl. 83—3.)



1. In the art of mixing and transporting concrete, the process which consists in feeding a gaseous agent under pressure from below a mass of materials contained within a chamber to initially mixe the components of such mass by agitating the same, discharging such initially mixed mass from the chamber into a duct, feeding a gaseous agent under pressure to said duct at a point distant from the point of entry of the initially mixed materials, to create a partial vacuum within said duct, feeding a gaseous agent under pressure into the duct at a point adjacent to the entry of the intially mixed materials thereinto, and propelling the mass as a whole and effecting a further mixture of its components by the partial vacuum created within the duct and by the pressure of the gaseous agent applied rearwardly of such mass.

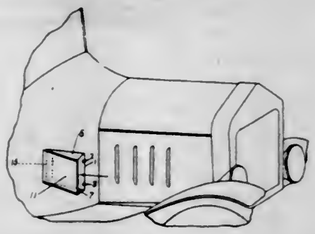
1,506,090. COLLAPSIBLE LAST. FRED JOHN SHANISEY, Sr., Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed June 24, 1921. Serial No. 480,049. 19 Claims. (Cl. 12—136.)

1. A collapsible last comprising a heel part and forepart arranged for relative movement to collapse the last, a locking member engaging said parts to prevent such collapsing movement and hold the parts in extended position, said locking member being movable from operative position to permit the collapse of the last and being accessible for effecting such movement by the operator's fingers, and means for automatically catching and holding said locking member in inoperative position when so displaced, constructed and arranged to release it for locking operation again upon the collapsing movement of the last.



1,506,091. BRAKE-OPERATING MECHANISM. JOHN L. SHULTZ, Bellefonte, Pa. Filed June 30, 1923. Serial No. 648,674. 1 Claim. (Cl. 74—48.)

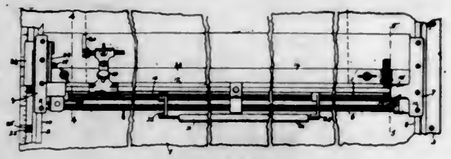
In a brake operating mechanism, a connecting rod composed of sections which are circular in transverse section, said sections being diametrically flattened at their ends, said diametrically flattened end portions overlapping each other and being provided with angularly dis-



posed extremities, discs having circular central openings receiving the diametrically flattened overlapping end portions of the rod sections and located between the angularly disposed extremities thereof and a coil spring bearing against the inner faces of the discs and having its convolutions surrounding the diametrically flattened overlapping end portions of the rod sections.

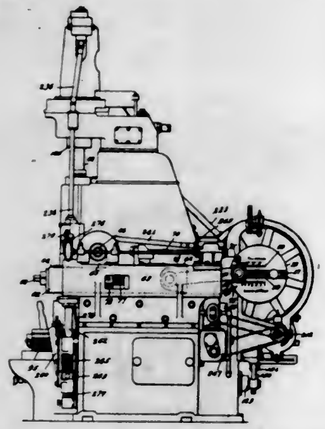
1,506,092. END-GATE LOCK. JOHN M. SISKO, Nesquehoning, Pa. Filed Mar. 18, 1924. Serial No. 700,082. 1 Claim. (Cl. 296—56.)

The combination of an end gate and a wagon body, one of the side walls of the wagon body having a keeper and the bottom wagon body having a keeper, a locking bar, one end of which is angularly bent and adapted to engage in the last named keeper and the other end being adapted to engage in the first named keeper, a lever pivoted upon the face of the end gate and operatively engaged with the bar whereby the bar may be shifted to carry the ends out of engagement with the keeper and a spring holding the locking bar in engagement with the keeper.



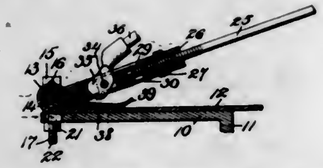
1,506,093. VENTILATING DEVICE FOR MOTOR CARS AND THE LIKE. KING SKERRETT, Buenos Aires, Argentina. Filed Oct. 19, 1923. Serial No. 669,548. 3 Claims. (Cl. 98—22.)

3. A ventilating device comprising a base plate having an elongated slot therein; a pair of triangular side portions hinged to opposite edges of said base plate; a cover plate hinged to the third edge of said base plate; a funnel secured to and extending at approximately right angles from said base plate and corresponding to said slot; means on said side portions for holding said cover plate in open position; and means on the fourth edge of said base plate for holding said cover plate in closed position.



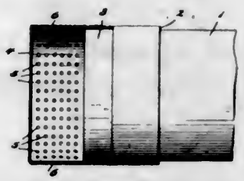
1,506,094. PERFORATING MACHINE. EUGENE A. SPAULDING, Portland, Me. Filed Mar. 30, 1923. Serial No. 628,735. 2 Claims. (Cl. 164—87.)

1. In a perforating machine, the combination of a feed table, a feed bar, a feed shaft journalled to said bar, pinions on the ends of said shaft, parallel racks on said table engaged by said pinions, a pawl carried by said bar, a guide extending along the table in the direction of the feed, said pawl being adapted to be carired along adjacent to said guide, a stop adjustably secured on said guide to



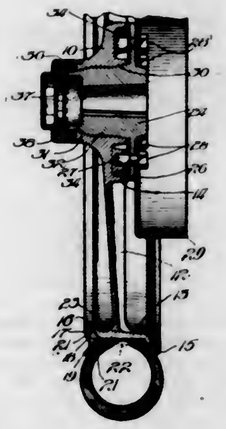
engage said pawl and a spacing bar extending longitudinally of said feed bar connected to disengage said pawl from said stop.

1,506,095. MACHINE FOR FORMING GEARS OR OTHER POLYGONAL ARTICLES. GEORGE R. STEVENSON, Indianapolis, Ind., assignor to Stevenson Gear Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 17, 1921. Serial No. 523,040. 32 Claims. (Cl. 90—8.)



5. In a machine of the class described, the combination of a tool carrier, a reciprocable blank-carrying ram associated with said tool carrier, means for automatically intermittently retracting and advancing the tools relative to the line of movement of the ram, a reciprocable driving member, connections between the reciprocable driving member and the ram for causing reciprocation of the ram by reciprocation of the driving member, and means by which the stroke of the ram may be adjustably coordonated with the tool carrier.

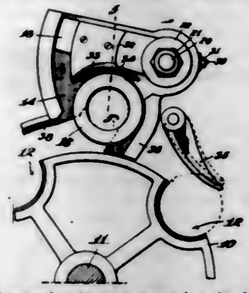
1,506,096. DEVICE FOR BENDING METAL STRIPS. WILLIAM M. STIDWORTHY, Hackettstown, N. J. Filed Apr. 11, 1923. Serial No. 631,300. 5 Claims. (Cl. 153—40.)



1. A device for bending metal strips comprising a support for the strip, a lever mounted so as to swing, a dog on the lever, and a mandrel at the pivot of the lever and having a tail piece to limit its rotation, said tail piece extending beyond the forming part of the mandrel.

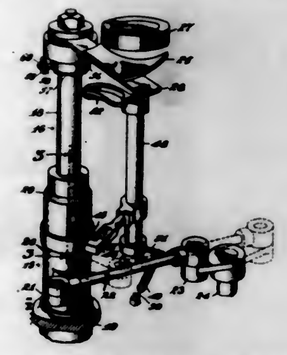
1,506,097. AMMUNITION FOR LINE-THROWING GUNS AND THE LINE-CARRYING RING THEREFOR. JOHN W. STOCKETT, Washington, D. C. Filed Oct. 16, 1923. Serial No. 668,875. 4 Claims. (Cl. 102—34.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A round of fixed ammunition, including a projectile formed with an annular shoulder toward its base, a perforated container secured to the base and a gauze fabric covering the container.



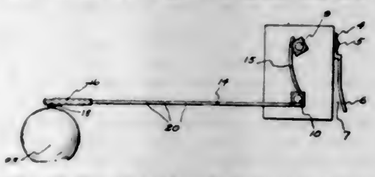
1,506,098. METAL WHEEL. CHARLES E. WADE, Detroit, Mich., assignor to Jefferson Forge Products Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 7, 1921. Serial No. 506,033. 4 Claims. (Cl. 301—65.)

3. In an automobile wheel, the combination of an integral forged structure comprising a center-body, spokes and a rim positioned centrally on the ends of the spokes, the rim being tapered in opposite directions from its approximate center longitudinal line and provided with an integral outwardly extending flange on one side and an integrally inwardly extending flange having a groove on the other side; and a detachable flange adapted to be seated in said groove to retain the tire on the rim between the outwardly extending integral and detachable flanges.



1,506,099. CAN-CAP-FEEDING DEVICE. RAY O. WILSON and ARTHUR D. SUMNER, Los Angeles, Calif., assignors of forty-nine one-hundredths to Franklin F. Stetson, Los Angeles, Calif. Filed Jan. 26, 1921. Serial No. 440,216. 8 Claims. (Cl. 113—114.)

1. In a can cap feeding mechanism, an oscillating pusher-bar arranged to intersect a stack of can-caps on its forward movement and adapted to advance the lowermost can-cap, and fixed means co-operating with the pusher-bar on its forward movement for causing the can-cap being

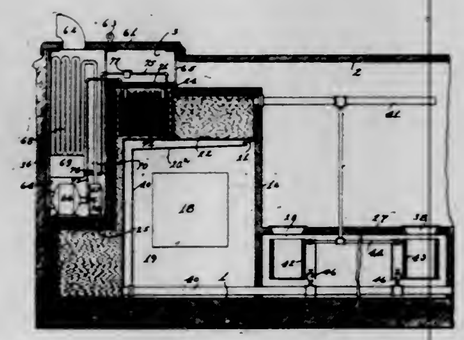


advanced by the pusher-bar to move longitudinally of the pusher-bar and be ejected at the outer end of the pusher-bar.

1,506,100. AUTOMATIC CAN-TOP-FEEDING MECHANISM. RAY O. WILSON and ARTHUR D. SUMNER, Los Angeles, Calif., assignors of forty-nine one-hundredths to Franklin F. Stetson, Los Angeles, Calif. Filed Jan. 26, 1921. Serial No. 440,217. 10 Claims. (Cl. 113—114.)

1. In a can-cap feeding mechanism, an oscillatory drive shaft, means for oscillating said shaft continuously, a normally stationary driven shaft aligned with said drive shaft, can controlled means for intermittently connecting the drive to the driven shaft, and can-top ejector means operable by said driven shaft.

1,506,101. OVERFLOW ALARM. WILLIAM WINKLER and ARTHUR H. MILLER, Brooklyn, N. Y. Filed Oct. 24, 1922. Serial No. 596,676. 1 Claim. (Cl. 200—84.)

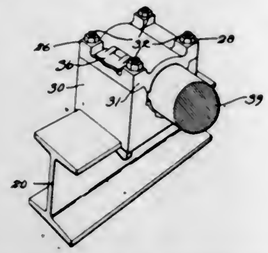


A device of the class described comprising a main block adapted to be secured above a receptacle, terminal studs thereon, a lever arm having spaced notches thereon, an extension pivoted on the lower terminal stud and adapted to contact with the remaining stud when rotated, a sleeve slidable on the lever, a pointed pin passing thru the wall of said sleeve and adapted to engage any of the notches, a float ball secured to said pin, and a flat spring secured to said sleeve adapted to urge the pointed pin into contact with the corresponding notch.

1,506,102. COMBINATION TOOL. ARTHUR WISE, Salt Lake City, Utah. Filed Mar. 6, 1922. Serial No. 541,297. 2 Claims. (Cl. 7—1.)

2. A combination tool comprising a handle, a bifurcated tack remover secured in one end of said handle, and a gasket remover secured in the same end of said handle and with a portion thereof inclined from the tack remover.

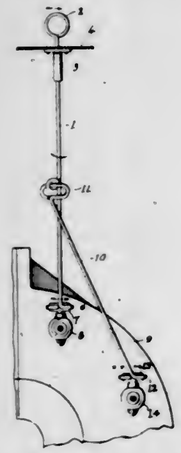
1,506,103. DINING-CAR REFRIGERATOR INSTALLATION. WILLIAM WISHART and ALBERT H. MORRELL, Clinton, Iowa, assignors, by mesne assignments, to Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Aug. 8, 1921. Serial No. 490,781. 7 Claims. (Cl. 62—117.)



1. A dining car refrigerator system, comprising a main refrigerator box embodying a food-receiving chamber, a brine tank therein, a plurality of auxiliary refrigerator boxes, a pipe system connecting said auxiliary boxes with the brine tank, and a refrigerator high side and low side unit associated with the brine tank with the low side projecting into the brine tank to cool the brine therein and thereby cause circulation of the brine through the main refrigerator box and through the auxiliary refrigerator boxes to cool the same.

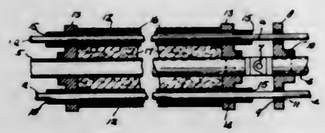
1,506,104. PROCESS FOR PRODUCTION OF ALUMINUM CHLORIDE AND OTHER PRODUCTS FROM CARBONACEOUS SHALES AND LIKE MATERIAL. EDSON R. WOLCOTT, Los Angeles, Calif., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Oct. 13, 1919, Serial No. 330,381. Renewed Feb. 18, 1922. Serial No. 537,645. 15 Claims. (Cl. 23—13.)

8. The process of making aluminum chloride comprising reacting with chlorin upon a residue derived from heating a carbonaceous argillaceous mineral, said residue comprising aluminous material and carbon.



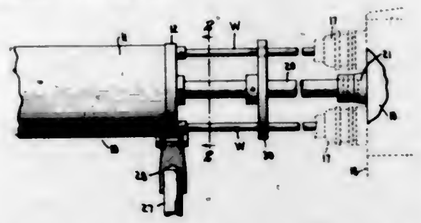
1,506,105. SHAFT BEARING. LEWIS E. ZERBE, Moneta, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Mar. 22, 1923. Serial No. 626,791. 5 Claims. (Cl. 64—52.)

1. In a shaft bearing of the kind described, the combination of a beam, a box supported by the beam, hook bolts engaging the beam for securing the box to the beam, a cap on the box secured thereto by the said bolts and the box projecting laterally beyond the beam and



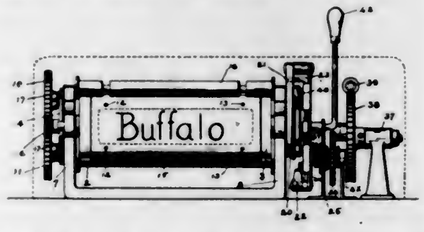
provided with depending faces engaging the side of the beam, the bolts extending through the lateral extensions of the box.

1,506,106. PET-COCK-OPERATING DEVICE. WILLIAM DEXTER SMITH BRACE, North Bangor, N. Y. Filed Apr. 7, 1923. Serial No. 630,551. 4 Claims. (Cl. 137—139.)



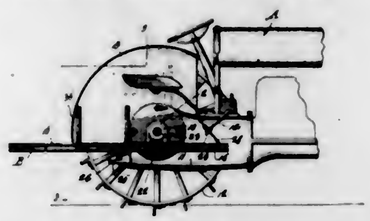
1. A device for operating at a distance pet cocks and the like comprising a rotatable operating member having a loop portion integral therewith at or about its middle portion and an auxiliary rod member interlinking with said loop by means of another loop at the upper end of said auxiliary rod member, and means connected with said rod members for engaging and operating the thumb pieces of pet cocks.

1,506,107. STOCK REST FOR LATHES AND LIKE MACHINES. JOHN P. BROPHY, Cleveland Heights, Ohio. Filed June 5, 1922. Serial No. 566,014. 16 Claims. (Cl. 29—37.)



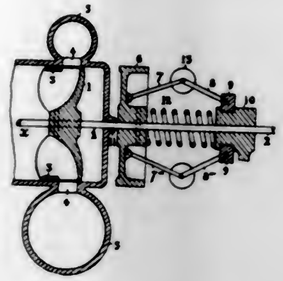
1. In mechanism of the character described, the combination of suitable supports, a guide tube for an individual bar or rod, a shell surrounding said tube and spaced therefrom, and sound-deadening material packed between said tube and shell.

1,506,108. STOCK REST. JOHN P. BROPHY, Cleveland Heights, Ohio, assignor to The Cleveland Automatic Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 21, 1923. Serial No. 640,369. 3 Claims. (Cl. 29—37.)



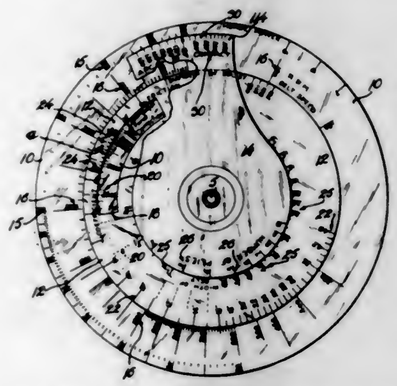
1. A stock rest comprising a hollow cylinder, a longitudinally extending pipe carried inside said cylinder, rotatable bushings in each end of said pipe, and sound insulating material surrounding said pipe within the cylinder.

1,506,109. STREET OR STATION INDICATING APPARATUS. JOHN W. CARNOCHAN, Rochester, N. Y., assignor to Alfred M. Ecclestone, St. Catharines, Ontario, Canada. Filed May 12, 1923. Serial No. 638,511. 8 Claims. (Cl. 40—53.)



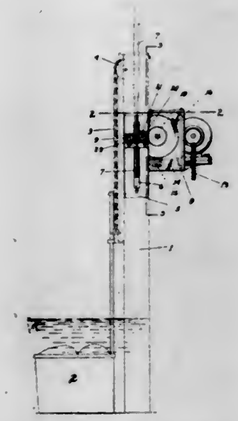
1. In a street or station indicator, the combination of a frame, a positively driven roller mounted to rotate in said frame, a pair of arms mounted to swing on said frame, a pair of idle rollers mounted between the outer ends of said swinging arms, means for operatively connecting said idle rollers with each other to make them rotate in unison, a belt having names printed thereon at predetermined intervals thereof adapted to be unwound from one of said idle rollers passed over said positively driven roller and wound up on the other of said idle rollers, means carried on the periphery of said positively driven roller to engage said belt, pull it from one of the idle rollers and feed it onto the other of said idle rollers.

1,506,110. SAFETY CLUTCH RELEASE. LOUIS CLEMENT, Evangeline, La. Filed Aug. 4, 1923. Serial No. 655,711. 3 Claims. (Cl. 180—82.)



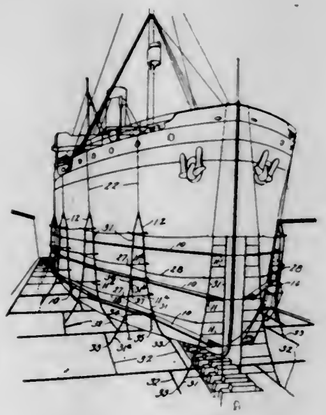
1. The combination with a tractor including a clutch pedal, of a safety appliance for the tractor for preventing the tilting back of the tractor to a dangerous angle comprising a platform, means rockably securing the platform at a point intermediate its ends to the rear drive axle casing of the tractor the rear end of the platform extending beyond the rear end of the tractor, an operating rod rockably carried by the forward end of the platform means slidably connecting the rod with the clutch pedal and a stop carried by the rod for engaging said clutch pedal.

1,506,111. SELF-ACTING SPEED-REGULATING DEVICE FOR TURBINES. MARCEL CROZET-FOURNEYRON, Le Chambon Feugerolles, France. Filed Mar. 25, 1922. Serial No. 546,879. 3 Claims. (Cl. 253—97.)



3. In a water turbine, the combination with the rotor, the shaft carrying the same and capable of axial displacement and the distributing member, of a slide-valve provided on the said rotor so as to participate in its rotary and longitudinal movements, and a centrifugal governer adapted to axially displace the said rotor and slide-valve thereby causing the latter to more or less open the discharge opening of the said distributing member, a pulley secured to the said rotor-shaft, a stationary bearing for said shaft, a collar rotatably mounted on said bearing the said governor being pivoted to the said pulley and said collar, and a spring interposed between the said pulley and the said collar.

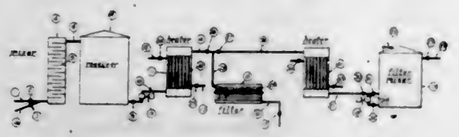
1,506,112. CALCULATOR. MURVIN B. CUTSHAW, Denver, Colo. Filed Oct. 3, 1922. Serial No. 592,069. 8 Claims. (Cl. 235—84.)



1. In a belt calculator, a member having a combined scale for revolutions per minute and belt speed an.. also having a scale correcting belt speed for centrifugal force, and a second member having a diameter of pulleys scale cooperating with the other scales for giving belt speeds.

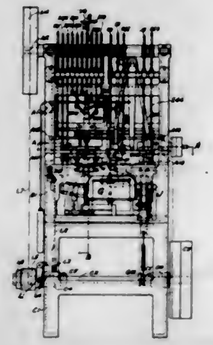
1,506,113. OPERATING MECHANISM FOR EGG TIMERS. SAMUEL O. DEARING, Stockton, Calif. Filed May 8, 1923. Serial No. 637,503. 3 Claims. (Cl. 161—16.)

1. An operating mechanism for egg-timers having a casing, a vertically moving rack bar therein and a pinion engaging the same, comprising a driven gear mechanism arranged as a unit and adapted to be detachably connected to the casing and to be operatively connected to the pinion.



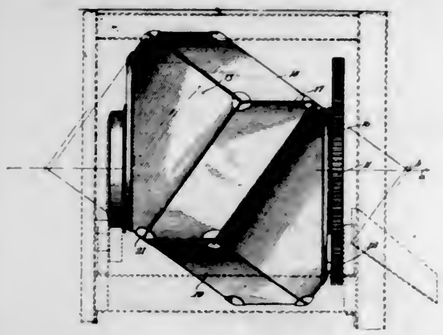
1,506,114. SHIP SCAFFOLD. ALFREDO DONAGGIO, Winfield, N. Y. Filed May 6, 1921. Serial No. 467,351. 20 Claims. (Cl. 304—16.)

1. In scaffolding for ships' hulls, flexible ladders having rungs provided each with a horizontally disposed forked end projecting beyond the side of the ladder the branches of the fork being disposed on opposite sides of the plane of the ladder and a plurality of hull-engaging rollers supported in spaced relation by said forked ends.



1,506,115. TREATING PETROLEUM OILS. ROBERT N. DONALDSON and ROSS MCCOLLUM, Bakersfield, Calif., assignors to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Mar. 21, 1923. Serial No. 626,685. 2 Claims. (Cl. 196—4.)

1. The process of removing colloidal asphalt from crude petroleum oil, which comprises preliminarily treating the oil with dilute sulphuric acid to flocculate its colloidal asphaltic content without forming sulfonated hydrocar-

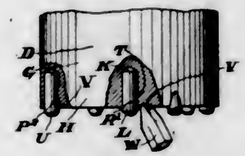


bons, and then separating the treated oil from the flocculated bodies.

1,506,116. AUTOMATIC BOX MACHINE. ROBERT H. FENN, Whitestone, N. Y. Filed Dec. 26, 1918, Serial No. 268,296. Renewed Dec. 6, 1923. 131 Claims. (Cl. 93—40.)

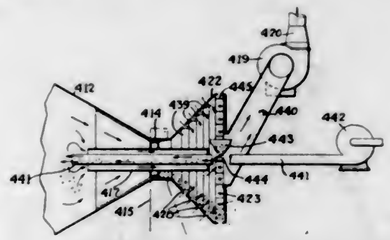
1. In an automatic box machine the combination of a horizontally reciprocated feed slide together with a plurality of telescoping, vertically reciprocated tubes, operating independently of each other, one of said tubes provided with a plunger adapted to press a blank against said slide.

1,506,117. ELONGATED CUBE MIXER. JAMES C. FRENCH, Muskegon, Mich., assignor to Austin Machinery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,644. 7 Claims. (Cl. 83—73.)



1. A polyhedric mixer body, having ends of truncated cubic form arranged with a horizontal axis extending through the theoretical projected cube corners, and intermediate connecting sheets or side walls spacing apart the companion edges of said ends of cubic form.

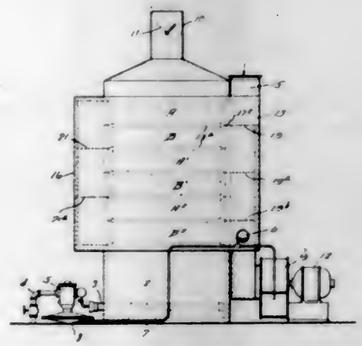
1,506,118. METHOD OF PREPARING SILICEOUS MATERIAL. FRANCIS X. GOVERS, New York, N. Y. Filed Aug. 7, 1923. Serial No. 656,209. 8 Claims. (Cl. 23—28.)



1. The method of preparing silicic acid which comprises preparing a colloidal solution of silicic acid and removing water therefrom before a "gel" has formed, the removal of water being carried to the extent that the solid product will not form a solid "gel" in the presence of water.

1,506,119. CORE-DRILL BIT. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 1, 1923. Serial No. 616,310. 1 Claim. (Cl. 255—72.)

1. A rotary cutting bit for a core drill, having removable cylindrical cutter pins inserted in longitudinally extending holes in the end face of the bit, each pin having a locking notch intermediate its length, and the metal of the body portion of the bit being driven or forced from the end face of the bit into said locking notches to form locking keys to hold the pins in place and prevent them from turning during operation of the bit.



1,506,120. GRINDING MILL AND MATERIAL-REMOVING MEANS THEREFOR. HARRY W. HARDINGE, New York, N. Y., assignor to Hardinge Company Incorporated, New York, N. Y., a Corporation of New York. Filed June 14, 1923. Serial No. 645,232. 14 Claims. (Cl. 83—9.)

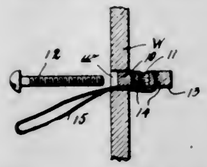
1. A grinding mill comprising a drum having an inlet opening and having an outlet opening, and means for simultaneously passing streams of elastic fluid through said outlet opening in opposite directions, said means comprising a suction conduit extending through said outlet opening.

1,506,121. APPARATUS FOR THE EXCHANGE OF HEAT. JAMES M. HARRISON, Cleveland, Ohio. Filed Oct. 14, 1921. Serial No. 507,604. 10 Claims. (Cl. 257—137.)

2. An apparatus of the character described comprising a plurality of series of oblong hollow elements each having expanded ends, the ends of the elements in each series engaging one another and the bodies of adjacent elements being spaced, a pair of pass hoods communicating with opposite ends of each of said elements respectively, means for securing the said elements in place, baffle plates in each pass hood, each of said plates extending between the bottoms of the expanded ends of the elements of one series and the tops of the expanded ends of the elements in a subjacent series and the baffle plates in one pass hood being staggered with respect to those in the other, means

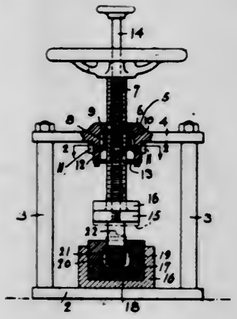
for circulating a fluid through said pass hoods and the said elements, and means for circulating another fluid through the passages provided between the said elements.

1,506,122. ECCENTRIC. JOSEPH A. HILLARD, Tacoma, Wash. Filed Apr. 30, 1921. Serial No. 710,064. 1 Claim. (Cl. 74—1.)



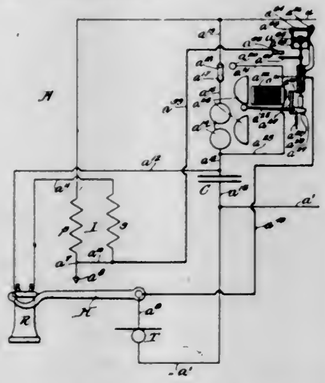
In combination with a shaft, a connecting rod, means for connecting the rod to said shaft comprising an eccentric mounted on said shaft, said eccentric having an annuair groove formed in the periphery thereof, a clamping ring extending around said eccentric and comprising a pair of coacting sections secured together at their adjacent ends, said clamping ring having an annular groove provided in the periphery thereof coacting with the annular groove provided in the periphery of the eccentric to provide a raceway, ball bearings positioned in said raceway, said clamping ring having lateral extensions formed on the upper portion thereof, coacting lateral extensions formed on the lower end of the connecting rod, and fastening means associated with the aforementioned coacting lateral extensions for securing a connecting rod to the clamping ring.

1,506,123. ANCHOR-BOLT NUT. WILLIAM A. HUBENER, New York, N. Y., assignor to Diamond Expansion Bolt Company, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,608. 7 Claims. (Cl. 85—32.)



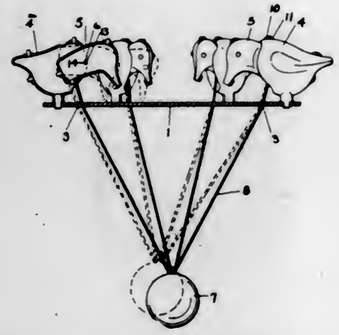
1. In an anchor bolt nut, the combination of a nut with a transverse hole for the passage of a bolt, a flexible

pull member attached to the nut for bringing it into securing position, and a temporary tension member applied



to said pull member for holding the nut preliminary to the introduction of the bolt.

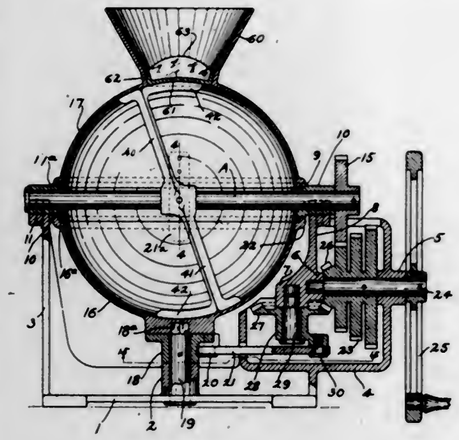
1,506,124. SWAGING PRESS. JOHN HIRSCH, Pittsburgh, Pa. Filed Apr. 18, 1922. Serial No. 553,534. 2 Claims. (Cl. 113—39.)



1. In a swaging press, the combination of a suitable frame having a cross-member, a hollow screw-bar mounted therein, passing through an opening in said cross-member, a nut below cross-member, and adapted to engage the lower face of same, said screw-bar engaging said nut, means for holding said nut against rotation, a compressor-plate adapted to be engaged by said screw-bar, and a spindle in the said screw-bar connected to said compressor plate and extending above said screw-bar.

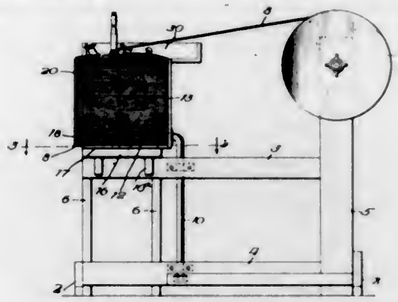
1,506,125. TELEPHONE SYSTEM. CLIFFORD L. KEDDY, Lynn, Mass. Filed Jan. 5, 1922. Serial No. 527,266. 5 Claims. (Cl. 179—84.)

1. A telephone system having in combination a plurality of stations; signal instruments at said stations; signal circuits connecting said stations; means through which a person at one station operates the signal circuit of the other station to call the latter, and means under the control of the person at the called station adapted to be manually adjusted so as to automatically produce a visual "absent" signal at the calling station when the signal circuit of said called station is operated.



1,506,126. TOY. JOSEPH A. KUENZ, Jackson, Mich. Filed May 20, 1922. Serial No. 562,366. 1 Claim. (Cl. 46—40.)

In a toy, the combination of a body comprising a pair of complementary sheet metal stampings disposed edge to edge and having outwardly projecting tongues on the edges thereof, the tongues of the members being side by side when the members are in assembled relation, and perforated coupling members arranged over the coacting pairs of tongues, the outer ends of said tongues being folded over said coupling members.



1,506,127. [WITHDRAWN.]

1,506,128. MIXER. FRANK X. LAUTERBUR, Sidney, Ohio. Filed June 18, 1923. Serial No. 646,128. 15 Claims. (Cl. 259—78.)

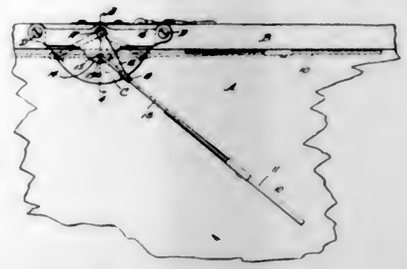
1. In a mixer, the combination of a bowl of substantially spherical shape, means for imparting a rotary movement to the bowl as a whole, a beater having a shaft revoluble within the bowl at an angle to the axis of movement of the bowl and means for operating the bowl and the beater simultaneously.

1,506,129. STRAPPING APPARATUS. CHESTER M. MACCHESNEY, Chicago, Ill., assignor to Acme Steel Goods Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1921. Serial No. 491,698. 6 Claims. (Cl. 100—31.)

1. Strapping apparatus comprising a three-sided holder adapted to receive and sustain a package or bundle leaving the central portion thereof free, a blade projecting from the side of the holder where the bundle overhangs so as to extend across the central portion thereof and prevent it from falling by a preponderance of weight beyond the holder, and a pivotal mounting for the holder whereby it may be caused to occupy either of two positions so as to right-angularly alternate in presenting the package or bundle for the strapping thereof.

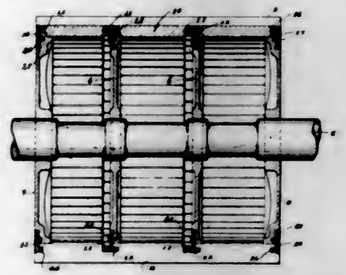
1,506,130. METHOD OF COATING METAL MOLDS. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Mar. 14, 1923. Serial No. 625,141. 2 Claims. (Cl. 22—192.)

1. The method of applying a protective coating to metal molds which consists in first heating the molds to between 300° and 500° F., then painting the heated surface of the molds with a wash containing a little soluble silicate in solution and a considerable quantity of powdered fire clay in suspension, then heating the surface of the mold, then applying another coat of fire clay with a soluble silicate binder, again heating the surface of the mold and repeating the operation until the desired thickness of fire clay is applied to the surface of the mold.



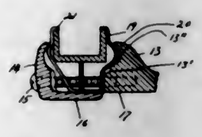
1,506,131. RECEPTACLE. LUCY NATA, San Francisco, Calif. Filed Oct. 8, 1923. Serial No. 667,423. 5 Claims. (Cl. 298—35.)

1. A box having a hinged bottom, and locking means therefor including a shaft extending longitudinally of the box and adapted for transverse bodily movement, said shaft being carried by the door, and hooked lugs on the box with which said shaft engages when in locking position.



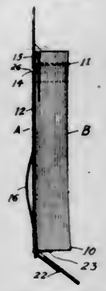
1,506,132. WINDSHIELD WIPER. JOHN R. OISHEI, Buffalo, N. Y. Filed Aug. 9, 1923. Serial No. 656,530. 5 Claims. (Cl. 15—255.)

1. In a windshield wiper, a wiper strip, a rock shaft for actuating said wiper strip, a spring arm engaging said wiper strip and pressing said wiper strip toward the windshield glass, said spring arm having a bearing portion journalled independently of and spaced from said shaft, and a part on said shaft engaging said spring



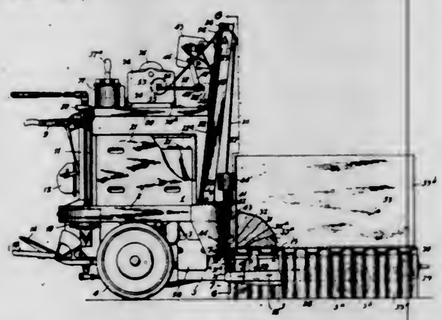
arm between said bearing portion and its wiper strip engaging portion for oscillating said wiper strip when said shaft is rocked.

1,506,133. ROLL OR ROTOR. EMIL A. PETERSON, Appleton, Wis. Filed Oct. 22, 1919. Serial No. 332,437. 4 Claims. (Cl. 92—22.)



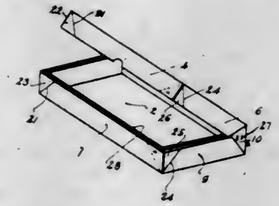
4. A device of the class described, comprising a roll frame including a shaft and a plurality of collar members fixed thereto in spaced relation, a plurality of knife bars, interlocking connections between the knife bars and collar members, spacing members positioned between adjacent knife bars, interlocking connections between the spacing members and collar members, an annular ring for retaining said knife bars and spacing members in interlocking connection with the collar members, and means readily detachably securing said annular ring in position on the frame.

1,506,134. WINDSHIELD VISOR. RAYMOND J. PURDY and ALBERT T. POTTER, Detroit, Mich., assignors to Ainsworth Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 9, 1922. Serial No. 593,260. 4 Claims. (Cl. 296—95.)



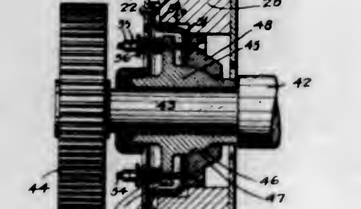
1. The combination with windshield standards and a visor, of attachment means including pivot brackets for the visor, clamping jaws on said brackets for engaging said standards, cooperating jaw members, clamping screws engaging both of said jaw members, and removable clips engaging both of said jaw members, said clips being apertured for the passage of said screws.

1,506,135. TICKET HOLDER AND CUTTER. CHARLES T. RASCHICK, St. Paul, Minn. Filed Jan. 10, 1921. Serial No. 436,093. 3 Claims. (Cl. 164—119.)



1. A device of the class described formed from a single piece of sheet metal, comprising a cutter, a shearing tongue formed from the body of said device and cooperating with a member formed on said device, inclined upwardly therefrom to form shearing means, said inclined member extending in front of said tongue when in released position to provide a guard to conceal the same.

1,506,136. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker R. & L. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 19, 1922. Serial No. 530,460. 23 Claims. (Cl. 298—21.)



1. In apparatus of the class described, the combination of a truck frame having an elevating platform thereon arranged to removably receive a support or holder, wheels for supporting said frame, devices disposed at opposite sides of said platform and movable upwardly to engage the ends of the support or holder projecting laterally beyond said elevating platform to tilt it, and means on said frame for operating said tilting devices.

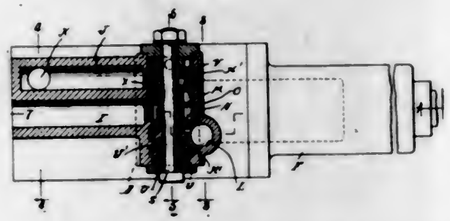
1,506,137. COLLAPSIBLE ONE-PIECE REENFORCED SUIT BOX. GEORGE E. SCRUBY, Birmingham, Ala. Filed Mar. 10, 1923. Serial No. 624,065. 14 Claims. (Cl. 229—41.)

14. In a collapsible paper box, a bottom having foldable marginal walls, and a reinforcement mounted to fold with one of said marginal walls and formed by a plurality of walls adapted to be expanded into a frame shaped to fit snugly into, and to reinforce the several marginal walls of, said bottom.

1,506,138. SHEET-SEVERING DEVICE. GUSTAV SEIBT, St. Louis, Mo. Filed Jan. 29, 1923. Serial No. 615,614. 5 Claims. (Cl. 164—42.)

1. An apparatus for severing a sheet into narrow strips, comprising a table adapted to have a sheet positioned thereon, a cutting device arranged beyond one end of said table for severing the sheet into narrow strips, means for receiving the severed strips and collecting and holding them in a pile, a rotatable feeding device for moving the sheet into position to be acted upon by said cutting device, an actuating mechanism for imparting a step by step movement to said feeding device, and means on the cutter that is adapted to engage said actuating mechanism and impart movement to same when the cutter moves into its inoperative position.

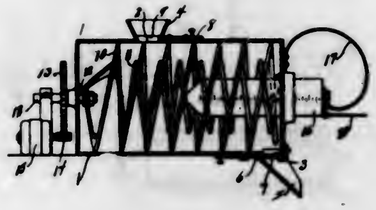
1,506,139. HAIR-CUTTING APPLIANCE. SAMUEL SEVERSON, Valders, Wis. Filed July 23, 1923. Serial No. 653,258. 7 Claims. (Cl. 30—1.)



1. In an appliance of the class described, a handle member, cutting means carried thereby, means for creating a suction at the cutting means whereby the hair to be cut is drawn into engagement therewith, and a guard carried by the handle member providing means for causing the maximum force of the suction to be exerted on the hair over which the cutting means is moved.

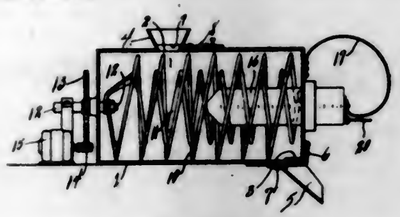
1,506,140. FURNACE RETORT. CHARLES HOWARD SMITH, Short Hills, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Sept. 9, 1918. Serial No. 253,189. 2 Claims. (Cl. 64—10.)

1. A furnace retort having a vertically and transversely extending end plate, a longitudinally rotating shaft located within the retort, an annular member



flanged at each end, one of said flanges being connected to said end plate, a member having a spherical socket and secured in place to the flange at the other end of the member, a bearing member in which there is seated a trunnion on said shaft, which bearing member has an outer spherical portion that fits the socket member; and spring means extending from the socket member to the bearing member for maintaining the bearing member against its socket member.

1,506,141. PNEUMATIC TOOL. WILLIAM A. SMITH and CLARENCE H. DOCKHAM, Detroit, Mich., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 6, 1921. Serial No. 475,536. 7 Claims. (Cl. 121—18.)

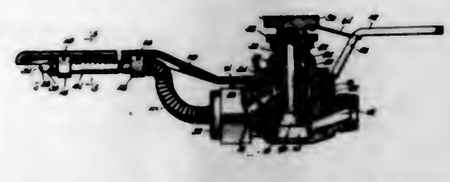


1. In a pneumatic tool, the combination with a piston and a cylinder having a main exhaust port over-run by said piston, of a valve construction comprising a cylindrical casing having portions of different diameters with a pressure supply port intermediate the same, a valve having heads fitting the portions of different diameters and subjected to differential pressure of the fluid supply, a leak passage from the fluid supply to the end of the casing of larger diameter and a passage from said end of the casing to the cylinder in a position to be sealed by the piston while at one end of its stroke and to be in communication with the main exhaust port when said piston is at the opposite end of its stroke, whereby pressure on the large area end of the valve is alternately built up and exhausted.

1,506,142. APPARATUS FOR MIXING CONCRETE UNDER PRESSURE. ROBERT C. STUBBS, Dallas, Tex. Filed Jan. 23, 1923. Serial No. 614,388. 14 Claims. (Cl. 83—73.)

1. A machine for mixing concrete and other plastic material comprising a drum in fixed position and provided with a closable inlet opening and a closable discharge opening, a screw-shaped vane mounted in the drum, means for driving the vane and mechanical means for compressing the material being mixed so as to fill the voids therein and also to compact the binder material on the coarse aggregate.

1,506,143. PROCESS OF MIXING CONCRETE AND OTHER PLASTICS. ROBERT C. STUBBS, Dallas, Tex. Filed Jan. 23, 1923. Serial No. 614,389. 10 Claims. (Cl. 83—73.)



1. A process of mixing concrete or other plastic comprising the moving of the central portion of a plastic mass in one direction and the outer surrounding portion in the opposite direction in a confining vessel and applying movable mechanical pressure to said mass for securing frictional contact of the particles on each other.

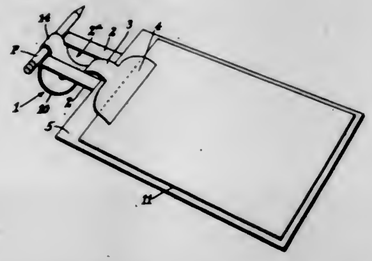
1,506,144. SAFETY BACKGROUND FOR CHECKS OR OTHER DOCUMENTS. EDWARD M. WEEKS, Washington, D. C. Filed Apr. 15, 1922. Serial No. 552,881. 6 Claims. (Cl. 283—9.)

1. A safety base for bank checks and other documents characterized by a series of color bands successively blending into each other and produced by a multiplicity of independent parallel lines of graduated width.

1,506,145. GAS IGNITER. GEORGE M. WILLIS, Chicago, and ARTHUR H. ROETTCHER, Evanston, Ill., assignors to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 27, 1923. Serial No. 634,952. 10 Claims. (Cl. 158—115.)

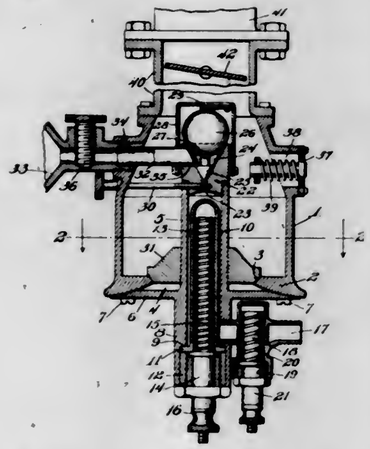
1. In a gas igniter, in combination, valve mechanism, a pivotally mounted projector, a flexible conduit connection between said valve mechanism and said projector to permit the latter to be swung, and automatic means for opening said valve when said projector is swung.

1,506,146. AEROPLANE. HENRY ZIEMSS, Jr., Chicago, Ill. Filed Feb. 12, 1919. Serial No. 276,482. 40 Claims. (Cl. 244—12.)



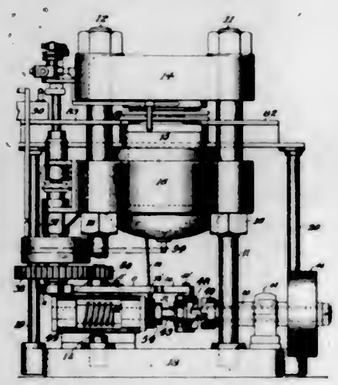
1. In an aeroplane, a variable camber wing comprising a front spar, a rear spar, and a plurality of ribs each comprising a central section, a forward section and a rear section, said sections including upper and lower flange portions and means for spacing said flange

portions apart, the upper flange portion of the rear section having a sliding connection with the rear spar and the lower flange portions of each of the sections having sliding connections with the forward and rear spars, and



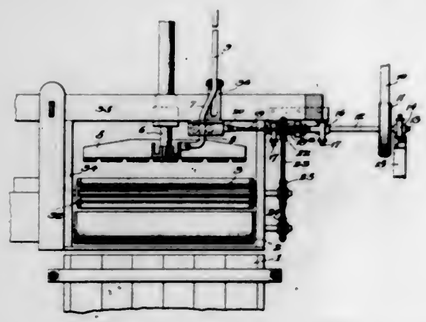
a pneumatic tube entered between the lower flange portion of the central section and the spacing means thereof, said tube having a connection for admitting and exhausting air under pressure.

1,506,147. HOLDING DEVICE. FRED ABBOTT, Watts, Calif. Filed Nov. 13, 1923. Serial No. 674,447. 2 Claims. (Cl. 24—66.)



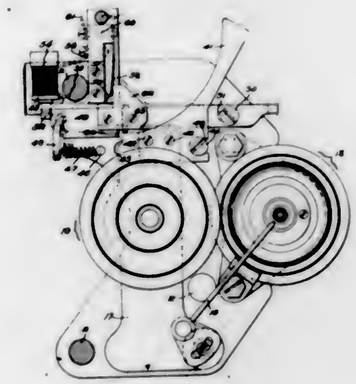
1. A holding device consisting of an approximately S-shaped strip of resilient material having free or disconnected ends at one extremity of the S, one of said ends being bifurcated to provide two limbs, the other end of said strip passing between said limbs and being provided with a clamping head, and a base to cooperate with said head to which the other end of said strip is secured.

1,506,148. CARBURETOR VAPORIZER. VIRGIL CHARLIE ANDERSON, San Francisco, Calif., assignor of one-half to Charles T. H. Wright, San Francisco, Calif. Filed July 21, 1923. Serial No. 653,043. 7 Claims. (Cl. 48—103.)



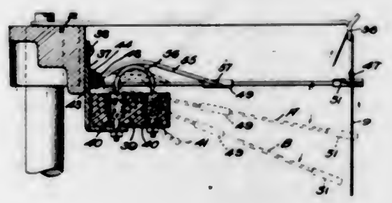
1. A carburetor vaporizer for internal combustion engines, comprising a casing having a fuel tube therein, a cylindrical heating element arranged within and spaced from the interior of the fuel tube to define a narrow fuel channel lengthwise said tube, means for heating said element, a fuel jet passage arranged at the end of the fuel tube, a gravity operated valve for controlling said passage, and means bearing on said valve and serving as a fuel spreader beyond the valve.

1,506,149. MACHINE FOR MOLDING PLASTIC MATERIAL AND THE LIKE. GEORGE W. BEADLE, Stamford, Conn., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed Apr. 16, 1920. Serial No. 374,484. 49 Claims. (Cl. 18—53.)



1. In a machine for pressing records, a pair of dies both of which are adapted to face up preparatory to receiving record material but otherwise are in facing alignment, said dies comprising a record forming mold, a plurality of such molds connected to a common rotatable means adapted to successively rotate them in'o and out of pressing position, means for supporting the molds during their rotation, in combination wi h means for successively pressing the dies toward each other to give form to the material between them.

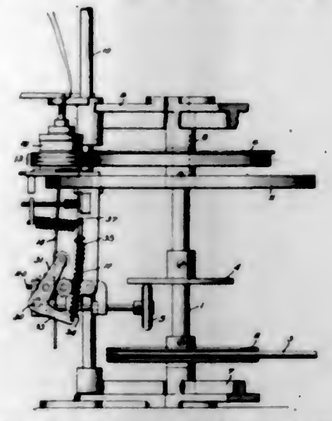
1,506,150. PRESS FEEDER. JAMES T. BEATY, Charlotte, N. C., assignor to Liddell Company, Charlotte, N. C., a Corporation of North Carolina. Filed July 27, 1923. Serial No. 654,200. 3 Claims. (Cl. 100—25.)



1. In a device of the character described, means to carry cotton from a condenser, upper and lower rollers located adjacent said means, the upper of said rollers having bearings permitting upward and downward movement of said roller, a baffle board operatively connected to said upper roller and means to operate said rollers.

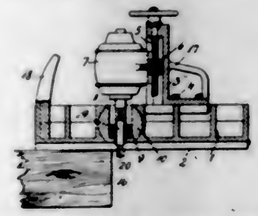
1,506,151. DRIVING MECHANISM FOR KNITTING MACHINES. ALBERT E. BERDON', Detroit, Mich., assignor, by mesne assignments, to James K. Lanning, Fall River, Mass. Filed Aug. 19, 1921. Serial No. 493,638. 12 Claims. (Cl. 66—7.)

1. A knitting organization comprising in combination, a rotary knitting head, a driving disk therefor, a lever carrying said driving disk, an electrical stop motion including an electromagnet, a movable member carrying an armature, and means whereby said movable member is positioned by the movement of said lever to drive said knitting head, and to bring said armature into position where it may be engaged by said electromagnet.



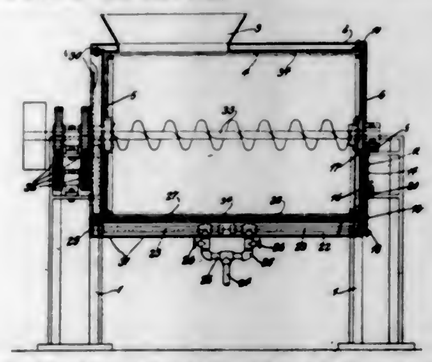
1,506,152. STOP MECHANISM FOR KNITTING MACHINES. ALBERT E. BERDON', Detroit, Mich., assignor, by mesne assignments, to James K. Lanning, Fall River, Mass. Filed Aug. 19, 1921. Serial No. 493,639. 10 Claims. (Cl. 66—7.)

1. Knot detecting and stopping mechanism for textile machines comprising in combination, a contact member and a second contact member composed of two levers, the first of which bears upon the second and has a contact, said second lever having a slot or opening for the detection of knots.



1,506,153. TAKE UP MECHANISM FOR KNITTING MACHINES. ALBERT E. BERDON', Detroit, Mich., assignor, by mesne assignments, to James K. Lanning, Fall River, Mass. Filed Aug. 19, 1921. Serial No. 493,641. 14 Claims. (Cl. 66—9.)

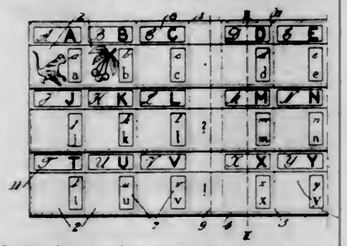
1. Take-up mechanism for knitting and like machines comprising take-up rolls, a movable frame wherein said rolls are mounted, driving means for said rolls supported by said frame, said driving means being movable into and out of driving relation to the prime driving means, and



means carried by said frame and adapted to engage the product and to maintain the tension thereof substantially constant at all times.

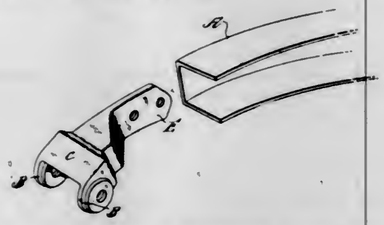
1,506,154. UNIVERSAL MACHINE FOR JOINERY WORK. HANS JENS VILHELM BERTHELSEN, AXEL LOUIS HANSEN, and JENS JENSEN, Copenhagen, Denmark. Filed Feb. 26, 1924. Serial No. 695,293. 7 Claims. (Cl. 144—3.)

1. A universal machine for joinery work comprising in combination a body having a plane work engaging face, a motor on the body, a shaft coupled to the motor and extending through the body in substantially perpendicular relation to the plane of said face, means for coupling a tool to said shaft and grooves arranged in the body for the purpose of securing to said body suitable guiding members for the matter to be treated.



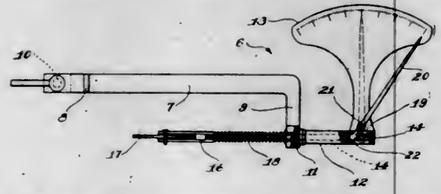
1,506,155. POP-CORN-CANDY MIXER. ADDISON BISHOP, St. Louis, Mo. Filed Dec. 27, 1921. Serial No. 524,859. 4 Claims. (Cl. 126—350.)

4. A machine of the character described, comprising a stationary cylinder of relatively large diameter, a feeding-in hopper for conducting material into the cylinder, a wall



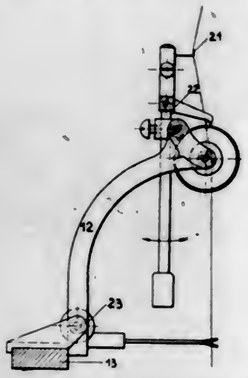
surrounding the cylinder and forming a space for confining heated air around the cylinder, a door closing said space at one end, a heating device supported within said space below the cylinder, and a deflector device supported within said space between said heating device and the cylinder wall.

1,506,156. DISPLAY HOLDER AND CONTAINER FOR EDUCATIONAL CARDS. ANNA BJÖRKLUND-ÅSPERÉN, Stockholm, Sweden. Filed Feb. 23, 1923. Serial No. 620,761. 8 Claims. (Cl. 35—9.)



1. A device for keeping loose characters, and for serving as an exercise book for teaching in the infant school consisting of a sheet of a suitable material provided on one side with a number of pockets for keeping such characters and adapted to be folded into a size corresponding to the size of a text book, the pockets having been formed by firstly folding the sheet so as to form long horizontal pockets, situated the one above the other, and then dividing said horizontal long pockets vertically so as to form pockets of the desired size.

1,506,157. PRESSED-STEEL SPRING HANGER FOR AUTOMOBILE FRAMES. GEORGE C. BRAINARD, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Substitute for application Serial No. 287,281, filed Apr. 3, 1919. This application filed May 27, 1921. Serial No. 473,053. 3 Claims. (Cl. 267—54.)



1. A spring hanger for automobile frames comprising parallel ears and a connecting member integral therewith and converging wing members integral with the ears and connecting member and forming a channel therewith and adapted to be connected to the end of an automobile frame.

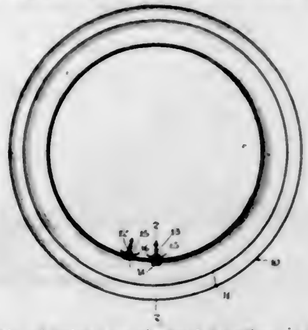
1,506,158. INDICATOR FOR CENTERING TIRES. HUMPHRIES W. BREWER, Dubois, Pa. Filed Dec. 3, 1923. Serial No. 678,172. 9 Claims. (Cl. 33—172.)

1. The combination in a device for use with a turning machine having a rotating bed or table for carrying the work member to be centered and a tool carrier mounted for movement transversely thereof, of a centering device comprising a frame detachably supported from the tool carrier, an operating member mounted for movement on the frame and adapted to engage the annular portion of the work member to be centered, and indicating means carried by the frame and connected to said operating member.

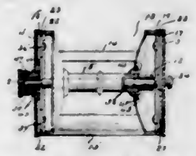
1,506,159. WINDING DEVICE FOR YARNS. XAVER BRÜGGER, Horgen, Switzerland. Filed June 22, 1923. Serial No. 647,166. 2 Claims. (Cl. 242—147.)

1. In a winding device, a supporting arm, a pair of spring-compressed tension discs carried thereby, swinging arm pivoted on the supporting arm, a weight for the lower end of said swinging arm, a thread eye at the upper end thereof and a pawl carried by said arm and cooperating with the edge of one of said discs.

1,506,160. PHONOGRAPH. GEORGE B. BURCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed Mar. 8, 1918. Serial No. 221,285. 3 Claims. (Cl. 181—82.)



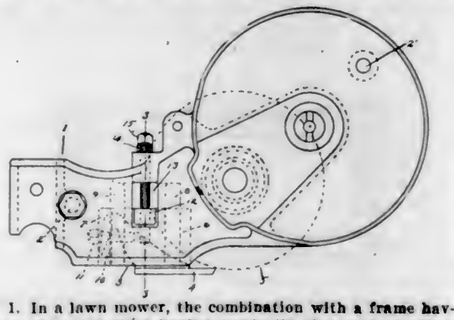
1. An acoustic device, comprising a large, direct-acting vibratory diaphragm of conoidal form the outer surface of which is concavely curved from its apex outward in all radial directions.



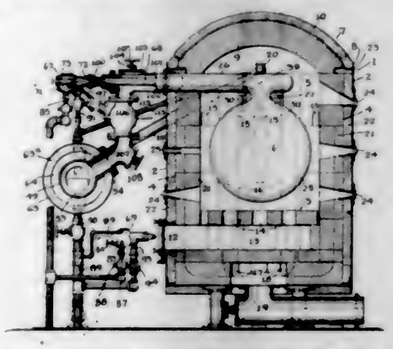
1,506,161. INNER TUBE FOR PNEUMATIC TIRES. WILLIAM ADDISON CALDWELL, Manila, Philippine Islands. Filed July 28, 1921. Serial No. 488,115. 1 Claim. (Cl. 152—22.)

In combination with a pneumatic tire casing, a pair of inner tubes, the innermost one of which is normally of less size than the outermost one and disposed within

said outer tube and adapted to be partially inflated initially and remain in that condition until puncture of the outer tube, an inflation stem extending transversely through both of said tubes at their inner circumferential center, and communicating at its inner end with the innermost tube, means carried on said stem and adapted to be forced against the outer face of the outer tube whereby the pair of tubes are clamped together and the stem openings therein sealed, a second inflation stem communicating at its inner end with the outer tube only, and disposed in the same circumferential center plane as the first named inflation stem, and means carried on said second inflation stem whereby to seal the stem opening of the outer tube.

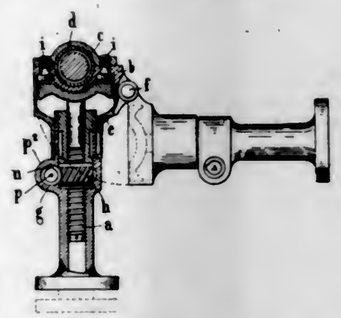


1,506,162. FISHING REEL. PLINY CATUCCI, Newark, N. J. Filed July 22, 1922. Serial No. 576,716. 9 Claims. (Cl. 242—84.1.)



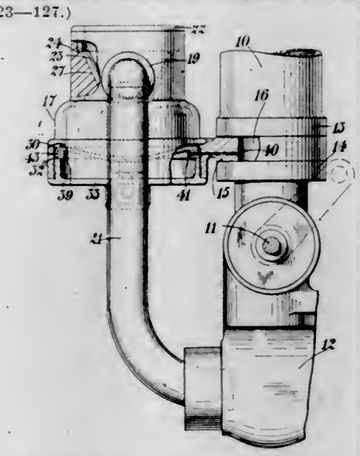
1. In a fishing reel, the combination of a cylindrical reel frame, having a recess in the end thereof, an internal circumferential groove spaced from said recess to form a circumferential tongue between said groove and recess, a head plate fitted into said recess and a locking member secured to said head plate and having offset ends at diametrical points for engagement with and rotation in said groove, said locking member having a rigid arm thereon for engagement with said tongue, whereby, said head plate may be locked to the ends of said reel frame.

1,506,163. LAWN MOWER. ARTHUR J. COLDWELL, Lansing, Mich., assignor to Ideal Engine Company, Lansing, Mich., a Corporation of Michigan. Filed Oct. 22, 1921. Serial No. 509,699. 8 Claims. (Cl. 56—294.)



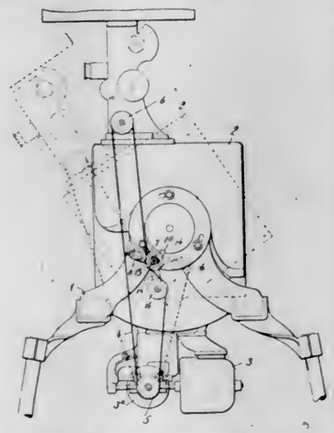
1. In a lawn mower, the combination with a frame having sides, said sides having vertically elongated openings therein, of a cutter bar extending between said frame sides and provided with tongues at its opposite ends engaging in said openings, guides upon said frame sides adapted for sliding engagement by the ends of said cutter bar, means upon said frame sides and engaging said tongues for adjustably raising the ends of said cutter bar, and adjustable stops upon said frame sides engageable with said tongues for holding the ends of said cutter bar in their adjusted positions.

1,506,164. PROCESS OF AND APPARATUS FOR MAKING GAS. WALTER C. DAYTON, Rutherford, N. J., assignor to General Oil Gas Corporation, Bristol, Va., a Corporation of Virginia. Filed Aug. 9, 1920. Serial No. 402,170. 18 Claims. (Cl. 48—107.)



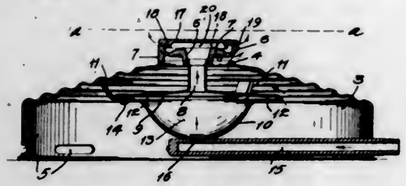
7. The process which consists in delivering air under pressure through a heat interchanging device to a mixing device and also independently supplying oil into said mixing device while maintaining substantially constant a predetermined proportion of air and oil, the air being insufficient in amount to completely burn the oil, introducing the mixture from said mixing device to a heated reaction zone whereat partial combustion takes place, withdrawing the resulting gas and passing the same through said heat interchanging device.

1,506,165. APPARATUS FOR PREVENTING THEFT OR UNAUTHORIZED USE OF MOTOR VEHICLES. DAVID DOYLE, Sydenham, London, England. Original application filed Apr. 6, 1920, Serial No. 371,705. Divided and this application filed Feb. 16, 1922. Serial No. 537,090. 6 Claims. (Cl. 254—86.)



6. In a motor vehicle the combination of a jack carried upon an axle of the vehicle and adapted to assume a vertical position, means comprising a worm for extending the jack when in such vertical position for raising the axle and a rotary member within said worm casing adapted to be rotated with the worm when an appropriate combination key is employed and means for rendering the worm inoperative in the direction for lowering the jack when said combination key is not employed.

1,506,166. REGULATION OF THE COMBUSTIBLE MIXTURE IN INTERNAL-COMBUSTION ENGINES. ALBERT ARTHUR MOLTENO DURRANT, London, England, assignor to The London General Omnibus Company Limited, London, England, a British Company. Filed Jan. 2, 1923. Serial No. 610,394. 5 Claims. (Cl. 123—127.)

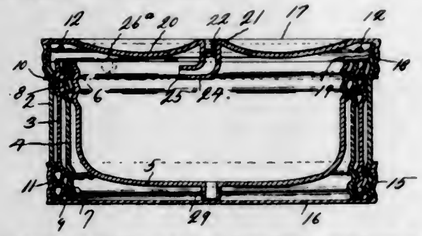


1. The combination of an induction conduit for fuel and air leading to the cylinder of an internal-combustion engine, a valve controlling said conduit, a carburetor supplying said conduit, a supply conduit for the supply of a gaseous anti-detonating agent to the air intake of the carburetor, a valve controlling said supply conduit, a chamber connected to said induction conduit at the cylinder side of the first said valve, a controlling member operatively connected with the latter valve and movable in said chamber under the suction action therein in a direction to close the latter valve, and a spring operative on the second said valve tending to open the same against the suction action on said controlling member.

1,506,167. TENSION REGULATOR FOR DRIVING BELTS. WILLIAM ELLWOOD, New York, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 17, 1921. Serial No. 452,902. 7 Claims. (Cl. 64—5.)

1. In a picture projector, a driving motor, a driving pulley for the projector mechanism operated by said motor, said pulley being movable bodily upon tilting of the projector mechanism, a driving belt for transmitting power between said motor and said pulley and means for maintaining a substantially uniform tension on said belt for all positions of said driving pulley comprising a pair of adjusting pulleys disposed on opposite sides of said belt, one of said adjusting pulleys being normally fixed relative to the frame of the projector and the other of said pulleys being bodily movable, and means for holding said movable pulley against said belt with a substantially constant force.

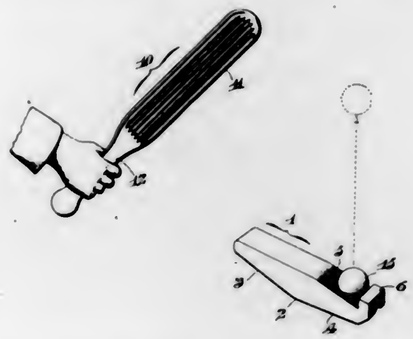
1,506,168. GAS BURNER. CHRISTEN K. ERIKSTRUP, Luck, Wis. Filed Aug. 29, 1923. Serial No. 659,935. 6 Claims. (Cl. 158—99.)



1. A burner of the kind described comprising a primary mixing chamber having a surrounding substantially continuous air intake passage, a gas pipe connected to said mixing chamber through the bottom thereof, a secondary mixing chamber overlying said primary mixing chamber, a contracted neck connecting said two mixing chambers, said secondary mixing chamber having a surrounding substantially continuous gas-discharge passageway.

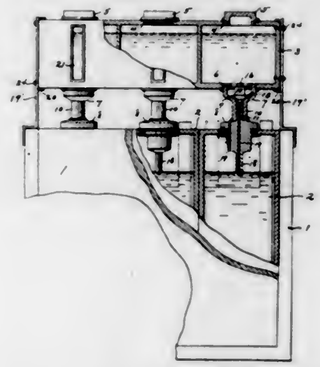
1,506,169. WASHBOARD. CHARLES A. FETTERS, Washington, D. C. Filed June 15, 1921. Serial No. 477,704. 2 Claims. (Cl. 68—29.)

1. A wash board formed from a single piece of pliable rubber, vacuum cup means carried by the rear side thereof whereby said wash board may be attached and held on a smooth surface.



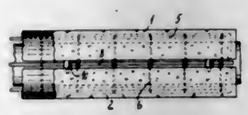
1,506,170. SYRINGE. CHARLES A. FETTERS, Washington, D. C. Filed Aug. 29, 1921. Serial No. 496,365. 4 Claims. (Cl. 128—227.)

1. A device of the character described comprising a receptacle formed from a plurality of detachably connected collapsible sections, said sections telescopically engaging



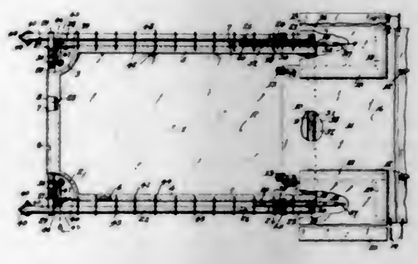
each other, a cover on the upepr end of the outer section, said cover forming a seat for the operator and having means whereby a nozzle may be received and liquid conveyed to the nozzle.

1,506,171. GAME APPARATUS. CHRISTIAN FILBERG, Philadelphia, Pa. Filed Jan. 5, 1922. Serial No. 527,080. 1 Claim. (Cl. 46—59.)



In a game apparatus of the kind hereinbefore described, a block of obtuse-angled longitudinal section providing a transverse fulcrum whereon said block may be rocked when struck at the elevated end, the top surface of the opposite end of said block being declined outwardly to an upstanding transverse end projection of a height closely aligning with the axis of the ball to be used with said block whereby the vertical projection of said ball is aided when the opposed end of the block is struck, a concavity adjacent thereto providing a ball seat, and the forward end of said block having the underside longitudinally hollowed out to lighten the ball sustaining end thereof so as to oppose a striking force with minimum restivity.

1,506,172. BATTERY FILLER. FRANK H. FREDETTE, Newark, N. J., assignor, by mesne assignments, to Louis Cassinelli, Newark, N. J. Filed May 11, 1920. Serial No. 380,448. 2 Claims. (Cl. 137—68.)

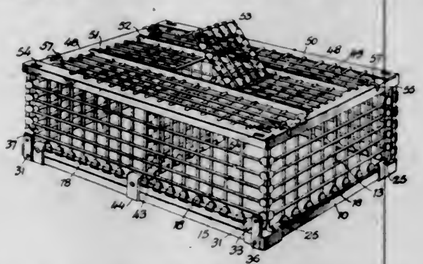


2. In combination with a storage battery cell, a closed filler tank adapted to be supported upon and above said cell, a separable tubular connection between the bottom of said tank and the top of said cell, comprising a valve case fitted to an opening in the bottom of said tank and having an elongated tubular discharge stem, and a cell cap having an elongated tubular stem extending from the normal liquid level in said cell to a point within said discharge stem, and a valve yieldingly held upon its seat within said case and adapted to be unseated as and when said cap stem is inserted into said discharge stem in placing said tank in position, and whereby said valve is automatically seated by the removal of said tank from said cell.

1,506,173. METHOD OF PRODUCING CONCRETE POLES. HANS ENGELHARDT HAGEN and JACOB KJÖTSRUD, Arendal, Norway. Filed Nov. 17, 1919. Serial No. 338,570. Renewed Feb. 7, 1924. 1 claim. (Cl. 72—82.)

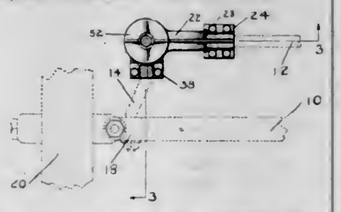
A method of making a hollow concrete pole consisting in placing longitudinally extending bars and intertwisted cross-wires in two semi-circular chambers, spacing said bars and wires from the curved surfaces of said chambers, placing concrete in said spaces to form with said bars and wires two half sleeves of reinforced concrete, permitting said concrete to harden, then placing the longitudinal edges of one half sleeve adjacent to the longitudinal edges of the other half sleeve and connecting the cross-wires of one half sleeve to the cross-wires of the other half-sleeve, and placing concrete over the points of connection to provide a substantially cylindrical hollow pole.

1,506,174. COMBINATION LUGGAGE CARRIER AND BED. CHARLES HAMMOND and LAWRENCE S. OGLE, Phoenix, Ariz., assignors of one-half to J. A. Kleinsmid and E. F. Evants, both of Phoenix, Ariz. Filed Sept. 20, 1922. Serial No. 589,482. 6 Claims. (Cl. 5—119.)



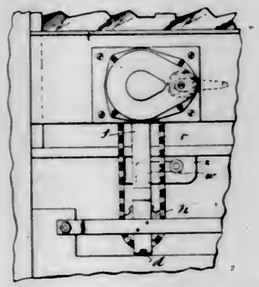
1. A device for the purpose set forth comprising a pair of sectional and foldable side rails, and an end rail, an end rail element, means for slidably connecting said element to said side rails, a foldable flexible body connected to said element and end rail, means for adjustably positioning said element longitudinally of the side rails to maintain said body extended, supporting legs hinged to said side rails, coupling members for connecting said body to said side rails, and supporting brackets carried by the end rail.

1,506,175. COLLAPSIBLE CRATE. JEFFERSON D. HANNAH, Fayetteville, Ark. Filed Mar. 20, 1923. Serial No. 626,323. 4 Claims. (Cl. 217—47.)



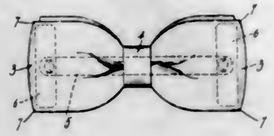
1. A poultry crate comprising a floor, side and end panels, a hinge member secured to a corner of the floor and hinging the side and end panels, said hinge having

a vertical extension formed integrally therewith and extending above the level of the floor, and a cover hav-



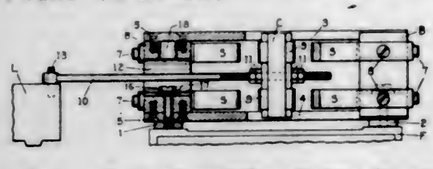
ing a slot to receive said vertical extension when the crate is in its folded position, said cover being adapted to be secured to said vertical extension.

1,506,176. STEERING-ROD ATTACHMENT. OLIVER E. HARLEY, Louisville, Ky. Filed June 11, 1923. Serial No. 644,548. 2 Claims. (Cl. 280—89.)



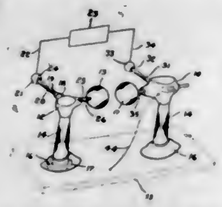
1. A steering-rod attachment including an arm having one end adapted to grip the connecting-rod of a steering apparatus and a plate integral with the other end of said arm and overhanging the steering connection, a member adapted to grip the spindle-arm of the steering device, a plate integral with said member and adapted to co-operate with the plate on the aforesaid arm, and resilient frictional means connecting said plates, said resilient frictional means including a set of friction plates, a spring acting on said plates, and a pivotal bolt, distinct from the steering knuckle bolt, fitted into concentric openings in said plates.

1,506,177. CLUTCH. ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Original application filed Apr. 27, 1921, Serial No. 464,870. Divided and this application filed Sept. 15, 1922. Serial No. 588,328. 7 Claims. (Cl. 192—8.)



1. A clutch, having in combination, a cylindrical casing, a cam rotatably supported therein and arranged for connection with the driven parts, a plurality of rotatable members supported about said clutch in proximity to the cylindrical casing, and a driving plate for engaging the said rotating members when the clutch parts are actuated by the driving parts and springs for yieldingly forcing said rotating members against the driving plate, said cam being shaped to thrust the rotating members into locking arrangement with the casing when any reverse actuation occurs from the driven parts.

1,506,178. MAN'S NECKWEAR. JAMES A. HEWES, Melrose, Mass., assignor to James A. Hewes and Frank W. Potter, Copartners, doing business as Hewes & Potter, Boston, Mass. Filed Mar. 22, 1923. Serial No. 626,799. 1 Claim. (Cl. 2—154.)



A bow tie including a frame comprising a longitudinal member of pliable metal readily bendable to impart a variety of shapes to the tie, and narrow strips of rigid material secured to the ends of said longitudinal member and at right angles thereto, the length of each of said strips being approximately the width of the bow and located near its outer end.

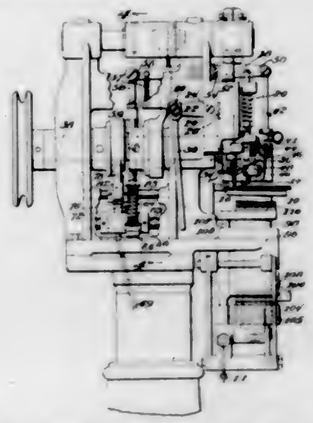
1,506,179. DETACHABLE-UNIT CIRCUIT CONTROLLER FOR INTERLOCKING MACHINES. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 2, 1920. Serial No. 421,407. 3 Claims. (Cl. 173—303.)

1. In a unit circuit controller structure for interlocking machines of the type shown and described, in which the circuit controller units are arranged close together side by side in a row and are fastened to spaced frame members, end blocks having central openings alined horizontally and adapted to receive an operating rod, each end block having a hole extending downward from said central opening, screws in said holes and fastening said end blocks to said frame members, each of said end blocks also having a passage in its upper portion disposed to permit the insertion of a tool from above for turning the screw, whereby any circuit controller unit may be removed from above without disturbing adjacent units.

1,506,180. SPARK GAP. EDWIN S. HUMPHREYS and FRANK MATTERN, Chicago, Ill. Filed Apr. 28, 1922. Serial No. 557,196. 17 Claims. (Cl. 171—95.)

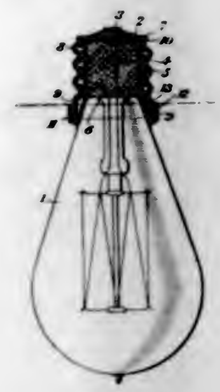
2. In a device of the character described, a source of electrical energy whose difference of potential is to be measured, a spark gap for measuring said difference

of potential, electromagnetic means for automatically causing an indication of the spacing of the elements of said gap when the initial discharge passes between them upon movement of said elements toward one another.



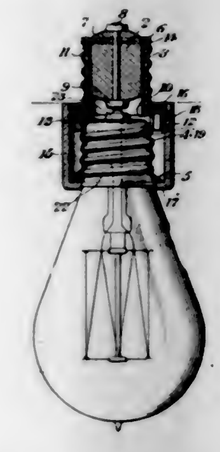
15. In a device of the character described, a source of electrical energy whose difference in potential is to be measured, a spark gap for measuring said difference in potential and means for indicating the spacing of the elements of said gap at which the initial discharge passes after movement of said elements beyond said spacing.

1,506,181. DEFERRED-ACTION DRY BATTERY. ALTON KARL HUNTLEY, Madison, Wis., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Apr. 22, 1921. Serial No. 463,501. 6 Claims. (Cl. 204—38.)



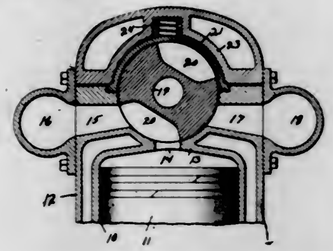
1. A dry battery comprising a plurality of cartridge electrodes, a plurality of zinc electrodes respectively surrounding the same and spaced therefrom, activating material supported out of contact with the cartridge electrodes in the inactive position of the battery, and means for forcing said activating material into operative relation with the electrodes by manipulation of the battery parts.

1,506,182. STOCK-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1919. Serial No. 289,889. 42 Claims. (Cl. 12—27.)



5. A stock fitting machine having, in combination, intermittently acting means for feeding an unattached sole blank, a knife for operating upon the margin of the blank, normally-idle means for positioning the knife relatively to the blank, and means for insuring that said positioning movement takes place during intervals of rest in the feeding movement of the blank.

1,506,183. ELECTRIC LAMP. LOUIS KELLNER, Brooklyn, N. Y. Filed Nov. 29, 1921. Serial No. 518,715. 6 Claims. (Cl. 176—31.)



2. An electric lamp comprising a bulb, a loosely rotatable threaded sleeve of conducting material mounted on the terminal end thereof and adapted to screw into a lamp socket, a ring of insulating material secured to the lamp and fitting over the end of the sleeve adjacent the lamp bulb, means for temporarily locking the sleeve to the lamp to turn therewith, and contacts carried by the lamp.

1,506,184. SAFETY PLUG AND LAMP SOCKET. LOUIS KELLNER, Brooklyn, N. Y. Filed Nov. 29, 1921. Serial No. 518,716. 7 Claims. (Cl. 173—356.)

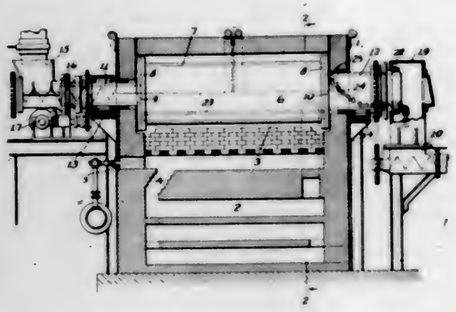
1. A plug connector comprising a holder for an insulation plug and a terminal contact, an internally threaded lamp socket carried by the said holder and rigid therewith, an externally threaded connector sleeve surrounding the holder and rotatable thereon, a freely rotatable insulating guard and operating sleeve surrounding the lamp socket, means for locking the socket and the connector sleeve against longitudinal movement with relation to the operating sleeve, and means for temporarily locking the lamp socket and the connector sleeve to the operating sleeve within said sleeve to rotate therewith.

1,506,185. CASING OR BEARING FOR VALVES OR OTHER MOVING PARTS. JOSEPH H. LEHMAN, Hasbrouck Heights, N. J. Filed Sept. 27, 1922, Serial No. 590,810. Renewed Nov. 14, 1923. 14 Claims. (Cl. 123—190.)

14. In combination a valve casing having an aperture and a cylindrical rotary valve within said aperture, a portion of the peripheral wall of said aperture being formed of a member adapted to receive heat from and be maintained at substantially the same temperature as said valve and mounted to move in a radial direction by its own expansion upon being heated, said member being rigidly supported to resist radial movement by pressure thereon from the valve itself.

1,506,186. SPRING STRUCTURE. DAVID T. OWEN and WESLEY G. LEHMANN, Cleveland, Ohio; said Lehmann assignor to said Owen. Filed Sept. 22, 1922. Serial No. 589,750. 7 Claims. (Cl. 5—259.)

1. A spring structure, comprising adjoining wires and metal connecting clips therefor, said clips and wires being locked in rigid union where connected together by indentations formed in both the wires and clips.

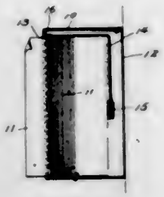


1,506,187. METAL TIE FOR SPRING STRUCTURES. DAVID T. OWEN and WESLEY G. LEHMANN, Cleveland, Ohio; said Lehmann assignor to said Owen. Filed Nov. 2, 1922. Serial No. 598,475. 2 Claims. (Cl. 5—270.)

1. A spring structure comprising adjoining wire and a metal connecting clip therefor, said clip and one of said wires being locked in rigid union where connected together by an indentation formed in both the wire and the clip, said clip and another of said wires being hinged together.

1,506,188. FURNACE RETORT. JOHN W. MCLAUGHLIN, Fairmont, W. Va., and GEORGE H. GELL, South Clinchfield, Va., assignors to Clinchfield Carbocoal Corporation, Bristol, Va., a Corporation of Virginia. Filed June 20, 1921. Serial No. 478,873. 8 Claims. (Cl. 202—4.)

8. A furnace-retort having a rotatable retort shell, mounted in respect to the masonry structure of the furnace in such a manner that heat from the furnace can be transmitted to and through the walls of the retort to the material being treated within the retort shell, the retort being gas tight, except for offtake means by which evolved vapors and gases pass from the retort, the retort being provided with means for feeding coal or analogous material thereinto at one end and with means whereby the solid residues can pass from the

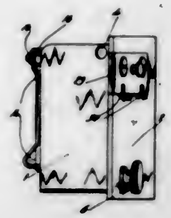


interior of the retort at the other end, said retort having located in said rotatable shell a member which is free to rise and fall as the retort rotates.

1,506,189. ELECTRIC CELL CONTAINING A SALT INHIBITING THE PRODUCTION OF GAS. ANNA A. MACKENZIE, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Nov. 4, 1920. Serial No. 421,744. 5 Claims. (Cl. 204—38.)

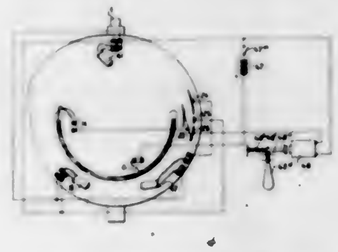
1. An electric cell subject to damage by a gas evolving reaction of the electrolyte, and containing an alkaline earth metal chlorid, whereby such reaction is substantially inhibited.

1,506,190. DISPENSING CABINET. MOSES M. MARCUSE, New York, N. Y. Filed Apr. 26, 1922. Serial No. 556,622. 5 Claims. (Cl. 211—29.)



1. In a sheet dispensing cabinet provided with a delivery opening, a flexible weighted sheet feeding means connected to said cabinet adjacent the top and in proximity to the delivery opening and deflected away from said delivery opening by the package of sheets over which it is draped.

1,506,191. DATE-STAMPING DEVICE. ALBERT MARSH and HERBERT PHILIP ALMS, London, England. Filed Aug. 27, 1923. Serial No. 659,607. 7 Claims. (Cl. 101—66.)

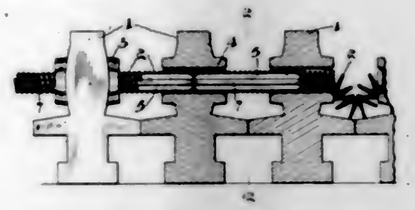


1. A date stamping device for ticket delivering machines, comprising hinged arms carrying printing means, a type ribbon mounted on a spool and passing round guides and over the printing means, a take-up spool adapted to be actuated automatically at each operation

of the device to feed the ribbon a small amount at each operation, a hinged frame carrying the date stamping device, a casing in which the frame is hinged so that

it may be turned about its hinge to give access to the mechanism, and clamping means for securing it in the casing at other times.

1,506,192. AUTOMATIC BOMB-DROPPING APPARATUS FOR AEROPLANES, AIRSHIPS, AND OTHER AIRCRAFT. NICOLAAS EVERHARD GROENEVELD MEIJER, Soerabaja, Dutch East Indies. Filed Jan. 16, 1924. Serial No. 686,625. 14 Claims. (Cl. 244—1.)



1. In automatic bomb dropping apparatus, a sight adapted to oscillate about an axis at right angles to the sight line, a support secured to said sight, gravity controlled means adapted to oscillate about the said axis, a member adapted for rotation about said axis, means tending to swing said member about said axis, a radially extending abutment on said member, a part associated with said member and adapted to cooperate with the gravity controlled means to close an energy circuit, means adapted under the control of said part to successively lock the said member in different angular positions relative to the support, a clockwork, means normally adapted to arrest the clockwork but arranged to be inoperative as long as the said member is locked in one position, an element adapted to be rectilinearly driven at a uniform speed by said clockwork, a piece associated with said element and adapted to be moved relative to said element through a rectilinear path intersecting the path of said abutment, means under the control of said part for moving said piece relative to said element, and bomb releasing means under the control of said part.

1,506,193. WATERPROOFING COMPOSITION FOR WALLS. OTTO K. MILLER, Okolona, Ky. Filed Oct. 12, 1923. Serial No. 668,175. 2 Claims. (Cl. 106—24.)

1. A waterproofing composition for walls including the following ingredients in approximately the following proportions: plaster of Paris, one portion; wood fibre, one portion; cement, two portions; and hydrated lime, one half portion.

1,506,194. SUPPORT FOR RESISTANCE WIRING. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed Jan. 19, 1924. Serial No. 687,231. 8 Claims. (Cl. 219—63.)

1. The combination with a horizontally arranged helical electric heating element, and a plurality of external supports for said element, of an internal support extending axially through the element.

1,506,195. MINING MACHINE. HESS P. MORGAN, Lisbon, Ohio. Filed Jan. 31, 1923. Serial No. 616,039. 4 Claims. (Cl. 262—26.)

1. A mining machine comprising a casing provided with top and bottom sides and a vertical wall bridging the space therebetween, the vertical wall throughout its portion adjacent one end of the casing being disposed within the margins of the said top and bottom sides to form a guide channel, an endless chain travelling within said channel, a plurality of cutting elements located at opposite sides of the casing and adjacent its top and bottom, and gearing housed within the casing operatively connected with the said cutting elements and cleaning chain whereby to actuate the same.

1,506,196. DRY BATTERY. FLOYD DEWEY MOYER, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,789. 12 Claims. (Cl. 204—38.)

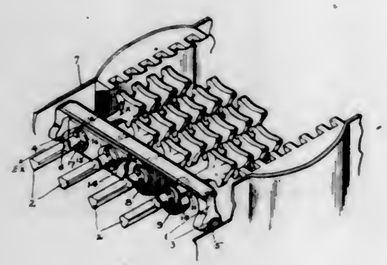
1. In a dry battery of the deferred action type, a depolarizing electrode having as exterior protective means, a dry bibulous coating which is expansible when wetted, and a second electrode separated from said coating by a space adapted to be occupied by said bibulous coating when the latter is expanded, and means whereby said bibulous coating may be wetted to activate said battery.

1,506,197. **WELL PUMP.** ANDREW J. NICHOLAS, Philadelphia, Pa., assignor to A. D. Cook, Inc., Lawrenceburg, Ind., a Corporation of Indiana. Filed Mar. 7, 1924. Serial No. 697,664. 3 Claims. (Cl. 103—1.)

1. A well pump having a plunger, and a plunger rod, said rod being hollow and opening into the bottom of the well, and means operating through said hollow rod for determining the depth of liquid in the well.

1,506,198. **STABILIZED GLAUCONITE AND METHOD OF MAKING SAME.** CARL H. NORDELL, Fort Wayne, Ind., assignor to Wayne Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 17, 1924. Serial No. 686,897. 14 Claims. (Cl. 23—13.)

1. The method of stabilizing glauconite to better adapt it for use in softening water, comprising treating exhausted glauconite with sodium silicate.



1,506,199. **CONTAINER-COVER HOLDER.** JOHN S. PEARSON, Belmar, N. J. Filed Mar. 28, 1922. Serial No. 547,398. 2 Claims. (Cl. 221—60.)

1. A container cap carrier comprising a bracket having an internally threaded opening at one end adapted to be screwed over a threaded container mouth and an externally threaded nipple rigidly secured to the other end of said bracket adapted to hold said cap when removed from said mouth.

1,506,200. **GRATE-BAR SUPPORT.** HAROLD F. PENNEY and CHARLES CLARK FRAUTZ, Geneva, N. Y., assignors to Phillips & Clark Stove Co. Inc., Geneva, N. Y., a Corporation of New York. Filed Mar. 8, 1923. Serial No. 623,788. 4 Claims. (Cl. 126—181.)
